These fish show a surprising amount of strength, and it takes careful handling to land them. Hence, I suggest that you have a reel of some kind on your rod. When the bass makes a rush, let him go, and when you get a chance reel up your line again. You will not be able to do this with the reel as fast as you like sometimes. I always play a bass with my left hand on the line, especially if I am using a fly-rod, and I do not try to recover the line on the reel, but let it lie in folds on the ground or in the water until I get time to reel it up. If a bass is coming toward you, you want to keep the line tight on him all the time, and you can recover the line faster by pulling it through the guides with the left hand than you can by the use of the reel, unless you have an automatic reel. By all means have a reel of some kind, for you cannot enjoy bass fishing without it. It enables you to lengthen or shorten your line at will, when you are moving your bait about, and is of the utmost service. The general idea of the reel is that it is of most use in playing the fish. Such is not the case. Indeed, as I will presently show you, the greatest purpose of the reel in scientific bass fishing is not to get your fish in to you, but to get your bait out to the fish.

You will learn this river fishing for yourself very easily, always remembering that you must keep out of sight and that you must keep your bait in motion, and that you must expect to find your fish in the hard and tangled places, and not in the open shallow water, unless they are feeding there in the evening. Your frogs you can carry in a little cheesecloth bag, even in an old stocking, for a little while, if you have nothing better. If you are using minnows, you must keep them alive, and hence must change the water in your minnow pail as soon as you see the minnows come up to the top for air.

I would advise you always to have a landing net with you when you are bass fishing, and for river fishing, where you are on a bank, sometimes several feet above the water, I would advise using a net with a handle 2 or 3 feet long. Have a button sewed at the back of your collar, and a little loop at the end of the ring of your net. Fasten the loop on the button, and the shaft of the net will hang down your back and so be out of your way while you are fishing. Let your line swim down along the bank and under the trees ahead of you. Keep on fishing. Don't be discouraged. Fish all day if you are out for a fishing trip. Although bass bite best in the morning and evening, you may pick up a nice one at any moment, for a bass is naturally a hungry sort of creature, and will eat even when his stomach is full.

Opening Day.

BOSTON, March 17.—As the season for trout draws near, the local angler begins to feel a deepening interest in the progress of spring.

It is taken for granted that he must be on the old brook, April 1. The day was set aside a month before, a sacred day, to be used in no other way.

As he looks back at former fishing years, his mind calls up his varied experiences of the opening day. He well remembers the first sight of the stream, how springlike its murmer sounded, of the long, long wade with never a fish to reward him, and then at last in a favorite spot his line has known for years, the thrill of the first bite, the short sharp play and the netting of a beautiful quarter-pounder.

But it is usually no summer day. With waders well lined with socks, heavy coat and sweater, and even gloves, the fisherman may look more like a February eel-spearer than an angler for trout, but he has been there before and smiles at the scoff of outsiders. He has fished the opening day with the thermometer at 28°, perhaps in a snow flurry, when his line froze tight in the ferrules, and his hands refused to obey his will when he tried to put on a livlier worm. For this is all bait fishing, and empty-handed is the man who casts the fly.

Let us wish for a springlike day on April 1.

J. C. PHILLIPS.

A highly original observation upon the behavior of fish in deep water is attributed to a long-experienced captain of a steam fishing smack, so remarkable as to deserve special notice. The fishing boats belonging to the southern portion of the North Sea found in their catch lately a disproportionately small quantity of cod-fish. The captain maintained that he had foreseen this for eight days, because most of the fish caught had sand in their stomachs. He claims to have often observed that just before the fish left the shallow water of the southern banks they took sand into their stomachs, and soon after fish caught in deeper northern waters showed the same peculiarity. Then when the time for migrating from these deep waters came again, the fish disposed of the sand. The theory has been advanced that the sand is taken in as ballast, and is rejected when shallow water is to be returned to. The sand often differs in color and grain from that of the bottom where the fish are found. It is claimed that this sand may supply a guide for the fishermen.—Hansa.

The pastor was calling at the house of Brother Billings, and the small boy was entertaining him until the parents came down.

"Do you ever go fishin'?" inquired the youngster, who had inherited his father's fondness for the sport.

"I am a fisher of men," responded the good man.

"Do you carry your bait in a jug, like papa does?" was the next question, just as Brother Billings appeared with a seraphic smile lighting up his genial countenance.—Detroit Free Press.

Massachusetts Game and Fish.

BOSTON, March 25.—Although every lover of the succulent lobster will regret the action of the Massachusetts Legislature in passing a so-called "9-inch law." which will practically take away all protection if the bill is signed by Governor Crane, the fact must be conceded that, generally speaking, the fish and game laws of this State have been much improved in some particulars this winter. It is true that action on several bills yet remains to be completed, but it seems opportune to invite attention to those which have become laws, and to indicate the legislative status of others.

Among the first to become law was an amendment to the act relative to taking or killing gray squirrels, hares and rabbits, so that the season for hunting these opens on Oct. 1 instead of on Sept. 15, thereby preventing the probable shooting of game birds by rabbit and squirrel hunters before the opening of the bird shooting season. This is an important step in the right direction, and will make it easier to enforce the game laws.

The next act in point of time, and perhaps second to none in importance, received the Governor's signature March 7, and becomes operative thirty days after that date. Section 1 reads as follows:

"Whoever takes, catches or has in possession, at any time, trout less than 6 inches in length, shall be fined ten dollars for each and every such trout taken, caught or held in possession: Provided, that this shall not apply to any person engaged in breeding or rearing trout, or to any one who, on taking such trout, immediately returns it alive to the water from which it was taken."

Section 2 provides that "this act shall not apply to the county of Berkshire."

This exception is due to the fact that it is claimed that the trout in the brooks on the mountains and hillsides of Berkshire are small in size, and to prohibit the catching of 6-inch trout would materially limit fishing in that region. It is the opinion of many sportsmen, however, that this law will produce beneficial results in other sections of the State, for it is well known that the unsportsmanlike fish hog is found in Massachusetts as well as elsewhere, and well-authenticated stories of "slaughtering the innocents" are too common. When one hears of brooks being depleted by the capture of from 300 to 900 baby trout it is difficult to feel otherwise than indignant with the "hog" who will thus rob the waters, nullify the work the State is doing and make impossible the fine sport which otherwise might be enjoyed by anglers. The porcine fisher in search of record strings of infant trout will get into trouble this year unless he observes the law.

By the repeal of Chapter 138, Acts of 1891, the open season for trout is made uniform throughout the State—from April 1 to Sept. 1.

The limitation of snaring of partridges, hares and rabbits by an owner upon his own land to the two months of October and November, which constitute the open shooting season, is of large consequence, since thereby there is now no excuse for having partridges in possession except during the open season, while hares and rabbits are protected another month from the destructive influence of snaring. This act was approved by the Governor March 12.

On the same date Governor Crane signed the bill entitled "An act to prohibit the taking of shellfish from contaminated waters."

Considered from several standpoints, it may perhaps be said that the legislators of this State have seldom enacted a law relating to the commercial fisheries that is more far-reaching than this, and it may justly be a matter of pride that Massachusetts has led in this, as she has in many other important matters intended to benefit the health and well-being of the public at large. The full text of the bill is as follows:

Section 1. The Commissioners on Inland Fisheries and Game shall, whenever so requested in writing by the State Board of Health, prohibit the taking of oysters, clams, quahaugs and scallops from the tidal waters or flats of any part of the Commonwealth, for such period of time as the said Board of Health may determine.

Section 2. The State Board of Health shall have power to examine all complaints that may be brought to its attention in regard to contamination of tidal waters and flats by sewage or other causes, to determine as near as may be the bounds of such contamination, and mark the same when necessary, and to request the Commissioners on Inland Fisheries and Game to prohibit the taking therefrom of any oysters, clams, quahaugs and scallops, as provided in Section 1 of this act.

Section 3. Whoever takes any oysters, clams, quahaugs or scallops from any part of the tidal waters or flats of the Commonwealth from which the taking of the same is prohibited as above provided shall forfeit not less than five nor more than ten dollars for the first offense, and not less than fifty nor more than one hundred dollars for each subsequent offense: Provided, That the Commissioners on Inland Fisheries and Game shall cause notice of such prohibition, with a description or bounds of the premises concerned, to be given by publication in some newspaper published in the town or county in which or adjacent to which are situated the tidal waters or flats from which the taking of oysters, clams, quahaugs or scallops is prohibited as above provided, at least one week before said penalty shall be incurred.

The fact having been scientifically established that shellfish can be and are contaminated by sewage, it becomes of the highest consequence that public confidence in the healthful condition of such articles of food should be fully established. In no other way can the trade in such food products—among the most delicious we have—be promoted to the same extent. When once the fact is fixed in the public mind that the public welfare is being scrupulously looked after in this particular by the State government, the shaken confidence of citizens will be restored and thousands who have doubtingly shaken their heads over clams and oysters and refused to eat them will gladly welcome them again to their bill of fare. Thus, while the public health is the chief motive of this law, its enforcement will incidentally be a blessing to the fish trade.

An act prohibiting for a period of five years all fishing in Lake Quinsigamond between Sept. 1 and April 1, and prohibiting the sale of any fish taken in the lake, has become a law.

Among the important bills that have passed both houses is the following:

"Whoever takes or kills a plover, snipe, sandpiper, rail or any of the so-called shore, marsh or beach birds between the 1st day of May and the 15th day of July, or a wild or passenger pigeon, or a gull, or a tern, at any time, shall be punished by a fine of ten dollars for every bird so taken or killed."

The black back gull and herring gull are exempted from the provisions of this act, but the protection of the wild pigeon, the tern and the laughing gull and the kittiwake is complete.

The act relating to shooting or pursuing wildfowl in Boston Harbor has been amended so as to define what is meant by mechanical means, by specifying that any boat or floating device propelled by steam, naphtha, gasoline, electricity, compressed air or any other similar motive power cannot be used. This does not, however, exclude rowboats or sailboats.

Fishing in Lewis Bay or its tributaries with drag nets or seines is prohibited by a bill that recently passed the Legislature and is now probably before the Governor. A similar bill relating to fishing in Pleasant Bay has also passed both houses.

The 9-inch lobster bill is now before the Governor. It passed by large majorities in both houses, and many are on the anxious bench in anticipation of executive action. Many hope he will follow Governor Wolcott and veto the act, and these include lobster dealers and lobster fishermen; but others, of course, believe he will take the opposite action.

The Fish and Game Commissioners hope to get through an amendment to the law for the collection of statistics, so that they can obtain figures of some practical value as statistical data. The bill has passed its third reading in the House, and as there seems to be no objection it will probably reach the Governor before long.

Nothing of importance has yet been done with the Sunday laws, but the bill relating to Sunday fishing, which has been recommitted, will doubtless be soon brought back in a new form.

I learn that Webster Hart, of Conway, who was before the court last fall for killing a deer, and appealed, has recently paid his fine without waiting for the decision of the higher court. Killing deer in this State has become rather too expensive for the average man to indulge in, and the influence of the two convictions obtained last fall within a few days of each other was far reaching and effective. There can be no question about the increase of deer in the Old Bay State, and in some sections it is reasonably numerous.

The North Adams Transcript of Jan. 14 makes the following statement:

"Deer are becoming remarkably frequent in this section. A herd of eight was recently seen near the Vermont line, and this noon passengers on a car from Williamstown saw a large buck at the Braytonville crossing. The animal was frightened and ran rapidly into the woods to the north."

The following extract from the North Adams Evening Herald of Feb. 6 is also of interest in this connection:

"Ed. C. Barber, who lives on the outskirts of Pownal, saw the other day a scene that has not been equaled in these parts. A short distance from his home on a sloping hillside, just as the sun was going down, he saw pass along a short distance from him twenty-two deer, all following in each other's tracks, varying in size from a large buck down to the size of a lamp, and were seemingly tame and the scene was certainly a treat."

When occurrences like these on or near the northwest boundary of the State are recorded and wild deer are seen within view of the gilded dome on Beacon Hill, there is convincing evidence of the possibilities of protection even in a thickly populated State. OCCASIONAL.

The Salmon Angling Excursion.

NEW YORK, March 24.—*Editor Forest and Stream:* I have received inquiries concerning a projected salmon fishing excursion to be furnished by the St. Lawrence Steamship Company this summer. The trip will be a most attractive one for men who have not been down on the North Shore, and there will be abundant fishing for brook trout and sea trout. The excursionists will probably kill a few bears and seals, and will enjoy the sight of the great nesting grounds of wildfowl, but the salmon fishing feature of the trip will not be very important. Let me say a word or two about the rivers that are to be fished. The Olomano is the best one of the lot and furnishes grand salmon fishing for one or two rods during about fourteen days of the run. It furnishes fair sport for one rod for another week. Any more rods on the river would ruin the sport for all. The salmon run into the Olomano about the last week in June. The water is usually too high at that time. During the first two weeks of July the salmon rest in two pools near the sea, and if carefully fished will furnish magnificent sport for not more than two fishermen. After that time the salmon ascend the river and stop again under the Smoky Falls, about two miles up stream. There is only one small resting place a few yards in extent behind an island on the eastern side of the falls, and the salmon are very shy and not easily approached at that sport. After they pass the Smoky Falls they will not rise to the fly. There are very few brook trout in the Olomano. There is a run of sea trout after the middle of July.

The Wash-she-cootai is the next best river of the lot. It is a cold river and salmon will not rise to the fly there until after July 15. The salmon remain in the two pools near the sea during July and August, and are very capricious. It is a fine bit of salmon water for one rod, if the fisherman is very expert, otherwise the river is of no account. Two fishermen on the Wash-she-cootai would probably ruin the fishing a day or two, as the fish rest in shallow water and are very shy—an odd lot of salmon in that river. Salmon do not take the fly after they have passed above the fall at the head of the upper pool. Brook trout fishing is inexhaustible in the lakes above the fall, and one can catch charrs in deep water in the lakes with bait. There is fair sea trout fishing in the Wash-she-cootai after the middle of July.

The Coacoacho is not a salmon river. It abounds in sea trout and would furnish sea trout fishing for a dozen fishermen at some time during the July run, for a couple of weeks. The Musquarro is not a salmon river to any considerable extent. It is a clay river, and the fish do not like it much. The Etamamion has a high fall about two miles from the sea that prevents salmon from ascending. Salmon run in and out during the latter part of June and early part of July, and one rod will sometimes get good sport in a pool beneath the high fall, if the fisherman is patient and contented with exploring while he is waiting for a salmon day. There is a sea trout run in July in the Etamamion.

The St. Augustin I have not fished, because my Indians told me that there was only one resting pool in the west entrance, and that was so full of rocks that two or three fishermen who had tried the river lost their lives promptly. I intended getting a permit and risking some old lines there three years ago on my way down from the north, but was told that no salmon remained in the pool so late in the summer. ROBERT T. MORRIS.

At the National Capital.

AT the annual meeting of the Game and Fish Protective Association of the District of Columbia, March 20, the first steps were taken toward the holding in Washington of a convention of representative men of the District, Virginia, Maryland and West Virginia, the object of which will be to secure legislation to prevent the pollution of the waters of the Potomac.

The matter was brought before the meeting in the annual report of Major Richard Sylvester, chairman of the Association Committee on Legislation, and was referred to the Executive Committee to make the necessary arrangements. The Executive Committee reported a plan by which it is hoped to enlarge the Association's field of work. It is proposed to have the officers of the Association consist of a president, secretary and treasurer, a vice-president from the District and from each of the three States named, and an honorary vice-president from each State and Territory in the Union. There is also to be a large list of committees, the members of which, numbering about sixty, with the officers, will constitute the Executive Committee. The object of this proposed reorganization is to actively enlist a large number in the Association's work, instead of having it all fall on the shoulders of a dozen or so, as has been the case heretofore.

The plan of proposed reorganization was offered in the form of an amendment to the Constitution, and that it may be acted upon at once the meeting was adjourned for two weeks. In the meantime the proposed amendment will be printed and circulated by the secretary among the members. With this in view, the annual election of officers was deferred until the next meeting.

Major Sylvester's report was the first business to come before the meeting. He dealt first with the history of early efforts to prevent the ruthless destruction of game before the Association had been formed and secured the enactment of penal laws. "Since the inception of this Association," he said, "new game and fish laws have been enacted, and it is a pleasure to note that they are generally respected. Now and then a seine is drawn in the District waters contrary to law, but not many examples of the law's violation have been cited, and the education carried on through your efforts has had a most wonderful and beneficial effect. You live to look upon the greatest protected spawning grounds in the country. So it should be. Here at the National Capital, with its headquarters of the Fish Commission, exists a wonderful basin wherein hundreds of species are fostered. It was once said that when you find a man with a rod on his shoulder, no matter what his appearance may be, there's something good in him. So in the fishermen who work for a living along the lower Potomac. They love the work; they appreciate any effort for improving and multiplying the fish, and to-day they have joined in this laudable undertaking of ours and condemn and reproach him who would bring short fish into the market for sale.

"Here hard working people send for copies of the laws and give orders to have them respected. The common carriers eagerly watch for the close of game and fish seasons, in order to be within the scope of the legitimate. The merchant dealers, with few exceptions, do not keep game out of season.

"It is remarkable what an army of boys, youths, middle-aged and old men and women, prompted by the health, recreation and skill which attach to use of the rod and reel, has sprung into existence through the agitation due to your Association, individually and collectively. They study the weather, the water, the forests and mountains, and have learned the Potomac. They know its beautiful features and can intelligently talk of its pollution.

"Now we want Maryland, West Virginia and Virginia to join us, that concerted action may be had which will result in the condemnation and eradication of some of the impure and disagreeable features of the Potomac which filtration will not relieve. No clearer, more logical or more scientific paper was ever presented on the subject of the Potomac's pollution than that read by Henry Talbott, of this Association, which was authorized printed by Congress.

"During the last session of that body I have to report the amendments recommended by this Association, both fish and game, became law. Up to the present time Congress has granted every request made by your chairman on legislation in the way of legislation, and as your warden I have endeavored to enforce these laws. I do not care to multiply words on the subject. Members of the Association who are not familiar with the laws as they now prevail will obtain them in new books, which, I presume, will be authorized to be issued at another meeting of the Executive Committee.

"During the year there were sixteen cases prosecuted for violation of the fish law and seven cases prosecuted for violation of the game law, and in all except one conviction resulted. I have here the names of those who were charged with such violations. As they have paid their penalties, it is not necessary perhaps to make public their names, but the list is with the secretary for perusal."

Following Major Sylvester's report, Mr. Henry Talbott read a very able and scientific paper dealing with the pollution of water in general and Potomac River water in particular. He contended that the emptying of sewage and the refuse of mills and factories into rivers is not only a menace to public health but it is destructive of fish. Although this pollution of water may not in all cases be sufficient to kill the fish directly, he said it destroys the smaller plant and animal life in the water and leaves the river uninhabitable for fish. The Association will have Mr. Talbott's paper printed for general distribution.

As a concluding number on the evening's programme,

Prof. Charles H. Townsend, of the Fish Commission, gave an illustrated talk on the cruise of the Albatross through Southern Pacific waters. The Albatross took soundsings and dredged a course of more than 3,000 miles, and her crew made many interesting inland trips through South Pacific islands. The results of the dredgings, Prof. Townsend said, were not particularly interesting, as the bottom of the Pacific is the most barren of any waters where the Government experts have dredged. On the islands, however, they found much of interest, and with these his lecture mainly dealt.—Washington Post.

The Kennel.

Training the Hunting Dog.

By B. Waters, Author of "Fetch and Carry: A Treatise on Retrieving."

XV.—Breaking Shot, Breaking In, Chasing.

The different manifestations of unsteadiness are termed breaking shot, breaking in, and chasing, and all have their origin in the desire of the dog to capture the bird. It is all quite in keeping with the dog's nature, and his natural manner of acquiring possession of his prey. Breaking shot is when the dog breaks away at the report of the gun. Breaking in denotes that the dog, as the term signifies, breaks in and flushes the birds, either before or after making a point, and chasing signifies according to its common meaning.

The amateur, whose prejudgments are based on his own purposes as being the true data for estimating the dog's duties, is prone to consider the different forms of unsteadiness as manifestations of perversity or malicious harmfulness. From the dog's standpoint, the handler has no more relevancy in the pursuit of game than he would have in a bone which the dog might be gnawing. While the dog takes a certain degree of pleasure in the pursuit of game, a material purpose, the capture of the prey, dominates, and thus his eager pursuit has a basis of self-interest. The latter must be preserved, therefore it is seldom good training to attempt to check his unsteadiness too suddenly. It is better done by easy degrees, even if the dog is distinctly hard headed in his obstinacy.

It is one of the easiest parts of the training to enforce when the trainer engages in it seriously, although it is one of the most difficult for the average shooter to enforce, on account of his failure to methodically control the dog by mechanical means.

Some nice judgment should be exercised as to how much freedom to give the dog, on the score of timidity, apathetic interest, natural indolence, etc. Some dogs, whose self-interest is exceptionally assertive, will hunt with the greatest enthusiasm for themselves, while exerting themselves with half-heartedness for their masters. Thus the matter of how much restraint shall be exercised is one of expediency, which must be determined by the good judgment of the trainer.

While giving the puppy's unsteadiness serious consideration, the amateur should avoid any exhibitions of it himself. If he breaks shot to capture a wounded bird, or manifests undue haste and excitement when in the vicinity of birds, it is unreasonable to expect steadiness under such circumstances on the part of the puppy, or indeed on the part of a thoroughly trained dog. The enormity of the offense as manifested by the puppy consists not so much in the error itself as in spoiling a shot for the trainer. Most amateur trainers are more intent on the pleasures of the sport than on the advancement of the dog's schooling, and therefore the error of the puppy is in the nature of a personal injury to them.

Chasing rabbits should be corrected first. Viewed from a schooling standpoint, the act may be a fault or not, accordingly as the dog may or may not need an incentive to effort. Timid dogs gain self-confidence and boldness, while lazy dogs acquire more industry and enthusiasm from indulging in it

When the trainer attempts to teach the dog to forbear chasing, the theory is to make the act painful instead of pleasurable. The trainer proceeds to establish in the dog's mind an association of unpleasant ideas in reference to the rabbit. This is quickly done by shooting a rabbit ahead of the dog, on favorable opportunity, of which many present themselves when a dog is addicted to the habit of chasing. The dog will manifest the greatest elation. However, the trainer fastens a checkcord to the dog's collar, and with the rabbit and whip in the left hand a good whipping is administered to him. At intervals, the rabbit is thrust in his face, the trainer at the same time exclaiming Hi! Hi! Hi! with some cuts of the whip sandwiched in. The dog credits all the hurts of the whip to the rabbit, and learns to associate it with pain accordingly. It is commonly held to be bad training to shoot a rabbit ahead of a dog. It is so if one indulges in it with a thoroughly trained dog. Discrimination between what encourages a dog to chase and what deters him from chasing should be considered. Shooting a rabbit ahead of a dog in pursuit of it, and punishing him for it, bring the act and the object in direct and painful association. After a time, if the dog at the first view of a fleeing rabbit, forgets himself on the impulse of the moment, and starts to chase, the warning cry Hi! Hi! Hi! will check him, and on second thought he will desist. The punishment must be persisted in till the dog ignores the rabbit temptation reliably.

The correction for unsteadiness in respect to shot and birds is also administered on the theory of associating the errors with pain, but in practice much more care needs to be exercised than in breaking the dog of rabbit chasing. By injudicious punishment, it is quite as easy to teach the dog to forbear hunting birds at all as it is to forbear chasing rabbits. There is a degree of punishment which will deter the dog from chasing and breaking in; there is a further degree which will deter him from hunting at all, and there is still a further degree which will cause him to blink. He never should be punished so severely or so persistently that he shows hesitation or loss of confidence in himself or handler. It is much better to make haste slowly, accomplishing advancement safely, step by step, than it is to take the chances of establishing all necessary steadiness in a moment or ruining all at the same time.

Dogs of a sensitive, deferential disposition may be steadied by the warning cry, Hi! Hi! Hi! and words of disapproval alone. On a dog of a bolder nature, the check cord is put while he is pointing, and when the birds rise he is permitted to dash forward fifteen or twenty feet before being snubbed and brought back to the place whence he started.

Aged, experienced dogs which have become confirmed shot breakers may be dealt with still more severely. A spike collar is effective in making a prompt cure of one of this kind. Place it upon his neck when he is working. Tie the choke with a piece of twine, so that it will not slip backward and forward as a choke collar, thus resting on his neck in manner similar to his ordinary kennel collar. When he points, the trainer walks up to him quietly, fastens the check cord into his collar, adjusts it so it will uncoil freely, then shoots and permits the dog to run into the collar when he breaks shot. The impetus of the dog breaks the twine, and the collar then hugs his neck tightly. The trainer forces him back to place with the collar and cord. Few dogs have the courage to break shot after two or three experiences with the collar applied in this manner. If the dog is self-willed and obstinate above the ordinary, it is better to engage the assistance of a clear-headed friend to do the shooting, while the trainer devotes all his attention to the dog. Play to give the dog every opportunity to break shot, and let him go to the full length of the check cord as often as he will do so. If he at length hesitates to break, the trainer by feigning to break shot himself may encourage him to do so, but at every offense he is brought back to place with a pull of the collar, and if necessary he is still further punished with the whip. The most resolute dog will not persist in lawless breaking away under such treatment, and it has the further advantage of being lasting in its effects. Concerning the use of the spike collar, the trainer will do well to read and heed the remarks upon its use presented in another chapter.

100 Sportsmen's Finds.

Some of the Queer Discoveries Made by Those Who Are Looking for Game or Fish.

Carping writers may question the propriety of including here these fiends—52 to 57—on the ground that they relate to a period too remote and were not the finds of fishermen. But as to the time of their happening, be it said, for such incidents we must go back a long way—our age is too prosaic for their like; and as to their not being finds by sportsmen, what is there to show that the fishermen who caught the several fishes were not all true sportsmen of the very truest sort?

52

There are many legends paralleling the gospel story of Peter's finding the piece of money in the fish's mouth. Thus St. Cadoc, of Wales (sixth century), was walking one day with Gildes, the historian, and, putting his Virgil under his arm, began to weep at the thought that his beloved poet was even then perhaps with Satan and the lost. A gust of wind caused him to lift his arm, and, to his great grief, his book was blown out to sea. Next day a fisherman brought him a fine salmon for a present, and in its stomach was the lost Virgil, uninjured.

53

St. Benno, Bishop of Meissen, in Saxony (June 16, 1106), left his see and went to Rome to avoid the persecution of the Emperor Henry IV., and ordered that the keys of his cathedral should be thrown into the sea when Henry was excommunicated. When he returned he found them in a fish.

54

St. Egwin, Bishop of Worcester (Jan. 11, 720), wanted to punish himself for his worldly life when a youth, and put fetters on his feet, throwing the key into the sea. On his way back from Rome the seamen caught a huge fish, in whose stomach was the key, which the saint considered a sign that his penance was abridged, and he released himself.

55

St. Atilan, Bishop of Zamora (Oct. 5, 10th century), wanted to surrender his bishopric, and threw his Episcopal ring into the Douro. But a fish brought it back to him, and he concluded that he should continue to bear his burden.

56

The salmon and the ring in the coat of arms of Scotland are explained by a remarkable legend. A young Scotch lady had dropped her ring into the Clyde, and her husband suspected her of having given it to a lover. St. Kenttgernor Mungo, Bishop, prayed for her on the river bank, and a salmon came up with the ring in his mouth. The Bollandists tell the story differently, not putting the lady in as innocent a light, though they state that she reformed.

57

St. Maurillus, Bishop of Angers (Sept. 13, 5th century), is represented holding a fish out of whose mouth or gills keys protrude. The legend tells that he let a child die without baptism (others say confirmation), and was so convinced of his unworthiness as pastor that he fled to England, where he worked as a gardener. On his voyage he threw the keys of his cathedral (or of the reliquaries) into the ocean, but people following him caught a fish in whose stomach were the keys, and the sight of them convinced him that he should go back.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Canoeing.

Notice.

'Mid Reef and Rapid.—V.

BY F. R. WEBB.

No two cruisers have just the same ideas in regard to equipments, or go out with exactly the same outfit. One man scorns all superfluities and goes flying light in the matter of baggage. He rolls himself in a single blanket and sleeps on the floor boards of his canoe; with a coat for a pillow and a rubber sheet thrown over a paddle laid lengthwise of the cockpit for a tent, perchance elevated at one end by being lashed to a mast if he has one; if not a couple of forked sticks will elevate it. He scorns a camp stove as useless lumber, and boils his coffee and fries his bacon and eggs (upon which he chiefly lives while on his cruise, for eggs may be procured at any farmhouse, and potatoes, onions, etc., are heavy and bulky) on a little bed of coals.

He finds ample occupation on Sunday forenoons in washing out the extra shirt, pair of socks and the couple of handkerchiefs he has burdened himself with, and in scraping the mud off and darning the holes in his one pair of trousers.

Another goes to the other extreme, and loads his canoe down with superfluities. I have never actually cruised with a man who took a dress suit along, although I have read of canoeists who did so; but b'iled shirts have not been unknown among the men I have cruised with, and umbrellas, silk hats and feather pillows have been heard of in a canoeist's outfit.

A happy medium is the best plan. Camping, even under the most favorable circumstances, is roughing it, and all the little comforts and conveniences to which a man is accustomed at home are set aside for the time being, and it is not advisable to go to too great an extreme and make too radical a change. Our party had perhaps rather more conveniences and even luxuries than most cruisers enjoy, but we had no trouble in finding stowage room for everything, and we have found that the carrying of them along with us not only entails no special inconvenience upon us, but adds greatly to our comfort and pleasure; therefore we carry them.

There are three points upon which we insist on being well provided. They are, first, absolute protection from the weather day and night; second, good, wholesome, abundant, well cooked food; third, good comfortable sleeping accommodations.

In providing for the first point we take plenty of clothing along—woolen by all means—consisting of one good stout coat, two pairs of trousers, one of which at least must be short, or Knickerbockers, and two pairs are better so that when making a morning start after a night's camp a dry pair may be at hand to put on in case the pair worn the day before are wet.

These short trousers, with long stockings and hob-nailed canvas shoes, are worn in the canoe while cruising. Two medium-weight flannel shirts, one light ditto or pongee shirt to wear on the trip home or on occasion where anything in the nature of "dress up" is required—extra shirts, ties, etc., are best preserved from "mussing up" or rumpling in the clothes bag when tightly rolled up in paper, as when they are received from the furnishing store. I also carry an extra heavy flannel shirt to sleep in, but this may be dispensed with.

Two changes of underwear in addition to the suit worn, two pairs of long heavy bicycle stockings, three pairs of socks (if a pair of long trousers be taken), and half a dozen handkerchiefs complete the equipment of clothing. Half a dozen towels, a cake of soap in a tin box, a brush, comb and tooth brush in a leather case, and a small mirror make up the toilet articles. These latter, including one of the towels, are carried in one of the side pockets which are strung along under each side of the cockpit coaming—four on each side. A small waterproof bag will hold what stationery is required. Stamped envelopes will be found more convenient than the other kind, as loose stamps are apt to absorb moisture and stick together.

A small muslin bag may be carried, in which is stowed a miscellaneous collection of odds and ends, such as needles, thread, thimble, pins, buttons, hooks and eyes, safety pins (both the latter articles are quite handy and useful for a variety of purposes), tape, small rubber bottle of ink, fountain pen, dropper for filling, etc., while in another small bag may be placed a stick or cake of shaving soap, razor, shaving brush (one that is reversible, with brush that can be screwed inside of handle is best), and leather strop rolled up and tied.

All clothing, towels, smoking materials (except a small temporary supply for present use, that may be carried in one of the cockpit pockets) and the two small bags just mentioned are carried in a round-bottomed, well-oiled bag of very light duck or heavy drilling 22in. long and 42in. in circumference, with a stout double drawn-string in the top. This bag may be made by the canoeist himself at a cost of about 25 cents.

For use in the canoe a helmet, either of straw or of cork, is worn, while a soft felt hat or yachting cap for shore use is a luxury which, once used, is appreciated. An extra heavy pair of stout leather shoes for shore use should be carried, and a light pair of low canvas rubber-soled tennis shoes or heavy slippers for camp use will be found well worth their slight weight and room.

Some protection from the weather is of course necessary. Some canoeists carry a suit of oiled muslin, consisting of coat and pants and a heavy sou'wester hat; and these are highly recommended by canoeing authorities. I used a suit of them for several seasons, but did not like them. Perhaps I may have been unfortunate in my choice of goods, but I found them very heavy, bulky, sticky and generally disagreeable; and I now use and much prefer a long, heavy rubber coat for shore use, and a light cape of best quality heavy gossamer (which I had made with special reference to carrying on all day trout fishing trips) for use in the canoe. An oiled cape of

heavy muslin or drilling will do as well, except that it is much bulkier and heavier, and may be made by the canoeist himself at an expense not exceeding 25 cents; it should be from 30 to 32in. long from collar to hem, and is the two-thirds segment of a circle. These articles, with the before-mentioned sou'wester hat, give effectual proctection from the rain ashore or afloat.

As to the second point—good, wholesome, well cooked food—the great standby of the average canoeist is bacon and eggs. This is an excellent diet as far as it goes, but when indulged in two or three times a day for an entire cruise it has a tendency to grow monotonous, and the boarders around the camp-fire may well be excused if they feel like the boarders immortalized in verse at the celebrated boarding house where they had ham and eggs three times a day, and should want to yell, too. Potatoes, onions, fish and fresh meats when procurable all give healthful variety to the bill of fare, and, although a little bulky and heavy, are well worth their carrying, and room may generally be found for them in some of the other fellows' canoes.

There is a great deal of romance and poetry about a camp-fire, but for good, quick, effective cooking a sheet iron camp stove is infinitely preferable, and I would almost as soon cruise without my canoe as without my camp stove.

Our stove, in connection with the expeditionary tinware and cooking utensils, has been fully described.

The club supplies consisted of bacon, eggs, potatoes, onions, biscuits, cheese, pickles, olives, a boiled ham, a boiled tongue, with canned goods, such as ham, tongue, sardines, boned turkey and chicken; coffee, sugar, salt lemons, pepper, corn meal, coal oil, candles and matches.

The coal oil was carried in a flat-topped half-gallon can with a brass cap over the spout, which was packed in the camp stove. There is a great deal of prejudice in the minds of many canoeists against carrying coal oil, but when packed as above described we have never yet experienced any inconvenience from it, and we consider it indispensable for starting fires, especially on a rainy day; also a lighted lantern or two around a camp has a good effect in keeping off prowling "varmints." Coal oil lanterns are, however, objectionable for use in the small canoe cabins, and we use candles in our tents. The eggs are carried in a couple of half-gallon lard buckets; the potatoes, onions, biscuits, cheese, lemons, candles, etc., in bags of drilling or sheeting. We generally lay in a supply of four or five dozen biscuits at a time, and the bag containing these, as well as the smaller bags containing crackers, cakes, etc., are carried in a large round-bottomed oiled canvas bag. The matches are carried in large-mouthed bottles—one in each canoe—securely corked and with a small brass screweye in the top of each cork, to which is attached a string, which is tied around the neck of the bottle and is the means of preventing much bad language and vexation of spirit. The coffee, sugar, butter, lard, salt, pepper and corn meal (in which to fry fish) are carried in small tin cans—generally of the square kind procured at any drug store. The bacon is procured in coarse sacks, in which it remains until used up. The ham and tongue are packed in muslin bags.

The mess chest is a small box, 12 by 18in., and 6 or 7in. deep, covered with oiled canvas. It contains one tin can each of coffee, sugar, butter, lard, salt, corn meal and pepper, a small bottle of pickles or olives, a small bag of biscuits, one or two cans of potted goods or sardines, a piece of cheese, a couple of hard-boiled eggs, some sliced ham or tongue or both, a couple of lemons and whatever else is intended for each day's noonday lunch, for it is our custom to get up a hot meal for breakfast and supper only, and to have a midday lunch, picnic fashion, instead of dinner, and everything necessary for this lunch is prepared and stowed in the mess chest by me, every morning after breakfast, so that all the unpacking required for our midday meal is to get out the mess chest. It also contains all the expeditionary graniteware plates, knives, forks and spoons—each man carries his own drinking cup in his own canoe. Extra cans of coffee and sugar were stowed in my canoe, and the small mess chest cans replenished from time to time as required. All the small canned goods are stowed in a large oiled canvas bag, and the provisionary supplies were distributed around among the different canoes as equitably as might be.

Our bacon, coffee, sugar and canned goods were laid in at Staunton for the entire cruise, while but a small supply of butter, lard, vegetables, eggs and biscuits were laid in, as owing to the heat generated below decks they will not remain in good condition longer than two or three days, and are easily replenished at almost any farmhouse.

We are by this time quite well known along the river, and generally make it a point to procure supplies at certain houses on each cruise, where we know by experience that good butter, lard, bread, etc., can be had, such as Rippetoe, Kygers, Bear Lithia Springs, Coffman's, Keyser, Fleming, the Kenner House, at Riverton, and Osburn's.

The third point—good sleeping accommodations—I consider also a very important one, for after a hard day's work a good refreshing night's rest is surely more beneficial than a night passed in turning and twisting around in the vain endeavor to find a softer spot on the pine floor boards of the canoe; consequently our party carried each a small folding hair mattress, specially designed and made to our order, which, when extended, spreads over a floor space of 5ft. in length by 18in. wide, and which, when folded for transportation, presents two cushions 18 by 20in., upon which to sit, which, with a third cushion of the same size placed in an upright position against the swinging back rest, forms a most comfortable seat, and the room it occupies is not noted. The mattress is incased in an oiled canvas bag, which is slipped off when preparing the bed for the night. A small air pillow is slipped inside of the mattress bag for transportation and used at night.

A good thick pair of blankets incased in an oiled canvas bag and a piece of rubber sheeting, such as is used in carriage tops, about 5 by 7ft., complete the sleeping arrangements.

A good serviceable tent is also to us at least a necessity, as the crude shelter afforded by the rubber sheet and paddle arrangement does not come up to our ideas of comfort. Our tents are of the square or oblong-topped Mohican pattern, made of blue and white striped awning cloth, with white duck tops. The tents are 5ft. long on top and 8ft. long on the bottom, covering the entire cockpit. The canvas roof extends a few inches beyond each end of the tent, and these ends are looped to receive light spreaders of bamboo or pine, which are slipped in when the tent is to be used. A light line is rove into each end of the looped top, so as to pass the bight of the line around the spreaders, and a metal hook or snap similar to those used on hitch reins is rove into the free ends of the lines to hook into the rings at bow and stern of the canoes. Tents of this class are usually erected by lashing the lines to the masts, but as our canoes carry no masts we use a simple device in the shape of a couple of standards. Each standard is made of two pieces of light pine bolted together at one end, the other ends being left free, so that they spread out like the legs of a pair of compasses. They are about 3½ft. long—a little longer than the height of the tent. To raise the tent in position for the night, throw it loosely over the cockpit, insert the spreaders into the loops at each end of the top, hook the hooks at the ends of the lines into the bow and stern rings of the canoe, spread and raise the standards one at each end of the tent, with the lines passing through notches cut in the tops, which also raises the tent; place the feet of the standards (also notched) on cleats screwed on top of the gunwales on each side of the canoe for this purpose; fasten the tent all around at bottom and corners to stout screweyes screwed under the gunwales or fenders by means of loops of stout fish line slipped through button holes worked for this purpose, and there you are! It is a much simpler and neater device than tying the tent ropes to masts, and there is no strain on the decks of the canoes.

The advantages of the canoe tents over a shore tent for a cruising party are obvious. Good smooth camping places affording room for a shore tent are not always to be found when camping time arrives, whereas when canoe tents are used a camp may be made wherever room can be found for the canoes. We have not infrequently camped on the side of a high bank or placed the canoes for the night on the rocks and reefs at the water's edge, and I have even put up my tent and slept with my canoe afloat safely moored to the bank with bow and stern painters.

Our mess table—two thin pieces of poplar 4ft. long and 12in. broad—mounted upon four buggy wheel spokes driven into the ground, upon which they are sustained side by side on cross-pieces fitted to the spokes at each end of the table (in transit the boards are laid flat on the floor boards of one of the canoes, and covered with a piece of rubber sheeting to prevent soiling by muddy shoes), and our dining fly of striped awning cloth of the same material and pattern of which our tents are made and erected on two of the light bamboo pike poles carried by each canoe, will doubtless be considered by most canoeists as superfluities that might be dispensed with, but we have found both to be such conveniences that they are worth more to us than their room and weight in the canoes. On a rainy day in camp the fly comes out specially strong and proves to be a convenience that is well nigh indispensable. We each of us also carried another superfluity in the shape of a small light folding camp stool, which we find such a comfort and convenience that it could not well be dispensed with. This, when folded flat and placed on the floor of the canoe under the mattress, is entirely out of the way, and its weight is but a trifle.

We carried two small coal oil lanterns for use around the camp, but for use in the canoes each one was provided with an ingenious little candle lantern, constructed in my workshop out of a couple of blocks of pine, a yard of stout wire, a piece of bent tin and a large lamp chimney. The piece of tin was tacked to one side of the wooden base of the lamp, and bent so as to hook over the cockpit coaming, where, so placed as to come between the eyes of the canoeist and his book as he lies at full length in his blankets, its convenience for reading purposes is inestimable.

[TO BE CONTINUED.]

THE following men have been proposed for membership to the Eastern Division of the A. C. A.: Arthur C. Whittemore, West Medford, Mass.; Philip A. Hutchins, West Medford, Mass.; F. B. Howard, Medford, Mass.; Frank H. Hamilton, Medford, Mass.

Yachting.

Our Boston Letter.

BOSTON, March 23.—The annual meeting of the Yacht Racing Association of Massachusetts has been held, the dates for open races to be sailed under its rules selected, and it now looks as though the season had commenced in earnest. This will be a great yachting year in Massachusetts, not only for the Association but for all kinds of club racing. Many new boats have been built and the old ones are not leaving the district in very large numbers, so that there should be a very respectable racing fleet throughout the entire season.

Several of the clubs will have more than one Y. R. A. race day. The custom of having a series of races has grown very popular in Massachusetts during the past few years, and there is no doubt that it is a very good thing, for it has been noted that when a series of races have been given there have been more boats attending than if a single race was held. This year the Hull-Massachusetts Club has taken four dates, three of which will be for invitation races. The American Y. C., of Newburyport, has taken three dates, all of which will be for open races. It is expected that the town will have an anniversary celebration on June 25, and the American Y. C. is expected to arrange an elaborate programme of races on that day. Newburyport day will come on Aug. 13 this year, and two days' racing will be held. The Annisquam Y. C. started in last year giving series of races, and it will do the same thing this year. The Burgess Y. C. will have two days' racing and the East Gloucester Y. C., which did not hold any Y. R. A. race last year, will this year give two.

The following list of race dates was taken by the different clubs:

May 30, Thursday—South Boston, City Point.
June 17, Monday—Hull-Massachusetts, for classes over 18ft., Hull. Dorchester, classes 18ft. and under, Dorchester.
June 25, Tuesday—American, Newburyport.
June 29, Saturday—Boston, City Point.
July 3, Wednesday—Columbia, City Point.
July 4, Thursday—City of Boston, City Point.
July 6, Saturday—Mosquito Fleet, City Point.
July 20, Saturday—Winthrop, Winthrop.
July 25, 26 and 27, Thursday, Friday and Saturday—Hull-Massachusetts, invitation races, Hull.
July 29 and 30, Monday and Tuesday—Burgess, Marblehead.
Aug. 5 and 6, Monday and Tuesday—Manchester, West Manchester.
Aug. 7 and 8, Wednesday and Thursday—East Gloucester, Gloucester.
Aug. 9 and 10, Friday and Saturday—Annisquam, Annisquam.
Aug. 12 and 13, Monday and Tuesday—American, Newburyport.
Aug. 17, Saturday—Wollaston, Quincy Bay.
Aug. 26, Monday—Cape Cod, Provincetown
Aug. 27, Tuesday—Wellfleet, Wellfleet.
Aug. 29, Thursday—Plymouth, Plymouth.
Aug. 30, Friday—Kingston, Kingston.
Aug. 31, Saturday—Duxbury, Duxbury.
Sept. 2, Labor Day—Lynn, off Nahant.

It has been decided by the Yacht Racing Association that all movable trusses must go. The yachts which have been built for the unrestricted classes have become lighter and lighter in construction with each succeeding year, until they have reached the point where trusses are absolutely necessary to hold up the long ends that are not sufficiently strong to maintain their original form. The Yacht Racing Association realizes that these trusses are necessary and has no intention of attempting to bar them altogether, but it does insist that, when they are used, they shall be sealed by the official measurer in such a manner that they will become immovable, and an official seal put on them.

This year there will be but one general circuit of races to be held under the rules of the Association. Last year the season's races were divided into three circuits. It has not been discovered that any good came of this change, but, on the contrary, if persisted in, it might have proved dangerous for the Association. One Association is absolutely necessary in these waters, and only one. If that one Association were to be divided into three districts, it would be only a forerunner to the existence of three associations. This would be a severe blow to yachting in Massachusetts, for there would undoubtedly be scantling and classification rules which would conflict, the general classification that exists now would become a thing of the past and the yachtsmen would not feel encouraged in building new boats.

The present classification with its scantling restrictions is a good thing for yachting. First of all it provides uniform classes, all of the boats for which are built to the limit of waterline length. The limit of waterline length being maintained under the rules, permanent classes are obtained—that is, a 25-footer is built to be a 25-footer, with a waterline length between 24 and 25ft., and not a 22-footer or a 23-footer or a 24-footer. The scantling restrictions provide a boat that is staunch and seaworthy and which will not become useless after a few seasons of racing. With the assurance of permanent classes and restrictions that will insure well-built boats, the yachtsmen have every inducement to build, for under these conditions a yacht becomes marketable at any time and the owner is not offering for sale an obsolete type of boat.

But with all the good that the Association has done and all that it is possible for it to do in the future, there are always some who want constant changes which will bring things nearer their way of thinking, regardless of the interests of others. These things have always had to be met since the present Association was formed and in similar associations before it. There is now a movement on foot to form another association that will directly conflict with the principles of the present one. Parties have been to some of the clubs with the object of having them leave the present Association and join the new one. If this movement was started for the purpose of elevating yachting it might receive the attention of reputable clubs, but there is every reason to believe that it has been started because of purely personal grievances and that the promoters want to form an association in which they will have their own sweet way, regardless of the harm it might do yacht racing and without any thought of fairness to others.

Independence is fast taking form at the Atlantic Works. More than half the plating is already on her, and the plates are being turned out every day. All of the plates of the second strake from the bottom of the fin have been put in place. As soon as these are all riveted the remainder of the lead will be stowed. Nearly all of the steel plating of the deck, with the exception of the partner plate and those which go between it and the stringer plates, has been put in position. The brackets that brace the deck beams and the frames have all been riveted to place on the starboard side. The intercostal plates that brace the floor plates are nearly all in and the steel bulkhead, that strengthens the fitting around the mainsheet traveler, has been bolted to place. It has been found necessary to cast a new frame for the balance rudder, as the one already cast did not prove flexible enough under test. The new one will be cast at the Bath Iron Works of Hyde metal.

The committee appointed to conduct the races for the cups and prizes offered by Thomas W. Lawson held a meeting this week and appointed a sub-committee to arrange all necessary details. It has been decided to hold the races on Labor Day, Sept. 2, or one week from the close of the America Cup races. If these races are finished one week or more before Sept. 2, the races for the Lawson cups will be held on that date, but if they are not finished until less than a week before Sept. 2, the Lawson cups races will be held one week from the time they are

finished. For instance, if the America Cup races are finished Sept. 2, the races for the Lawson cups will be held on Sept. 9.

Hanley has an order for a Canada cup defender from Detroit parties, and the keel of the boat is now set up in the shop. He also is building a Y. R. A. 25-footer for ex-Com. A. W. Chesterton, who formerly owned the champion 25-footer Hermes. He has an order to build a Y. R. A. 25-footer from Crowninshield's design for T. B. Wales. The 18-footer for Humphrey and Lauriat is well along. Yachtsmen in the East will be glad that Hanley will have a chance to show his work in the Canada cup races. It was desired by those building other defenders and by B. B. Crowninshield that a Hanley boat should compete.

At Lawley's the Sloan 85ft. schooner is about half planked. The Parsons 46-footer is being finished up inside and has been painted outside. The Binney 70ft. steamer is partly planked and the 86ft. steamer of the same design is having her house put on. The deck beams are being laid on the Douglas 18-footer. The Bar Harbor 25-footer is all planked. The lead keel of a centerboard 25-footer will be set up this week. The frames of the Eno 120ft. steamer are being set up.

Kiley's Marine Agency has sold the passenger steamer Montvale to a syndicate, which will convert her into a house-boat; also the naphtha yacht Gladys to Edward F. Shumway, of Falmouth; the schooner Fiona to Elmer P. Broadbent, of New Bedford, and the catboat Foam to Frank Comer, of Fall River.

Crowninshield has sold the steam yacht Columbia, formerly owned by Col. Albert B. Pope, to Montgomery Rollins, and, in connection with F. Bowne Jones, the yawl Scarpha to Mr. Fallett, of Brooklyn. He has an order for a 21ft. cat for A. T. Brownell, to be used at Newport.

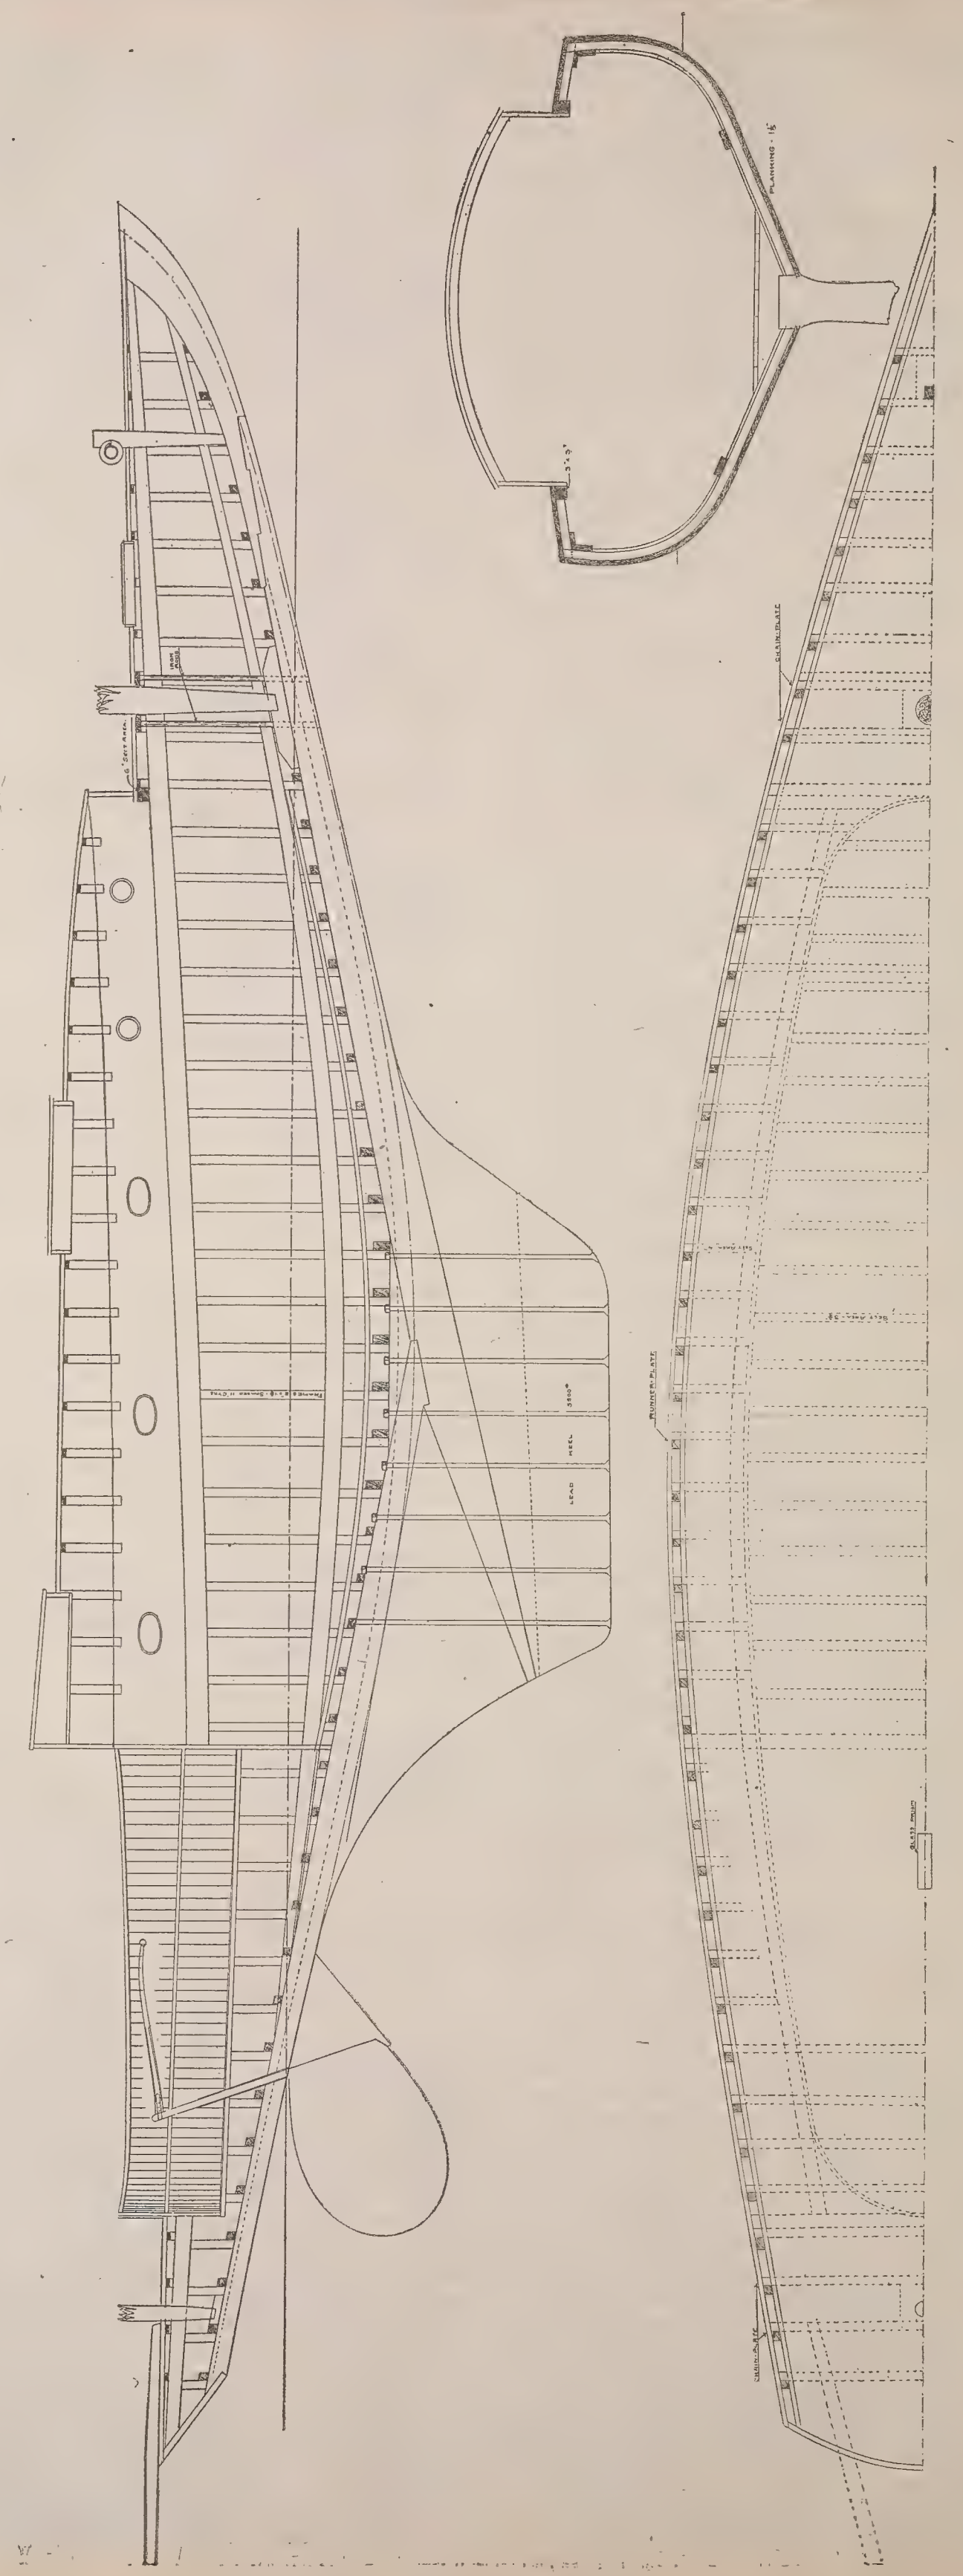
Fenton has the Y. R. A. 25-footer designed by Crowninshield for F. B. Macomber all planked and the deck is now being laid. He is building a Y. R. A. 21-footer from designs of W. Starling Burgess for T. K. Lothrop. New topsides and deck are being put on the 25-footer Khalifa, which was damaged by the recent fire.

JOHN B. KILLEEN.

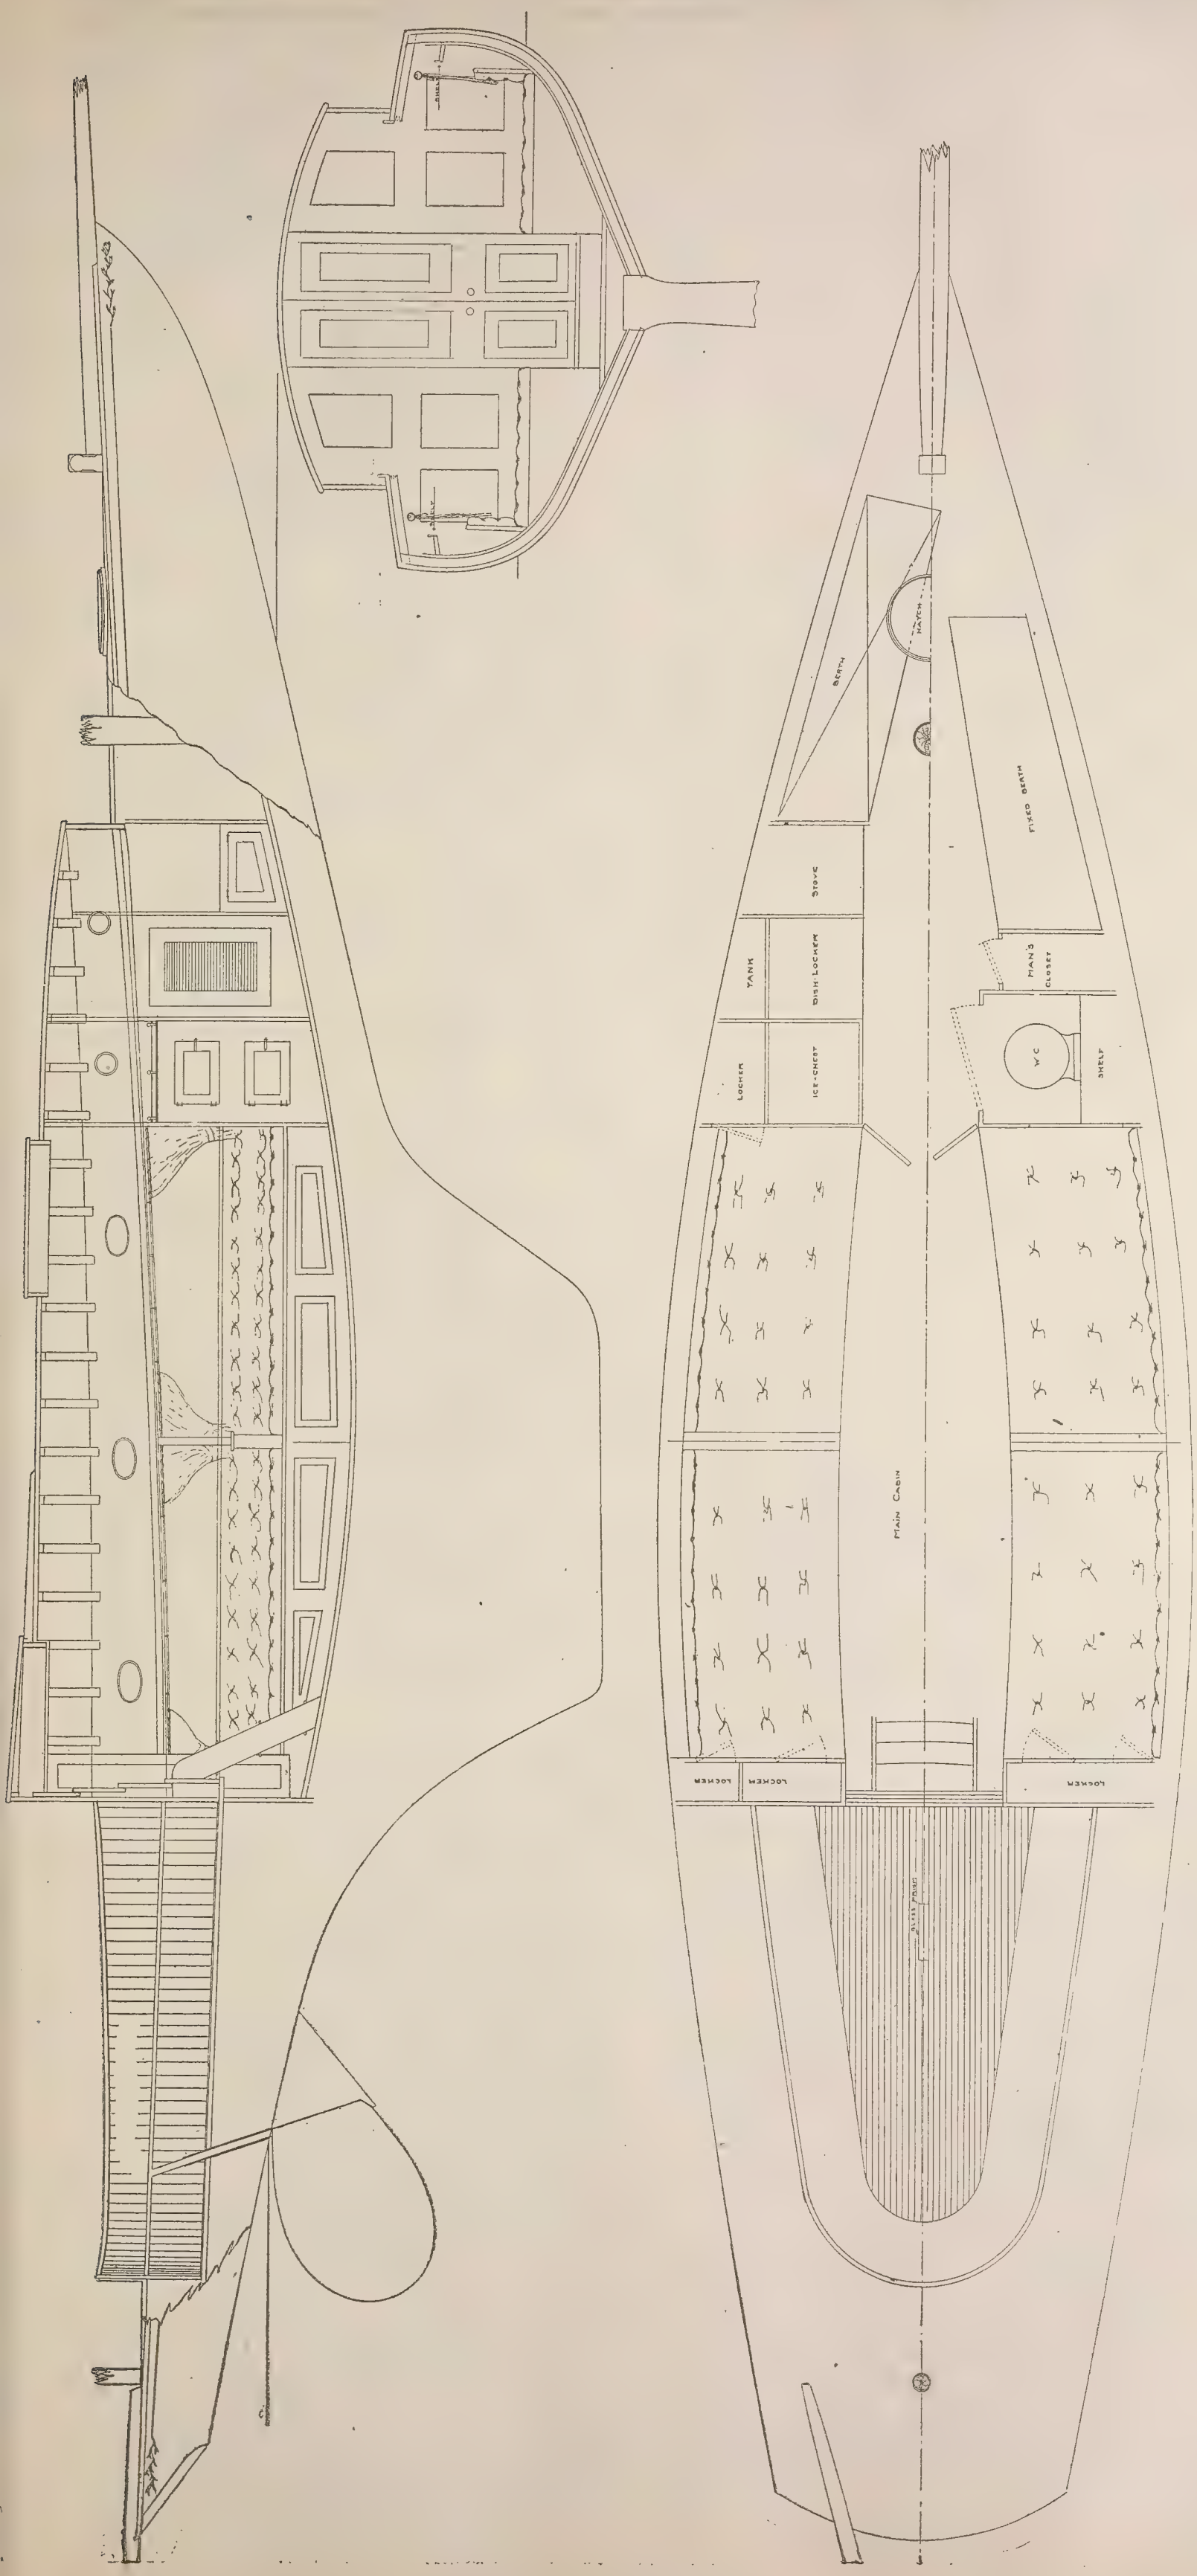
American Yachts and Yachting.

Lecture by Professor Biles.

THERE was a crowded attendance, including many well-known yachting people, in one of the class rooms of the Glasgow University on Monday evening, when Prof. Biles lectured on "American Yachts and Yachting." To all who have a love for the sea, said the Professor in his introductory remarks, the subject of yachts is always an interesting one and frequently an enchanting one. In clear, bright weather, when the sea is smooth and the winds are light, the yacht glides through the water with an almost imperceptible motion. After patient watching, a breath steals over the water, develops to a breeze, and when the vessel responds, the cooling breath of air, the swish of water on the bow and the heeling over of the vessel all betoken the flight of the great bird ship. Later on the wind increases, and the sailors reluctantly take in the lighter of the beautiful white wings, and with a good anchorage not far away the steersman prudently makes for it. This is yachting in its pleasantest aspect; but the yacht must be made so that she can face the sea if she cannot find shelter or happens to belong to the yachting enthusiast who detests fine weather and is only happy when he is at sea in a gale of wind. Generally strength can be added to a structure by putting in more material, but the construction's problem is to get as much strength as possible for a given weight. The problem of development in yacht design is one of reducing weight without strength. At any rate, in America the yacht designing has been developed on these lines, the question becoming largely one of lightening construction and thereby increasing the weight available for sails and ballast, or reducing the displacement, and generally thereby increasing the speed. The first American yacht was built, he said in 1614, and the first English yacht ten years earlier. In the eighteenth century there was little yachting in America, and it was not until the arrival of the schooner America and the winning of the Squadron cup that British yachtsmen began to take any interest in the doings of the yachting men on the other side of the Atlantic. The America was first in that historic race, with an English sloop, Aurora, second; but as the America was 160 tons and Aurora only 47, it looks, according to our up-to-date ideas of time allowance, that Aurora should have been awarded the cup. Up till about 1870 the America Cup races which were sailed were very like our cruiser races, except that they lacked the refinement of an official handicapper. The racers were chosen from boats already in existence, sometimes as much as thirteen years old, and the American boats especially had usually been experimented on by the fitting of different rigs at different times. How different was the present-day fashion of building a yacht for international racing! A veiled secrecy surrounds it in conception and construction. The newspapers, in hushed, whispering paragraphs, print day by day inviolable secrets, and when the vessel is launched and completed she is to be seen by an interested and wondering public only at a distance of miles, for fear some one might see her shape or material. Success justifies almost anything, and these precautions are taken to preserve the secrets which each designer considers vital to his own success, but which probably the other, if he knew them, would only look upon as something to avoid. In 1881 the Americans began to build defenders specially to meet our challengers, and the principle of light construction began to be pushed to its limits. This was seen particularly in the epoch-making Gloriana, and no yacht designer can be successful until he has learned the lessons which that boat helped to teach. Light construction is the essence of speed in yachts, but weakness and lightness were not synonymous any more than were heaviness and strength. When amateur naval architects took to fixing scantlings in order to insure strength to the yacht they showed a belief that heavy scantlings meant more strength. The Gloriana and other American boats have proved that when the different stresses which come upon a yacht are taken as the guide to the scantling or each individual part, lightness is more apt to give strength



CLARICE—CONSTRUCTION PLAN.



CLARICE—CABIN PLAN.

than weakness. A striking example of the possibilities of light construction was shown in a small American yacht, the work of one who was now among the students of that university. She was 12ft. on the waterline and 6ft. wide; 19½ft. over all. She weighed only 225lbs., and with two men weighing 400lbs. aboard she sailed eleven miles an hour and beat the 30-footers. He regarded that boat as one of the most remarkable specimens of naval architecture ever produced. [Applause.]

Touching briefly on steam yachting, Prof. Biles said that the owners of steam yachts were not apparently sufficiently well informed or sufficiently interested to care whether their vessels obtained the maximum speed from the amount of fuel burned. In cross-Channel steamers the owners had an unhappy habit of wanting as much as possible for their money, and for steamers of about the same dimensions as some of the yachts they would not be content to get 16 or 17 knots for 4,000 or 5,000 h. p., but they wanted 19 or 20 knots, and had to get it. If they only wanted 16 or 17 they expected to get it on about half the power given to some of the yachts.

Reverting to the Cup races, the lecturer said that the result of the Shamrock races was a continuation of that monotony of defeat to which we had grown so accustomed, and for which so many reasons had been given. There was only one real explanation, and that was that the American boats had always been a little faster. The plea that our yachts had to cross the Atlantic and must therefore be heavier had nobly done its duty as an excuse, and it was time it was relieved. There had never been any regulation against the temporary strengthening of a boat for the passage, and it was apparent to any one who had considered the matter that the greatest strains to be provided against came when racing and not when at sea under snug jury rig. The development of our own yachts had gone in the direction of lighter hulls, but we had always been a little behind the Americans. Let us hope, he concluded, that with the happy combination of the best designer, our most scientific shipbuilder, and our most successful yachtsman, nobly supported by great public spirit and a long purse, we shall have better luck this time.—Yachting World.

Clarice.

MR. W. STARLING BURGESS, eldest son of the late Edward Burgess, has opened an office in Boston, where he will conduct a business as a yacht designer and broker. Mr. Burgess is a member of the Class of 1901 Harvard, and during his course at College ranked high in his studies. He has been a boat sailer all his life, and has had much practical experience as a yachtsman. Aside from his being a practical yachtsman, Mr. Burgess has followed yachting closely for a number of years past, and has studied naval architecture under several able men. He has owned several boats, among them being Sally and Helene, and during the war with Spain he served on the auxiliary cruiser Prairie. Owing to the unusual ability shown while in the service, Mr. Burgess was rated as gunner's mate. He already has a large amount of work on hand including orders for both large and small boats. Shortly after starting in business Mr. Burgess was burned out and lost several valuable models of boats designed by his father and a number of drawings of his own.

The yawl, plans of which appear this week, was designed by Mr. Burgess for his uncle Mr. Walter Burgess, and was built by Embree, of Quincy. She is a good looking boat with excellent accommodations, and although she was intended primarily for cruising, she was designed to conform to the rules and restrictions of the Massachusetts Y. R. A. The lines show a well-turned boat, and she will undoubtedly show considerable speed. Her dimensions are as follows:

Length—		
Over all	44ft.	
L.W.L	28ft.	6 in.

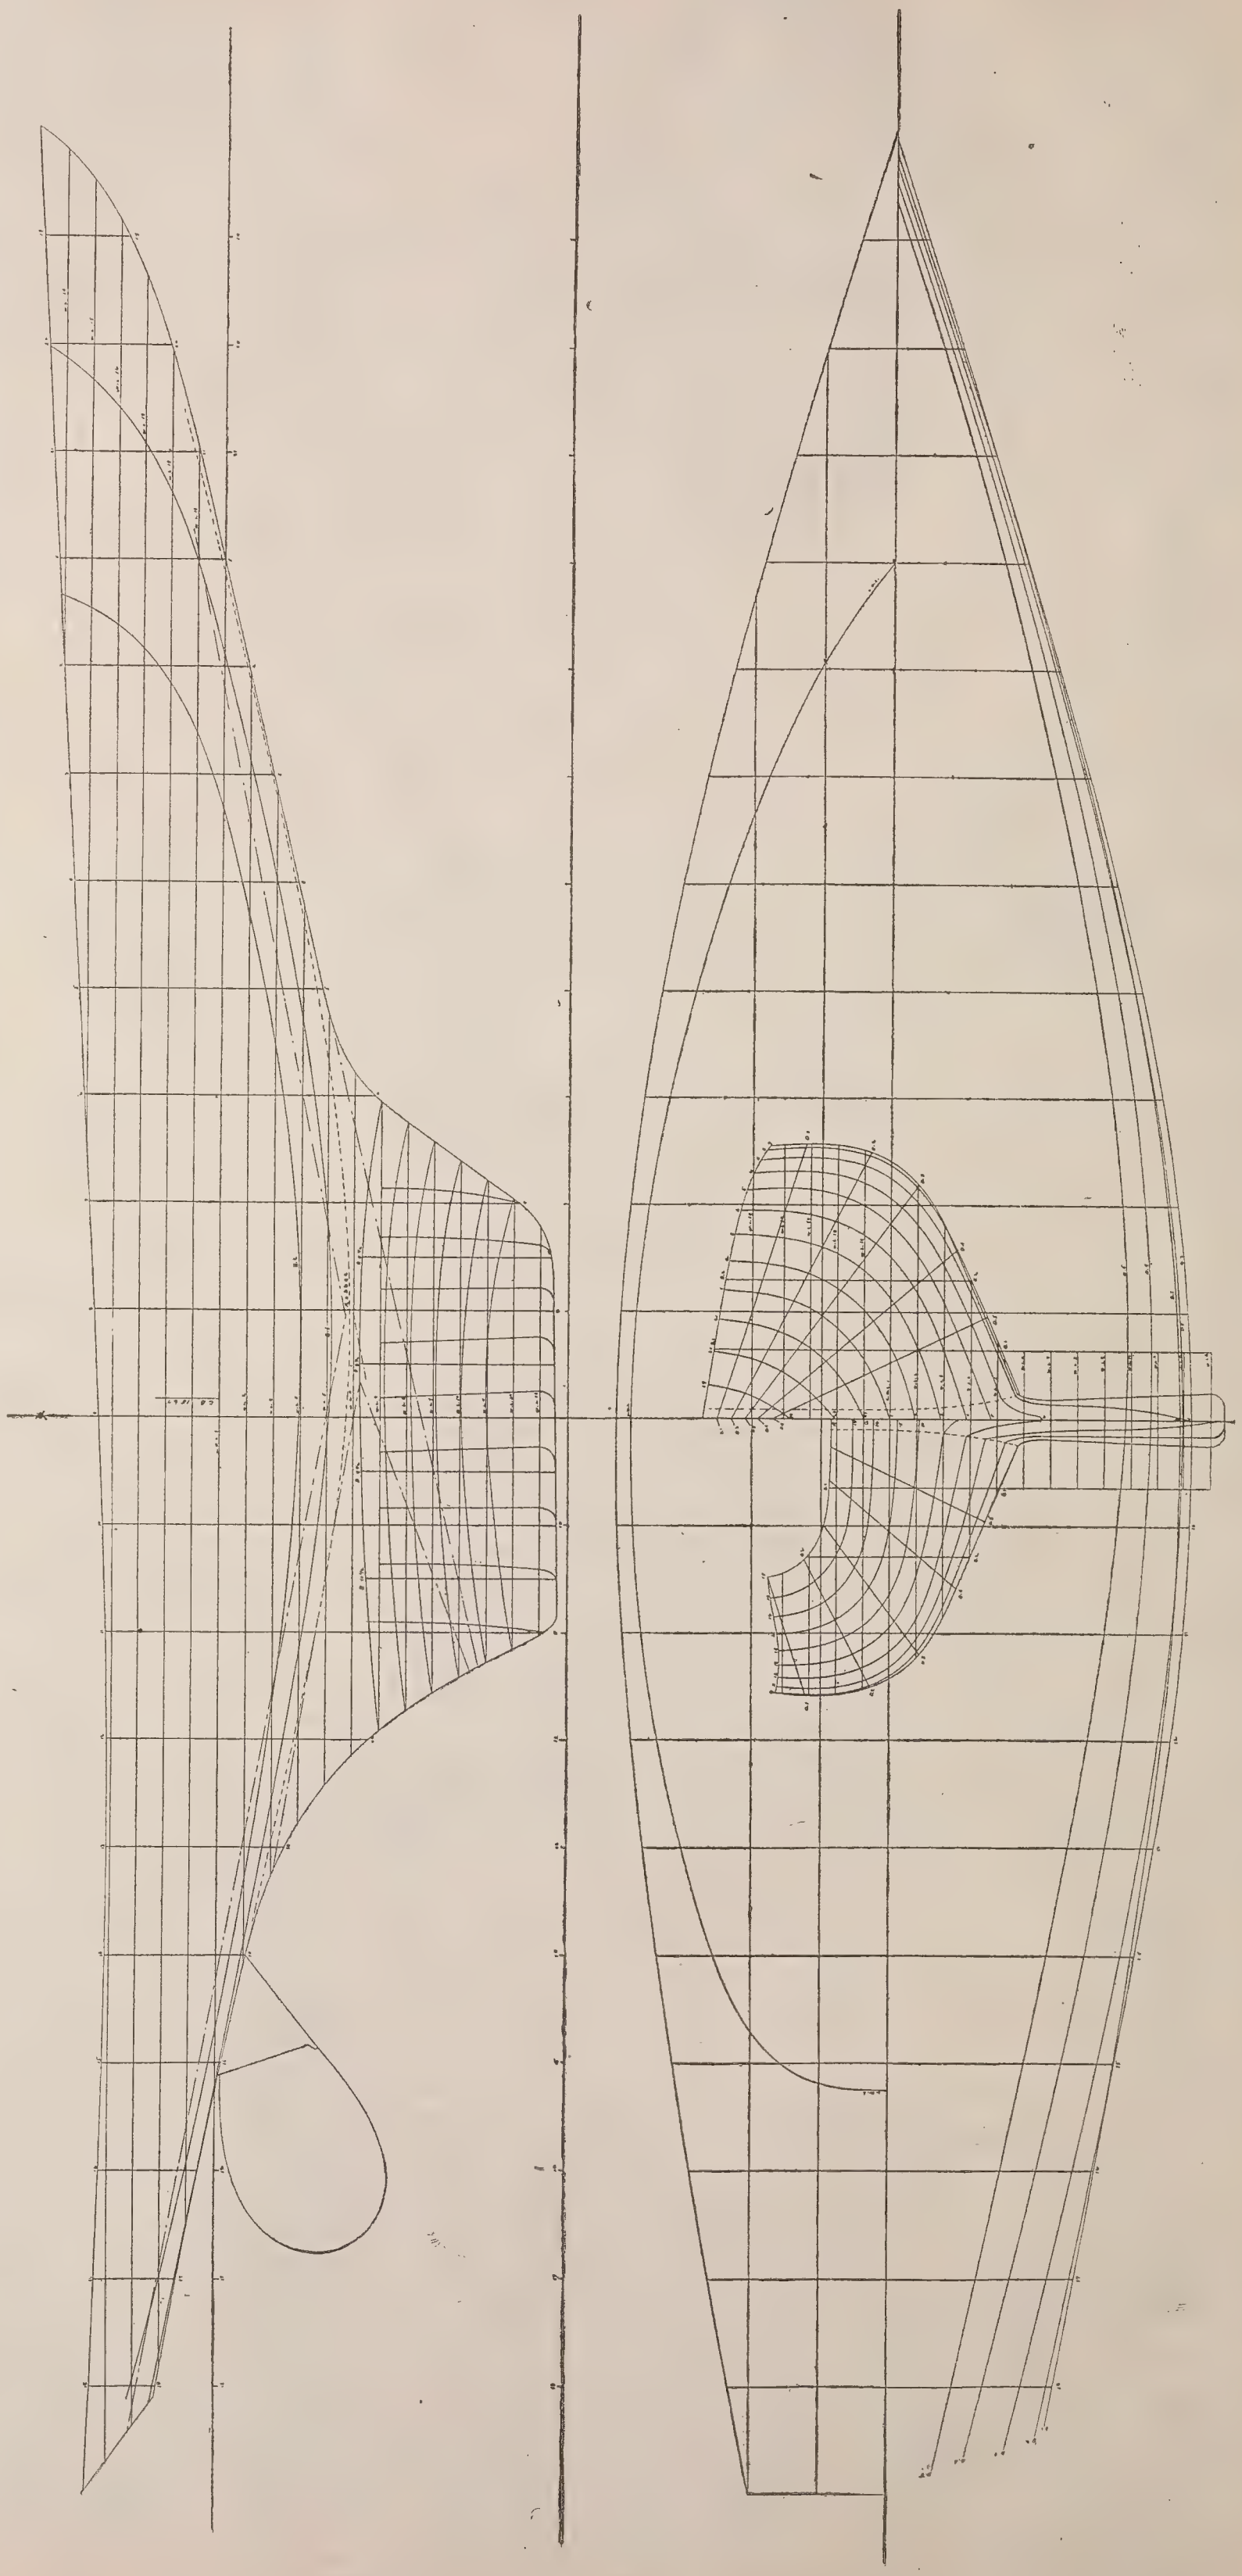
Redskin III.

THE 35ft. schooner Redskin III. was built by Embree, of Quincy Point, for the Sturtevant Brothers, and was launched in May, 1900. She is a centerboard boat of the new Skow type, and her original plans were made by Gardner & Cox, but numerous changes were made during the course of construction, and they do not lay any claim now to the design. She is 61ft. over all, 34ft. on the waterline, 16ft. beam, 4ft. 6in. draft and 3ft. least freeboard. Bolted to the hull is a hollow fin 13ft. long on the bottom and 3ft. deep. A centerboard 12ft. long and 3ft. wide houses in the fin. It is a solid steel plate 4in. thick and weighs about 2½ tons. The rudder is hung on the after end of the fin and the steering wheel is in the forward end of the cockpit. The rudder fin centerboard and fittings weigh nearly 7 tons. The centerboard is raised by a powerful winch in the cabin. The hull is built with oak keel and frames and double planking, the inner being of cedar and the outer of yellow pine. The outer planking is screwed to the inner from the inside, so that the boat is free from all plugs that would cover fastenings. About 60,000 screws were used in this work. The cabin house is 24ft. long with over 6ft. headroom throughout its length. There is a stateroom with two berths on the starboard side of the companionway and a toilet room on the port side opposite. The cabin has the usual berths, lockers, etc., and is very roomy. Forward is the galley, reached by a companionway in the forward end of the cabin house. The pole mainmast is 71ft. and the foremast is 70ft. long. The main boom is 42ft. and the gaff 27ft. long.



CLARICE, CRUISING YAWL—DESIGNED BY W. STARLING BURGESS, 1901.

Yacht Club Notes.

The members of the Rochester Y. C. have unanimously accepted the invitation of the Buffalo Y. C. to attend the rendezvous of the L. Y. R. A. at Buffalo during the Pan-American Exposition next summer. The Buffalo Club has offered $2,500 in prizes for the races which have been planned.

The success of the contests carried on during the last season of the Seawanhaka Y. C. for the Centre Island cup has led the donor to offer a similar prize for competition during the coming season. This cup will also be known as the Centre Island cup, and will be open to competition by Seawanhaka knockabouts owned by club members. It will be awarded to the yacht having the highest record in a series of seven races on June 15 and 22, July 6, 20 and 27, and Aug. 10 and 17, based on the following system of scoring:

In each race each yacht shall be credited with a number of points equal to the number of yachts she defeats, with one point added as a premium for entry. A yacht which starts and does not finish, or is disqualified, will receive no points, but will be counted as a defeated yacht in assigning points to her competitors. In order to qualify for the series prize a yacht must start in at least five of the seven races above scheduled. No yacht shall be counted in awarding points to others after it has become impossible for her to qualify in this series.

The record of a yacht shall be the percentage which the total number of points to her credit at the end of the series bears to the total number of points she would have received had she won every race in which she started. Two yachts at least must start to constitute a race.

In addition to the cup to be awarded to the winner of the series, the club will present a second prize to the yacht finishing second on the same system of scoring, and to the winner of each individual race the usual pewter mug, provided no other prizes are arranged for.

Should the yacht winning the first or second prize in the above series have been manned with a strictly Corinthian crew in all her races the club will present individual Corinthian prizes to each member of her crew.

Should the offer of the Centre Island cup result in arousing sufficient interest, the donor purposes continuing the gift annually, for such classes as may be determined upon, as long as the interest justifies it.

The Race Committee of the club will continue the "Corinthian list" the coming season. Of it, the committee says:

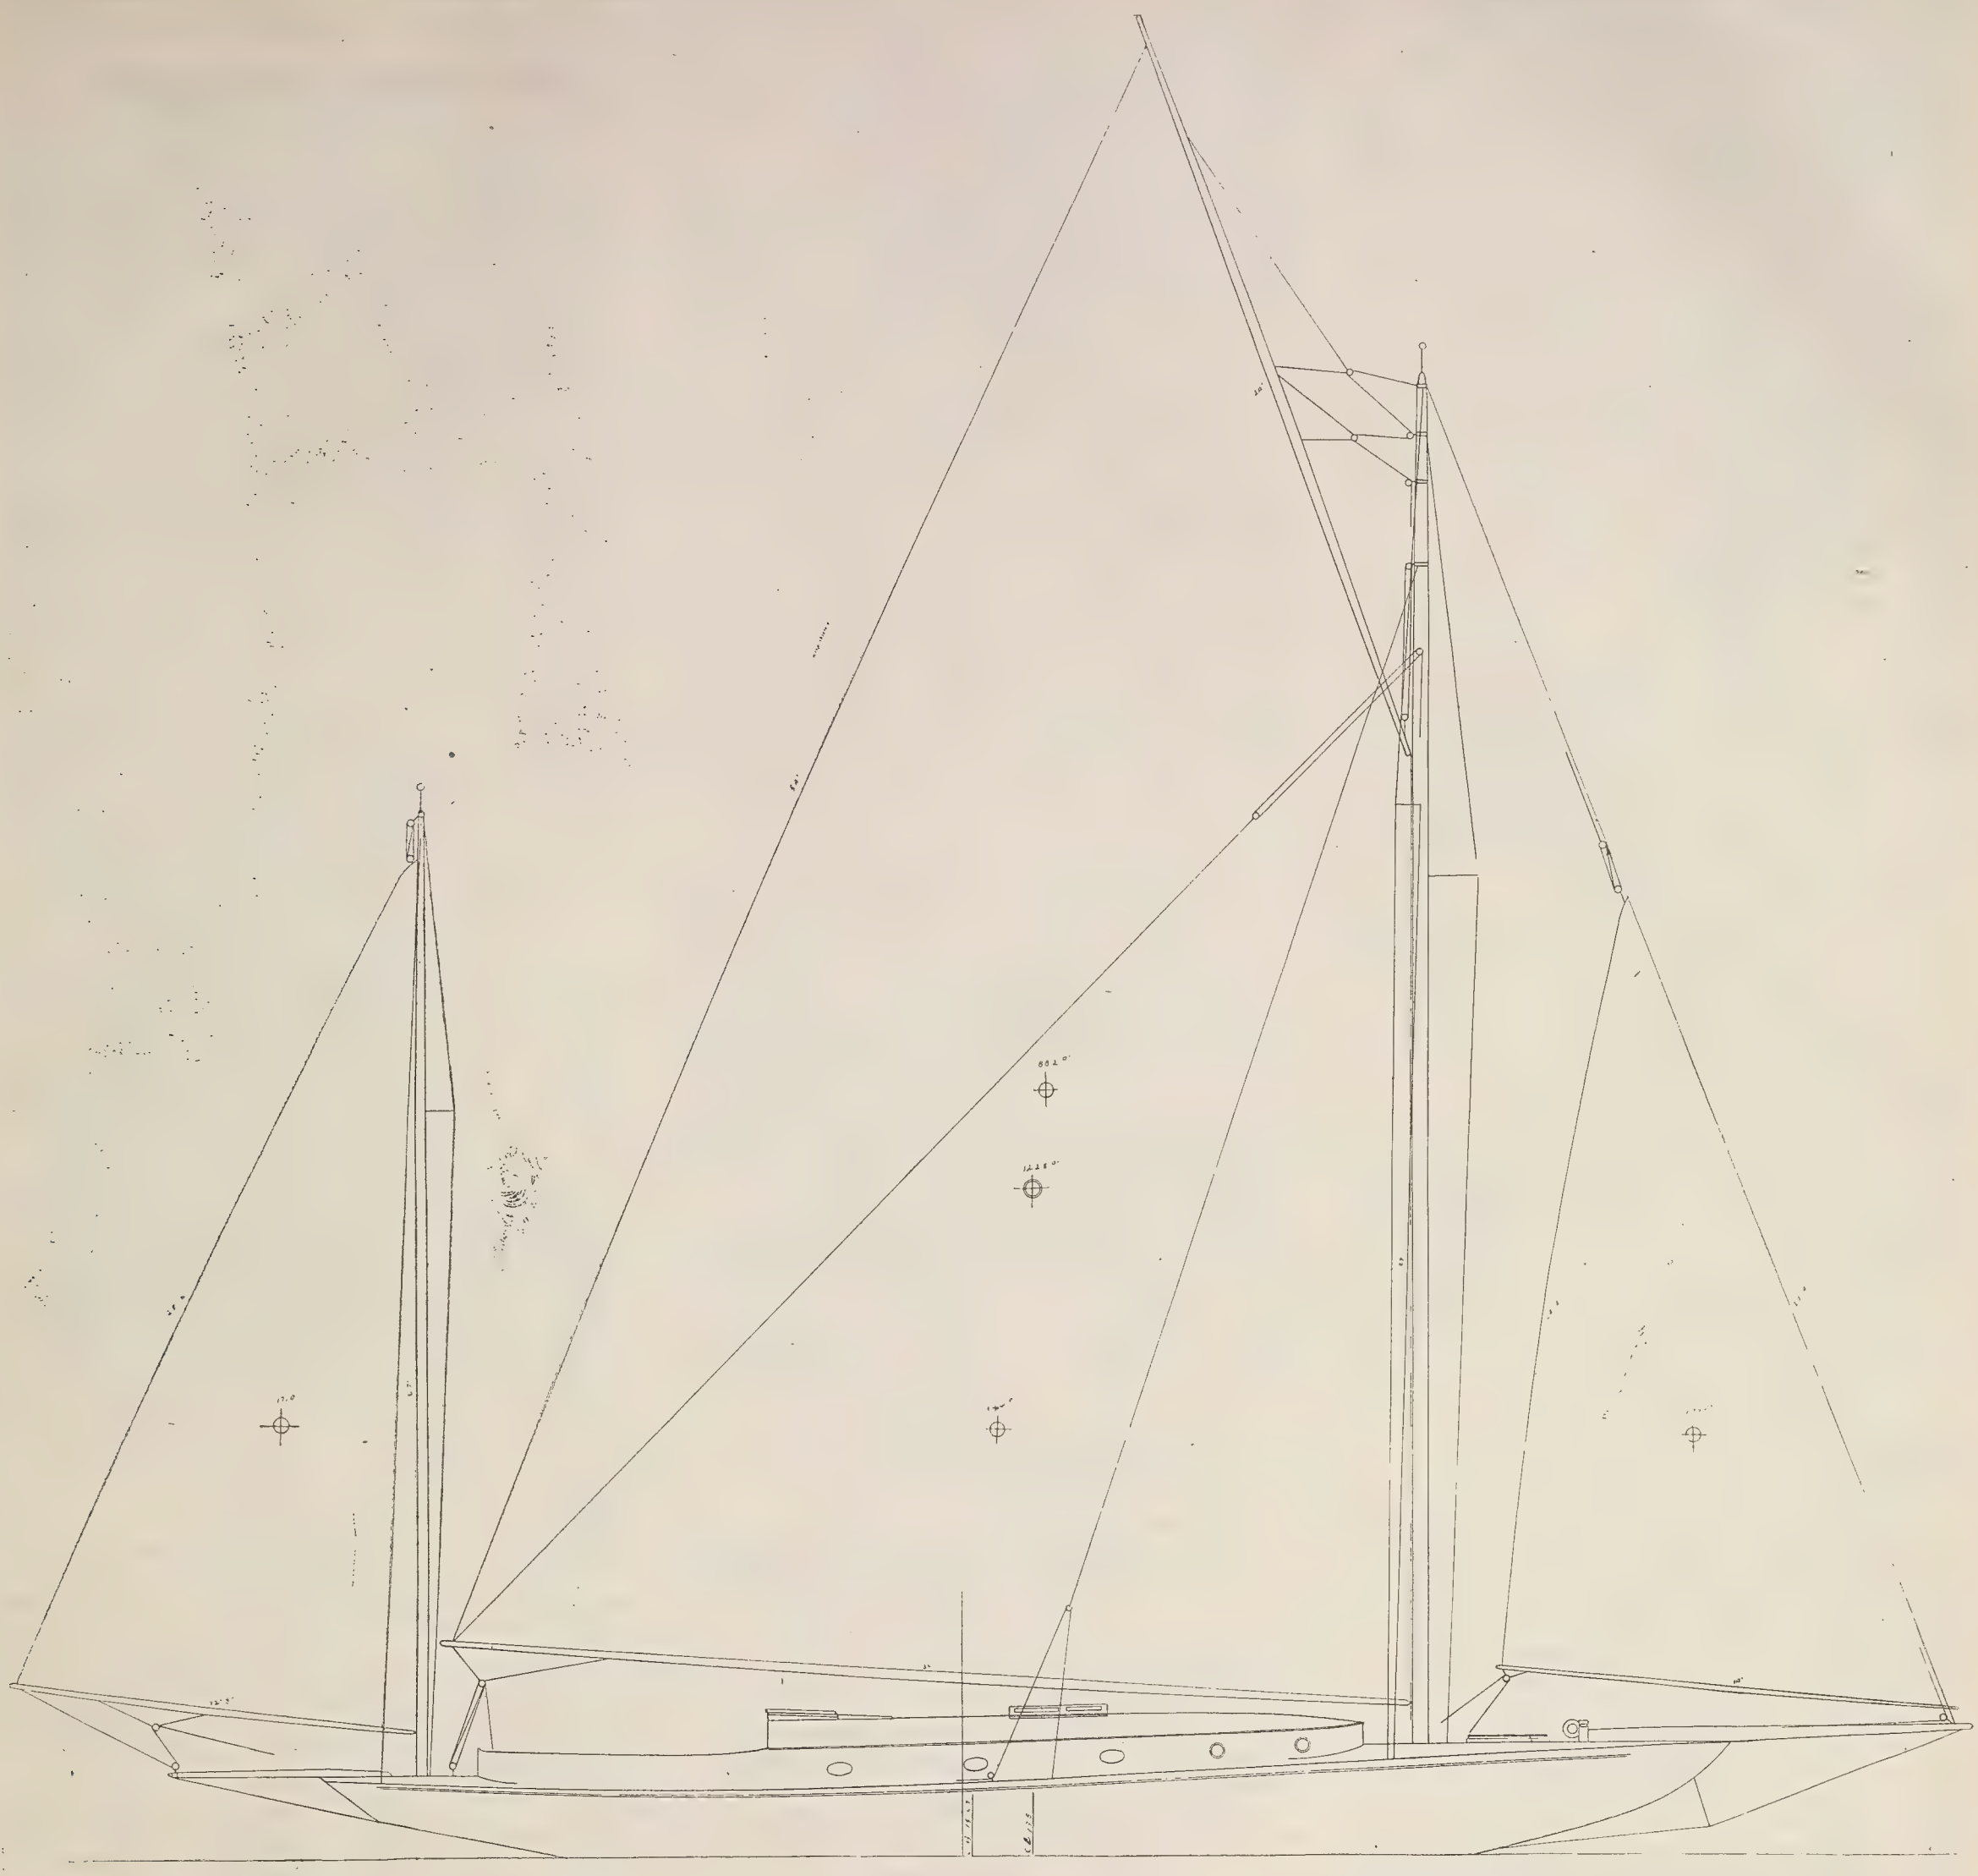
For the benefit of those who are not familiar with the purposes of this list it may be well to say that it is intended to be a record, or list, of amateurs who may desire to act as members of crews of racing yachts during the coming season, and who will be willing to attend at races and for practice purposes with as much regularity as may be practicable. The "Founder's Fund" has been established, the income of which is to be applied for the purpose of "encouraging racing in small yachts manned by amateurs, and of encouraging attainment of proficiency in all other matters relating to seamanship."

When the list is made up the committee will send a copy to the owners of racing yachts and invite them to organize their crews from the persons appearing on the list.

"The club," the committee says, "has had an enviable record for amateur racing in the past, and we hope that the junior members especially will co-operate with us in this renewed effort to revive the old spirit."

The general yachting fever due to the coming international races extended to Auburn, N. Y., on Monday, March 18, when delegates from central and western New York yacht clubs, representing a membership of over 700, met at the Osborne House to form an association to be known as the Interlake Yacht Racing Association. The delegates were from the following clubs: The Syracuse Y. C., the Lakeside Y. C., of Ithaca; the Sheldrake Y. C., the Frontenac Y. C., of Union Springs; the Canandaigua Y. C., the Skaneateles Y. C., the Seneca Falls Y. C. and the Owasco Lake Y. C. The object of the Association is to promote amateur racing and yachting and to systematize the racing plans for the coming season. The first two weeks in August were named for the first series of races on Cayuga Lake. On Decoration Day a race will take place at Ithaca, and a regatta, course to be decided upon, will occur on July 4.

Mr. Charles D. Mosher lectured on "High Speed in Steam Vessels" to a large number of the members of the Yachtsmen's Club, on Wednesday evening, March 20.



CLARICE—SAIL PLAN.

YACHTING NEWS NOTES.

The Glasgow Exhibition Committee at a meeting held on March 21, fixed June 7 and 8 as the dates for yacht races, open to the world, over the Royal Northern Y. C. course, at Rothesay, for cups of the value of $2,500. One of these cups will go to the boat that crosses the finish line first, irrespective of her rating, and another to the yacht that wins on time allowance. It was agreed to invite American owners to participate.

The Emperor of Germany's new racing yacht now being built at Oertz & Harden's Hamburg yard, has been named Samoa II.

Mr. D. M. Armstrong, of Bridgeport, Conn., has sold the stea myacht Tide, through Messrs. Gardner & Cox, to Mr. Clarkson Cowl, of the N. Y. Y. C.

The cutter Norota has been sold by Mr. D. B. Burnham, N. Y. Y. C., through Messrs. Gardner & Cox, to Mr. C. F. Hofer, of Cincinnati. Mr. Hofer has a summer place at Camden, Maine, and Norota will be used along that coast.

Mr. Henry F. Noyes, N. Y. Y. C., has sold the steam yacht Katrina to Mr. L. F. Heublein, of Hartford, Conn.

Mrs. Julia Curtis has sold the steam yacht Calypso to Mr. E. M. Post, of New York.

The auxiliary schooner yacht building at the Geo. Lawley & Son Corp., South Boston, for Mr. Henry T. Sloans, N. Y. Y. C., from designs by Messrs. Tams, Lemoine & Crane, will be named Idler.

Mr. William H. Langley, the new owner of Mohawk, has had that schooner practically rebuilt at Poillon's yard, South Brooklyn. The interior of the yacht has been greatly altered and her ballast has been taken from the inside and put on the keel. Sawyer is making a new suit of sails for her, and her color has been changed from black to white.

The schooner yacht Fortuna, now owned by Mr. Henry R. Wolcott, N. Y. Y. C., is being overhauled and refitted at New London. As soon as she is ready she will go into commission, and will take a short cruise in Southern waters.

The schooner yacht Ramona, now at Port Jefferson, L. I., owned By Mr. B. M. Whitlock, N. Y. Y. C., is being changed in her cabins and other improvements are also being made.

The cutter Carmita, owned by Mr. R. K. Forrest, N. Y. Y. C., is at Hawkins' yard, City Island, and will soon be fitted out. She will sail for Old Point Comfort early in April and return the latter part of May.

Mr. J. J. Hill's steam yacht Wacouta has sailed for Baltimore, and will make a short cruise in Chesapeake Bay and in the Potomac and James Rivers.

The 70-footer Virginia, owned by Mr. W. K. Vanderbilt, Jr., N. Y. Y. C., is at Burlee's yard, Staten Island, being strengthened and repairel under the direction of Messrs. Tams, Lemoine & Crane.

Col. Francis L. Leland's schooner yacht Ariel is being overhauled and refitted at Port Jefferson, L. I.

Mr. Charles Hayden has sold Empress to Mr. August Heckscher, of Huntington, L. I.

Mr. A. Howard Hinkle's 65ft. cutter Senta sailed from Bermuda a few days ago for Greenport, L. I, where she will refit for the racing season. It is reported that she arrived at Bermuda in a very good condition.

We have received from Mr. Edward M. MacLellan, the secretary of the Yachtsmen's Club, a copy of the club book for 1901.

Alterations are being made on the steam yachts Neiara and Elreba, at Tebo's, South Brooklyn, preparing to go into commission.

Now that it has become almost a custom to equip yachts, both large and small, with searchlights, it is interesting to note the progress that has been made in the direction of perfecting this most valuable invention. There are a number of different makes on the market, one of the best of which is the Baldwin acetylene searchlight, manufactured by A. H. Funke. One of the desirable features of this splendid light is that the annoyance of carrying a gas generator in the cabin is wholly avoided. In the case of the Baldwin searchlight the generator is attached to the back of the lamp itself, no pipes or tubes being used.

About fifty-five species of wild birds make themselves at home in the city of Paris and find their living there. All of the others, except perhaps the climbers, are represented among them. One bird of prey, a pelerine falcon, established himself on the towers of Notre Dame a few years ago, whence he hunted the pigeons of the quarter, and a fisher martin leaving the marshes he was accustomed to frequent, when the water became too low for him, came to hunt insects and little fishes in the midst of the city near the Pont des Arts. A number of woodcocks and rails, a season or two ago, haunted the ponds of la Glacière, and a few pairs of water fowl made their nests in the same place.

The huntsman who brings home the antlers proves that he has been able to get a head of the game.—Elmira Gazette.

The Cruise of the Tule Belle.

I WAS sitting in my room reading one lowering evening in November in the early '70's, when a Celestial visitant (China boy in English) knocked at my door with a note, which said, "Come and go sailing to-night."

"Where is the Captain?" I asked.

"Down factly."

"All right; tell him I'll come," and the messenger faded away. I found the Captain at the "factory," and three of us with a lot of nondescript plunder squeezed into a buggy and set out over our apology for a pavement for Long Bridge. There were neither moon nor stars in sight, and in those days the bridge was not lighted, and the chance that the horse would put his foot in a hole in the planking by no means unlikely; but the cherub who looks after real sailors d'dn't desert us amateur ones, and we presently found ourselves in safety at our destination, where the schooner Peerless was to be dimly discerned pitching at a sea that already had some scend in it. The wind was in the southeast (our storm quarter) and everything looked decidedly dubious.

Why we were starting at this hour I have no idea, but it must have been about 10 P. M. when we reached the landing, and there was a good deal to do before we were under way. The purpose of the expedition was, I discovered, to tow a hunting ark or house-boat which the Captain had just built, about fifty miles up the bay and San Joaquin River, where she was to be left as a hunter's rendezvous for the winter. She was the first of her kind, and better adapted for what she was intended for than for what she had to go through. We had shipped one or two extra hands—in the darkness I couldn't tell how many—and about midnight got clear of the anchorage, and with the Tule Belle sousing along behind us like a grand piano case, set out before a stiff S.E. gale.

Now the Belle had been designed with a single eye to the comfort of her occupants, and her capabilities as a sea-going craft had never been inquired into. As there was no rule prohibiting the shifting of ballast aboard arks at any time, that matter had been left to take care of itself, and the weight of the man at the helm had no perceptible effect upon the cooking range, parlor stove and a few other trifles stowed away forward of the center of buoyancy. She was, in sea parlance "mightily down by the head."

Running before the wind along the city front we managed fairly well, but the sea was rising, and by the time we had crossed the channel and were abreast of Angel Island there came from out the darkness strenuous sounds which plainly told that the crew of the Tule Belle was not enjoying itself.

We had in our company another yacht, the staunch and ever-faithful Lotus, commanded by The Ancient Mariner, and a hasty conference was held by the two commanders, who shouted their remarks to each other at the top of their lungs "in the teeth of the booming gale," and it was decided to run into Raccoon Straits and seek an anchorage for the night before disaster befell us.

I had myself sought and found a refuge on that side of the island in a somewhat similar case, so I tried to pilot our argosy into the cove I had in mind but as you are probably aware, on a dark stormy night the shore, especially if a high one, looks much nearer than it really it. As a result, the nerve of the Captain failed him and he ordered the anchor let go long before, in my judgment, it should have been. Now the bottom of Raccoon Straits is composed of rocks solely—I don't think there is any mud—and it slopes from the island toward deep water like the roof of a New England meeting house; added to this, the Captain never used a heavy anchor if he had a light one aboard. The result can be easily imagined: the Peerless waltzed for deep water, and her tall spars and top hamper catching the wind, carried her slap aboard the Belle. You ought to have heard the glass in her windows go, and you ought not to have heard her crew swear!

Meantime the Lotus luffing up to see how we were enjoying ourselves, split her jib from top to bottom, and squaring away faded into the darkness and we saw her no more on that cruise.

The big anchor was now let go, which brought us up, but well out in rough water instead of in the shelter I had planned for, and we set about getting things a little to rights. The Captain noticing that the skiff, which had got between the two vessels, was half full of water, promptly jumped into her to bale her out and she as promptly sank under him. I heard his cry for assistance, and found him with his arms over the bulwarks, trying vainly to raise himself. Although he stood in the skiff, she afforded him no base to spring from, as she was awash, and everybody was too busy to hear him, even if the infernal hubbub of the slatting and banging of sails and ropes and hulls had allowed anything else to be heard.

The Captain was far from a featherweight, and I was no Hercules added to which was the fact his clothes fitted him "like the paper on the wall," and there wasn't so much as a wrinkle to lay hold of. I couldn't reach a leg, and I thought I had torn all my nails off in my endeavors to make an impression on his rotundity, but at length the Peerless gave an extra big roll before the skiff could get down, and I got hold of a leg and he rolled himself over the bulwarks, pretty well blown, but none the worse for his adventure otherwise—he was drenched before he got into the skiff.

We got things clear at last, turned the Tule Belle end for end and lashed her tiller, converted the rudder into a cutwater, then we veered her astern with a good scope, had some coffee and a pipe and turned in somewhere between 2 and 3 in the morning.

The storm blew over in the night, and the morning showed bright and clear, and breakfast put us all in pretty good humor, though the crew of the Belle was evidently not quite easy in its mind; but when she proved to tow excellently stern first and the crew found itself relieved from the necessity of even pretending to steer it, smoked its pipe and dozed the day away in placid contentment.

We traversed the length of San Pablo and Suisun bays without accident or incident, but when we got into the San Joaquin River something happened—I can't remember whether the tide turned against us, or we ran aground, or what it was, but the Captain became firmly imbued with the idea that he ought to be back in the city. Now it happened just at that time that it didn't make any particular difference to anybody whether I was back in the city or not—I had, if the truth were told, a good deal more time than money on my hands—but if he wanted to get back I had no objection to keeping him company. We filled a pumpkin-seed-shaped affair we carried for a dinghy with some things to eat and drink and smoke, and bidding good-by to the fleet, set out for the next landing, where we expected a steamer could be boarded.

My first discovery was that the sail which had been made in the "trimming shop" of the factory was the most ingeniously mal-contrived affair I have ever seen, was a good deal larger than it had any business to be, could only be reefed by cutting away the upper stops—which I promptly did—and set like a nightcap. However, we started, and had got a mile or so on our way when it began to rain. It was no "snizzle-snozzle drizzle-drozzle, but a right down good pour," and we hastened to run the boat among some tules, dowse the sail and spread a rubber blanket over our heads and shoulders. Here we sat and laughed and smoked while the rain beat down on our rubber shelter, until it got tired, and then we set out again.

We reached the landing at last and boarded a schooner to make some inquiries, but by some curious freak of fortune—for it isn't the rule—we struck the most inhospitable gang of Souwegian Yahoos that I have ever met in all my experience, and they almost put us off, they were so anxious to get rid of us. They plainly took us for a couple of shipwrecked greenhorns, who would ask to be carried home, but we got enough out of them to convince us that no steamer stopped at that landing, and the next was too far off to make seeking it advisable in that weather, and set out to return to the yacht.

When we got so far away that nothing they could throw could reach us, we uncovered the basket and lunched sumptuously in their sight, not forgetting to toast them politely with every drink we took. Then waving them a parting salute appropriate to the occasion, we hoisted our ridiculous sail and sped away. It came on to rain again before we got back, and fearing the boats might set off without us, we kept on, arriving in time, but drenched. A good fire in the galley helped matters some, but as we stood there divested of our outer garments and drying those we had on in installments, a brilliant idea occurred to me, which I lost no time in putting into execution. Jumping into the small boat I boarded the Belle—we were under way again—and with the least possible loss of time had a roaring fire in the stove in the saloon. This was not a very large apartment, and I soon had a fine glow on the temperature, and pulling a rocking chair before the genial blaze, got a magazine, and occasionally glancing at the passing landscape, which was a little monotonous just here, whiled away the afternoon, got dry and enjoyed myself hugely. I remember that I decided that if I ever got rich I would have a boat which should be entirely cabin, staterooms and galley (this last at the extreme stern) with a slave of a tug to drag me around. I haven't built that craft yet. Several times the Captain hailed me to come aboard for various purposes, but I only shook my outstretched fingers at him and answered that he had better join me and be comfortable.

About dinner time, however, I surrendered and rejoined him aboard the Peerless, and we spent the evening amicably together, turning in rather early to make up the lost sleep of the night before. We got the Belle safely to her destination next day and returned in the Peerless without any more shipwrecks, and I believe the Belle is somewhere up in those sloughs yet, though I think she long since sank from her high estate to the position of storehouse for hunting boots and such truck.

The genial Captain (who was Podgers) passed away a few months ago, and the bones of the handsome Peerless were long since laid on a reef on the coast of Australia; the Ancient Mariner has gone, and the Lotus, or her bones, is somewhere in the South Seas too. ***

A curious story is told of a fox that was being hunted the other day by the Fitzwilliam hounds. He was found at Wadworth Wood, and gave a good run to a withy bed, from which he was again driven, and on this he made for a railway, "lay down in the permanent way and refused to budge." Whether he was acquainted with the local time table or whether he heard a train approaching, the chronicler of the incident does not state; but he infers that the fox knew it would be dangerous to the hounds to venture on the line. The calculations of the sagacious animal were right enough, as they very often are. A train was approaching, the huntsman saw that the hounds were likely to be cut to pieces if they ventured on the line, and he whipped them off accordingly—with some difficulty, it is said, for the hounds were less experienced in the matter of express trains than the fox. Keenness in pursuit of his prey and obedience to the huntsman are the two chief features of a fox hound, and the two must have clashed considerably in the Fitzwilliam pack when they actually saw their fox before them and were not allowed to have him. "The fox maintained his position till the express got within a short distance, and then quietly made off." Every one will congratulate him on his escape.—London Standard.

The Duke of La Tremouille has a shooting preserve in the forest of Rambouillet, and to protect it against poachers has studded it with man-traps of his own invention. The other day the game keepers heard the electric alarm jingle, and rushing to the designated poacher trap found the Duke, who in roaming about his estate had stepped into one of his own snares and found himself in the twinkling of an eye dumped into a deep narrow pit, out of which he could not climb.

A curious cause of death has recently been recorded in India. A native who was fishing in a stream caught a flat, eel-like fish, about 15 to 16 inches in length. Being desirous of killing it, he put it into his mouth in order to bite off its head. The fish slipped through the man's fingers into his mouth and conveyed itself partly down his gullet. The situation now was bad for the fish, but still worse for the man, for owing to the sharp fins on the back of the fish it was not possible to withdraw it. The man died in great agony within an hour.

Rifle Range and Gallery.

Fixtures.

July 14-23.—San Francisco, Cal.—National Schuetzenbund of North America's annual tournament in Shell Mound Park. Offhand, 200yds.

Aug. 6-7.—Taftsville, Conn.—South New England Schuetzenbund's annual festival and prize shoot.

Zettler Rifle Club Tournament.

THE rifle tournament given by the Zettler Rifle Club ended on March 16, after seven days of keen and interesting competition. The range is 75ft. long as against 90ft. in the Garden, a difference of 15ft. All the winners in the tournament used Peters .22 short, and no less than six men broke the indoor 75ft. record. A large number of the contestants in the revolver and pistol matches also used this ammunition.

One-hundred shot gallery match for the championship of 1901, entrance $5; 100 shots to be fired in 10 scores of 10 shots at any time during the tournament; the regular 25 (¼in.) ring target. In case of a tie for the championship the highest 10-shot score of the contestants shall decide; all other ties divide. The winners were as follows:

F C Ross, Brooklyn, Z R C, Stevens—
243 247 245 243 245 242 244 248 248 246—2451

June 13-14.—Bellefontaine, O.—Fourth annual tournament of the Silver Lake Gun Club. B. G. Cushman, Sec'y.
June 17-20.—Warm Springs, Ga.—Southern Interstate tournament; two days targets, two days live birds. Chas. L. Davis, Mgr.
June 20.—Waterville, Me.—Amateur target shoot of the Waterville Gun Club; $75 added money. Dana P. Foster, Sec'y.
June 25-27.—Walla Walla, Wash.—Seventh annual tournament of the Sportsmen's Association of the Northwest. W. G. Campbell, Sec'y.
June —.—Columbus, Wis.—Tournament of the Trapshooters' League of Wisconsin. First week in June
July 17-18.—St. Marys, W. Va.—Fifth annual tournament of the West Virginia State Sportsmen's Association, under auspices of West Virginia Gun Club. Mallory Brothers, Mgrs.
July 30.—Dexter Park, Brooklyn, L. I.—Annual clambake and handicap merchandise shoot at targets. Eugene Doenick, Sec'y.
Newark, N. J.—South Side Gun Club target shoot every Saturday afternoon.
Chicago Ill.—Garfield Gun Club's live-bird trophy shoots, first and third Saturdays of each month. Grounds, West Monroe street at Fifty-second avenue. Dr. J. W. Meek, Sec'y.

CONTESTS AT INTERSTATE PARK.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.
April 1-5.—Interstate Park, Queens, L. I.—The Interstate Association's ninth annual Grand American Handicap Tournament at Live Birds.
Monthly contest for the Dewar trophy till June, 1902; handicap; 25 live birds; $5 entrance. First contest took place June 20, 1900.
Interstate Park, Queens, L. I.—Weekly shoot of the New Utrecht Gun Club—Saturdays.

INTERSTATE ASSOCIATION CONTESTS.

Elmer E. Shaner, Manager.

April 1-5.—Interstate Park, Queens, L. I.—The Interstate Association's ninth annual Grand American Handicap tournament at live birds. Edward Banks, Sec'y-Treas., 318 Broadway, New York.
April 17-18.—Jacksonville, Fla.—The Interstate Association's tournament, under the auspices of the Jacksonville Gun Club. B. W. Sperry, Sec'y.
May 8-10.—Memphis, Tenn.—The Interstate Association's tournament, under the auspices of the Memphis Gun Club.
June 19-21.—Cleveland, O.—The Interstate Association's tournament under the auspices of the Cleveland Gun Club.
July 1-2.—Sherbrooke, P. Q., Can.—The Interstate Association's tournament under the auspices of the Sherbrooke Gun Club. C. H. Foss, Sec'y.
July 10-11.—Jamestown, N. Y.—The Interstate Association's tournament, under the auspices of the Jamestown Gun Club. Dr. C. Rawson, Sec'y.
July 23-26.—Interstate Park, Queens, L. I.—The Interstate Association's second Grand American Handicap target tournament; $1,000 added money. Edward Banks, Sec'y-Treas., 318 Broadway, New York.
Aug. 7-9.—Providence, R. I.—The Interstate Association's tournament under the auspices of the Providence Gun Club. R. C. Root, Sec'y.
Aug. 21-22.—Auburn, Me.—The Interstate Association's tournament, under the auspices of the Auburn Gun Club. L. A. Barker, Sec'y.

PETERS CARTRIDGE COMPANY'S TOURNAMENTS.

April 1-2.—Houston, Tex.—Two days' tournament of the Peters Cartridge Company.
April 23-24.—Olathe, Kans.—Peters Cartridge Company's amateur tournament, assisted by Mr. Frank Hodges.
April 24-25.—Binghamton, N. Y.—Amateur tournament of the Peters Cartridge Co.; $150 added money. H. W. Brown, Sec'y. John Parker, Mgr.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

Under date of March 23 Mr. Elmer E. Shaner, manager of the Interstate Association, sends us the following communication: "I desire to announce through the columns of FOREST AND STREAM that the office of compiler of scores during the Grand American Handicap live-bird tournament will be filled by Mr. Edward Banks, business engagements preventing Mr. John D. Regan from being present as per schedule. While the announcement that Mr. Banks will again fill his old position will be pleasing news to intending contestants, I know that it will be a very serious disappointment to the gentleman personally, as he was counting on 'mingling with the boys' and having a good time generally at this tournament. The system in vogue at the Grand American Handicap is such as to require a man to be thoroughly familiar with the routine and all details in connection therewith, making it clearly out of the question to fill the position in a satisfactory manner with a new man at this late date. However, Mr. Banks has kindly consented to help out on this occasion, and his loyalty is fully appreciated by the Interstate Association."

The programme of the Interstate Association's trapshooting target tournament, given for the Jacksonville Gun Club, Jacksonville, Fla., April 17 and 18, is now ready for distribution, and can be obtained of Mr. Elmer E. Shaner, 111 Fourth avenue, Pittsburg, Pa., or Mr. B. W. Sperry, secretary of the club, Jacksonville, Fla. There are ten like events each day, of which seven are at 15 and three at 20 targets, $1.50 and $2 entrance. Shooting commences at 9:30. To reach the shooting grounds take the Main street cars at Bay and Main streets. The club has secured a rate of one and one-third fare for the round trip on all railroads running into Jacksonville. The Rose system, ratios 5, 3, 2, 1, will govern. Guns and ammunition forwarded to Mr. B. W. Sperry will be delivered at the shooting grounds. Targets 2 cents. Lunch served on the grounds. Manufacturers' agents for targets only. Duval House will be headquarters.

The shooting interests of the Pan-American Exposition are gradually taking organized shape. Mr. Harry D. Kirkover, who has these interests in charge, is working most energetically and successfully in arranging the details. It has been arranged that this shoot will take place in July, in the week commencing on the 15th of that month. A valuable list of merchandise prizes will be offered for competition, and $2,000 in cash will be added. The members of the executive committee are Messrs. H. D. Kirkover, Buffalo, chairman; E. E. Shaner, Pittsburg; Edward Banks, New York; Col. J. T. Anthony, Charlotte, N. C.; G. W. Loomis, Omaha, Neb.; Hon. T. A. Marshall, Keithsburg, Ill., and B. Waters. The programme committee consists of Edward Banks, Elmer E. Shaner and B. Waters.

Mr. Harold Money added new honors to his record at the great annual tournament of the Riverton Gun Club, Philadelphia, Pa., last Saturday, by killing 98 pigeons out of 100, and beating all competitors. This and his recent win of the Carteret Gun Club championship, wherein, in each instance, he was competing against the pick of America's best amateur shots, distinguishes him as being the best amateur with the scatter gun.

Mr. Geo. R. Schneider, the secretary, writes us as follows: "At a recent meeting of the Fulton Gun Club the following officers were elected for the year: President, Patrick May; Vice-President, John Blake; Treasurer, A. Woods; Secretary, Geo. R. Schneider; Captain, Samuel Giles. The club decided to have a regular club shoot every two weeks, the first day of the week, at Dick Oseing's farm, Crescent street, near Old Mill, Brooklyn. The first shoot will be held March 31."

In our trap columns this week we publish an interesting letter from Capt. A. W. du Bray (Gaucho), in which he narrates in a charming manner some shooting incidents of his Southern travels. He, in a personal letter to us, mentions the regrettable circumstances that, owing to the illness of his daughter, he may not be able to attend the Grand American Handicap this year.

Keep in mind that the Baltimore live-bird tournament follows the Grand American Handicap, the dates being April 9 to 12. The shooters in attendance at the Grand American Handicap who contemplate attending the aforementioned event will have opportunity to learn all particulars from representatives on the grounds, as a large delegation of the Baltimore Shooting Association will be present at the G. A. H.

The E C cup, emblematic of the target championship of the United States, and for that matter of the world, since the competition is open to all comers regardless of boundaries, will be put in competition at the forthcoming great Pan-American tournament. It is now held by a shooter of mighty deeds with the shotgun, Mr. W. R. Crosby, of O'Fallon, Ill.

April 23 and 24 are the dates announced for the Peters Cartridge Company's amateur tournament, at Olatha, Kan. Mr. Frank Hodges will assist in conducting the tournament. Also April 1 and 2 at Houston, Tex., and April 24 and 25 at Binghamton, N. Y., this company gives tournaments.

The secretary of the club, Mr. Dana P. Foster, writes us as follows: "The Waterville, Me., Gun Club will hold its annual shoot June 20. There will be $75 added money; eleven events—five at 15 targets, five at 20, one at 25. This will be the first shoot on the club's new grounds."

Six teams competed in the Boston Gun Club's shoot on March 20, namely, Portsmouth, Haverhill, Birch Brook, Fitchburg, Brockton and Boston. Brockton won by a score of 105. There were five men on a team, each shooting at 30 targets.

Messrs. Clarence Mauman, of San Francisco; Mr. "Dick" Merrill, of Milwaukee, and Mr. Tod Sloan, arrived in New York in the early part of this week with a design on the possession of the G. A. H. trophy.

In the second match of the series between teams of the Trenton Shooting Association and White Hill Gun Club the former scored another victory by a score of 85 to 81. There were six men on a team, 25 targets per man.

At Spring Valley, N. Y., a new trapshooting club has been organized. Dr. W. S. Taylor, of that place, is actively working in promoting its interests. The grounds will be in readiness as soon as possible, and the club will then engage in active competition.

On Tuesday of last week the Ambler Gun Club, of Ambler, N. J., and the Highland Club, of Germantown, held a twelve-men team contest, each man shooting at 25 targets. The scores were Ambler 206, Highland 212.

Mr. Elmer E. Shaner, manager of the Interstate Association, has been engaged to manage the great Pan-American Exposition tournament.

Messrs. S. M. Van Allen, of Jamaica, and Henry Koegel, of Newark, N. J., contemplate shooting a 100-live-bird match at Interstate Park in the near future.

The Oceanic Rod and Gun Club holds its bi-monthly shoot at Rockaway Park, L. I., on the first of next month.

BERNARD WATERS.

Riverton Gun Club's Tournament.

PHILADELPHIA, Pa., March 23.—There were nineteen contestants in the eighth annual amateur handicap live-bird tournament of the Riverton Gun Club, the conditions of which were 100 birds per man, handicap rise, 27 to 30yds., 50yds. boundary, $100 entrance. The championship cup and $760 to first, $475 to second, $285 to third, and $190 to fourth.

Among the visitors present were Messrs. J. H. Carstairs, W. R. Ellison, W. C. Downey, F. T. Chandler, J. M. Saule, Charles McAlister, Thomas E. Agnew, R. F. Harned, J. R. Painter, W. C. Davis, H. E. Murphy, J. B. Ridge, Dr. G. D. B. Darby, C. F. Moody, S. D. Stinson, J. F. Alburger, Dr. Shoemaker, Col. Frank Pleasanton, R. C. Harding, E. D. Showell, Stanley Hart, and Walter Sterling.

At the end of the fiftieth round the race seemed to be narrowed down to Messrs. H. D. Kirkover and H. Money, each having killed 49 out of 50, thereby leading all the other contestants. The scores:

Boston Athletic Association.

BOSTON, March 25.—Our Association last spring decided to put in a set of expert traps on our outdoor grounds at Riverside for the purpose of encouraging trapshooting among its members. The result is that in one year's trial the sport has become so popular that we are now going into it for fair, and started last week to put in two sets of five traps, a set of three traps also for doubles and a magautrap, all fitted with electric pulls. We are also erecting a large club house 50 by 22 for the use of our gunners only, and when all is finished we think we will have the finest shooting grounds in New England.

A match shoot at 250 inanimate birds between Harvard University and B. A. A. took place last Saturday afternoon, March 23, on the B. A. A. grounds at Riverside, and proved to be one of the most exciting matches held in this section for some time. The Harvard team won by only 2 birds.

Phelps, of Harvard, and Farmer, of B. A. A., did the best work, each getting 48 of their possible 50. The scores:

Harvard.			B. A. A.	
Blake	8 8 9 8 8—41		Farmer	10 10 10 10 8—48
Poore	9 10 8 9 10—46		Clark	9 10 8 9 10—46
Phelps	10 10 10 9 9—48		Baxter	10 7 10 10 10—46
Bancroft	8 9 8 10 8—43		Hallett	7 9 9 10 7—42
Leonard	8 10 8 10 9—45—223		Hill	5 8 8 9 9—39—221

Above scores made over expert traps, all unknown angles. Judges were Mr. C. H. North, of Chamberlin Cartridge Company, Cleveland, O., and Leroy Woodward.

At the close of the match between Harvard and B. A. A., the latter club held its regular weekly handicap shoot for the Hunter cup. There were fourteen entries, and very good scores were made. Mr. W. B. Farmer, an 85 man, was the leader with a total of 94, and T. F. Baxter, another 85 man, was a close second with a total of 92. The scores:

										Hdcp.	Total.
Farmer	8	9	9	10	10	10	10	8	5	15	94
Baxter	8	8	10	10	7	10	9	10	5	15	92
Hallett	..	..	..	8	9	9	7	9	9	40	91
White	..	..	..	9	7	9	9	8	8	40	90
Clark	9	7	9	9	10	8	9	10	3	15	89
Dewey	..	..	..	7	8	8	8	7	10	40	88
Blake	10	8	8	9	8	8	9	8	4	15	87
Moore	..	7	9	10	9	8	8	7	8	20	86
Strout	..	..	..	8	7	5	7	9	9	40	85
Hunter	..	7	7	8	7	9	9	7	4	25	83
Hill	..	7	6	8	5	8	8	9	9	20	80
Warner	..	..	5	5	5	8	8	6	5	35	77
Howell	..	..	..	3	6	6	7	7	7	30	76
Clewley	..	..	..	4	3	6	7	5	5	40	70

Our method of handicapping is perhaps a little out of the ordinary, but we find it to be as good as, if not better than, any other we have tried, excepting, of course, distance handicaps: 85 men shoot at 85 birds and to their score add 15; 80 men shoot at 80 birds and to their score add 20; 75 men shoot at 75 birds and to their score add 25; 70, 65, 60, etc.

We would be pleased to have other clubs of amateurs try this method and let us have their views through your valued paper.

J. H. DAGGETT, Capt.

IN NEW JERSEY.

Trap at Guttenburg.

March 22.—At Guttenberg racetrack, in an event at 13 live birds, all standing at 28yds., the following scores were made:

A. A. SCHOVERLING.

South Side Gun Club.

Newark, N. J., March 23.—Each of the events was at 10 targets in the shoot of the South Side Gun Club to-day. The scores were as follows:

Hayes	9	10	6	5	10	9	7	9	7	..	..
W H Smith	7	8	10	6	9	7	8	9	7	9	..
Mihlon	5	5	7	6	10	7	7	8	5	9	..
Weller	8	5	7	8	8	6	8	8	8	8	..
Terrill	10	8	..	..	7	9	7	8	7	..	..
Sinnock	..	..	..	8	8	9	6	9	8	9	..
Dr Gardner	..	..	6	6	5	7	9	7	8	9	9
Day	..	..	..	6	7	5	6	5	..	..	..
Leroy	..	..	..	..	..	..	..	..	6	9	8

Event at 25 targets: Smith 24, Weller 21, Gardner 15, Leroy 22.

I. H. T.

Hudson Gun Club.

Jersey City, N. J., March 24.—The following scores were made by the members of the Hudson Gun Club at its last shoot. The day was bad, as it was raining and cloudy. Next shoot April 7:

Events:	1	2	3	4	5	6	7	8
Targets:	25	25	10	25	10	15	20	20
Schorty	24	22	10	21	9	15	17	15
Dudley	..	..	10	23	10	13	17	16
Banta	13	17	9	21	8	8	14	14
Bock	20	20	10	22	9	12	17	..
Hughes	12	20	6	..	7	12	..	..
Hansman	..	..	6	13	6	12	14	12
Caunitz	..	..	7	10	6	8	12	12
See	19	20	6	14	..	..	..	..
Whitley	..	..	..	17	..	9	..	..

No. 4 was the club shoot. No. 8 was at 21yds.

Mississippi Valley Notes.

Missouri State Shoot.

EAST ALTON, Ill., March 22.—Announcement is made this week of the twenty-fourth annual tournament and conclave of the Missouri State Game and Fish Protective Association, which will be held at St. Louis during the week of May 28 to June 1. It is stated by Secretary Herbert Taylor that the amateur will be well taken care of in this programme, which will carry cash prizes and added money to the amount of $1,000. Programmes can be had by addressing Herbert Taylor or David Elliott, Chemical Building, St. Louis, Mo.

F. C. RIEHL.

Cast-Off and Bend.

THE following, treating of fitting the gun to the shooter, is taken from "Experts on Guns and Shooting," by G. T. Teasdale-Buckell:

Correspondence is frequently taking place on the question of bend and cast-off, and it seems to be believed that the latter is a new thing introduced by the try-guns. This is not so. Some believe because they can shoot without either of these that other people can do so too. This is a very common mistake. It does not argue a very great acquaintance with the world to believe that what suits one must necessarily suit others. The late Sir Victor Brook could kill rabbits shooting from the hip, but he did not make the mistake of believing that therefore the hip was the best place to shoot from, either for other people or at other game.

The man who would abolish cast-off and cast-on might just as well attempt to abolish bend of stock also. The only use of either is to enable the eye to get in a straight line with the center of the rib and the sight. Of couse, if any individual is so gifted that he can shoot without getting the eye in this alignment, neither cast-off nor bend is of the smallest service to him. But a man who attempted to do this could only shoot moderately well in any case. Certainly a stock can be so bent that the eye can align the barrel without cast-off or cast-on, but this can only be done by means of a totally unnecessary bend. Put it the other way: Cast-off might be made so violent as to admit the eye into alignment without any bend whatever. But the general consensus of opinion of experts is for a little of both, for the reason that it makes a more sightly gun, and an equally effective one.

We cannot discuss the question of cast-off or bend with any one who shoots without getting his eye into alignment with the center of the rib and the sight. He is unique, and disarms criticism by placing himself outside the rules of the game. If, however, any one desires to imitate that style of shooting, we would suggest the following experiment before new guns are ordered. Take a try-gun, make it as straight as it will go—so straight that it is mechanically impossible to align the eye with its rib—and then load it and shoot at a bullseye target 40yds. away.

If this is a success—which it is 99 to 1 it will not be—then it is not to be taken for granted that perpendicular and side shots can be equally well taken; they must be actually tried and succeed before the gun can be called a success, and when they have come off satisfactorily, our advice is to discard such a straight tool. The reason for this is that if a man can shoot well without the power of alignment, he is in the most perfect health. Some day it may happen that, like poor city men, he will go out with the gun in search of health. Or, to do less violence to imagination, he may be a bit off color, and then he will find that hand and eye do not work with perfect agreement.

The reason why cast-off and bend were invented was probably not to compel a man to take unnecessary aim, but to enable him to see his mistake when it arose. When bad shooting comes on, confidence is shaken, and without confidence good shooting cannot be restored. We believe that the ability to align the rib is a ready means to the restoration of confidence. It has often happened with our experiments in trying new guns for gunmakers that we start by doing really good shooting with a gun that we are unable to align. Then suddenly shooting goes off; and this very inability to alight has always prevented us getting into form again, whereas with our own guns nothing is easier than this recovery. The reason is that with a gun that can be aligned we know what we are doing, and where we shoot, whereas with another weapon we only know we miss, nothing more. Now we are not going to fall into the mistake we condemn of judging others by our own weaknesses. We prefer to take the majority as our own guide when we can. In advocating bend and cast-off, we are merely repeating the arguments that have influenced all experts from Joe Manton, the father of gun making, to the makers of to-day. We have frequently been told that our bend and cast-off are abnormal, but we do not think so. The very straight-stocked guns—the outcome of pigeon shooting—are abnormal, inasmuch as they are special tools for special work. Some days ago we were in a gun maker's place, when he gave us an old Joe Manton gun, and upon putting it up we found it was precisely our bend and cast-off, both at comb and heel. The gun has a particularly low comb, very different from the majority of the guns made to-day. Our opinion was challenged by the gun maker in question, but on measurement it proved to be correct to within 1-16in. of bend at the comb, and to 1-10in. at the heel, and if we shoot with abnormal cast-off, one at least of Joe Manton's customers must also have done so. We have had precisely the same stock for thirty-five years, and we got it, like everybody did in those days, by trying several until we found the right one. It is probable that the country gun maker from whom we got this stock had not designed himself, but copied from some weapon by Joe Manton, for there are such a multitude of possibilities in the shape of a gun stock that no two could ever be so near alike unless they were copied, indirectly perhaps. Bend and cast-off then have been considered a necessity from the days of Joe Manton at least. To alter or even modify opinion will be found a very difficult task, and one that does not appear to us worth the undertaking.

Without bend or cast-off, or some of both, it is mechanically impossible to align the rib of a gun. The object of a perfect fit is that the eye should not have to feel its way to this alignment, but that the touch of the cheek upon the stock should insure the correct position of the eye in respect to the line of the rib or of the rib in respect to the eye. The advantage of this arrangement can best be understood by those who have struggled to find a peep sight on a rifle that does not fit while shooting at moving deer. It is that, whether the shooter wants to align or not, he sees by simply looking at the game or the point of aim, whether the gun is pointing at it or not.

If a sharp pencil or a table knife, or any other pointed and knife-edged object, be taken in hand it is easy to bring it up quickly to cover an object just as if it were the sight of a gun. Most people can do it with one hand or the other and with one eye or the other. There are some who, using the right hand, will make the right eye the aligning eye, and in using the left hand will make the left eye do the aligning. This is an old test for sight, and to discover which is the master eye. But when one takes hold of a gun it is with two hands, not with one only, and it seems therefore that in order to test sight for shooting, both hands should be engaged. The simplest way is the way of our fathers—put up a gun and let some one tell you if it covers the object. But, although this covers most of the ground, it cannot prove whether the man needs cast-off or cast-on naturally and independently of acquired habit. When a gun is put to the shoulder there is a mechanical influence on alignment always more or less present. This mechanical assistance must be got rid of if it is desired actually to find out whether there is any advantage in "fit"—that is, whether a perfectly straight weapon, made like a fishing rod or a walking stick, could be used with accuracy to shoot from the shoulder.

In order to test this it seems to be necessary to take two sharp-edged pointers, and holding them in a vertical position, one in either hand, to endeavor at the same moment to cover an object with both of them. In the ordinary way of shooting the pointer in the right hand will represent the breech end of the rib of the gun, and the pointer in the left will represent the fore sight. Put them up smartly, and if the two points are in exact alignment between the eye and the object looked at, without any after correction whatever, then it is possible that the fitting of a gun is all lost labor in such a case. But we believe that there is absolutely no individual who can bring these two points to bear exactly at the same instant of time—that is, so that one should exactly cover the other, and both cover the object looked at. We have seen many shooters attempt the single point held in one hand, generally to their own satisfaction. But this test, representing the foresight and its alignment, is no use whatever unless it is presupposed that the eye is brought mechanically into line with the breech end of the gun. The pointers in both hands coming up at the same time will show how much that time-honored phrase "hand and eye working together" has been abused. The man who fancies hands and eyes work together with extreme accuracy will on trial generally be as much disappointed as when he discovered how little he could hold a rifle still on first looking through a telescopic sight. He will generally find himself neither able to keep the line or the elevation either. And yet this ought to be easy to a man who can shoot with any bend or any cast-off or cast-on. It is a lesson which proves just how much time is lost in correcting the "put up" of a gun by sight alignment when that gun does not mechanically come into position with the eye at the breech end. When it does come into mechanical position all the alignment necessary is between the sight and the object; when it does not there is the same trouble, only worse, as there is to find the true alignment with a pointer in either hand. We say worse for two reasons: First, it is optically impossible to get the breech of a gun and the sight in alignment with the eye when the stock is much too straight. Second, there will always be a mechanical influence in putting a gun up to the shoulder, and when that influence is not in the right direction it is obviously in the wrong. So that it is not only a question of hand and eye going together, but also one of hand and eye working together in spite of undue interference or mechanical pressure in the wrong direction.

We are aware that people who have given but little time and study to shooting matters will tell us that we know nothing of the matter, that you should never look at the sights, but only at the game. And they argue from this that neither sights nor ribs are any good whatever, and that therefore bend and cast-off don't matter. We have had it pointed out to us that men have shot just as well as ever when they have lost their sights by accident and have been unaware of the fact. We do not think that this proves non-alignment. The flash of light down the rib of the gun is always more conspicuous than the sight itself, and is certainly as good a guide to correct alignment. As for not looking at the sight, nobody ever suggested looking at it, but it is impossible to look at an object and then cover it with another object without seeing the latter. We are quite willing to admit that almost any shooter can hit a 6ft. target with almost any gun. But for good game shooting it is necessary to hit a 6in. target, and there are 144 6in. targets in one of 6ft.

Quickness is so absolutely the essence of good shooting, especially with driven game, that any gun that "comes up" in such a manner as to require correction cannot be the best. So that whether a shooter can bring up one pointer correctly or not, he will always save time if the second pointer—i. e., the breech of his gun—is mechanically and automatically brought up for him by the perfect fit of his stock; by the cast-off that allows the pressure of his cheek to tell him when his eye is opposite the breech in respect to the horizontal, and by the bend which tells him that when his cheek touches the stock his eye has the correct elevation for the center of the rib.

Grand American Handicap Entries for 1901.

Chesapeake Gun Club.

NEWPORT NEWS, Va.—The Chesapeake Gun Club held an interesting shoot on March 20. Mr. Franklin Stearns, of Richmond, Va., was a visitor. The scores were: T. F. Stearns 24, Franklin Stearns 22, E. S. Robinson 22, R. Lee Robinson 21, B. B. Semmes 19, G. B. James 17, A. G. Fifer 16, H. J. Moyer 14, Frank Latimer 13, W. K. Stow 13, E. W. Milstead 12, Joe Hautz 12.

ILLUSTRATION SUPPLEMENTS.

Continuing the illustration supplements which have been an acceptable feature of the Forest and Stream, we have prepared a new series of four pictures which will be given with the first number of the month, as follows:

April 6—**The Trapper's Camp.** Drawn by E. W. Deming.

May 4—**Rap Full.** The schooner yacht Constellation in a northeaster. From a photo by Stebbins.

June 1—**Between Casts.** On a trout stream. Drawn by W. P. Davison.

July 6—**The Home of the Bass.** Drawn by W. P. Davison.

Boston Gun Club.

BOSTON, March 20.—Wednesday, March 20, the occasion of the second annual team shoot, was not what could be called a good day for a trap shoot, but nearly fifty shooters congregated on the well-known platform to help make it one of the most enjoyable and successful tournaments held in this vicinity for a long time. The tournament was in charge of the usual Boston Gun Club managers, with the addition of Mrs. Park, of Philadelphia, and C. A. North, of Cleveland, and with their help it is needless to say that nothing was wanting from that direction. The accommodation for trapping was most complete, two magautraps throwing all the targets, one at the usual place and used for all handicap events, and the other at a separate stand 40yds. to the left with extra platform for all 16yd. events. The programme called for 150 targets, 85 at 16yds. and 65 handicap distance. The shooting was exceedingly difficult, especially in the afternoon, when a light rain was falling and was blown by the variable wind directly into the faces of the shooters.

The club offered for a special prize a best leather cover to the amateur shooter who had the highest average in the programme events. This was evidently what Cutler was waiting for, as he started in in the lead and held it to the end, coming under the wire 8 birds in the lead over his nearest competitor. Leroy's shooting was the feature of the day, and was easily high gun, but could not enter into the amateur race. Shooting from the 21yd. mark one time, mixing in with the 16yd. mark, shooting singles, doubles or anything that was called for, he averaged over 81 per cent., and though not the percentage that would carry honors at roof gardens, taking in consideration everything, it would more than compare with them.

The team match was the center of attraction this week, and was entered into by six teams, representing the following clubs: Portsmouth, Haverhill, Birch Brook, Fitchburg, Brockton, and Boston. After a spirited contest, in which there was amusement for every one, it was found that the Shore City experts had done the same trick as in last year's contest, and won by 8 targets. At the end the winning team was presented with a sterling silver-mounted cut-glass loving cup by the Boston Gun Club, which it hopes will be the means of adding interest in their trapshooting on their own grounds.

In the prize match of the Boston Gun Club's serial prize shoot the winners of the honor position were Worthing and Cutler, who tied on 25 out of the 30. Next in line were Michaels and Howe, the latter from the 19yd. mark, with 23 each. Leroy from the 21yd. mark, and North were third with 22.

Dinner was served up stairs in the club house, with the compliments of the club, and those who were unfortunate enough to have missed a few targets in the morning's sport made straight scores in that direction, and felt repaid for their hard work.

Extra events Nos. 2, 13, 14, 15 and 16, 10 unknown, 16yds.; extra events Nos. 8, 9 and 10, 15 unknown, 16yds.; extra event No. 12, 20 unknown, 16yds.; extra event No. 4, 5 pairs, unknown, 16yds.; extra events Nos. 1, 5, 6 and 7, 10 unknown, distance handicap; extra event No. 3, 15 unknown, distance handicap; extra events No. 11, 5 pairs, unknown, distance handicap:

Peters Cartridge Co. Tournament at Asheville.

ASHEVILLE, N. C., March 21.—To-day saw the closing of the three days' shoot given by the Peters Cartridge Company, of Cincinnati, under the auspices of the Battery Park Hotel.

The morning of the 19th saw quite a number of shooters gathered upon the club grounds, which are situated in the bounds of the driving park, which faces the far-famed French Broad River.

Owing to the programme getting out late many telegrams of regret were received by the management from shooters who would have attended.

The conditions for the first and second days were anything but agreeable. The first day a stiff, strong breeze blew off the river directly in the faces of the shooters, accompanied by clouds of dust. The second day the wind held from the same quarter, and with a steady downpour of rain. Many shooters quit and went up to the city. This in itself was a great drawback, but the shooters one and all were unanimous in their praise of the smooth management of the shoot by that genial and popular manager Jack Parker, of the Peters Cartridge Company, assisted by Harry Lemcke.

The third day saw a much larger attendance than on the second day, as the sun came out bright and warm, and the wind shifted to the backs of the shooters. The day was most delightful, and scores increased accordingly.

The veteran, Col. J. T. Anthony, of Charlotte, N. C., won the handsome $100 silver loving cup, which was presented by Maj. McKissick, of the Battery Park Hotel, for the amateur making the highest average for the three days.

The Colonel used Peters Ideals, and at once began to forge ahead, and he landed a winner. The Colonel says the load is what the name implies—an ideal.

Maj. McKissick was a close second, and if his gun had not broken down he would have given the Colonel a close race.

Mr. John Avery, of the Peters Cartridge Company, was also in attendance, and shot a good race. Mr. John Parker was high gun, but as he was not eligible for added money or prizes, he was out of it.

Harry Lemcke shot in good form, and he is fast coming back to his old form, as before his late illness, but a severe bruise on his face caused by his gun put him out of the game. He shot some after the first day, but left-handed.

Jim Carrier, of Asheville, has got a new gun, as has also French Coxe, and these boys will make it hot for the amateurs of this section before long, as both are promising young shooters.

The last day saw many ladies present to witness the shooting, as the beautiful weather brought them down from the hotels. This must have had something to do with the boys being on their metal. Every one of the participants shot Peters Ideals, and they are all enthusiastic over the same. The very quick action of the shells was noted in a miss-and-out by Anthony, McKissick, Avery and Parker, on the last day, from the 32yd. mark.

In August Maj. McKissick and Col. Anthony will give a shoot here, open to the world, dates to be selected later on, and the writer will say right here to all shooters: "Don't miss it, or fail to come to the 'City in the Sky.'"

Concord Gun Club.

CONCORD, N. H., March 15.—The scores made by the Concord Gun Club to-day at 50 targets were: Tuttle 42, Nardini 40, King 44, Martin 44, Morris 46, Sanbon 45.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Shooting Notes in the South.

Editor Forest and Stream:

As another year comes and goes, the sportsman of an observing turn of mind is given opportunities of adding to his store of gun, dog and game lore and thereby to his fund of general information on kindred subjects.

The season of 1900-1901 has in most places been a good one, added to which the weather, favorable in most Southern States, has afforded those so inclined many bright and cheerful days afield—days so short as hours go, yet so replete of nerve-stirring events that many of them dwell in our memory for all time.

The writer enjoyed, while at Greensboro, N. C., a few afternoons' quail shooting with that incomparable sportsman, Mr. J. F. Jordan, than whom no greater nimrod or more amiable companion can be found. To tell the truth, we did not have much sport, owing to a combination of causes which seemed to thwart us on every occasion. When the dogs were at their best the wind was so high that they could not show off to advantage, and when we had what might have been a good day, it rained up to noon, and our best dog turned out lame and quite unfit for service. So, all in all, we may be said to have had many of the fates against us, which, as every true sportsman knows, will happen in best regulated kennels and in best timed affairs generally. Fact is, the middle of January in North Carolina is a bit late for great bags, but splendid for good hard shooting.

In this connection I wish to relate what in my humble opinion is the very finest and most brilliant shooting done afield by any man that has ever come under my observation. Mr. Jordan has always been a great advocate of and believer in small-bore guns, and as soon as he knew he could obtain one of reputable American make of 28 gauge he immediately ordered it. So now he is using exclusively a 26in. barrel, 28 gauge, Parker gun, right barrel improved cylinder, left modified choke; and to see him perform with this little toy of a weapon is nothing short of a marvelous feat. He gets his ammunition loaded by that most skillful sportsman and careful of gunsmiths, Mr. William Wagner, of Washington, D. C., using 1½drs. of powder and ½oz. No. 8 Tatham's chilled shot. Mr. Wagner, himself a staunch and firm believer in small bores, has probably had more experience in hand loading small gauge ammunition than any one else in America, so that to say his loads are perfect is merely to paint the lily. At any rate, one must see Mr. Jordan chop birds down in doubles and singles, far and near, and hardly ever miss, to fully appreciate what such apparently insignificant loads can do in a well bored gun with such an artist behind it.

I will say this, and make as simple a statement of the absolute facts as I can, knowing fully well dozens of other men have been afield with Mr. Jordan this past season, and feeling absolutely certain any one of them would frankly and freely indorse all I will say and go far beyond what I would dare tell.

In the first place, we shot together part of three days, and in one instance only did Mr. Jordan fail to get his pair out of a covey rise, and then the bird that escaped went off badly wounded, and had we taken more time I have no doubt the dogs would have found it in the dense thicket into which it flew. I saw him kill and gather birds in such close and tangled places that nothing but a glimpse of fast fading brown could be seen for a single instant, some being killed at less than a dozen paces. On the other hand, we saw him kill some at distances which I cannot bring myself to give, knowing full well that such would certainly invalidate my whole statement, for after all there is a limit to the credulity of even one's own personal friends and admirers, and in all modesty, I trust I may claim to have some of both.

Mr. Jordan candidly admits that he never in his whole shooting experience of twenty-seven years has had so handy, serviceable and deadly a little gun, and to realize the truth and correctness of this statement one has but to see him handle it. It was such a revelation to me that all great scores at the traps fade into insignificance by comparison—really there can be no comparison. To say that a man seldom misses simply conveys no information whatever, because a man may pick his shots and poke about and yet not do anything worthy of mention. But when a man takes every offer, fair or foul, and then seldom misses—why, that is quite another thing, and stamps him a past master in the art of shooting, raising him to a plane seldom reached by any one and never topped by living mortal—and all this with 1½drs. of powder and ½oz. of shot. Think of it, gentlemen who use a handful of ammunition to bag a bird not as big as your fist, and then ponder which of the two is really the more sport.

Of course, we had no such dog as our dear old lamented dog Dash, nor will we again have. The man who owns one such dog is more than fortunate; to ever have two would make the rest of mankind envious. To shoot with a man like Mr. Jordan has an exhilarating and yet depressing effect. It just makes one warm all over to see a man cut down bird after bird anywhere, anyhow, at any rate of speed, angle or from any position, and one feels a glow of pride in knowing such a man, especially when you know him well enough to quite thoroughly appreciate his modesty. But then again comes the reaction when you yourself bungle along and miss shamefully, and suddenly hear a pistol-like report and see a brown ball of feathers and stuff come tumbling down away off through tree tops—ever so far and in never so tangled a place; and so it goes from morning to night—the little gun cracks, the little birdie collapses, nothing is said, but a great deal is done. Bravo, Jordan! We all think we can shoot, but when with you, why, we get another think.

Leaving Greensboro with regret, I wended my way on my Southern trip, and soon reached Macon, Ga., where, with my friend, Mr. F. C. Etheridge, I had a morning's dove shooting. Unfortunately birds were very scarce, so we had very little sport. All the same, I hugely enjoyed the company of the men with whom we spent the evening and following morning. A day or two spent with so thorough a sportsman as Mr. Etheridge is always delightful, game or no game. The companionship of such a man is always a treat, so I look forward to another jaunt toward Macon.

At Jacksonville, Fla., I lodged with mine host B. W. Sperry, proprietor of the Hotel Duval. Mr. Sperry has the knack without showing it of making his guests feel comfortable and instantly at home. Can one say more of any hotel man?

Here we had a little trapshooting, and also one day afield, during which we bagged a few quail and doves, and had a splendid walk and good long chat, if not very much game in our bags. But game is cheap, any one knows that; a good chummy fellow is scarce, so give me Sperry.

At New Orleans I ran up to my old chum, Mr. John W. Phillips, and together we went on our annual snipe shooting trip to Beaumont, Tex. There we found Mr. Geo. Oliver, ready as of yore to pilot us and this year to show us his young pointer dog George work on snipe.

Regarding this dog as a game finder I can safely say I have never seen his superior, and perhaps might add, his equal. At any rate, he is a most promising yooung dog of tremendous courage and endurance, and possessing a really wonderful nose. Some two or three years ago I wrote a full account of our shooting at Beaumont over Dr. Oliver's dog Bill. Well, George is a half brother to Bill, and for me, give me George all the time. He is more tractable and has quite as good or even better nose, and most certainly will make a better dog.

This year, owing to high winds and finding the snipe principally on burns bare of corn, which of course made them wild as hawks, we could not make as big a bag as usual. Still we got plenty—i. e., seventy, eighty and seventy in three days' shooting, two guns—barring a few birds bagged by Mr. Oilver, say a dozen or so.

The snipe shooting was nearly all at extreme ranges, and never could one have a better opportunity for trying out to fullest extent the quality of ammunition or range of gun.

GAUCHO.

Staunton Gun Club.

STAUNTON, Va., March 22.—In the two 25-target events to-day in the shoot of the Staunton Gun Club the following scores were made:

Event No. 1:

Garber	1111101110111111110001110—19
Sillings	1111111110011011111111111—22

ON LONG ISLAND.

Trap at Interstate Park.—John Wright's Shoot.

Interstate Park, L. I., March 20.—A rainy morning was inauspicious for a good day, but, while there was drizzling rain betimes and heavy, dull sky, the conditions of the weather did not seriously affect the competition. There was a good attendance of shooters. Mr. Donald Deacon, of the New Utrecht Gun Club, acted efficiently as referee. The scores:

Extra event No. 1, 10 birds, handicap; Rose system; three moneys. Gilbert (31), 10, Crosby (31) 10, Piercy (28) 10, Fanning (30) 9, Dr. Shaw (27) 9, C. E. Cady (26) 9, Van Allen (29) 9, Morfey (30) 8, Dr. Martin (27) 7.

Extra event No. 2, same conditions as No. 1: Crosby (31) 10, Fanning (30) 10, Gilbert (31) 10, Shaw (27) 10, Daly (28) 10, Morris (27) 10, Cramer (26) 9, Piercy (28) 8, C. E. Cady (26) 8, Dr. Miller (28) 8, Van Allen (29) 7, Martin (27) 7.

Regular event No. 1, 5 birds, handicap; two moneys, class shooting: Morris (28) 5, Piercy (28) 5, Shaw (27) 5, Fanning (32) 5, Crosby (33) 5, Anderson (26) 5, Daly (30) 5, Kay (28) 5, Cramer (27) 4, Miller (28) 5, Cady (27) 4, Gilbert (33) 4, James (27) 4, Martin (27) 4.

Regular event No. 2, 7 birds, $5, was shot as No. 3: Miller (28) 7, Piercy (28) 7, Langdon (26) 7, Crosby (31) 7, J. P. Kay (28) 6, Rogers (27) 6, Gilbert (31) 6, Fanning (30) 6, J. G. E. (27) 5, Lockwood (26) 5, Daly (29) 5, Gardner (26) 2.

After deducting $75 for the price of the painting, there was $25 left. After deducting 50 per cent. of this sum, there was $12.50 to be divided among the winners of second and third, so that the values were $87.50 to first, $7.50 to second and $5 to third. The share of third was 70 cents. Instead of a miss-and-out the ties were shot off under the same conditions as the main event. Following are the scores:

Morris, 28	1221221222—10	Crosby, 33	12222*1210— 8
Martin, 26	1112221221—10	Waters, 28	1210022222— 8
McManus, 27	2222122212—10	Kay, 28	2212220022— 8
Gilbert, 33	2022212222— 9	J G E, 26	2222220021— 8
Cramer, 27	2121012112— 9	Cady, 27	2022120221— 8
Shaw, 27	2211112210— 9	Daly, 30	2222220210— 8
Rogers, 27	1110121211— 9	Piercy, 28	1202220100— 6
Lockwood, 27	2222222202— 9	Blauvelt, 27	0220022022— 6
Fanning, 32	0220111121— 8	Anderson, 26	1202022100— 6
Miller, 28	1111002222— 8	Hyde, 26	02202200*0— 4

	First Tie.	Second Tie.
Morris, 28	2122112222	212*222222—9
Martin, 26	2211111121	2120110121—8
McManus, 27	1112010w	.....

Event No. 3 of the programme was shot as No. 2, and was the main event, the prize being a painting of a trout. The programme was arranged very awkwardly, as follows:

"First prize will be a $75 oil painting and 50 per cent. of entrance money over and above fifteen entries. Second prize, 30 per cent.; third prize, 20 per cent. above fifteen entries. Class shooting, handicap rises. All 25 and 26yd. men one lost bird as dead. All 27 and 28yd. men one lost bird as no bird. Ties, miss-and-out, but any contestant can draw his share pro rata before shooting ties if desired."

A fair forecast of the number of shooters would have been twenty, the number which actually participated. After deducting the price of the birds, there was $100 left.

Jeannette Gun Club.

Dexter Park, Brooklyn, March 15.—In the club shoot Job Lott won the medal in Class A, C. Bohling in Class B.

Challenge medal:

C Meyer	2012222212222211—14	G E Leoble	222021010012112—11

Club shoot:

New Utrecht Rod and Gun Club.

Interstate Park, L. I., March 23.—A balmy day, clear and bright, with a touch of springtime to gladden it, favored the shoot of the New Utrecht Gun Club to-day. There was a gathering of shooters, club men and visitors of mighty fame with the shotgun. All the visitors were scratch men, while many of the club members had a lost bird as a no bird or a kill. The result shows that the handicapping was excellent. There was no wind, but it was not an easy matter to make full scores, for the birds were a mixed lot, with now and then a three-flap bird, one which goes out of the boundary in three flaps of its wings or more.

Mr. Walter F. Sykes managed the shoot. A number of the club members further honored and dignified the event by bringing their wives. To the club members the day had an added significance, inasmuch as the club rooms in the Casino were officially opened for the use of the members—and elegant rooms they are. The reception room is elegantly furnished with a view both to the comfortable and the beautiful. Pictures and mounted heads grace the walls, a cabinet contains articles all in keeping with the theme of sport, while elegant furniture and furnishing satisfy the taste of the most critical. The second room is equipped with lockers and things useful in respect to the members' shooting paraphernalia.

The prizes in the 20-bird event, of which the scores are herewith appended, were furnished by the club. The entrance was price of birds. There were prizes of mounted heads of different animals, and mounted birds—five prizes for members and five prizes for guests. The scores as a whole were excellent. There were thirty-six entries, and of these thirteen scored the limit.

F A Thompson, 29	220202122112*22*2022—15

WESTERN TRAPS.

Butte Rod and Gun Club, of Montana.

CHICAGO, Ill., March 23.—The annual meeting of the Butte Rod and Gun Club was held last week in the Owsley block, with a good attendance. The treasurer's report showed $1,022.23 on hand, and other assets are a house and lot at the range and 22,000 bluerocks. The secretary's report showed nine members, including those elected during the last year. Carl Engle was elected to membership last night. For non-resident members annual dues were reduced from $6 to $1. The election of officers resulted in practically a reinstallment of the present board as follows: President, J. M. Steward; Vice-President, J. M. Spargo; Treasurer, A. Wehl; Secretary, C. H. Smith; Captain, A. J. Walker; Trustees, Gus Bird, Joe Slemons, P. A. Allen, J. E. O'Brien and G. W. Morse.

The new magautrap was discussed, and it was said that the Anaconda men will attend the installation ceremonies on the 24th of this month. A large number of the club members will go to Great Falls to attend the State tournament, which is to open on May 19.

Garden City Gun Club.

Chicago, Ill., March 23.—The regular monthly handicap shoot of the Garden City Gun Club took place at Watson's Park, Burnside Crossing, to-day. Several of the competitors scored the limit in the club shoot, as the following scores will show:

Portsmouth Gun Club.

PORTSMOUTH, Va., March 22.—Here find scores made at a live-bird shoot of the Portsmouth Gun Club March 21. Seven hundred birds were trapped, all good, fast birds. Among the visitors were some crack shots from Baltimore, Md., and Richmond, Va.; also "Jolly Jack," of U. M. C. fame. The shoot was ably refereed by L. D. Thomas, and everything passed off quietly and enjoyably to all:

G. P. GRANT, Cor. Sec'y.

"What makes you so sure that Wrighter is going into fiction? Has he ever done anything in that line?" "No, but he's planning to spend two weeks on a fishing trip."—Buffalo Commercial.

"Captain, will you kindly tell me what time it is?" asked Jonesby from the cabin of his yacht. "Six bells, sir," returned the captain. "Oh, hang the bells!" said Jonesby. "What time is it on shore?"—Harper's Bazaar.

PUBLISHERS' DEPARTMENT.

The quaintly worded advertisement of Jos. A. Marks & Co. shows that the wants of sportsmen can be provided for in Detroit, and it might well enough be to the advantage of each one whose vacation is likely to be spent in the Northwest to send for their free catalogue.—*Adv.*

Acetylene gas has come to stay, and when its brilliancy is considered it is not strange that it should have been applied to searchlights. Yacht and launch owners interested in such matters will be inclined to investigate the Baldwin Acetylene Searchlight.—*Adv.*

The camper who has been in the habit of lumbering up his tent with a choice collection of wood as a precaution against rainy weather will appreciate the comfort, convenience and compactness of the Khotal Camp Stove, whose advertisement we carry in another column.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1901, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, APRIL 6, 1901.

VOL. LVI.—No. 14. No. 346 BROADWAY, NEW YORK

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

If we are content with an ungainly fly, we will be satisfied with inferiority of rod and tackle; and although the fish may not see the difference, the angler may become from neglecting one point slovenly in all. A well-made fly is a beautiful object, an ill-made one an eyesore and annoyance; and it is a great satisfaction both to exhibit and examine a well-filled book of handsomely tied flies.—R. B. Roosevelt.

THE REAL THING IN MINNESOTA.

THE Hallock, Minn., Enterprise reports that the poachers of Beltrami county have discovered that in their conflict with the game wardens they have "run up against the real thing." That is to say that they are now dealing with an executive agent who means business. And this means that the Minnesota interregnum of make-believe protection for political purposes only has come to a sudden end.

For two years politics ruled. The deputy game wardens were appointed with a view to the votes they could control. The game protection force was a part of the political machine. The result was precisely what it has been everywhere else and always will be. The poachers had things pretty much all their own way. Game was killed out of season, and was shipped to market in violation of the law, and the illicit destruction was proceeding on a scale and at a rate that promised extermination.

The change came with the appointment of a new commission and of a new executive agent. The commission is composed of Messrs. Uri L. Lamprey, W. P. Hill, D. W. Meeker, H. G. Smith and Samuel F. Fullerton, Executive Agent. Mr. Fullerton, it will be remembered, was the very efficient agent of two years ago. During his former term he did most excellent service and had acquired a thorough knowledge of the ways of offenders and the means of enforcing the law. He had, in fact, so well demonstrated his fitness for the place and his usefulness in it that there existed not an iota of justification for dismissing him from office. Had the public business of Minnesota at that time been conducted on the principle by which individual business is controlled, Executive Agent Fullerton would have been retained to carry on the good work he was doing. Now that he has been reappointed, the citizens of Minnesota have the right man in the right place doing the right work in the right way. As the Beltrami poachers put it, game law enforcement is now "the real thing."

Some of Executive Agent Fullerton's acts are startling in the light they throw upon the conditions which prevailed under the old régime. For instance, his predecessor had been told of a tannery established in the wilds of Itasca county for the tanning of moose and deer hides; but the story met only official pooh-poohing as a fake concocted for political purposes. Within ten days after taking office Mr. Fullerton discovered the tannery, raided it, seized 137 deer skins and fourteen moose hides and nineteen sacks of hair collected from other skins; arrested the proprietor, took him before a magistrate and had him roundly fined. This Itasca county tanner had employed a gang of hunters to kill moose and deer for him, and had sold the meat to lumber camps. Agent Fullerton arrested the lumbermen, haled them into court and collected the penalties. Another lumberman, one of the most prominent in the State, at latest accounts was dodging arrest and trying to arrange a compromise. Another seizure was of a taxidermy establishment some seventy miles from Thief River Falls, whose proprietor had three men killing deer and moose for the heads, which were mounted for sale, the meat being sold to lumber camps. The man was fined and his business was broken up. Both taxidermist and tanner averred that they had been running full time for two years and never before this had they been "up against the real thing."

The lawbreakers in the cities are "up against it" too. Last Saturday the steward of the Minneapolis Club was fined $50 for having venison in possession. In St. Paul, Carling and Magee, two of the principal restaurant keepers, and R. E. Cobb, a commission man, have just been made to pay $70 each for game unlawfuly in possession. These are but examples of numerous convictions of game law violators secured by Executive Agent Fullerton in the first weeks of his new term of office. He may be relied upon to carry on the work in the same vigorous way. The new administration means business; it is showing itself to be "the real thing." We congratulate Minnesota upon the change and upon the outlook.

THE GUN IN CLOSE SEASON.

ONE consideration which was strongly urged in opposition to the Maine bill to forbid the carrying of guns into the woods in close season was the use made of firearms for signaling purposes by those traveling in the forest. There are men of experience and a good degree of woodcraft who are nevertheless unwilling to trust themselves to go from camp without a gun to fire as a signal in the event of their getting lost. Another argument advanced was that shooting at a mark is one of the common diversions of camp life, and it would be felt as a hardship by many visitors to be deprived of this.

Whatever may be the cogency of these considerations in their application to the wilderness, they may not reasonably be urged with respect to the common practice of carrying firearms into the home game covers in the close season. On the contrary, there are good reasons for keeping firearms out of the woods and fields in the close season.

For one thing, it would simplify the enforcement of the game laws. A game protector would not be obliged to discover the actual killing of game; it would be enough for him to find firearms in possession.

Another reason is that to keep the guns out of the game covers would secure to the game the conditions of peace and quiet essential to their breeding and well being. From the last day of the open season to the first day of the lawful shooting again the game country should be unaffrighted by the sound of shooting.

The system would be welcomed as a decided relief by the farmer, for it would in a large measure lessen the nuisance of trespass and invasion of lawless strangers. It would stop the hordes of wanton shooters who swarm out from the large towns at times when there is no legitimate game to shoot. The farmer would have greater security for his fences, crops and cattle. The law would go far to solve the problem of the armed hoodlum.

By exempting from the prohibition the landowner—that is, by reserving to a person the right to carry guns on his own lands—no possible hardship would be entailed by the adoption and enforcement of such a law. It would cut off no legitimate privilege now enjoyed by any one as to the carrying of arms in the field.

If we assent to the premises that guns should be used to kill only game, and not chippy birds, and that game should be killed only in its season, we may adopt the conclusion that guns should be carried in the game fields only in the time when game shooting is permissible, and that at all other times they should be forbidden.

Why should we not adopt the absolute prohibition of firearms from the game covers as an essential feature of game protective legislation? Why may we not make it another platform plank?

THE TRAPPER'S CAMP.

WHEN the days begin to lengthen and the cold to strengthen, when January winds send snow whirling through bare branches until it is piled deep in the woods; when quiet waters everywhere are locked in ice and only the swiftest brooks and rivers are open, then the trapper puts out his line of traps and gathers his harvest. In this time of hard cold, when the ground is snow covered, food is scarce. The carnivorous woods dwellers have a hard time to make both ends meet, for, of the creatures which are their prey in summer and autumn, many are now safely enjoying their long winter sleep, and fox and marten and mink are forced to work double tides to keep life in body. But now their fur is prime, and will be so until the snow is gone.

If about to start in on new ground, the trapper built his camps in the autumn and gathered for himself a good wood pile. He looked over his steel traps, of which he had no great store, prepared the material for his deadfalls, and also the boards on which to stretch his small skins. Then, when the time to start had come, he started out from one cabin and set his traps to the other, and then perhaps put out a second line by another route back to his starting point. Over these lines he moved back and forth, collecting his fur, resetting and baiting his traps, always busy and often happy. There is pleasure, excitement and health in the life, even if to-day there is much hard work, frequent disappointment and little or no money.

For in these days—except in the furthest north—the progress of civilization and the energy of earlier generations of his kind have so reduced the supply of fur bearers that to-day the trapper's harvest is but a slender one. No longer may he hope to see hanging about his cabin, drying on their frames of green willows, great circular beaver skins, beautifully glossy brown on one side and smoothly dark on the other; rarely may he secure an otter, such as is seen lying in the snow before this camp; and he who may kill a deer and so have fresh meat for weeks may think himself fortunate.

Nowadays most trappers must be content to skin the casual mink, the humble muskrat or the occasional fox or wildcat, for the day of trapping is past. Yet it was not many years ago that one in three weeks from the settlements secured twenty-seven beaver and one hundred and forty good mink; but he was a trapper and his like is hardly to be seen to-day.

Trapping grounds in the United States are few. Michigan, Wisconsin, Minnesota and one or two other States along the border offer a little fur, but not enough to pay the trapper day's wages. Yet he who can endure the winter's cold and loves an outdoor life may well enough, if he has time, put out a line of traps and for a little time live as did the pioneers.

ELK AND SHEEP.

Judge J. L. Smith, of the Missouri Court of Appeals, whose experience in the Rocky Mountains has made him familiar with the game conditions there prevailing, has published in the Kansas City Journal a stirring appeal for immediate action by the Secretary of the Interior to stay the threatened invasion of the Snake River Basin by the sheep men. We reprint Judge Smith's letter in another column. It bears out the representations of the elk situation already given in our columns by Mr. Wells and others. The facts are familiar. The elk driven from the high ranges by the snows depend upon the pasturage of the low country for their winter subsistence. Of this winter range they have been in a measure deprived by the inroads of settlers. They have been menaced, and now are threatened again by the sheep men, who have attempted and will attempt again to pasture their immense flocks on the public lands. Such an invasion will mean inevitably the destruction of the feeding grounds of the game and the starvation of the elk. If there were no recourse, if to state these facts were to describe a situation for which no remedy were possible, to bring it thus to public attention would be without purpose. Judge Smith suggests that the Secretary of the Interior could by an order forbid the pasturage of sheep on public lands. Congress has authorized the Secretary to make regulations governing the forest reserves, but the constitutionality of the statute has been questioned. Congress should at the very earliest opportunity remove any such question now existing by enacting specific regulations for the forest reserves on the lines of those already enacted and in force for the National Park. The conditions described by Judge Smith give new force to the FOREST AND STREAM's proposition that the national forest reserves shall be made game preserves.

THE ARGUMENT FOR SPRING SHOOTING.

THE common contention, and the chief argument in defense of spring shooting, is expressed in a sentence—"Because others do we must." You may consume hours in talk and use up reams of good stationery to discuss the economic phases of the question, to show the foolishness of killing birds in the breeding season, to demonstrate that the stock cannot stand the drafts made upon it by the spring shooter, and to all your talk and writing the one all-sufficient and conclusive and unanswerable retort is, "Because others do we must."

If spring shooting of game on the way to its breeding grounds, or on grounds where it would stop to nest if it were given a chance—if this shooting has any good and sufficient reason for continuance, it is not found in the plea, "Because others do we must."

The Sportsman Tourist.

Glimpses of Seminole Life.

The Seminoles of Florida occupy a unique position with respect to the United States Government, as being unconquered and unsubdued, having no legal existence nor allegiance to our nation—in short, so far as the United States are concerned officially, there are no Indians in Florida. The tribe to-day numbers over 600 souls, living at peace with all mankind, independent but suspicious of Washington officials and only asking to be let alone, refusing all Government assistance—a homeless people in a free land, ever pushing on as the white man approaches.

Many of the tribe have never been outside the confines of the Florida swamps; they hold to the belief that this land is theirs—theirs by right of the pledge made to the "gallant Worth," who was the first of the eight generals who had not disastrously failed in fighting the daring and wily Seminole.

Two years ago Tom Tiger, chieftain, reached Kissimmee after a ride of 160 miles. Dressed in the regalia of a chief and mounted on a rawboned horse, he might have been mistaken for a sheik of the Arabian desert. He had come on a friendly visit, incidentally, but to tell the white friend his trouble over a horse which had been stolen by a white rascal. The story is a long one, but suffice it to say proceedings were instituted, and with the result that Tom Tiger, Seminole chief, was the first Indian who had ever stood up in a white man's court, making, as spectators remarked, the most imposing picture they had ever witnessed. The tall, magnificent looking savage, with uplifted hand, took the oath on the holy Book of God, and with a perfect understanding of the act. It was told that the State attorney made the most thrilling speech of his life as he pleaded for the barbarian of the swamp.

The case was lost to the Indian on a simple technicality and the white man escaped penitentiary.

On this wonderful visit of Tom's, which was lived over and over again around the camp-fires, traditions and heart thoughts were revealed, as the chief sat evening after evening, putting forth his best efforts to entertain.

Tom had a love for wyomee (whisky) and was not averse to taking it, and in speaking of a friend whom he admired much, he would say, "Captain —— good man; five Indians go in saloon, five drinks give 'em. No money take. Five white men go in, money take." But when Tom was asked to not take whisky in Kissimmee, he promised *ungah*, "all right."

A day or two after, when the white friend stepped out of his office, and looking back saw the tall form just passing into the saloon, headed by three cowboys, his spirits fell. Tom returned to the office, and his friend chided him for going to the saloon. Whisky, me no take 'em; lemonade me take; cowboys, whisky." The white man's trust had not been betrayed.

In this Indian's visit many chapters were revealed of the character and home life of this tribe. Savages, 'tis true, but honor, justice and religion shine forth in their tribal life. During his absence, his squaw and piccaninnies were attending to the corn patch and caring for the hogs. Tom came as an ambassador to the white friend's home. "Martha Tiger tell me old too much, Kissimmee city too far; want to see white squaw; want white squaw to come to Seminole camp."

A few months after the long promised and anticipated visit was made. Preparations in the Seminole village were going on for the green corn dance; the hunters were out for game; the corn was ripening and an air of festivity was all around. Dogs barked as the white guests approached, but a commanding Seminole reprimand soon drove them away; piccaninnies came around with timid advances and squaws greeted with handshaking. A wigwam was built at once by hospitable hands, and the visitors were assigned to this point in the camp.

What a world of interest, both romantic and tragic, hovers around the wigwams of a Seminole family! Tallahassee is the patriarch of the Cow Creek tribe, and every deference is shown him by members of the band. To Tallahassee was left much of the entertaining, he directing the movements that would add to the pleasure of the white guests. Without giving thought to it, we hitched to a pole that stood in the open. It proved to be the festal pole for the dance, and the spot was sacred for that occasion; but the innate courtesy of the old chief prevented his showing any offense, and in the morning he waved his hand in the direction of the horses and asked, "Horses, you want 'em there?" Learning what the pole was for, we were the ones to beg pardon and feel chagrin.

Then came the attention to us, in showing around the little fields, telling the names and kinship of the various members as they came into camp. This devolved upon Tallahassee, and the honor was two-fold. As the shadows fell and the camp-fire flickered, it was the old chief who regaled the company with history dating back over 150 years. "My grandfather tell me, old, old man; me tell my boys," and so history and tradition is kept and handed down from generation to generation.

The old patriarch rambled in low monotone, living over again in dreamy reminiscence his hunting days, and, with a record of seventy bears, to say nothing of panthers, deer, coons, possums and turkeys, how the mind of the nineteenth-century hunter was put on fire. As the old chief drew closer his tunic, we asked, "Tallahassee, last winter cold much; Kissimmee city ice come; what you do?" A young brave spoke up, "Tallahassee old, get cold heap; blankets put on him and big log fire make."

Then came the jokes, as told by one member on another; and how these children of the forest would laugh, as the tales were recounted. They are children only in mind, yet are full of discernment and strong in character. A present of a book containing Tallahassee's picture had been sent to the old chief the year before, and this must now be brought out to show to the visitors. Spelling and copy books were the occasion of much comment and much praise from the white friends. The older Indians said, "Me no write; old too much. Little Tiger make letters by and by; write good; keep store." Who shall say there is not hope for their civilization and a bright future for this picturesque tribe?

The utensils hanging around the wigwams would do credit to many a white family; there were buckets and pans of agateware, also a sewing machine or two, and well-made wagons, purchased in Jacksonville.

In the past they have lived a happy, care-free life, migrating from place to place, taking squaws and piccaninnies with them, the men hunting alligators, deer and coon, while the women would gather the koontie (cassava). With the depletion of the game their livelihood is being taken from them, and they are becoming a helpless people, but still proud as the old race.

A purse of $10 was once made up for one family when the husband had died; but the cowboys, ever ready to alarm the Indians, had told them that the money was

HANNAH.

A slave owned by the Seminole Indians. In Tallahassee's Camp, making sof-ka for dinner.

from the Government, and the older members held a talk, with the result, "Money no take 'em; squaw no want 'em." With mouth-watering glances the little ones at the same time refused candy and sweet cakes; they had been forbidden to accept what the old Indians believed was from Washington, the home of the "big white chief."

A character holding a position unparalleled in Uncle Sam's domain is Hannah, the negro slave belonging to Tallahassee's family. She is a full-blood negress, with thick lips, broad, flat nose and kinky hair, which may or may not have been combed in the last quarter-century. Hannah is the last vestige of Seminole slavery, the one

CHIEF TALLAHASSEE.

Indiantown, Fla., June, 1899.

great subject of warfare seventy-five years ago between the Seminoles and the Southern planters, and upon which, truly speaking, was based the seven years' war.

Hannah does the work of the family, and though she is kindly treated, yet a certain contempt is felt for her, for Hannah is an "este lustee" (a negro), and to the haughty Seminole a negro is the lowest of human creatures.

The occasion when Hannah's picture was kodaked is fresh in memory. All preparations were being made for the feast, but Billy Ham, Tallahassee's son, had not been able to get a deer, and so had purchased beef from a market thirty miles away. With pots and kettles in readiness, Hannah was preparing the beef, when the little box-like instrument was gently rested on a rail near by. Hannah's eye detected the object and she turned away and began busying herself around the boiling kettle on the ground. The camera was adjusted, finger on button ready to snap and a masked indifference affected and an animated conversation begun with one of the Indians near by, when Hannah again retured to her work about the table. Snap! went the button, and Hannah's ebony face and twisted, string-tied locks were photographed on the plate, and proud was the owner to possess so good a likeness of Uncle Sam's one and only unfreed slave.

Minnie Moore-Willson.

Kissimmee, Fla.

The Fort Myers Press of March 21 reports: Mr. and Mrs. Austin H. Hart, who have spent the last five or six weeks at Fort Myers, have had an experience that falls to few, and, in fact, Mrs. Hart has the unique experience of penetrating into the very heart of the Indian camps in the Everglades, going further into the glades than any lady has hitherto ventured. They started out from Thompson about two weeks ago, with Mr. Geo. M. Hendry as guide. The Devil's Garden was visited, but not content with a visit to this famous spot, they pushed on further to the southeast, until they reached the main camp of Charlie Osceola and his band of Seminoles. A new camp was made every day as they moved about from place to place. Mr. Hart shot three catamounts and one wildcat, while Mrs. Hart brought down a fine turkey weighing 15 pounds. Game was seen in great abundance on every hand, the turkeys being so tame that Mrs. Hart succeeded in photographing one in front of their tent. Her description of the peculiarities of the Indians is very graphic. She says the Indians were engaged in building seven canoes or dugouts out of great cypress logs, one of these dugouts being intended to carry eighteen persons. The food is all cooked in one large pot, and when ready all take turns in eating out of this pot with one spoon to go around. Had not their provisions run short they would probably have succeeded in going through to Miami. As it was, they traveled twenty-five miles south of Wilson's store in the Everglades.

Some Boyhood Memories.

V.—An April Afternoon.

This afternoon was more than fifty years ago, and the man with a gun was four and one-half years old. He had been shut up in the house all winter, and was so tired of it that he wondered if there would ever be summer again. But as all things come to an end, so did that long and dreary winter, and one morning in the first week of April he was awakened by the sun shining in his face, and it actually felt warm. All out doors seemed to have been awakened too, for the bluebirds were twittering, and there was actually a robin in the old apple tree that stood at the kitchen door doing his best to tell the whole neighborhood that spring was come. The little boy could hardly wait to get his breakfast, for he thought surely mother would let him get out of doors now, and his disappointment was greater when mother said it was still too cold for boys that had just got over the measles, and then the little fellow's patience was at an end, and he took it so to heart that his father promised to take him to the sugar camp in the afternoon if the weather still got warmer. Afternoon was a long time coming, but it came, and when father came to dinner he said it was warm enough for the boy to go, and after the dinner the two set out together, the little fellow holding his father's hand, the hand that for many years did its best to guide him into all the ways that led to good, but too often they were ways the boy would not walk in after he grew older and became wise in his own conceit. As the little fellow walked with his father he rejoiced exceedingly, for he was not weighed down with the cares and responsibilities that beset men in later life, and supple limbs and robust health made it a joy just to be alive, and at every step the world unfolded something new before him.

Through the sugar camp there ran a clear babbling brook, in which were many chubs and suckers. The fish in this brook were all the youngster thought of, and so soon as the camp was reached he broke for a certain big log that lay across the stream with drift piled against its upper side and a deep hole under and below it. Lying flat on the big log he peered over its side, and in the limpid water below saw hundreds of suckers from four to eight inches long. He watched them for an hour, then ran to his father and begged for hook and line, and after much importuning the indulgent father left his work and went to the house for the coveted tackle. The hook was big enough for the largest bass that ever swallowed a minnow; the line was a carpenter's chalk line, and the rod a beech limb. Some worms were dug and then the father took the boy up the brook into the thick woods, where another log lay across the stream—a big old oak log three or four feet through and covered with beautiful bright green moss. In the deep water under and just below this log there were scores of chubs, mostly small, but there were a few that were five to six inches long. In a few minutes the happiest boy in the world was on the log, eagerly watching the rushes of the small fry to get the worm, but there soon came disappointment, for the little fellows stripped the hook and were not caught, for the hook was too big. The big fellows were too shy to come out from under the log. For more than an hour he baited and rebaited the hook, only to see it stripped and no fish caught. So intent was he about the fishing that he gave only a glance at a mink that started to cross on the log. The only thing he did pay any attention to was the startling whimper of a screech owl that came out of its hole with the lengthening shadows and quavered its greeting to the approaching night.

Finally patience and close attention to business were rewarded, for one of the big fellows made a rush from under the log and was caught. Then the youngster stood on the log and let out a series of childish whoops that brought the father in quick haste, for he thought the boy had surely fallen into the water. When he arrived the boy was still dangling his prize over the water and was told to bring it ashore at once for fear it might drop off and be lost. Father took it off the hook, and put in a pail of water it was carried alive to the spring, where, as it could not get out, it lived for several years, but never grew any. At last there came a freshet that overflowed the spring, and when the water subsided the fish was gone. It was only a little chub, but it was the boy's first fish, and he was one of the proudest boys that ever lived. For weeks afterward he watched the road to tell passers by that he had caught a fish. It was more than fifty years ago. The big logs that lay across the brook

are gone; the big trees that shaded the water are gone; the fish are gone, for the brook is no longer a brook, except for a few hours after heavy rains have fallen; but that boy has not forgotten that first fish he caught. Its capture, to the minutest detail, is remembered more vividly than the taking of four-pound small-mouth from a Michigan lake one delicious morning last June.

O. H. Hampton.

VI.—Gray Squirrel in a School House.

If the grown-up people would retain in their memory the keen suffering and pathos of sensitive childhood they would have more sympathy for the little ones about.

When I was a kid a neighbor told me he was looking for some fice puppies at his house pretty soon, and that he would give me choice. I heard of their arrival at once, and I scarcely waited for their eyes to open before I went to get mine. I chose a tawny one, with a white ring around his neck, white breast, blaze in his face, white feet and a white tip on his tail. He was about the size then of a half-grown rat. My two little cousins, Sam and Arch, went with me, and I snuggled the wee thing in my bosom and we struck for home. On our way we named him Tip. Along the road lived a neighbor who had five or six pet deer, which we met, and the old doe came up scenting about us, and I pulled Tip out and stuck his nose to the deer's, and he began to wiggle and whine, whereupon we pronounced that Tip would be a great deer dog. The prophecy came true. I have since owned as good hounds as ever loped the red brush after a buck, and as good bird dogs as Virginia afforded, but none of them has ever filled just the place of that great little fice. How many ground squirrels that little dog would put to hole that I would dig out, or run out by pouring in water; how many rabbits I would cut out of hollow trees or tear down rock piles to get; how many gray squirrels would I throw rocks at half a day and worry until they would jump out of the tree and Tip would catch them. Our darky playmate taught him all manner of tricks and used to paint the white places on him with poke berriers or indigo and call him his show dog.

Of course now and then we had to go to school. An old school teacher by the name of Donald McDonald took up with my daddy, and for years made his home at our house. He was the Scotchiest old Scotchman you ever saw. He had had a mail contract in some of the Southwestern States and got lost in a swamp and canebreak, and the hardship had wrecked his health. He was a stern and pious old Presbyterian, and my cousins and myself, who were far from being pious, made life miserable to that good old man. His school house was a log cabin, out of which, at the rear end, a log was cut and a row of window pane glass was put in the place. The benches were made of split logs, the flat side up and wooden pegs for legs, and no backs. We boys would never go around the road with old Donald to school, but preferred a new way, as we claimed, across a steep ridge and through the woods. One morning Tip treed a gray squirrel in a hickory and we set the dinner bucket in the weeds, and the other two boys agreed to carry the unhulled hickory nuts to me by hatfuls if I would knock the squirrel out. I threw many a nut before I brought it down, but when I did Tip gathered it, and I ran and caught it by the back of the neck, still alive. With it we ran for school, of course leaving our dinner bucket. We put on a bold front and went into the school house, and there sat old Donald McDonald upon his plank pedestal, mad as a hornet, his white, palsied head shaking and a switch about eight feet long trembling in his hands. We went to the ash trough (which was a sugar trough) and turned it over our squirrel, and Tip curled up on top of it. We got our books and went to spelling aloud with the others, swinging our bodies as we pronounced the syllables. Toward noon, when Donald had turned his back, I whispered to my cousins that we ought to look after our squirrel. We went over and raised the edge of the trough, and Tip turned his alert little head to one side, made a dash for the squirrel, turned over the trough, and through the door to the fence went squirrel and dog and every one of the thirty boys and girls in the house. Old Donald followed with his switch, and from some cause Sam hung up on the fence, and Donald gave him a furious lick on the right place, whereupon Sam, rubbing the stinging skin, made the air blue for a while with words shocking to a Presbyterian. For three hundred yards along the fence we chased that squirrel until it finally took refuge into a barn near by, and we tore hay and at least fifty dozen bundles of oats to pieces before the old lady of the house drove us all out.

Poor old Donald was prostrated when we returned and dismissed us early that day and went home. We went after our dinner bucket, and accusing Arch of losing it ran off and left him. In trying to overtake us down the steep hill he ran headlong against a shellbark hickory and nearly knocked his brains out. We were in no hurry getting home that evening, and although Donald had summoned our daddies to hear his charges against us, he had, with the Scotch love of fairness, disclosed nothing.

The escapade of the morning and Arch's bloody head made an ugly looking case for us. As soon as we were in Donald began his narration, telling the scrupulous and exact truth, and his vivid picture served more to amuse than to anger our daddies, for in their feeble attempt to reprimand us each kept his back turned; but they could not keep their sides from shaking. In the meantime we had fixed Arch so as his tale would not go hard with us.

Tip would run about of a night now and then, and he was not particular as to whether the company he kept was with big or little dogs; so he fell into a disorderly gang of the large size, and one night was killed by a big blue bull dog belonging to a near neighbor. His fate was promptly reported to us by our darky playmate (for it seems that he and Tip had been prowling together that night), and the day was a sad one for us. The stern old folks about the house seemed to have lost something, too, and looked very thoughtful.

We dug a grave in which to bury Tip; we would put him in and take him out and cry over him. Although Arch lisped badly, still he could sing like a bird, and he sang "Lily Dale," while the tears streamed down his cheeks; then he prayed that Tip might go to heaven, and we covered our brave little dog up.

We had, however, scarcely performed these sad rites until we began to plan how we might kill old Ring, the bull dog that had murdered Tip. We had recently and clandestinely procured a cheap single-barrel shotgun, so we beat a bullet out of some bar lead and loaded this gun, with a solemn promise never to shoot it again until we had shot Ring. Ring himself was given to nocturnal perambulations, but many was the moonlight nights we laid in the corners of the lane fence before we put an end to Ring; but we did, and then we got into sure enough trouble.

Natural History.

An Outing in Acadia.

BY EDWARD A. SAMUELS.

My description of the aphides and their peculiarities interested the Murrays very much, and Phœbe declared that she would avail herself of the first opportunity for watching the curious little insects while they were being milked.

"Yes," added Mrs. Murray, "and I hope also to have a chance to see the operation. The ants are singular little creatures. I have read somewhere that some species are very quarrelsome and they fight with their neighbors and make slaves of them; is that true?"

"Oh, yes," I replied; "the battles of the ants have been witnessed by a number of good observers, and there is no doubt whatever of the slave-making proclivities of some species."

"What horrid little wretches the red ants are!" exclaimed Phœbe. "I have been bitten several times by them in the woods; they are very savage when they are molested."

"But what do the ants need of slaves?" asked Mrs. Murray. "I always supposed they were among the most industrious of insects."

"Yes," added Phœbe; "their industry has passed into a proverb."

"We can only conjecture as to the cause or the origin of the habit," I replied; "but it is now so thoroughly established that some species depend absolutely on their slaves to do all their work."

This slave-making habit is one of the most curious phases of ant life, and it has been carefully studied by many prominent naturalists.

Pierre Huber was one of the earlier students of this singular trait, and to his observations have been added those of Darwin and many of the later entomologists.

The account given by Darwin is most interesting. He states that the species known as the *Formica rufescens,* which Huber studied in Switzerland, is absolutely dependent on its slaves. "Without their aid," he says, "the species would certainly become extinct in a single year. The males and fertile females do no work of any kind, and the workers, or sterile females, though most energetic and courageous in capturing slaves, do no other work. They are incapable even of making their own nests or of feeding their own larvæ.

"When the old nest is found inconvenient and they have to migrate, it is the slaves which determine the migration and actually carry their masters in their jaws. So utterly helpless are the masters that when Huber shut up thirty of them without a slave, but with plenty of the food which they like best, and with their own larvæ and pupæ to stimulate them to work, they did nothing; they could not even feed themselves, and many perished of hunger. Huber then introduced a single slave (*F. fusca*), and she instantly set to work, fed and saved the survivors; made some cells and tended the larvæ, and put all to rights."

Darwin also describes another slave-making species found in England called the *Formica sanguinea,* and in comparing their habits with those of the other species says: "Let it be observed what a contrast the instinctive habits of *F. sanguinea* present with those of the Continental *F. rufescens.* The latter does not build its own nest, does not determine its own migrations, does not collect food for itself or its young, and cannot even feed itself—it is absolutely dependent on its numerous slaves. *Formica sauguinea,* on the other hand, possesses much fewer slaves, and in the early part of summer extremely few. The masters determine when and where a new nest shall be formed, and when they migrate the masters carry the slaves. Both in Switzerland and England the slaves seem to have the exclusive care of the larvæ, and the masters alone go on slave-making expeditions. In Switzerland the slaves and masters work together, making and bringing materials for the nest; both, but chiefly the slaves, tend and milk, as it may be called, their aphides, and thus both collect food for the community."

"Well, but does nothing prey upon the ants?" asked Mrs. Murray. "Surely they must have their enemies."

"Yes, indeed, many of them, too. Some of the birds devour them greedily, as, for example, your golden-winged woodpecker, that handsome species that the boys call the highholder, flicker, pigeon woodpecker, etc.

"The toad also loves to take his position on an ant hill, and thrusting out his tongue, with the quickness of a flash picks off great numbers of them; the bear is also very fond of ants, and we often find dismantled nests that he has destroyed."

Among the insect tribes the ant appears to have but few enemies. One of the most interesting of these is the so-called ant lion, which in the larvæ form catches and eats a considerable number. This curious larva is furnished with long, formidable toothed jaws; it excavates a funnel-shaped hole in sandy soil and buries itself in the sand at the bottom with its expanded mandibles scarcely appearing above the surface. In this position, according to Sanborn, the entomologist, it awaits the approach of ants or other small insects, which losing their foothold on the loose sand fall easily into its open jaws; if, however, one of these should be warned of its danger and endeavor to escape, the ant lion is said to come forth from its concealment and by means of its broad, flattened head to throw quantities of sand from the bottom or sides of the cavity toward its victim; this has not only the effect of deepening the hole and making its sides steeper, but also of striking and overwhelming its prey, causing it to tumble within reach of the ant lion.

The ants of our American species do not as a rule molest the larger animals unless they are attacked, but there are some species in tropical countries which cause all animated beings to flee from their approach. An officer who was engaged in a Government survey in Honduras recently published an account of the movements of an

LARVA OF ANT LION.

army of warrior ants, which is very interesting. He was sitting in his hammock one intensely hot afternoon under the thatched roof of his bamboo hut, when a native came running in, and with excited gestures bade him follow him. He did so, knowing that something important was transpiring or he would not have acted so excitedly. The native pointed to an open place. There on the rolling savanna stretched a wide black belt extending far back into the deep shadows of the adjacent forest. It rose and fell with every formation of the ground, and like a huge snake slowly crept toward the village. "The warrior ants," exclaimed the native. "They will soon be here;

ANT LION—ADULT.

you had better untie your dogs or the ants will kill them."

Acting upon his advice the officer loosed his dogs, and retiring to a safe distance watched the approach of the warriors. In countless multitudes they swarmed over the plain, marching in compact order, like a well-drilled army. Before them scurried a heterogeneous mass of lizards, grasshoppers, frogs, beetles and other reptiles and insects in a wild scamper to reach a place of safety.

Soon the advance guard reached his hut and disappeared within, then the main column appeared, and in a few moments the floor, roof, walls and rafters were black with them. Like the soft rustle of dried grass stirred by a gentle breeze, came the sound of their presence in the

LARVA OF ANT LION IN ITS PIT AWAITING ITS PREY.

leaves of the thatched roof. The sounds increased in loudness as the rats, mice, lizards, cockroaches, centipedes and others of their ilk who had long made the roof their home tried vainly to escape. Some succeeded in getting away from the house, but only to fall victims to the surrounding hordes without. One large cockroach made a plucky fight, but overpowered by numbers, he gradually relaxed his efforts and was soon dismembered, each ant carrying off a portion of his body as a trophy."

The most exciting battle was with a snake about three feet in length that tried to slip away unseen. The ants quickly surrounded him, however, and fought with terrible ferocity. With every switch of his tail the snake killed a score of his tormentors, but their places were soon

NEST OF A COLONY OF TERMITES.

filled by the black swarm which swept unceasingly on. Finally the writhings of the snake became fainter and fainter, and at last ceased entirely, and then, and not until then, did the ants relinquish their attack. All day long they marched through the house until at sundown the end of the column had passed and was lost to view in the thickness of the forest.

Another interesting group of ants, usually called the white ants, are the *Termitidæ.* They are not true ants, however, as they belong in the great order *Neuroptera,* or nerve-winged insects, in which occur the dragon flies, etc., while the ants proper belong to the *Hymenoptera,* in which are included the wasps, bees, etc.

The termites of Africa live, like the ants, in large colonies, and the structures that they sometimes rear are

immense. An observer in writing of these insects states that "Each termite colony is founded by a fruitful pair, called the king and the queen, who are placed in a chamber devoted to their sole use and from which they never stir when once inclosed. These insects produce a vast quantity of eggs, from which are hatched remaining members of the colony, consisting of neuters of both sexes, the females being termed 'workers' and the males 'soldiers,' the latter being distinguished by their enormous heads and powerful jaws; of larvæ of two forms, some of which will be fully developed and others pass all their lives in the worker or soldier condition; of purpæ of two forms, and, lastly, of male and female perfect insects, which are destined to found fresh colonies.

"The neuters of either sex are without wings; the king and queen are chosen from a large number of perfect insects, and when the selection is made they are imprisoned in a cell, from which they are not permitted to escape, although an aperture is left which is sufficiently wide to permit the ingress and egress of the other termites. After a short time the body of the female increases prodigiously in size, becoming three or four inches in length and nearly two inches in diameter; all this while the head, thorax and legs retain their natural size.

"One can imagine how strange the form becomes as she progresses in maturity. At length she begins to deposit the eggs, which are dropped at the rate of eighty thousand a day. These are at once removed by the workers and placed in suitable places in the nest, where they are looked after until the larvæ are hatched."

The termites are sometimes a sad pest; it has been stated that nothing, unless cased in metal, can resist their jaws, and they have been known to destroy the whole woodwork of a house in a single season, and this without the mischief being discovered until it was too late to remedy it. They work in darkness and out of sight. Instances are numerous of their boring through the boards of a floor and tunneling the legs of tables, chairs, etc., leaving nothing but a mere shell no thicker than paper, which crumbles to pieces. A householder has on more than one occasion had his chair fall to pieces beneath him, or his staircase crumble to dust as he tried to ascend it.

Sometimes the nests of the termites in the forest are so numerous and so large in size, their height being often from ten to twenty feet, that they have the appearance of a native village, the nest being covered with a triple roofed dome, which is strong enough to support the weight of an ox.

"There is one thing to be said in favor of the ants," said Phœbe, after a short pause; "they do no injury to the farmer—at least I never heard that they do."

"No," I replied; "on the contrary they are beneficial to a considerable extent, for they often overpower and kill some of the more noxious species. And it is well that this is the case, for the ants are very numerous, and if they were inclined to be mischievous they could do considerable damage. The farmer has a hard struggle at the best, and his crops become less profitable and his enemies increase as the years roll on."

"Yes," said Mrs. Murray; "it seems to me that the injurious insects are increasing every year, and the farmer is obliged to fight them all the time."

"Yes," I responded; "the aggregate of injury done by insects in direct money loss is enormous, and if it were not for the beneficial species of birds, mammals and predacious insects man could not exist."

The multiplication of injurious insects is traceable far back and to the action of man himself. Humboldt has said that wherever man appears on the earth he provides the conditions for his own extinction in the destruction of forests. The wisdom of this statement is not generally appreciated, but the great scientist was right, and we already find as some of the results which have followed that destruction the drying up of rivers, droughts with their attendant failure of crops, the loss of fertility of lands and, as before stated, the enormous increase of insects, which, "deprived of their natural food by the removal of forest trees and shrubs and the other indigenous plants that once covered the soil, have now no other resources than the cultivated plants that have taken the place of the original vegetation." (Dr. Harris.)

The superficial observer cannot readily see why cutting down the forests causes the rivers to dry up, but that such is the case has been noted time and again, and it is now a well-recognized fact.

A most interesting example of the effect on the volume of rivers and rainfall by the destruction of forests has been recorded by the late Hon. Leverett Saltonstall, of Boston. He was riding on horseback through Andalusia in Spain, accompanied by a very intelligent peasant, who had been Washington Irving's guide when he was writing his books, "The Alhambra" and "The Conquest of Granada." He was an old man, and as they were riding along the bed of a brook, which was perfectly dry, Mr. Saltonstall said, "Does water ever flow here, Manuel?"

"No," he replied, "except in winter, and then it is a torrent. It used to be a river in old times, as long ago as when the Romans were here."

"How do you know that?" was asked.

"I will show you," he replied, moving on. In a few minutes they came to a precipitous rock, where there was a large bronze hook or bolt in the rock. "There is where the Romans made fast their galleys in the old times," said the guide.

"No better illustration of the evil effects upon rivers of cutting down the forests as they have been cut down in Spain, where hills have been denuded of them, could be given," was Mr. Saltonstall's comment on this interesting incident.

As I have already stated, the extent of the injuries that are annually inflicted by insects upon agriculture is enormous.

Many years ago this damage was estimated by competent authorities to be over $20,000,000 in the United States, and it undoubtedly is now at least double that amount. Every crop suffers in greater or less degree, and it is unquestionably the fact that the products of the farm are lessened in value every year at least one-tenth by the pests which destroy them.

Fortunately, as I said before, nature has provided agents to keep the pests in subjection, and it is, therefore, of great importance that the farmer should be able to recognize them and learn to appreciate the work they are doing for his benefit. Among these active agents are included a number of species of mammals, most of our birds, many of our familiar reptiles and myriads of rapacious insects; the efficiency of all these is increased by the manner in which each, while working in its own sphere, supplements the labors of the others.

COMMON BROWN BAT (*Vespertilio carolinensis*).
Three-fifths natural size.

Among our insectivorous mammals none are more familiar to all than the bats. These interesting little animals destroy immense numbers of moths and other injurious insects, and, subsisting as they do upon nocturnal species, which would probably elude the birds, they are of the greatest value to the agriculturi t.

They are constantly busy every night, darting about in all directions in pursuit of their prey, and this work is continued through the summer, as long as there are insects on the wing. Now, manifestly, in such a climate as ours for half the year, at least, the food supply of

FLYING FOX OR ROUSSETTE (*Pteropus rubricollis*).

these insect-eaters fails. Are they then to starve? Certainly not. Nature has provided against that contingency, for when cold weather approaches they conceal themselves in old buildings, caves and hollow trees, where they hibernate through the winter.

These animals occasionally fly into dwelling houses, where they sometimes cause no little alarm. They are harmless, however, and far from deserving the rough reception that is often given them.

Occasionally a female bat is captured in one of these visits with a young one clinging to its body. This habit is common to all the species, the young being carried about by the mother, clinging to her breast until they are old enough to wean.

We cannot but admire this example of nature's wise provision for the continuance of the species, for our bats, as a rule, have no permanent home, and they lodge during the day wherever they may chance to be. Now, in such a wandering life if some such provision for the care of the young were not made, they would starve, for the chances would be against the parent returning to the place where the young were born. She therefore carries them about with her, and they are thus protected against all chance of being lost or destroyed. There are over four hundred species of bats known to science, and they vary in size from the enormous flying foxes or roussettes, which are as large as a small dog and which subsist on fruits, to the little red bat of America which is not much larger than a wren.

Bats are not uninteresting as pets; on several occasions I have kept them in confinement, and they afforded me good opportunities for studying their habits. During the day time they remained perfectly still, their little eyes shut, their wings folded, hanging head downward from their perch, suspended by the sharp claws of their hind feet.

If they were disturbed during the day, they opened their mouths, which bristled with fine teeth and emitted a chattering melancholy little shriek. If a fly or other insect or small piece of meat was put in their mouth, they quickly swallowed it, after masticating it a little. If much disturbed they left their perch, and, after flying about the room for a few moments, again alighted on another convenient resting place. The vision of these animals is, in daylight, very defective; they are almost entirely nocturnal in their habits; but when flying about the room, though there were many objects hanging from the walls and chairs and tables and other pieces of furniture were scattered around, not once have I known a bat to strike against them or against the walls or ceiling; they were guided entirely by their exquisite sense of hearing and by that touch in the sensitive membrane of their wings.

When twilight commenced my pets were all activity, and through the greater part of the night seemed busily engaged in catching the flies that were on the ceiling and walls of the room. If a lamp were lighted they generally, after a few moments of nervous flight, reoccupied their perches, but if all was still they soon resumed their hunt for insects.

Notwithstanding I have had several of these animals at different times, and have kept them through a period of five or six weeks, I have never been able to detect any considerable amount of intelligence in them. After a while they became accustomed to being handled, and would lie passively in my hand. I think that they were able to recognize me from a stranger, as they seemed less uneasy when handled by myself; but as for affection, they seemed entirely devoid of it. Other animals when fed and cared for will in time recognize their keeper and seem pleased at his company. I have known a gray squirrel to really pine for my company after having been in my possession but a few days, and have known a flying squirrel to recognize its keeper and approach him with manifestations of pleasure at the fifth or sixth day after its capture; but the bats seem to have no desire to make friends, and are as well contented to be in the possession of one person as another.

Another beneficial animal on the farm is the mole, of which we have two species—the common and the star-nosed mole. Although it is generally believed that earth worms are almost their exclusive diet, there is no doubt that they eat great numbers of cut worms and the larvæ of the destructive beetle known as the June beetle or Dor beetle, that familiar insect which enters our lighted rooms in the evening and startles every one with its noisy buzzing as it flies around. The grub of this beetle, a fat yellowish-white grub that is often turned up by the plough, is among the worst pests of the farm, destroying as it sometimes does whole fields of mowing lands by eating the roots of the grasses.

It has been stated that a mole can dig through the ground much faster than a man can shovel after it, and I have no doubt of the correctness of the statement, for its strong forepaws, armed as they are with long, sharp chisel-shaped claws, enable it to burrow very rapidly.

The home nest of the mole is a curious affair, being constructed with two galleries or sections, which are connected by a number of passages. The star-nosed mole is an odd looking little animal, its nose or proboscis being surrounded by a fringe of tentacles or rays which it can expand or contract at will.

The moles are pugnacious little creatures, and when two males meet, the fight which is almost sure to ensue usually ends in the death of one or both of the combatants.

The opinion is often expressed that these animals have no eyes, but this is an error; they have eyes, very small ones, of course, and they are buried in the dense fur on their head, for in the subterranean life they lead their organs of vision need to be but poorly developed; their sense of hearing is, however, very acute. There are other mammals which are insectivorous, among which are the weasel, raccoon, skunk, etc., but their unfortunate propensity for devouring birds and their eggs and young neutralizes in a great measure the benefits they confer.

Among birds there are a great many insect-destroying species, and as a class they are nearly all beneficial. So valuable is their work that it has been said of them that had they not been created man could not exist. Different species seem to have been formed expressly for destroying insects at different points, and in different stages of existence. For example, the thrushes prey upon the larvæ and imagos of insects that are found on the ground; the flycatchers and sylvias or warblers seize the species which hover in the lower air; the woodpeckers kill the grubs of boring beetles in the bark and wood of trees; the creepers and titmice eat the eggs and small insects that hide in the bark and foliage of shrubs and trees, and the swallows and swifts flying in the upper air seize the moths and other injurious species which have escaped these other enemies, and at night the night hawks, whippoorwills and small owls capture the large moths which are abroad only in the nocturnal hours.

There are a great many species of insects which destroy the injurious varieties. Among these the dragon flies are constantly at work through the summer, and as the insects they kill are among the most noxious species they should be spared by the farmer on all occasions instead of being killed at every opportunity. These insects are popularly known as the "devil's darning needles," and are regarded by country people as injurious, but they are among the best friends that nature has given the farmer.

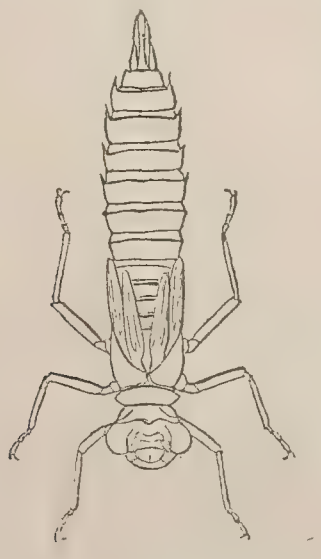
My old friend, the late F. G. Sanborn, who was one of the best observers I ever met, says of these insects: "The dragon flies are to be seen during the whole summer, swiftly darting and circling through the air, seizing and devouring the moths and butterflies that cross their path. In passing a pool or brook the sharp rattle of their thin, crisp wings strikes on the ear and calls the attention to the sportive flight of these terrible destroyers. Moths and butterflies laden with eggs, that venture from the security of the foliage to wing their sluggish flight to some appropriate place to deposit their burden, are quickly snapped up by the watchful dragon fly, who tears off the

STAR-NOSED MOLE (*Condylura cristata*, Harlan).
a, Front view of nose.

lean and useless wings and makes a rich repast on the plump body of his victim. It would be perhaps considered unnecessary to advert to the childish tradition of the terrific effects of the dragon fly on the human system—namely, its alleged powers of sewing up the eyes and of stringing men and animals—we should rather consider them as benefactors, knowing that they are incapable of injuring ourselves of our domestic animals, and that the powerful mandibles and sharp claws with which they are armed are only terrible to our enemies—the moths and butterflies. It may be here stated as a well-ascertained and authenticated fact that there is not one of our native moths or butterflies but what is more or less injurious to the

DRAGON FLY.

agriculturist. The thousands of species known to science subsist on vegetable food with scarce a dozen exceptions; and these destroy furs, woolen clothing and other household property. To return to the dragon flies: their eggs, which are laid near the surface beneath the water, hatch, not into winged insects like the parent, but into oddly shaped animals, which are chiefly remarkable for their masked mouth and the power of moving by means of a jet of water expelled from the tail. They pass most of their lives during the larva stage in crawling about upon the bottom and feeding upon other aquatic insects or even small fish; after some months they become full grown, having changed their skin many times, and now are in the pupa state, appearing with short wing cases; now



PUPA OF DRAGON FLY.

emerging from the water, they cling firmly to some stone or other substance a few inches above the surface, and, the skin on the back splitting open, the insect slowly disengages itself and works its way out, having now wings and other organs like its parent; these at first are moist and crumpled, but in a few hours become expanded and hardened, and the brilliant colors gradually become apparent. The larva can in its earlier stages be distinguished from the pupa by the absence of the four wing cases of a long, triangular form just behind the bases of the posterior feet."

In addition to the dragon flies there are many other rapacious insects such as the tiger beetles, etc., and supplementing their work are the ichneumon flies, those little insects which somewhat resemble wasps in their general appearance, but are generally much smaller in size; the work done by them is of the most interesting and important character.

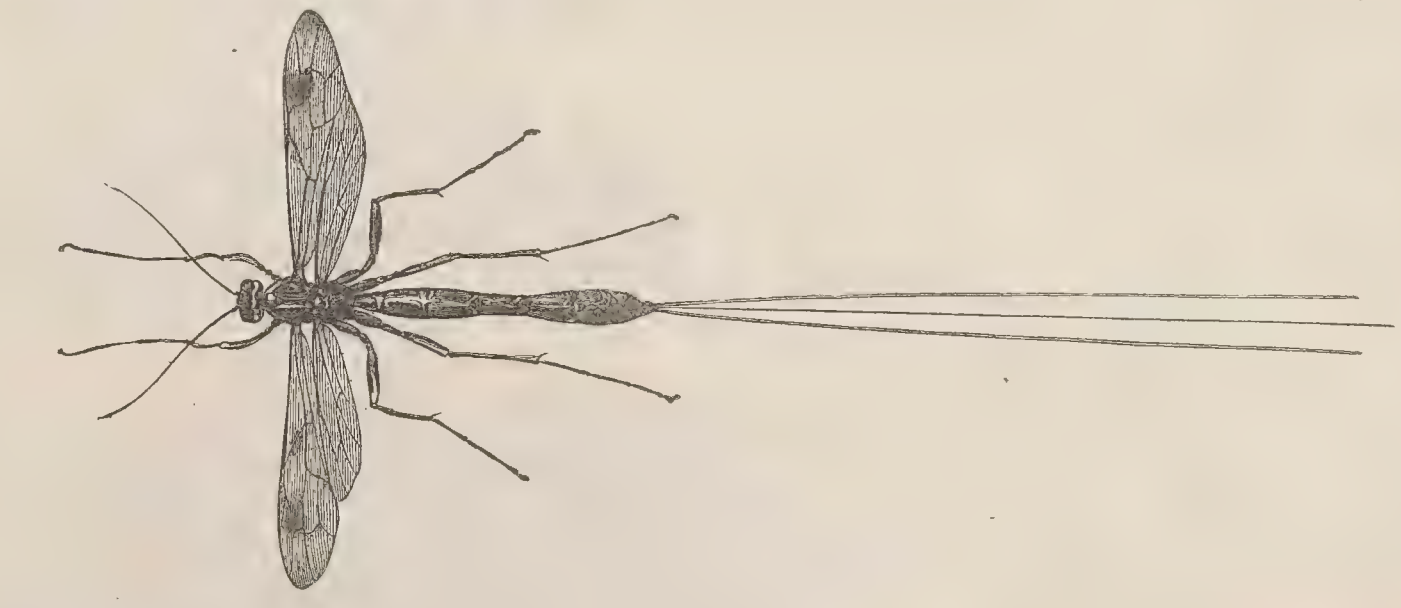
They are named from the fabled little creature which was said to enter the throat of the crocodile and prey upon the vitals of its huge enemy; their mission is to deposit one or more eggs in the bodies of the caterpillars by puncturing the skin and thrusting the eggs in the orifices. The ichneumon hovers about the body of the caterpillar and at a favorable moment darts against it and pierces its body with her ovipositer, which is a bristle-shaped little organ at the extremity of her abdomen, and with this the egg is deposited in the wound. The larvæ when hatched from those eggs which have been deposited devour the fleshy parts of the victim until fully grown, when, emerging from their succulent home, they each spin a cocoon on the skin of the caterpillar in which they remain until they become perfect insects, and this transformation being completed they are ready to lay their eggs in other caterpillars. Sometimes the egg is laid on the outside of

ICHNEUMON FLY.

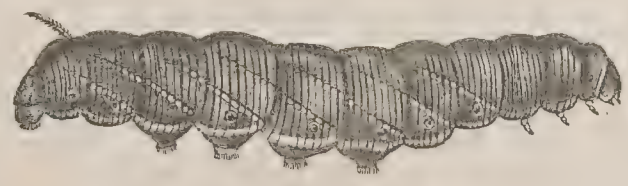
the body and the larva, when it hatches, penetrates the skin and does its allotted work.

"There are many species of ichneumons; it has been estimated that there are at least two thousand kinds in America alone, and were it not for them we would be overrun with insect pests—in fact, the services they render to man are of inestimable value."

An example of their great value lately came to my knowledge. An entomologist wished to raise from the caterpillars a number of the so-called potato-vine moths, which are large, green caterpillars, often found on potato and tomato vines. He collected a number of dozens of them, but not a single moth did he succeed in obtaining from them, for every caterpillar bore in its fat body one or more eggs which the ichneumons had deposited there; the parasites hatched and the caterpillars died a lingering death. Singularly enough there seems to be a special species of ichneumon for each noxious insect. For instance, the tobacco worm has its ichneumon, which deposits its eggs so abundantly that, according to the late



YELLOW SPOTTED PIMPLA.



POTATO OR TOMATO CATERPILLAR.

New York State Entomologist, Dr. Fitch, there are enough of the parasites hatched to destroy 2,500 other tobacco worms.

"There are some species which bore their ovipositors through solid wood to reach their victims, one of them the yellow spotted pimpla, carrying an ovipostor five inches in length, with which it reaches the larvæ of boring beetles deep in the wood."

There are other rapacious insects which prey upon noxious species such as the wasps, hornets, etc. Many of these subsist entirely on flies, and a large proportion of them upon the caterpillars of various lepedoptera. The white-faced hornet is a well-known species, its great paper nest often being found in the woods and orchards. It is very industrious in its pursuit of insects and sometimes enters dwellings in quest of its prey. The spiders are also well-known insect eaters, and the services they render are very important, but they are generally regarded with antipathy by the unthinking, who, forgetting the valuable work that is done by them, destroy them whenever they meet them.

My descriptions of insect life interested my listeners and the evening passed very quickly.

"Bless my soul!" exclaimed Mrs. Murray as the clock struck 11; "we are keeping late hours, indeed."

CATERPILLAR WITH COCOONS OF ICHNEUMONS ON ITS BACK.

"Yes," I responded, taking my night lamp, which she lighted for me; "our natural history discussion made the time fly rapidly. I hope I have not tired you."

"No, indeed," was the reply; "I have enjoyed it more than you can imagine."

Good nights were soon exchanged, and in a short time the occupants of the cottage were wrapped in the quiet, refreshing slumber which is always found in a Nova Scotia farmhouse.

EDWARD A. SAMUELS.

Tragedies of the Woods.

Editor Forest and Stream:

One day in the fall of 1888, in the mountains of northern Colorado, while engaged about the ranch, I saw up at the head of the meadow a half mile away a bunch of a dozen antelope coming down from the hills at full speed, closely pursued by some black animal. I knew that it must be a black wolf, since an occasional one had been seen, and nothing else that I could think of could run as this was running. All who are familiar with antelope know how wonderful is their speed; there are a very very few animals which can equal them.

When I first saw them the wolf was perhaps five or six rods behind, and during the distance I could see them (possibly eighty rods) it was gaining steadily but surely, and as they went out of sight into the hills on the other side of the meadow it was seemingly only about two jumps behind, and they began to scatter as it was closing in on them.

I was so intensely interested that I was fairly riveted to the spot, and not until they had disappeared did I waken to action. I ran to the bunk house, got my gun and ran up a steep timbered hillside for a near cut to an open valley, for which they were headed, believing it would catch one within a short distance. When I got to the edge of the timber on top of the hill I saw the antelope all huddled together and stannding still, just as sheep do after being chased or scared. The antelope would have offered a good shot if it had been meat I was after, but I cared nothing for getting an antelope, but did want a shot at the wolf.

Judging from the actions of the others, I felt certain it had caught one, but the surrounding country was composed of ridges, ravines and patches of timber, and notwithstanding my careful search I failed to find any trace of the wolf and its prey.

As I trudged back home after my fruitless chase I meditated, as I have often done since, on the long unwritten history of wild animal life in regions where man has not broken in upon the natural conditions; of the contests and conquests among nature's wild creatures, from the smallest up to the monarchs of the forest, all unknown and unrecorded, save on rare occasions when we by chance see for ourselves or see the evidence thereof, terminating of course in the "survival of the fittest."

At one time I was passing along the edge of the woods in winter when there was snow. I saw the track of a lynx where it had been leisurely traveling along, when the tracks showed where it had stopped behind a pine bush and squatted down in the snow, then made a tremendous leap out into the open field and run a few rods, evidently at its best pace.

There was the track of a jack rabbit coming down at right angles with the course the lynx was going, until directly opposite where the lynx was crouching behind the bush and about fifteen feet away, then a sudden turn and their tracks were mixed together in the race for life or a meal; but soon the tracks showed where jack had left his pursuer behind, and the lynx went on his way at his regular gait, but, we will suppose, not rejoicing, thus showing the "survival of the 'swiftest.'"

Had jack failed to get out of reach and the lynx had made the proposed connections there would have been a bloody, trampled spot on the snow, a few patches of white fur, and only the lynx track leading thither. Written on the snow like the great white pages of a book the observer may read most interesting tales as he passes along, and learn the life and habits of nature's wild creatures.

EMERSON CARNEY.

Telegony.

Editor Forest and Stream:

Without meddling in the discussion between Col. Alexander and Coahoma, I would suggest that conclusions as to heredity must be qualified by consideration of embryology, as twists from the latter sadly mar fine theories on the former. Telegony is dead in the face of heredity, and pestiferous rot as the idea is of its being an invariable result of mesalliances, that it does occur in rare cases seems well established. The confusion and contradictions of inheritance of abnormalities which are commonly seen in certain breeds is another upsetter; bobtails as a case in point: The offspring of a pair of naturally long tailed "bobtail sheep dogs" mated together have produced a born tailless dog, so potent that his get were invariably deformed in tail, no matter what the breed of the dam of such offspring might be. The grandam of this very potent dog uniformly had full-tailed puppies until she passed her seventh year; from that time on she never had a litter that did not include some tailless or half-tailed puppies, and, as in the case of her grandson, it mattered not what the breed of her mate was—bull terrier, mongrel collie or black and tan terrier was as efficient in begetting deformed tails as a very potent natural bobtail. These cases came under my own observation, and I saw accounts of the same vagaries of heredity, mentioned in connection with the Manx cats, in the London Stockkeeper, and something on the same general lines in the American Naturalist. Mr. H. T. Payne, editor of Field Sports, had some very clear accounts of the Mexican hairless dog in his native country, showing just the eccentricity of heredity that I cite as to bobtailed animals, and, as far as that particular breed goes, he demolished Coahoma's hypothetical case on why dogs are hairless. I cannot remember Mr. Payne's statements exactly, as they were published long since, but if anybody has a file of that paper, Mr. Payne's demolition of the theory of "maternal impressions" and his exposition of heredity of hairlessness will be found well worth reading. W. WADE.

OAKMONT, Pa., March 15.

Two Kinds of Crows.

Editor Forest and Stream:

In reading your article on the crows, it reminded me of Dr. John Burnham, my father's family physician when I was a little boy. The old doctor was exceedingly bright and sharp, and was known all over Hancock county and a large part of eastern Maine for his shrewdness. One year he concluded he would like to go to the State Legislature. There was a war on the crows among some of the farmers. They declared they destroyed their corn and others declared they were a great benefit by picking up the grub worms that always cut down the young, tender corn as soon as it came out of the ground. There was a bounty of eight cents on each head. As soon as the doctor was nominated and commenced his canvass, the farmers met him with a petition to have the bounty taken off and a petition to have the bounty remain. To keep friendly with all sides, the doctor signed both petitions. He was elected, and when the Legislature met both petitions came up, and those that knew him best thought they had him in a tight place. One of the members made a grand speech on the bills, and said: "I see the member from Hancock county has signed both of these petitions, and I would be pleased to have him explain his position." The old doctor got up quietly, with every member watching him and wondering how he was going to get out of the dilemma he was placed in, and said: "Mr. Speaker, I signed a petition to have the bounty taken off of these little pasture crows that do no harm. I signed a petition to have the bounty remain on these great island crows that will stand and pick a man's eyes out of his head."

W. O. BLAISDELL.

Experiences with Wild Animals.

MORGANTOWN, W. Va., March 28.—*Editor Forest and Stream:* We have been properly admonished by you not to "sling mud" or say hard things about those whose views do not harmonize with ours along certain lines.

I have just read Mr. Wells' article in this week's FOREST AND STREAM on the fear of animals in general and the panther, or mountain lion, in particular.

With all respect for those who may differ with Mr. Wells, I just felt like throwing up my hat and saying "Bully for Wells!" Coming from a man with his surroundings and opportunities, who devotes so much time to observing, that ought to be a "clincher" in this discussion. EMERSON CARNEY.

The Snake and the Jug.

A party of Jacksonville mechanics were at work on the Matanzas River some months ago raising a sunken dredge boat. They lived on board of the big lighter on which they worked in a small house on the deck. One noon their bill of fare was somewhat strengthened by some wild turkey eggs which had been found by some of the party while hunting on shore. After the hungry engineers had destroyed a heavy dinner they left their dining room and returned to work. The doors and windows were all open, and the cook did not clear off the table for some time.

In this interval a large water moccasin of near 6 feet crawled on board the lighter, and wriggled into the dining room through the open door. In his prospecting tour he climbed the table leg, and here, with a snake's fondness for eggs, he went in for a feast. One of the turkey eggs lay alone by a plate, and the rest were in a dish on the other side of the table. In the center stood a large water jug, and right here the wily serpent slipped up. After swallowing the lonesome egg, he started for the main supper, and in his artless manner crawled through the handle of the jug. It was a rather tight fit, and he had to stop about half-way through on account of the egg, which enlarged him somewhat. So stretching forward he bolted another egg, and thereby fastened himself.

On each side of the jug handle was an egg on his inside, and he could move neither backward nor forward, practically riveted in position. He was soon found in this peculiar situation by the cook, who speedily killed him.

The reporter was shown the skin of the snake with a crease still in the middle from the tremendous pressure, and he was also permitted to gaze on the jug whose handle proved so fatal.—Florida Times-Union.

The Linnaean Society.

REGULAR meetings of the Society will be held in the American Museum of Natural History, Seventy-seventh street and Eighth avenue, on Tuesday evenings, April 9 and 23 at 8 o'clock.

April 9.—C. William Beebe: "A Summer's Study of Nova Scotian Biology." Illustrated by lantern slides. (Postponed from meeting of March 26.)

April 23.—Louis B. Bishop: "The Summer Birds of Warren, Conn.," and "The Winter Birds of Pea Island, North Carolina. WALTER W. GRANGER,

Secretary American Musuem of Natural History.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

Spring Shooting.

WATERTOWN, N. Y., March 29.—*Editor Forest and Stream:* I fear that I have already presumed too much upon the good nature of FOREST AND STREAM and the many readers who are not directly interested in this question of spring shooting in New York State. But while looking at a map of New York State and admiring the new duck preserve of Jefferson, which we hope to annex to the old and well-stocked preserve of Ontario, my eye happened to rest on the little county of Oswego, the county which is willing to stop spring shooting—that is, if Long Island does. What a great county this must be for black ducks—the only kind the Oswego county gentleman cares to shoot. My map shows one small river, two little creeks and the canal. But then they are so centrally located, bounded by six counties, and most of them seem to have plenty of lakes and small ponds, and they are so easy to get to from Oswego. It is such a short distance up to Woodville Pond in Jefferson, and it's dollars to doughnuts that he has killed more black duck at Woodville than he ever could in Oswego county, and such a nice easy trip to his little preserve at Black Lake, near Cayuga Lake. Oh, yes! Oswego county is a great place for black duck with such a lot of nice lakes and ponds all around it. Of course she don't want to stop spring shooting, and if Long Island is excepted we have got to except Oswego county. It seems to me that this bluff has been worked plenty long enough, and Jefferson is going to call Oswego's hand and make her show down what she's got.

Now the black duck is the only duck this gentleman from Oswego cares to shoot in the spring, and I would like to have him show me the place on the map of Oswego county where he ever killed a black duck at any time of year. I wonder how many black ducks the Oswego gentleman would kill next spring if we should call his bluff and put a protection fence that he couldn't climb over or crawl under around his little patch of sand.

Jefferson is going to put up a section of that fence this year. Why won't the other five counties join in and put up the rest of it? The Oswego spring shooter is not the only one that is liable to get tangled up in this fence. There are several duck shooters in New York city who are not satisfied until they have followed the spring flight through the State to the St. Lawrence River and taken a parting shot at them as they leave our hospitable shores for Ontario. Syracuse, Rome, Utica and Rochester are also represented; even Boston, Mass., sends a delegate every spring. Boys, we like to have you visit us, but we should like to have you arrange your business so as to do it in the fall. We hope that the rest of the State won't object to our extending the duck preserve of Ontario down into Jefferson, for we believe that we can then have just as good fall duck shooting as they have in Ontario, and we won't tax you twenty-five dollars to come up and try it.

W. H. TALLETT.

Mr. W. B. Mershon writes in the Saginaw Courier-Herald of the Michigan situation:

"Those shooters here in Saginaw who have advocated spring shooting of ducks and water fowl have, as a rule, made the argument that they should be allowed to shoot these birds in the spring when they are ready to nest and breed again and destroy the seed for another crop, because other States permitted it; but if other States would stop spring shooting they would be willing to have it stopped in Michigan. Now here is a chance to test their sincerity: The following are the facts in relation to our neighboring States: It is true that as yet Ohio does permit the shooting of water fowl between Nov. 10 and Dec. 1, and again between March 10 and April 10. I believe, in some portions of the State, however, it is allowed during open season but three days in the week.

"Indiana and Illinois season opens Sept. 1 to April 15. But our next neighbor, on the west, Wisconsin, does not allow spring shooting, the open season being from Sept. 1 to Jan. 1, and the State of Minnesota, next adjoining to the northwest, has identically the same laws as Wisconsin. Our neighbors of the north, Ontario, have just passed a law prohibiting spring shooting. A strong effort is being made in the State of New York to pass a law at this session to prohibit spring shooting, and the indications for success are excellent. Massachusetts has put a stop to spring shooting, and Connecticut is expected to follow. Now here is a line of territory from the Atlantic coast to the margin of Dakota with only two black spots in it so far—Michigan and New York. The gap above us is filled in with the good work of Ontario, a natural breeding ground for water fowl. It is absolutely necessary to shorten the season, or the birds will become extinct. Is there a better way to shorten it than by stopping spring shooting? Ten years ago these stringent measures were unnecessary, and almost anyone could go out and get all the ducks necessary. Twenty years ago this was true of the buffalo and wild pigeon. But there are more hunters to-day and there are better guns and better ammunition and less woodland cover and marsh feeding and breeding ground for the birds, so that stringent measures are necessary to prevent the annihilation entirely of not only water fowl but other game and fish.

"With the showing of our neighboring States, will not our spring shooting friends turn in and help pass a measure that will put a stop to the slaughering of water fowl at this unnatural season? W. B. MERSHON."

An Appeal for the Wapiti.

From the Kansas City Journal.

During my summer vacations I have at one time and another visited various places along the chain of the Rocky Mountains between the Spanish peaks and Targee pass in pursuit of "fur, fin and feather." I have had the pleasure of successfully fly fishing in the head waters of the Columbia for the black speckled trout (*Salvelinus purpuratus*) and then crossing the chain, and there with equal success taking from the head waters of the Missouri the wary grayling (*Thymallus signifer*).

Early in August, after the frost king has exhaled his icy breath and paralyzed the myriads of blood-sucking insects which swarmed along the streams during the preceding month, the angler may unmolested cast his fly in the dashing and foaming waters for Salvelinus or Thymallus with results that will fill his heart with gladness; but by the end of the month he will find his heart surfeited on this invigorating and delightful sport. However, the open season on "fur and feathers" begins with September and he may now transfer his camp from the mountain stream on to the high ranges in quest of both.

In this latter location he will have more than one kind of sport. Mounted on his hardy and sure-footed cayuse and armed with his deadly Savage he may ride forth in search of big game, sometimes found lying high up on the mountain sides, or quietly grazing in the little secluded, grass-covered glades, surrounded by a perfect chevaux de frise of fallen timber, or by a seemingly impenetrable hedge of standing forest trees, or at other times hidden in the deepest woody solitude or darkest and narrowest cañon recesses. Here are found the wapiti—commonly though erroneously called the elk—the black and white tail deer, moose, sheep, bear, puma—or Rocky Mountain lion—lynx and wolf, the hunting of which in season affords the most exciting sport.

While moose are not common in the Rocky Mountains, they are found in Wyoming around the Tetons, up near the snow line and in the high mountains northwest of there, near the sources of the Yellowstone and Buffalo rivers.

The black-tail deer, though found everywhere along the Rockies, are perhaps more numerous than anywhere else in those mountains that are situated in that part of Colorado that lies between Hahn's Peak and the head waters of the White and Bear rivers. In October these animals migrate southwest into the basin of the Colorado River, and there remain until the following spring, when they return, greatly reduced in flesh and numbers.

During the migratory season, while camping for a couple of weeks near the base of old Sleepy Gap, I had the pleasure of seeing as many as 100 of them a day. And while their numbers are being gradually reduced, still under the restrictive laws of the State, which are fairly well enforced, it will be many years yet before they become extinct.

The wapiti, though found in various localities along the Rockies, are far more numerous in Wyoming than elsewhere. During the summer months the habitat of most of these animals is in the Yellowstone National Park. There they find abundant pasturage and fine water, and under the protecting care of the United States authorities enjoy absolute immunity from molestation; there, too, they bring forth their young.

As to the number in the National Park and its immediate vicinity, various estimates have been made. Mr. S. E. Osborne, a deputy game warden of Wyoming, who has faithfully served the State in that capacity for many years, and who has followed every wapiti trail from the south boundary of the National Park to Hoback's River, and whose opinion on the subject is, I think, entitled to more weight than that of any other person, puts the present number at 25,000. And while the opinions of others professing to have some knowledge on the subject differ, some estimating the number above and others below that named by Mr. Osborne, I am inclined to think the latter's figures are approximately correct.

Last summer while in camp with two other hunters on the head of Thoroughfare Creek, a few miles south and west of the southeast corner of the National Park, a snow fell to the depth of 12 inches and remained for several days. During the prevalence of this storm great numbers of wapiti abandoned their summer pastures on the high mountains in the National Park and directed their course toward the low-lying buttes situated in and along the basin of Snake River.

In going about we here met small bands of old bucks, numbering from three to a dozen, and larger ones composed of bucks, cows and calves, sometimes numbering hundreds, all heading south. They were often quite gentle, allowing us to approach within less than 10 yards of them. Many of them had doubtless never before seen a man nor heard the crack of a rifle. It is safe to say that in three days more than 1,000 were seen by us within easy range of our rifles; but notwithstanding this not a shot was fired by any of our party, we having previously each killed as many as our license authorized. Then, too, we had as much meat and as many heads as any true sportsman would care for during any one hunt.

The wapiti have learned by sad experience that during the winter in the high mountains in the National Park and its vicinity the snow falls to a depth of from 3 to 7 feet, and that during this time they cannot remain there, or if they do they must perish. Hence, as soon as the snow begins to fall they leave these mountain ranges, gradually moving southward, many of them going as far as Hoback's River, where they find excellent winter pasturage in the basin of Snake River and its confluents. They remain at this latter place until the snow disappears in the National Park, when they return to their summer breeding grounds.

They cannot exist in the National Park during the winter, and but for the pasturage afforded them in the Snake River Basin they must perish, for they can find it nowhere else. They cannot go west on account of the population covering the Madison and Henry's Fork

basins. Nor can they find winter pasturage among the barren snow-clad mountains to the east and southeast. Pierre's Hole, sometimes called the Teton Basin, which was once a part of their favorite pasture grounds, is now densely populated, and they can no longer go there. And so they are now restricted for winter pasturage to the Snake River Basin.

On my last trip through Jackson's Hole and the country lying south of the National Park, I discovered that a new peril threatens them. Sheep graze upon the same grasses and herbs and browse upon the same kind of twigs as the wapiti; and an expanding and profitable sheep industry is demanding the right to enter and occupy that part of the basin of the Snake which now affords winter pasturage for the wapiti.

Last summer thousands of sheep were driven to the southern rim of the basin of Hoback's River, and other thousands from the Idaho side were driven to the top of the Teton range overlooking the basin of the Snake from the west, where they were stopped by the show of armed resistance offered by the irate people of the Snake River Basin.

The sheep men threaten to invade the basin during the coming summer with their great herds, and the Snake River Basin people have pledged themselves to resist such invasion, if needs be with force of arms. A serious conflict therefore seems to be impending, and unless the sheep men are restrained by the Secretary of the Interior many lives may be lost and much property destroyed. If this threatened invasion shall be successful the inevitable consequence will be that the wapiti will next winter find their pastures barren, with no alternative left but to there die of starvation.

These noble animals, which, under the protection afforded them by the laws of the United States and of the State of Wyoming, have thus far been preserved, must at last be sacrificed in the interests of the sheep industry. One of the most attractive features of the National Park is its magnificent fauna. To protect this against a wanton destruction, prohibitory laws have been enacted and enforced at much public expense. Shall a few sheep men, to enrich themselves, be allowed to render the National Park practically a barren game preserve? Will the United States Government permit the noble wapiti, the property and pride of the people of the whole country, to be thus destroyed?

The winter pastures of these animals are almost exclusively on the public domain. Not one acre covers private land. The Secretary of the Interior could, without doubt, by an order forbid the pastuarge of sheep within the well-known pasture ground of these animals. Such an order, to be of any avail, should include all the public domain lying south of the National Park between the longitude of 110 and 111 and extending to the 44th parallel. This would give these animals a winter pasture in area about equal to that of the National Park—their summer pasture.

Has neither Wyoming nor any other State a Senator of Representative at Washington who will champion the cause of the poor, dumb, helpless wapiti and invoke the interposition of the National Government in its behalf, to the end that this threatened catastrophe which is about to overtake it may be averted?

Will the sportsmen of the United States and others interested in the preservation of these game animals stand idly by and permit this great public wrong to be committed without entering even as much as a protest against it?

The wanton and needless destruction of buffalo which was permitted to take place is a standing reproach to the people of the United States, and one which will last forever; and to allow the threatened and inexcusable destruction of the wapiti (next in importance and number to the buffalo) to take place will constitute a "mea culpa, mea maxima culpa" that ought to cause our people to hang their heads with shame. X. X. X.

CHICAGO AND THE WEST.

Duck Flight Still On.

CHICAGO, Ill., March 30.—The unprecedentedly heavy flight of ducks which has excited so much interest this spring still continues in unabated numbers, although already a good body of the birds has passed on to the northward. The usual amount of mystery attends the actions of the wildfowl, and no one at this writing is exactly certain whether the best of the shooting is to come or whether it is all going to end suddenly by a general north-bound exodus.

Any duck shooter knows that it takes water to bring ducks, and the reason that we have more ducks in Indiana and Illinois this spring than we have had for fifteen years is that we have more water than we have had for fifteen years. The Mississippi River is reaching high-water stage, the Illinois River is away out of its banks and all the tributaries in this latitude are boiling full. Instead of dwindling, trickling streams, our rivers and marshes are vast lakes, and our lakes are seas. The north-bound fowl coming over such stretches of water naturally drop down to stay a while. It is the common report that the extremely high water is affording a good protection to ducks. They band up far out in the open water and hence are practically safe. This is the report from Savanna in the western part of Illinois, where there are a great many ducks, but where the shooting has not been of the best, although some very creditable bags are reported.

Millions of ducks still remain in Indiana and the extraordinarily good shooting has been a good thing for the new Indiana game law. The Tolleston marshes are full of birds and the members have generally taken out licenses. Nor is the general public behind the club members, and scores of shooters who go to Water Valley and Shelby go with licenses in their pockets. Dick Turtle, who is just back to-day from Water Valley, says that this is the second shoot he has had on his license. He reports literally thousands of ducks in on the overflowed flats of that point. He says he did not see many mallards, but mostly pintails, and says the latter could hardly be worked to any advantage at all. They were out in the open in the shallow water, and when put up would go away in a vast body, their wings making a roar that could be heard for half a mile. They showed the usual pintail perversity and refused to work to decoys. Some birds when killed showed crops full of corn. It is likely that they go out very early in the morning and feed on the cornfields and spend the rest of the day taking care of themselves on the marshes. There has been fine mallard shooting in the timber along the Illinois River this spring; but just now there does not seem to be very many mallards along the Kankakee near Water Valley.

Reports from the lower Illinois River country are confusing. Mr. Hempstead Washburne, of the Swan Lake Club, and Mr. J. V. Clarke, of the Hennepin Club, were yesterday expecting telegrams advising them to start, but at last accounts had received no word. The country around Swan Lake, Lake Senachwine and Hennepin Club is literally afloat, and there is any quantity of water for the ducks to choose from. It is possible that the birds are working a little further north than these points.

The ice began to move in Fox Lake, Ill., this week. Shooters who have spent the past week at that point reported no sport worth mentioning. The general supposition is that the flight is not yet up to Fox Lake, yet Eddie Pope, who returned from there the middle of the week, said that when out on the wet prairies he saw thousands of birds going over very high and headed north. Koshkonong, Lake Poygan, Winneconne and the Horicon marshes would be strong tips this coming week were Wisconsin an open State, but it should be remembered that spring shooting is not now permitted in Wisconsin. Hence there will be a splendid body of birds well used to the Wisconsin marshes this spring, and in all likelihood the fall shooting will be fine. Fox Lake is just south of the Wisconsin line.

The Indiana Law.

Shooters should not go down to Indiana on the supposition that the new law is not going to be enforced. It is being enforced against non-residents, the wardens not siding in with the hotel keepers in their beliefs. Mr. R. B. Stiles, of Chicago, comments upon the workings of the law as below:

"The people around Rose Lawn are very much opposed to this law, and it being a typical Indiana swamp village, a very considerable portion of the people's money is now cut off. I was informed that 'deputy game wardens' were 'selling' licenses at Shelby, and as the law authorizes clerks of the Circuit Courts that authority only, I presume these 'licenses' are very valuable, and perhaps sold below market price of twenty-five bones.

"The vigilance of the game warden at Shelby is very likely toward collecting fees above all other restrictions of the law, as I met a traveling pot-hunter who had come through Shelby, Thayer and all along the river, having openly in his wagon two sink-tubs, boat and live decoys. Shelby is notoriously the field for the sink-tub, and it is used by almost all the market-shooters.

"I have shot on the Kankakee River for fourteen years and naturally feel a pang of regret that I will have to look elsewhere in future—not that I can't 'raise' the twenty-five, but look upon the act as bending to a deliberate and legalized case of hold-up."

Mr. Stiles calls attention to the fact that there is nothing in this Indiana law which prohibits non-residents from shooting jacksnipe and rabbits. It will seem that the industrious legislator experiences difficulty in the avoidance of loopholes in his handiwork.

No New Illinois Warden.

As stated last week, no commission has yet been issued by Governor Yates for a new State Game and Fish Commissioner, and advice from Governor Yates to-day states that no new warden has as yet been appointed. State Warden Harry Loveday is exerting himself to retain the office. I do not hear of any organized effort on the part of any other candidate, and indeed do not know of any other Chicago man who is in the field for the office.

"Chinese" Quail.

The heathen Chinese still seems to retain his reputation for ways that are dark. Moy Ung, a South Clark street Chinese restaurant keeper, this week sprung a trick which was vain. He was caught selling quail, which on the bill of fare were called Chinese quail. Inquiry proved that they came from Kokomo, Ind., and as it is just a little late for Kokomo quail, Moy Ung contributed $25 of American money with a view to supporting the dignity of our institutions. He said he thought Kokomo was in China, but he knows different now.

Wisconsin Acclimatization.

Mr. Howard Bosworth, of Milwaukee, paid this office a visit during the week. Mr. Bosworth, as will be remembered, was one of the first and most successful breeders of Mongolian pheasants in the State of Wisconsin. His pheasantry was located at his summer place, on Pine Lake, and his superintendent there occasionally took a hand at fish protection, with the result that he got some local fishermen fined for illegal net fishing. These local men resolved to get even, and one night not very long ago paid a visit to Mr. Bosworth's pheasant pens. They hammered off the lock of the gate and left it open. About 300 out of the 500 birds escaped, or, at least, were missing on the following morning. There is a bunch of about forty of these birds at the head of Pine Lake and another of about twenty-five lives near Mr. Bosworth's place. They are at the tender mercy of the people, and it is up to the birds to prove that they are able to survive and hold their own. Every once in a while some farmer kills some of them, but there are other farmers who believe in protecting them. Mr. Bosworth's experiment in acclimatization was somewhat involuntary and a little expensive, but it bids fair to solve the question as to the game qualities of the Mongolian pheasant.

Indiana Building a Railroad.

In Wyoming the Burlington Railroad Co. is building a line into the Big Horn country, and the contractors have engaged a number of Indians from the Crow reservation near by. These Indians were put at handling scrapers, and at first they thought the scraper was a good vehicle for a chariot race. It took some time for the bosses to settle them down, but they are said to make fairly good workmen now.

Another instance of progress in the wild West was in evidence here last week. There is a mail contractor out at Depuyer, Mont., who has a sixty-mile stage route. He has taken a notion in his head that an automobile would beat a buckboard to death on this run, and he commissioned his friend, Joe Kipp, who just left here last week, to look into the automobile business for him while he was here. I should not be surprised if we should see a horseless carriage carrying mail on the Blackfoot reservation before very long, and from that it is only an easy stage to equip each cowboy with his own automobile.

Grub List for a Mountain Trip.

That is going to be what my friend Warren Powell, of Taylorville, would call a "historical old bear hunt" when Joe Kipp and Old Man Brown and Billy Hofer and I, and maybe Jack Monroe, and certainly a cook or horse wrangler or so meet on the Blackfoot reservation some time this month and head into the hills after my long lost grizzly. Billy Hofer doesn't belong up in that country, and we will probably lose him, but Joe Kipp wants him to come up and see what a really good hunting country is, so Billy has agreed to join us. This is going to be a lodge trip. We may allow one little wall tent, but the cooking and story-telling is all going to be done in an Indian lodge, which is the only kind of a house fit to be occupied when one is after his long lost grizzly. We may go up Badger Creek, may try Ole Creek, may go to the Two Medicine—I don't know where, so only that it is away from Chicago. We would rather get far to the northwest of the St. Mary's lakes, but that is more than 100 miles from the base of supplies, and I fear we shall not have time.

Billy Hofer, having nothing but time on his hands, has been elected commissary-general. The grub list has been placed in his hands, and if it runs short we shall know whom to dislike. He figures on a party of six for twelve days in camp the following supplies: 30 pounds pressed bacon, 30 pounds side meat, 50 pounds flour, 2 pounds cream baking powder, five 3-pound tins of butter, 5 pounds of table salt, 5 pounds of coarse salt, 18 cans of St. Charles condensed milk, 6 pounds Eagle brand condensed milk, 18 pounds sugar, 10 pounds maple sugar, 1 pound best black tea in four tins, 3 pounds evaporated apricots, 5 pounds evaporated apples, 5 pounds evaporated peaches, 10 pounds of coffee 20 pounds onions, 80 pounds potatoes, 12 cans baked beans, 10 tins 1 pound each corned beef, 5 pounds navy beans, 12 cans tomatoes, 12 cans jams, ¼ pound pepper, 5 pounds Graham flour, 4 pounds Pettijohn's breakfast food, 4 pounds rolled oats, 4 pounds farina, 3 pounds lard, 5 pounds cheese, 4 pounds maccaroni, 4 pounds of rice, 4 bars Ivory soap, 5 yards muslin, 12 cans succotash. He insists on having a steam cooker for the oatmeal, and has itemized several other frills, which I have edited out of the scheme. The above list may be useful to some one else going into the mountains, since Billy Hofer has had a long experience in outfitting parties for the mountains.

Meantime Joe Kipp is out on the reservation putting up flags of all the bear dens and getting things ready for a sudden start when the rest of us hit the reservation. If we had a full month out there it is far more than even betting that we would get our bear in the game sack, and as it is, we may be lucky enough to run across him. Joe says all his bears are trained to fight at the drop of the hat, and any grizzly that fails to start to the gun is a disgrace to his tribe. I have hunted grizzlies over one hundred days all told one place or another and never was lucky enough to see one yet. Maybe Joe is going to deliver the goods—at least, we all hope so. George Thorne, of Montgomery, Ward & Co., may go with us, the party dividing and meeting at the Summit Station now and then, just at the crown of the Rockies. It is a lovely country, and maybe we will never come back, but just go on living chiefly by hunting and fishing, as they do in the geography.

What Shall We Do with Them?

What shall we do with the dog trainer who takes fifty-seven dogs to train, who sells a good dog now and then and reports it dead to its owner, who returns a dog mangy and sore-eyed, and only takes a dog out for exercise when its owner sends word he is coming to have a look at it? What shall we do with such a man as that?

What shall we do, also, with the sportsman who is a liar; who goes into the woods, for instance, and buys a big moose which some lumbermen have killed, but which he never saw until the day after it was shot; who comes home and spins a long story of his adventure and his steady nerve, posing as that which he is not? What shall we do with such a man as that?

Oddsfish! and also zounds! what a lot of little fakes and frauds there are in this sinful world. I wish we didn't hear of such things.

Pretty Slow.

Mr. F. B. Davidson, the holder of the long-distance bait-casting championship of the world, is now, and for some months has been, a citizen of New York, his business having been removed from Chicago to the latter city. Frank was out here last week, and expressed himself glad to see old friends again. He says New York is a nice place, though a trifle slow, and thinks it may grow if times continue good.

First Tarpon.

The first tarpon of the season at the Tarpon Club, off Rockport, Tex., fell to the rod of a Chicago man, Mr. Hobart, a fish measuring 6 feet 2 inches.

Going West.

Mr. Edward Kemeys, the sculptor of wild animals, has, owing to failing health, decided this spring to give up his Chicago residence for a little while and go out to the mountains to live. He will reside at Taos, N. M., for the coming summer.

Spring Shooting Situation Good.

Advice from headquarters of the Michigan anti-spring shooting movement, at Saginaw, says that they are pegging away and hope to succeed in abolishing spring shooting for keeps in that State. E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

A Turkey Hunter's Bull Luck.

RALEIGH, N. C., March 25.—A suit in the Superior Court here against the Seaboard Air Line Railway has developed one of the most novel accidents known to the annals of jurisprudence.

A vestibuled passenger train from Atlanta was bowling along toward Raleigh on a down grade at the rate of fifty miles per hour at 10 o'clock in the morning. William Watlington was on his way to a wild turkey blind which he had baited, and had his double-barreled breechloading shotgun on his shoulder, two cartridges being in the chambers. On reaching the railroad track, which was on an embankment about 10 feet high at this place, Mr. Watlington heard the train in the distance and stopped on the side of the track about 50 feet away to view the train as it swept by. He could not see over the embankment to the other side of the track.

Alongside the embankment, on both sides of the track, are the usual ditches, which were filled with water. Mr. Watlington was standing between the embankment and one of these ditches on the north side of the track with his gun on his right shoulder. On the other side of the track were a number of cattle nipping grass, which Mr. Watlington could not see. A few seconds before the train passed these cattle commenced to straggle across the track to the side on which Mr. Watlington was standing. The bovines all got safely across except one small Jersey bull, which was caught on the cow-catcher and hurled away with terrible velocity.

As misfortune and luck both would have it, the animal struck Mr. Watlington about amidships, knocked him down into the ditch, and landed on top of him. The bull was stunned, and struggled, but could not get up, and the water was drowning both man and beast. The engineer was watching the cattle and had not seen Mr. Watlington. When the fireman told him what had happened he stopped the train, hurried back and got there in time to pull Watlington and the bovine out of the ditch before they were drowned.

Striking Mr. Watlington and knocking him into the water saved the life of the bull, and the water prevented the blow by the bull from killing Watlington. Further examination showed that when the bull struck Mr. Watlington, the shock knocked the gun some distance away, and when it struck the ground it was discharged and killed one of the cows and wounded another so badly that it had to be killed. The gun was not injured.

On these facts Judge Brown held that the railroad company was not liable in damages to Mr. Watlington. Since the trial the owner of the two cows has sued Mr. Watlington and recovered $100 in full of damages for their killing.

Since all this happened Mr. Watlington has had a great piece of good luck. He has been working for H. N. Snow at High Point, in the furniture business, and the latter, who is getting old and tired of the business, retired and gave the whole plant and business, worth $20,000, to Mr. Watlington, who was of no kin to him, but simply a faithful employee.—New York Times.

Minnesota Game.

MINNEAPOLIS, Minn.—About Oct. 21, 1898, a party of four of us went to Devils Lake, N. D., for a short hunt, principally after geese, but were unfortunate enough to encounter a heavy snow storm, which lasted a great part of the two days that we were to hunt, and we were disappointed as far as geese were concerned, only securing four. The birds did not fly in and out of the lake during the storm.

There were quite a number of mallards flying, so we turned our attention to them and succeeded in bagging eighty-one, including a few redheads and gray ducks.

The mallards were the largest I have ever seen, and out of curiosity I weighed three males out of my bunch on return to Minneapolis, or about forty-eight hours after being shot. They weighed 14¾ pounds. One of them weighed a trifle over 5 pounds and the other two very near 5 pounds each.

Our shooting last fall was very poor, the duck flight being very irregular and not very heavy. I heard of a few good bags being made, but not so good as former years.

On account of the favorable season, prairie chickens were strong when the season opened, and I regret to say the law had not been observed.

I find the bicycle to be quite an important factor in the violation of the game laws, as it is a very easy matter to jump on a wheel with gun strapped to it (it is not always necessary to have a dog when the coveys are once located), take a run of three or four miles out of the small towns near which the chickens abound, start say about 6 P. M., get half a dozen or more birds and return just after sundown. It was the experience of a good many hunters as well as ours to find the coveys broken up and very wild, and this as early as Sept. 1. It has always seemed to me that we can always hear from good authority how the game laws are violated, but the deputy warden who lives, as you might say, on the grounds is usually blind and deaf to such violations. I am glad we have our former game warden back with us again—I mean Mr. Fullerton. He has done more for the protection of game the last month than his predecessor did in two years. K.

The Platform Plank of Forest and Stream.

DUNBARTON, N. H., March 25.—*Editor Forest and Stream:* At last New Hampshire has to a certain extent adopted the Plank of FOREST AND STREAM, as I am told that it is now illegal to sell at any time or to offer for sale within the State any ruffed grouse and woodcock. For some time the sale of brook trout has been illegal.

It was intended to include deer, lake trout and salmon in the law prohibiting the sale of woodcock and grouse; but as there was considerable opposition from the north country (the home of the deer and lake trout), it was considered best to leave the law on them as now in force. This has been a wise movement on the part of New Hampshire. With the open market in Massachusetts closed, the market shooters of the above State have come into New Hampshire and hunted steadily through the season, finding a ready sale at pretty good prices in our local markets. A prominent market man when talking about the law now in force said to me: "I am not sorry I had to keep a supply of woodcock and partridges on hand, as my customers wanted them. There was very little profit in handling them at the prices I had to pay." New Hampshire should have had such a law earlier, but it is better late than later. Great credit is due to FOREST AND STREAM inasmuch as it has shown clearly that other States were realizing the absolute necessity of the Plank.

The ruffed grouse is the bird we count on in New Hampshire, and with its extermination our bird shooting would practically end. So far as I can see or hear from reliable sources, the attempt to introduce foreign game birds has not proved a success. Under the law just passed, our grouse possibly may fail to increase to any extent. If they can hold their own, which I am sure they have not been doing, there will be enough for those who can kill them to get all they need or should have.

C. M. STARK.

Bob White in British Columbia.

CUMBERLAND, V. I., B. C., March 9.—*Editor Forest and Stream:* This week the Cumberland Game Association received a shipment of six dozen Virginia quail from Wichita, Kan. The birds were liberated the same evening between this place and Courtney. Most of them were quite lively, there being but two which showed any sign of weakness. The loss en route was sixteen. However, as eight extra birds had been shipped by the dealer gratuitously to cover losses, the actual loss was eight birds. It is to be hoped that people will unite in protecting the little fellows for some years, when they will afford grand sport. It is the intention of the Association to attempt the importation of the English partridge next season, if suitable arrangements can be made.

California quail turned out on the southern end of Vancouver Island have done well, and there is no reason why Bob White should not flourish and increase.

W. B. A.

Ducks Breeding in Vermont.

NORTH FERRISBURG, Vt., March 29.—I very much hope you will all be successful in putting a stop to spring shooting. Here on Little Otter, teal, wood and black ducks have nested for years, and I am quite sure that some seasons the mallard nests here, as on several occasions I have seen them on opening day, Sept. 1, and I hardly think they would come in from other places so early. This is the condition of things on the Otter, and only half a mile to the north is Long Point, on which are nearly fifty camps, and with from one to twenty-five boats going up the stream each day. Why should the ducks nest here unless protection in the spring is responsible for it?

I have thought an honest sportsman did not need a law to protect the game in the mating season, but I must be in the wrong or they are not all honest.

H. B. CHASE.

Trout on Long Island.

THE trout season opened on Long Island Friday last. The day was cold and blustering. The wind was so strong from the northwest that it was almost impossible to keep a fly in the water.

Mr. Rhinelander, of Manhattan, is credited with having landed the first fish, at the Southside Sportsmen's Club.

Col. Wagstaff and some others returned from the Southside preserve, Friday afternoon, with a fair basket of fish. Many of the other sportsmen there and to the eastern end of the island remained over until Monday.

Green Creek and Brown Creek, at Sayville, were not fished on account of the wind. The favorite fly for the windy days was a big fat *Lumbricus terrestris*.

Markets and Game.

SAUK CENTRE, Minn.—The markets here have been closed against prairie chickens for a year. That is all right; I was in favor of it years ago. This winter a law has been passed prohibiting the sale of ducks; that would be all right if the markets in all the States were closed. Now we will raise and feed the young ones for some one else to kill and sell. There are quite a few quail here this winter. They, as well as chickens, are wintering well. The chickens, however, are getting more scarce every year; if they would only close the season two or three years it would give them a start again. C. W. V.

Massachusetts Game.

DANVERS, Mass., March 21.—Game has wintered well. I never saw less snow. Saw first spring birds to-day—bluebirds, robin and meadowlark. We are having good rains, and the trout will run up the brooks. The new law that cuts off a month shooting on black ducks will not be welcome to the duck shooters, who have their best shooting in April. Many muskrats are being trapped on the river. Usually they are flooded out of their abodes by the spring freshets and boat loads killed. This winter, without snow, will be in their favor.

JOHN W. BABBITT.

Ducks Wintering in Ontario.

TORONTO, Canada, March 25.—A month ago a gentleman while ice-boating on the bay caught a live canvasback duck; its feet were frozen to the ice. Thousands of wild ducks stayed all winter in the Western Gap and the open lake. As far as I could distinguish, they consisted of at least four varieties. They all seemed to know that the law would protect them near large cities, for they loved to swim around the mouth of the sewers when the water was warm. G. H. CORSAN.

Long Island Ducking.

NEW YORK, April 1.—While down at East Quogue, L. I., last week, Mr. E. A. Jackson (guide), of above place, and myself killed eighteen black ducks, seventeen sprigtails, four geese and a few other ducks. The ducks were all very fat, and the geese averaged 12 pounds.

ALBERT A. SCHOVERLING.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Notice.

Talks to Boys.—XIV.

Bait Casting for Bass.

Now we come to another sort of bass fishing—that is, lake fishing—and it is here that you will need all your wits, as well as a long experience, before you may become perfect, or get to be what we call a scientific bass fisher. In your roving along the streams you have had some advantages on your side, and you have only been doing such fishing as almost any one might do. When you come to catching bass in the open water of a lake, where you have to fish from a boat, where there is no concealment, and where the bass can see you for a long ways, the whole question takes a different form. Again I am going to ask you to sit down and study the matter before you go to fishing.

You will observe that in the spring time the black bass makes its spawning bed out in the shallow water close to the shore. It feeds in this shallow water also, all day long in cloudy weather, though usually only for an hour or two in the evening of a warmish day. It follows these habits up till late June or early July, when its habits undergo a change. It leaves the shallow water and goes to the deeper part of the lake, where it feeds on minnows, small fish or crawfish. In late summer you can therefore catch it by still-fishing in deep water, or better speaking, along the face of some bar which drops off into deep water. This form of bass fishing sometimes will do, when there is nothing better going, but it is not the sort which will give you the most sport, and not the sort of which I wish now to speak.

The best form of this lake fishing for bass is known as bait casting, and the bait commonly used is the frog. I would not counsel you beginning to fish for bass in these lakes until they are well through their spawning season, as that is a time when no fish should be disturbed. If we killed the setting hens we would never have any chickens, and it is the same way with fish. We must give them a time to rear their little ones. There is ample time for this, and also for bait casting, in the early summer, along the shores of our bass lakes.

You will get the theory of this thing when you will observe that a bass can see you in this bright, clear, shallow water, and will dart away like a flash while you are still 40 or 50 feet away from him. You will note also that in the evening the bass will come and feeed right up at the edge of the grass, and in among the rushes and lily pads where the frogs live. I have often seen bass with their backs out of water, chasing frogs almost up on to the dry land. If a frog drops off of a lily pad and tries to swim, a bass will nab him in a rush so swift that it can hardly be followed by the eye. Now, there ought to be room here for you to make a litttle argument for yourself. If you can get a frog to that bass without his seeing you, and if you can have a hook in that frog; and if you can make the frog move as though it were alive, you are sure to get a strike from that bass if he sees the frog. He is sure to strike it on the surface of the water, and to strike it mighty hard and swiftly, since he will be afraid it is going to get away from him. That is sport, and that is your problem in this sport.

You will find that you cannot get at your bass from the bank, because a bank where there are frogs is too soft and marshy for you to walk upon, even if the bass could not see you there. You therefore get into a boat, and you approach your bass not from the shore side, as you did in your river fishing, but from the open water side. Now the problem is how to get your frog out to the bass without his seeing you.

As a boy you have often thrown a crab apple off a stick. Well, now you are going to learn to throw a frog off a rod. Your rod is short, slight and stiffish, and in its best form is not over seven feet in length. It would be a beautiful thing for throwing a crab apple, but it costs you $10 or more, and it is to be devoted to throwing frogs and not crab apples. Your old bamboo pole will not do in this game. Your rod must be made for this purpose and for no other purpose. Your old linen line will not do, but you must have a fine braided raw silk line, which will slip through the upright guides of the rod with perfect ease. The line is very thin and fine, and though it is strong enough for your purposes it will only wear a few days if you use it steadily.

But though you have your rod and your line, you have not yet got control over your frog. Here is where the casting reel comes in. The perfect casting reel is a quadruple multiplier, and it runs as smoothly as a watch. It is an expensive reel, but it will wear a long time if you take good care of it. It will run so easily that you can give the handle a twirl and it will keep moving for 15, 20 or even 30 seconds.

You will at once observe that if you give your frog a good pitch off the end of your rod, it will pull this little line off this smooth running reel very easily indeed. Now practice sweeping the rod from a point half way down your body and opposite your elbow, upward and forward over your shoulder. Hold the rod with the three lower fingers of the hand. Let the pressure come on the side and base of your forefinger. Your thumb will rest gently against the spool of the reel, and you must feel the line all the time lightly with your thumb, but you must be strictly careful not to push with your thumb. You must learn to think with that thumb.

As your rod tip goes up and over, your frog makes a long shoot out ahead of you, just as your crab apple did off the stick, only it does not go quite so high. As the frog goes out and down, follow it with the tip of the rod, so that as the frog lands, the tip of the rod will point directly toward it. This will allow the line to be pulled out straight through the guides, and will enable you to cast much farther than you otherwise could, and it will also

keep your reel from tangling so much as it will if the line does not run out smoothly and evenly.

Now remember this one thing absolutely. Think of it over and over again before you begin to cast, and sit down and think over it again after you have made failures in casting. Remember this, your thumb is your trigger finger. You do not grip with it, you do not push with it; you only regulate the reel by it. The push of the side of your forefinger will come on the side of the rod parallel with the face of the reel, and the reel, as you deliver your cast, will be standing on its end, the handle revolving on top of the reel, so that your thumb will be turned in toward your body. This will seem to you a most awkward sort of position, and so it will be for a long time, but it is the position which has been determined to be the best and most scientific one for bait casting with the reel.

It will be advisable for you to take lessons in the use of the casting reel of some man who knows how to cast. It is no use trying to get a good style without good tools for this kind of sport. Do not try to get a cheap casting outfit, but save your money and wait until you can get a good one, for you can never learn to do it properly with a bad outfit. Your rod can be bought for as low as $5 or $6, but see that it is selected by a man who knows what a casting rod is. Your reel will probably cost you not less than $10, and the best casting reels run from $20 to $30. Such a reel will last you all your life.

You may take lessons with your outfit after you get it, casting with a lead bullet which weighs a half ounce or so. You will at once observe that your reel has a most frightful faculty of tangling up the line. You start out a cast splendidly, and your bait goes over your head and flies on as though it would never stop. Then all at once it jerks and drops down. You look at your reel, and there is your line all bunched up and tangled, so that it may take you several minutes to get it straight again. The trouble was in that thumb. You forgot to think in your thumb. You pressed a little too hard, or let the line run a little too freely, instead of using just a gentle easy pressure all the time. Perhaps you were guilty of the very common fault of using too much force with your arm. The way to do is to make the rod do most of the work. Don't swing your arm too hard, but use your wrist and make the rod switch steadily from your wrist clear to the tip. This will give the bait all the force it needs and leave you a little more room to think of that thumb and to think with it.

Some men who have taken up bait casting late in life, have never been able to master it. It is far better to begin this, as all other manly sports, in youth. A boy will get the hang of this sort of thing before a man will. The art of bait casting, properly practiced, is one of the most skillful and beautiful forms of angling. It is very much more difficult to learn than fly casting. When you have learned how to cast a bait for bass, you may call yourself a bass fisherman, and you will then be able to take more bass than can be done in any other way with rod and reel.

Now we will suppose that we are in our boat, rowing along the edge of the lake some time of a summer afternoon. All around the edge of the lake there is a fringe of rushes, and we know that where these rushes cease and the open water begins, there is apt to be a drop off into deep water. At the edge of this bar the bass are apt to lie during the day. When they get hungry and want to go frog hunting, they move in among the rushes, and lie around keeping a sharp eye out for their food.

We will keep our boat 50 feet outside the line of the rushes as we begin our work. A good bait caster can cast 75 to 100 feet without any trouble, and at that distance can hit within eight or ten feet of his mark with fair regularity. Now, since you have learned to cast a bait, you begin at this sport.

Your frog makes a long, low flight, and lands in among the rushes. As he lights, the tip of your rod flies up just a little, so that he seems to make a little jump in the water. At the very instant that the frog drops and you twitch your rod, you transfer your rod to your left hand and begin to reel up with the right, not very fast, but just fast enough to make the frog move nicely in the water. As you reel up, you give the tip of the rod little bobs up and down, which jerk the frog a little in the water and make him look as though he were swimming. You cannot see all this, for your frog is away out there 50 or 60 feet away, and all you can see is the little ripple he makes on the water as he comes in toward you among the rushes. Then all at once you see a tremendous splash in the water right where the ripple of your frog was showing! With a jerk your line runs out under your thumb. You see the rushes bend where the great fish is dragging the line across them.

D not try to stop him. Do not get up and shout. Do not move your rod at all. Just gently feel the spool of the reel with your thumb, and let the line run on out. The old bass has caught your frog, but he has not swallowed it. For 10, 20, 30, 40 feet he runs, as swift as an arrow. Then your reel stops turning. Then your rod tip twitches gently, two or three times. Wait then, just a moment yet. Don't be in a hurry. That bass has never seen you, he does not see the line, and he does not care for the hook. If you leave him alone, he is going to swallow that frog, hook and all. I have sat and waited two minutes by the watch for a bass to swallw the frog before I would strike him. If after this little wait he starts off again, you will know that he is on his second run, and that he has probably swallowed the bait. Now strike hard! Don't remember any foolishness about hooking a fish with a fly rod with a turn of the wrist. This is an altogether different thing. Your fish is far away and your line may be bowed over the rushes. Reel up quickly until the line is as nearly tight as possible, then take a stiff, strong sweep of the rod upward with your whole arm, so that you will strike the hook home, deep into the hard mouth of the fish.

The instant you strike you feel the blood bound in your veins. The fish now knows that he has been the victim of a trap. The wit of man has outwitted him! He feels fright, terror, surprise and anger all in one—sometimes you will think more anger than anything else. He is not hurt very much by the hook, for he is used to the sharp fins of the perch and other fish, and his jaws are not sensitive. Yet he wants to get away from that restraining hook and line. He rushes for the weeds, springs into the air, shakes his head, and is all over the place in an instant. Keep a steady line on him, but do not try to hold him yet. When he is well hooked, back him out into the open water, if you can, and then let him swing on the rod. He will get enough of it after a while, and then you can reel him in slowly. When he sees the boat he will probably run again two or three times, but at last he will stick his mouth out of the water, and that means he is whipped. Now reel him in and pass the landing net gently under him.

Kill your bass at once with the thrust of a sharp knife through the back of the neck. If the day is warm, remove the gills and entrails and throw your fish on top of a chunk of ice, if you have any ice along. If you want to keep the fish alive on a string, pass the stringing needle through both lips of the fish, and never through the gills, as that will kill it almost at once. A nice string of these grand game fish following along by the side of the boat as you come into camp at night will seem a prize worth having, and you will even think it repays you for all the trouble you had in learning to cast the bait.

A Pair of Bass.

I was heels over head in work at my desk one Saturday morning, when Lou, my angling chum, came in with a cheery smile, which I knew boded good fish news.

"I received word from Joe this morning and he wishes us to come down to the station to-night, as there is a school of bass outside."

Joe was one of the crew of the ——— life-saving station, who had few equals as a boatman, and who was above all a thorough sportsman and angler. Under his guidance we had enjoyed many a day's good sport.

We packed our traps that evening, and arrived at the Beach about ten o'clock; the hotels were closed for the season, and the watchman on beat was the only mortal we met as we left the train.

It was a bright moonlight night in October, and as we walked along the beach toward the station we speculated about our chances for the morrow, and reminiscences of our last successful trip were gone over again.

As we neared the house Joe's dog Pepper announced our arrival, and after a cursory examination, having recognized us as old friends, led the way to the house. Most of the crew were enjoying their pipes and reading, while a party of four, including Joe, were engaged in a partner game of pinochle, in which Joe and the cook seemed to be getting the worst of it.

After the customary greetings we saw to it that our traps were carefully stowed away, and then we sat down to a chat regarding the luck during the week past, and were told that weather conditions had beeen such as to make trolling impossible. Joe promised good weather for the morning, and Lou and I had learned to have great confidence in his predictions.

After a good night's sleep we were awakened by Joe about six o'clock, and were soon sitting down to a breakfast of bacon and eggs and steaming hot coffee. Joe in the meantime had gotten everything ready, and putting our traps in the boat were were soon off for the grounds.

The day for fishing was all that could be desired, bright, crisp and clear, and hardly any swell on. By the time Joe had reached the grounds Lou and I had rigged up, and each putting a couple of large sand worms in our gang hooks we dropped them over, working the line out slowly until we had reached the 100-foot mark.

Joe headed for the first row of spiles, and in a few minutes I had the first strike, and soon landed a bass of about two pounds weight.

We went over the same ground again several times, but it seems it was the only bass in that locality.

Joe then started for the broken jetty, which as a rule turned out some nice bass.

Here we caught four, Lou getting one weighing 2½ pounds, and although we went over this ground again a half-dozen times, we failed to get another strike. The bracing air had again sharpened our appetites, and when I proposed a little lunch with a smoke afterward the others agreed willingly.

"There were quite a number of bass at that jetty," remarked Joe, "and if something hadn't scared them away we would probably have caught a dozen more."

"There they are now," suddenly said Joe, pointing toward the old jettty. Lou and I couldn't see anything, but Joe's practiced eye had caught sight of the school, and hurriedly arranging our baits, Joe rowed silently toward the spot.

"I've got one," I cried, suddenly. "So have I," answered Lou, "and he's bigger than any we've got." Mine being a small bass, was soon in the boat, and Joe then turned his attention to Lou, who was having his hands full with his 12-ounce rod. Several times he brought him close to the boat, only to let him go again, when he became "contrary," as Joe called it. When finally brought to the net and safe in the boat Joe estimated his weight at a little over five pounds, but from the way he fought Lou and I expected him to be larger.

We were still talking about his game fight, when Joe admonished us to hurry, having no time lose, as in another hour the tide would be flood and the fishing over.

On the way back it was the same story over again, two strikes and two bass; Lou again getting the larger one of about four pounds. We now had nine, and as they lay in the bottom of the boat they were a pretty sight with their beautiful striped sides.

As we had plenty of worms, Joe urged us to put on nice fresh baits, and on the next troll I hooked one, which from the strike he gave rather disappointed me, as I was now anxious to also catch a large one. Suddenly he started to run out my line at a lively rate, and I made up my mind he wasn't so small after all. I tried to turn him several times, but it was no use, and before I knew it he had over 300 feet of my line out.

"Careful now, don't hurry him," warned Joe, and as he rowed slowly toward him I commenced to reel in and gradually worked him to within about fifty feet of the boat. Then he made another run, and after this he was rather easy, and slowly but surely he was coming toward the boat.

Lou was on his knees, on the stern seat, ready to land him when the opportunity came. "Be careful," cried Lou, suddenly; "you've got a pair," and sure enough there were two bass, which Lou netted skillfully, and were soon safe in the boat. One was a mate to Lou's largest one, and the other was about two and a half pounds.

It seems I had first hooked the smaller one on the upper hook, and the larger one had then taken the trailing worms on the lower hook, and he it was that had suddenly run my line out after I had the first strike.

Before the change of tide we caught three more, all of about two to two and a half pounds, and Joe then hoisted his sprit sail and we started for the station. We arrived there just in time, and sat down to a dinner of roast beef, baked potatoes and cranberries, and which was enjoyed by Lou and I more than any dinner we have since eaten.

The scales were then brought out and the catch was found to weigh 38 pounds.

After bidding the crew good-by, Lou and I wended our way back to the railroad, where we took the train for home, but agreeing that for many days to come we would remember that day in October with Joe.

Argus.

Camp-Fire Stories from Canadian Woods.—III.

The Commodore and the Judge.

Moira Lake, as its name implies, is an enlargement of the river of that name, but some distance northwest of Stoco. Lying in the northern part of the second tier of townships from the Bay of Quinte, it extends about ten miles from west to east, and is about a mile and a half to two miles wide. It is a picturesque sheet of water, here and there studded with islands and bold rocky shores. It possesses some geological importance, as it marks the boundary in this locality between the Trenton limestone and the Archæan or older formations. On the north shore lies a valuable bed of talc and of marble and valuable mines of both hematite and magnatite iron. Cross the lake and you are in one of the most important mineral regions of Canada. Here lies the world's future supply of arsenic, besides gold, iron, zinc, galena and other economic minerals.

The shores of this lake are dotted with summer cottages, neat in appearance and comfortably supplied with all the requisites for summer outing, belonging to the prosperous and well-to-do families of the town of Madoc, lying about two miles to the north. In summer the water affords excellent fishing for black bass, pickerel and maskinonge, and is enlivened by steam yachts, launches and various other craft.

Coming by rail from the south, as you emerge from a rocky cut and skirt the western shore of a bay by a high grade you observe a point of rock away to the northeast, off from the shore. At low water this solitary rock looks like a huge porker taking his ease in a water hole. The early settlers, practical in everything, from the appearance of that boulder, gave this beautiful sheet of water the unromantic name of Hog Lake, and it is so laid down in the early maps of the country.

The island in the center, which is crossed by the railway as well as by the public road, was settled by one Robert Perry, who at one time kept a tavern here; the old building still stands at the end of the first bridge, and this property is still owned by some of his children. Perry, when a young man, while traveling through the then Indian woods, now the township of Tyendinaga, was set upon by some drunken Indians, beaten, robbed, thrown over a log by the wayside and left for dead. He was shortly afterward discovered, taken by friendly hands to the nearest house and cared for. He recovered from his wounds, but was never the same man. From the beating about the head his mind was affected, which made him somewhat eccentric. From this, and from his dwelling by the lake, he was facetiously called the Commodore—no doubt after that other Commodore Lake Erie fame. I am not aware that he ever disclosed a taste for music, or any weakness for the higher realm of poetic fancy, but his labors were enlivened and his peaceful slumbers soothed by the loudest chorus of bullfrogs. The aquatic minstrels were therefore known to the Madoc boys as "the Commodore's band." Perry, notwithstanding his eccentricities, was no fool. The loudest man at a logging bee or a raising, and the noisiest at a political meeting. Many a good story is related of Perry and among the rest is the following:

Years ago old Judge S., who was then county judge, being a skillful angler, whenever he had a short court at Madoc frequently enlisted the old Commodore to assist him in his favorite sport. In a certain circuit the court was unexpectedly short, and it was arranged that the two should spend the balance of the day upon the lake. The lunch basket was filled and every convenience supplied which forethought could suggest for a successful day's fishing. A horse and wagon was in requisition, and they found themselves at the shores of the lake.

Now, it so happened that the Commodore's favorite fishing ground was on a bar which ran out from this very porcine rock from which the lake had received its unsavory name. Thither they rowed, and cautiously making fast the boat commenced to fish with encouraging success. After a time, in looking through the lunch basket, however, it was discovered that the one thing most needful to a successful day's fishing, alas, was lacking, being an oversight of mine host at the hotel—there was nothing to "grease the rod," and besides, it being dog days, dring lake water was not conducive to health without diluting by a little of Corby's "family proof."

It was arranged that the Judge should remain upon the rock fishing while the Commodore should row over to land, go to the village and return with the needful, as fast as his legs could carry him. With strict injunctions as to celerity, he started on his errand. When he arrived at the hotel, being of convivial habits, the Commodore found a lot of his boon companions going in for a "good time." Of course, he joined in, forgetting his mission, and in a short time forgot everything else. He was soon overcome, and lay down on a bench to sleep off the fumes of the whisky. After hours of slumber, and when the sun was away down in the west, he awakened, and it began to dawn upon him there was something wrong. He thought it could hardly be possible that he had left the Judge on that rock all day in

the blazing sun, without a leaf of shade, and only decent standing room for one. He imagined it must be a dream. However, he made his way to the lake, and there, sure enough, was the Judge, like Prometheus of old, bound fast to the rock of fate. When he arrived to relieve the Judge, the scene that ensued is more easily imagined than described, and I shall not attempt it. Suffice it to say, in after years, whenever the old Judge related his experience, he could not enter into the joke so heartily as his hearers.

EDISON B. FRALECK.

New England Fishing. I

BOSTON, April 1.—The legal open season for trout in this State began to-day. Considerable preparation had been made early last week by the anglers, but the hard freeze of Friday and Saturday took away their enthusiasm. Ice formed of nearly an inch in thickness both mornings, with the mercury below freezing Sunday morning; not favorable conditions for outdoor trout fishing. Still some of the Boston anglers are off for the streams and preserves on the Cape, and in that part of the State. Some of the members of the Tihonet Club started Saturday evening, and others went down yesterday. Gen. Stevenson has planned to be one of the first at the Monument Club. F. G. Simpson goes down early to fish a stream of his own, though the cold weather may delay him for a couple of days. The cranberry bog streams in the vicinity of Dennis will be thoroughly fished early. Most of these streams are either controlled by leases or agreements to private parties, or the owners charge a fee for fishing a given length of time. The streams in the northern and western portions of the State are still too full of ice and ice water for trout fishing.

A display of trout in Appleton & Basset's window, on Washington street, has attracted considerable attention for some days. Even friends have walked into the store, with indignation depicted on their faces, and asked the proprietors: "Don't you know that it is close time?" "Are you not aware that you are liable to prosecution for showing trout before the first of April?" In response the firm have answered quietly, and called for the trout to be brought from the window. Behold, they are china; a good imitation of half of a brook trout, and a part of the plate. So well is the painting and firing done that, with the aid of a little parsley laid around the pseudo fish, even some of the more ancient anglers have been deceived. In the same window a couple of mounted albino wild, or Canada, geese were shown for some days recently. They were grayish-white all over, except a black spot on each side of the head. They are the property of Mr. C. H. Munroe, and were shot at Silver Lake, late in February. Mr. Munroe is proprietor of a fine hunting lodge at that lake.

It is too early for prognostications as to the departure of the ice from the Maine fishing lakes, but great preparations for guests are being made by hotel and camp proprietors. Improvements are in progress at nearly every important point. The Kineo House and surroundings, at Moosehead, are being much improved. At the Rangeleys great preparations are being made. Capt. F. C. Barker is making repairs and improvements. It is understood that he will have a number of new cottages at Haines' Landing, or just below, on the Decker lots, with a landing of his own. The steamer Capt. Farrar, sunk at the Upper Dam, will be raised and again run on Mooselucmaguntic Lake. Steam launches are growing to be more and more a feature at both the Rangeleys and Moosehead, and a number of new ones are to be put in for renting to sportsmen and camping parties. The same is true of Sebago Lake and Lake Auburn. One or two Boston parties are already planned for Sebago as soon as the ice is out. The ice sometimes goes out of that lake in April, but oftener early in May. SPECIAL.

The Scarlet Ibis.

CANANDAIGUA, N. Y., March 29.—*Editor Forest and Stream:* A list of bass flies is before me, and I find included therein both red ibis and scarlet ibis. Is there a difference, and, if so, wherein does it lie? Up to last August I was, to put it mildly, quite indifferent to the fly I have known as the scarlet ibis.

It came about in this way. Some years age we formed a fly-fishing club here, with a membership of nine impecunious and irresponsible souls. We have fished together upon every possible occasion for ten or twelve years. Our fishing has been almost exclusively with the fly, and has been confined, with few exceptions, to the waters of the outlet of Canandaigua Lake, where occasionally a good small-mouth bass is taken. Our knowledge of the art has been acquired wholly from one another and from individual experience, and I doubt if any one of us ever saw a fly-rod in the hand of an expert. So that a great deal of our work is necessarily crude, and some of it perhaps grotesque.

Nevertheless, we all mean to live up to and encourage the laws for the protection of fish and game, and we have by degrees established an unwritten code of ethics of our own which we in most instances respect and apply. And one of the propositions that has become axiomatic among us is that it would be a lasting disgrace to our organization for one of its members to use or to be possessed of a scarlet ibis fly. And it was formally resolved that if a prototype of the said scarlet ibis fly ever did actually exist it was the unanimous opinion of the club that it never had any valid excuse for it.

I remember that two of us once met an angler of some repute from a neighboring county. We heartily accorded him the hero-worship which we considered his due, until he exhibited to us his fly-book, which contained one white miller, one Gov. Alvord, one dark Montreal and eleven huge and gorgeous specimens of the scarlet ibis. He informed us that he often fished with three of these on his leader at the same time, and the disenchantment was complete. We hurried home and reported to the inner circle, and we unanimously and without discussion classed the gentleman as a savage.

But time went on and some of us devoted six days of the last week of August, 1900, to fly-fishing for bass. Before going I had been reading of the virtues of the scarlet ibis, and in a spirit of lawlessness, and forgetful of the solemnity of my unsworn vow, I surreptitiously and feloniously tied up a couple of misshapen and hideous imitations of that unearthly fly, and in the darkness of the night secreted them in my book.

Monday, Tuesday, Wednesday and Thursday I fished faithfully and legitimately, using the old tried and respected flies, but did not take a single fish which I could put in my basket.

Then, on Friday afternoon, with a feeling of guilt in my bosom and a frightened look over my shoulder, I attached one of my flaming monstrosities to the leader. After a few terrible minutes, observing that the bottom still remained in the stream and that no hills had fallen on me, my confidence returned, and inside of two hours I had taken four good bass, and, wonderful to relate, the largest three, including two two-pounders, had succumbed to the charm of the ibis.

The next afternoon I went back to the old flies. I worked hard, but could get nothing. Then I put on the remaining ibis, and within a half hour I had taken on that fly a bass that weighed 2 pounds and 15 ounces several hours afterward.

I did not make another cast. Perfect happiness was mine. I felt no remorse because such a noble bass met so ignominious a death at my hands. It was plain that I had fallen in the estimation of my brethren, but I bore it cheerfully and manfully.

Henceforth that scarlet ibis (or is it the red ibis) shall have a peg in my fly-book, and at times a loop on my leader.

But, oh my! oh my! I wish its color could be tampered with.

F. A. C.

At Mississquoi.

OVID, N. Y., March 23.—*Editor Forest and Stream:* In the spring of 1899 I went to Mississquoi Bay, Vt., for a day's pike fishing, leaving the train at Alburg on the western side of the bay. My experiences on that day were varied, and as thought of now were extremely pleasant, although some of them did not so impress me at the time. Shortly after the ice leaves the bay, the wall-eyes go in procession up one side of this arm of Lake Champlain and down the other side, biting steadily at everything biteable, although small tender minnows are preferred. In clear water the schools can be seen moving easily along near shore. This continues for a few days and then the run is over, the pike having retired, it is believed, into the deep waters of the lake. While the peregrination lasts, school doesn't keep on the shores of Mississquoi Bay. Old graybeards, strong men and tender striplings have but one duty—to take as many as possible.

I reached Alburg at 8 A. M., with a bucket of lively minnows caught by my own hands in the cool waters of the Chazy River. Who would be able to take more pike than I with my old bass rod, fine silk line and leader? Would it be difficult for so skilled a fisherman as myself to show these plebeians how to do it? "Pride goeth"——.

As I left the train the baggagemen were lifting large strings of pike into the car. There were fifty or seventy-five fish on each string, and there were six or seven strings. At least half a ton of pike was loaded. You can imagine the rise in my expectations.

The landlord gave me his only remaining boat. I soon knew why it was his remaining boat. Throwing out the anchor a few rods from the railroad bridge, I baited the hook with nervous fingers and—the boat was half full. She was a beautiful creation, built on the St. Lawrence model, but she leaked in bow, stern, middle and both sides. I barely reached shore. After such a beginning, I should have considered myself a victim of the gods and quit for the day. But when my head became cool—my feet were already so—I went out on the bridge with the crowd and cast in with them.

Soon there was a sharp tug, the old rod did its accustomed work, and a 4-pound pike came to surface thrashing around. I, 8 feet above him, watched him thrash. No landing net, no gaff, no spear, no gun, no way to kill him. After a time he departed, and was probably caught a few minutes later by some boy with a pork hook, a clothesline and a tamarack tree. Fall No. 2.

After this my eye fell on a boat nearby not entirely filled with men. I tried with offers of liberal stakes to secure a place in it. The owner was a callous man, and he calmly, suavely refused. Then I fell from grace, being much irritated by his manner, and assured him of my belief in several flaws in his ancestry. Feeling safe by position, I was very candid with him. When I finished my estimate, his countenance was no longer serene, nor his tones suave. This was my only successful operation during the day.

Then some good Samaritans appeared. Two gentlemen from St. Albans pulled up to the pile on which I was sitting and thanked me for the able manner in which I had risen to the occasion just past, and gave me a place in their boat. How they did catch pike! I saw them lift eighty fish from 2 to 5 pounds weight, while I could not, and did not, catch one that day.

After a time I became resigned, and took pleasure watching the rest do it. There were a dozen boats within a few rods, and I was kept busy. One old gentleman of ministerial garb and bearing, dubbed "Grandpa" by the crowd, tried to play the pike as one does bass. He usually lost the fish and caught the ha-ha!

Soon a rustic called to him, "Say, Grandpa, you want to do it like this!" He explained by a mighty lift on the long lever in his hands, whereupon a huge pike hurriedly left the water some 16 feet away and described a parabola toward and into the boat, Rusticus adroitly ducking to avoid the blow.

Then Grandpa tried it. His fish left the water just as hurriedly, but instead of falling into the boat it swung like a pendulum to the extremity of its arc, came back, struck Grandpa on the shoulder and caromed away into the water. The laugh which went up set those calves of Lake Champlain, the bullfrogs, a-bellowing.

When train time came, I went ashore, had some small dealings with a small boy, took my string of fifteen pike and went proudly, on the exterior, back to my home, explaining how wonderfully the fish bit.

BENJ. E. BIRGE.

Newfound Lake.

NEWFOUND LAKE, Bristol, N. H., March 30.—The resources of our New Hampshire lakes will be in evidence to visitors at the Pan-American Exposition at Buffalo, as the State will have an exhibit of game fish. Among them will be lake trout from this lake and Sunapee trout from Lake Sunapee, and other fish, it being the intention of Gen. Crofts, New Hampshire's commissioner to the exposition, to see that we have a good representation of our inland lakes. Seven lake trout have been taken from here and under the supervision of Mr. Ed Rike taken to the U. S. hatchery at Nashua, there to be kept in tanks, fed and cared for by Waldo F. Hubbard, U. S. Superintendent, until the exposition shall open.

Fish Commissioners Wentworth and Hughes, accompanied by Mr. Waldo F. Hubbard were at this lake March 26, and thought they would try their luck at bobbing through the ice for the elusive trout. The Commissioners drew a blank, but Mr. Hubbard hooked on to a big (?) one, but the U. S. official did not have "pull" enough to land that trout in Buffalo.

The trolling season is expected to commence about April 20, as the ice is not so thick this year, and signs are of an early breaking up. As the lake is kept well stocked by the Commissioners, there is every indication of the season being beneficial and instructive to fishermen who annually visit these waters for trout and salmon.

S. H.

Chicago Fly-Casting Club.

THE last indoor meeting of the Chicago Fly-Casting Club for the season was held on the evening of March 21 at the Hotel Bismarck. In view of the interest shown last season in team contests, it was decided to devote three of the six contest days the coming season to team contests, to divide the club into three teams, under the direction and instruction of Messrs. Bellows, Hascall and Peet. The advantage claimed was that the members would thus receive the benefit of the experience of their respective captains and mutually assist each other.

Club action was also taken in the direction of raising the plane of lure-casting nearer to that of fly-casting in scientific angling by instituting an event in practice contests, in which a ¼-ounce rubber frog is to be used instead of the 1½-ounce. The innovation met the approval of all members present.

Instructions were given to the Executive Committee to prepare suitable resolutions relative to the departure of the Rev. C. A. Lippincott to Flint, Mich., and charter member J. M. Clark to Kansas City, Mo.

During the evening the members were entertained with a rousing song by Mr. Perce; an interesting description of a winter fishing trip by Mr. Orr, who has just returned from the South; a sketch of the development of bait-casting rod, from the old 16-foot bamboo to the present 5-ounce 6½-foot gem of rod construction, by J. M. Clark, and also the speech of the season on "The Lottery of Scientific Angling," by President W. T. Church.

Carp in Toronto Bay.

TORONTO, Canada, March 25.—Toronto Bay is now full of carp of from 4 to 8 pounds in weight. They may eat all the wild celery and rice from the ducks, but they are better than no fish at all. I have much fun spearing them in the summer time. Taking a spear about 15 feet long and donning a bathing suit, I enter the water at any old place. Then thrusting the spear in the water ahead of me and drawing it back without splashing, I soon see a single file of carp on the way to investigate. I hit one, and you would laugh to see the rest of them get. They never come back after once smelling blood. They are cunning, brainy beggars. Hit them hard, for their scales are large and hard. The leather species are those which have had their scales injured; they then shed the remaining scales, and the skin is a little tougher. What do I do with the carp I spear? Why, as a joke, I give them to those who ask me for them. As the song goes, "They never ask again." Have you ever eaten flannel?

Here is a German recipe for cooking boarding-house carp: Boil in one quart of lager beer, in which is dropped a bit of cheese; the carp will emerge white, firm and free from bitterness. But the liquid will be so bitter that it would be rejected by the thirstiest bunco-steerer that ever roamed the plains. Another receipe is Jewish: Stuff with bread crumbs and egg, onions and garlic, salt, pepper, etc., and bake in the oven.

G. H. CORSAN.

Not Too Dangerous.

Editor Forest and Stream:

On page 249 of FOREST AND STREAM for March 30 your compositor makes me say that the salmon pool at the west entrance of the St. Augustin River is so full of rocks that two or three fishermen who had tried the river lost their lives promptly. I have fished some pretty dangerous waters but none that is quite so bad as that. If your compositor at work with my simple handwriting makes "lives" out of "lines" it makes me skeptical about the accuracy of archæologists' translations from more ancient hieroglyphics.

ROBERT T. MORRIS.

NEW YORK, March 28.

Striped Bass in the Hudson.

OSSINING, N. Y., March 28.—*Editor Forest and Stream:* They are soaking the striped bass up here, the several nets catching a ton a day. There have been three caught that tipped the scales at 38, 39½ and 40 pounds. As soon as the silt gets down on the bottom where it belongs—first warm spell—the hook and line fisherman will have some rare sport.

C. G. B.

"The Striped Bass."

THE paper under this title in our issue of March 30 should have had the signature Herbert N. Curtis, instead of Robert N. Curtis, as printed.

Thomas A. Edison is tarpon fishing in Florida.

For the Dog on Chain.

Editor Forest and Stream:

I find in the Hampshire Gazette note of a tragedy at Forest Park, in Springfield, Mass. It is related that "Dinah, the black bear which was brought to the park over seven years ago, when a cub, had two cubs born about the first of last month. Dinah was separated from the other bears and given the den, runway and cage to herself. When the young bears were little over a week old the keeper noticed that the mother bear had appeared in the cage connected with the den, while before she had kept closely within the den. This aroused his suspicions, and he dropped the grating, shutting her into the cage. A thorough search was then made of the den, but the cubs had disappeared, and no trace of them could be found. It is supposed that Dinah yielded to what appears to be a common impulse among bears in captivity, and devoured her offspring. She had been treated with the utmost care, and every precaution taken against disturbing her. The only person allowed near the den was the keeper that brought the animal's food once a day. The park authorities very much regret the occurrence. It is rare to have cubs born in captivity, and these were the first youngsters that had ever been at the park. People are always asking, "Have you any cubs out there?" In a few days more the cubs would probably have been taken from their mother and brought up by hand in a separate cage."

One thing is certain, that the keeper could have saved the cubs if he had not starved the dam! One meal a day is not near enough for the nursing mother of two cubs. The old bear should have had plenty of meat, besides cereals, fruit, nuts, or any odd thing to vary her diet and amuse her. Animals want playthings, especially dogs which are on chain. An old shoe, old hat or rag baby will keep them from whining and barking. After snow passes, the best hygiene for a hunting dog is to tie him to the springy limb of an apple tree, with not enough scope of rope or chain to allow him to get snarled up in it. It is like one of those children's baby jumpers.

CHARLES HALLOCK.

Mascoutah Kennel Club.

THE list of judges, with the breeds assigned to each, in respect to the forthcoming show of the Mascoutah Kennel Club, follow: James Mortimer, Hempstead, L. I.—St. Bernards, Newfoundlands, mastiffs, Russian wolfhounds, deerhounds, greyhounds, bloodhounds, English fox hounds, Chesapeake Bay dogs, Dalmatians, poodles, bull dogs, Boston terriers, French bull dogs, Schipperkes, Chihuahuas, Italian greyhounds, pugs, Yorkshire terriers, toy terriers, Pomeranians, Griffons, King Charles spaniels, Blenheim spaniels, ruby spaniels, Prince Charles spaniels, Japanese spaniels, American fox hounds and miscellaneous.

T. S. Ballin, Minneapolis—Bull terriers, smooth fox terriers, wire fox terriers, Airedale terriers, Welsh terriers, Bedlington terriers, black and tan terriers, Skye terriers, Dandie Dinmont terriers and Scotch terriers.

Dr. J. S. Niven, London, Ont.—Great Danes, Clumber spaniels, field spaniels, cocker spaniels and Irish terriers

J. A. Graham, St. Louis—English setters, Irish setters and Gordon setters.

T. Donoghue, La Salle, Ill.—Pointers and Irish water spaniels.

John A. Long, St. Louis—Collies and Old English sheepdogs.

Arthur Froembling, Chicago—Dachshunds.

Mrs. E. Oughton Giles, Stockenchurch, Bucks, Eng.—Beagles.

Points and Flushes.

The celebrated veterinarian, Mr. H. Clay Glover, of New York, has for some time been residing on Long Island, where he enjoys the freedom and advantages of country life while still being within touch of his business at 1293 Broadway, New York. His dog remedies have won their way to the front and have long since been recognized throughout this country as standard. They are specially prepared for all the ills to which the dog is subject.

Rush to the Hot Springs of Arkansas.

IT is probably due to the influences of the many campaigns in which the United States troops have been engaged in the last year or so in foreign climes, and the extremely arduous duties which they have performed with such distinction that the number of applications for treatment at the American Carlsbad—the Hot Springs of Arkansas—has increased to such an extent that from the present indications it looks as if the applicants could not be taken care of. Our Uncle Samuel keeps a great hospital there for the exclusive use of the officers and men of the regular and volunteer army—the Government Army and Navy Hospital is the way it is called, for the navy has a share of the benefits, too, and in the last few years it has become an immensely popular place.

The world-wide reputation which this resort bears for the prompt and permanent alleviation and relief of such ills as service in the semi-tropic regions involves, and that in connection with its remarkable climate and healthfulness of location—its altitude is just right—and its easy accessibility combine to make it a spot much sought after by officers and men.

The surgeon in charge of the Government Hospital estimates that the applications for admittance this year will be much in excess of the capacity of the hospital to care for them, although it has been extensively improved and everything done that could be done in anticipation of just such a rush. It looks as if at least a few of the applicants would be disappointed by their failure to get there.

'Mid Reef and Rapid.—VI.

BY F. R. WEBB.

FIVE o'clock of a summer morning in camp seems fully as late as 7 o'clock at home in a darkened bedroom; so when we turned out next morning at this seemingly early hour, after a good, sound, refreshing night's sleep, it did not seem much if any earlier to us than our usual hour. To the habitually late riser, the exquisite charm of early day—particularly in the summer—is lost. The rising sun; the fresh, dewy atmosphere; the delicious quiet; the feeling that all nature has been refreshed and purified by the night's rest—all combine to make this the most attractive and enjoyable part of the day. I presume that, as a rule, the members of our party were fully as little accustomed, when at home, as most people are, to viewing and enjoying nature at this early hour; therefore when we turned out this morning in the delicious, fresh purity of the new-born day, and had plunged our heads, faces and hands in the clear, refreshing water of the river, from whose smooth surface the mists were rising; drifting away in delicate little wreaths, and melting into the translucent atmosphere, just tinged by the sun's slanting rays, and washed the night's sleep out of our systems, it was with a keen sense of enjoyment that we took in all the beauties of the fresh, cool morning; and we sat down to our 6 o'clock breakfast of bacon, fried potatoes, soft boiled eggs and coffee with a much keener appetite than usually attends us at our matutinal meal at home fully two hours later.

The Colonel is a quick packer, and, naturally, his tent was struck and his canoe packed and ready for launching before it had occurred to the rest of us that our canoes were to be packed at all. While I was preparing breakfast, George and Lacy packed their canoes, and while they were washing up the breakfast things I packed mine, and by 8 o'clock everything was again afloat.

The three miles from here to the Shenandoah, at Port Republic, is a beautiful and interesting run. For the first mile and a half the water is still and deep, with hardly a ripple to break the surface. It is a beautiful sheet of water, flowing between soft, velvety, green banks, whose overhanging trees are reflected again from the mirror-like surface of the water, while the long, down-stream vista is closed by the towering peaks of the southern end of the Massanutton range of mountains, which loom squarely across the vista and are reproduced faithfully, bottom upward, in the river.

The river turns sharply to the right at the end of this long still reach, and an enormous fish dam, right in the elbow, or bend, straggles across the breadth of the river; which is here considerable. I am not aware that there is any particular advantage in this method of construction, but we meet with a number of dams in this river, built in this particular location—right in the angle of a sharp bend; the dam continuing across the river in a straight line with the inner bank. We usally shoot this dam near the right bank, where it is not more than a foot high, but at the present stage we were unable to find water enough flowing over the dam to do this, and the canoes were easily slid over by hand into the still water below.

The remaining mile and a half presents a formidable series of rapids or falls, as the long stretches of reefs and ledges, with considerable drop or fall, are not inaptly termed in local parlance—by far the worst we have yet experienced, and quite as extensive and rough as most of those to be found in the Shenandoah below. The first half mile is a wilderness of reefs, extending, particularly for the first 200 yards below the dam, in long, regular parallel lines, clear across the river, slanting away considerably down-stream as they cross. At the present low stage most of these reefs stood, baked hard, white and dry in the sun, considerably above the surface of the water, and as viewed from the dam the river bed presented a bewildering conglomeration of rocks with no apparent thoroughfare. The water between each line of reefs is still and deep, and we easily threaded our way along these little terraces, taking advantage of the frequent little gaps or chance channels through the "saw-tooth" ledges, to drop over each ledge into the terrace below. Our progress was thus quite slow, but we worked our way along the mazes quite successfully. Below the reefs the channel shoots swiftly to the left of a flat, grassy island, narrowing as it proceeds, until it finally ends in a nasty, crooked little pitch over a ledge, some three or four feet in height, with an equally nasty, crooked, rocky little channel below it, and we were all liberally thumped and banged about in here, before we succeeded in making our escape into quiet water below.

The next half-mile is a majestic still reach of river, imposing and lake-like in its dimensions; flowing between high, tree-clad banks on either side—a most lovely and impressive reach, with here and there masses of reefs large and small, exposing their white lime-encrusted surfaces above the water, and adding picturesqueness to the scene. This is followed by half a mile of falls similar to those above, but steeper and rougher.

We paddled slowly and cautiously over the calm surface of this lake-like reach; breaking the water into ripples and little furrows, as our paddles disturbed the surface and our sharp bows cut their way along through the water, which furrowed away in two long slanting lines far toward either shore from the bow of each canoe—the furrows broken into confused masses of little wavelets where the long diverging lines chanced to cross each other. A sharp lookout was necessary, as great masses of reefs, reaching nearly to the top of the water from the depths below, were plentiful, and the currentless surface showed no indications of their presence save where the little furrows from the bows of the canoes broke over a crest but just beneath the surface, and reuniting beyond passed on, leaving a series of little rings of water dancing and lapping round it.

A low wall of reefs and matted bush covered islands stretched clear across the river like a dam, below this reach, and marked the beginning of the last half mile of falls above Port Republic and the Shenandoah, down which the whitened waters tumbled and foamed; sparkling lightly in the rays of the morning sun among the masses of black, ugly, grinning reefs, which everywhere darkened the water and obstructed its passage, while the dull, threatening roar sounded ominously in our ears as we approached, with the long iron bridge at Port Republic stretched lightly across the end of the vista, outlining its slender filaments in faint, dark tracery against the great green background of the Blue Ridge.

We slipped into the narrow little boat channel between the two flat, grassy little islands in the middle of the river, and wound our way in and out among the rocks and ledges, along the winding little canal among the reefs, without touching a rock, until we passed through this chain; below which the water rests in a still terrace, 100 yards in extent, before foaming and tumbling down a reallly formidable series of ledges and reefs. A narrow little boat channel, close to the right bank, two or three hundred yards long, affords a tolerably safe passage through, although plentifully sprinkled with loose rocks, especiallly at the lower end, where it divides into two passage over the inevitable fall into the deep water below. Through this short, still reach we now paddled, directing our course toward the channel at the right, while George took occasion to produce his bugle and bray forth most unmelodious blasts thereon, with a view of arousing the sleepy inhabitants of Port Republic and notifying them of our approach. His musical efforts were speedily rewarded by the appearance of a litttle crowd of men and boys, who gathered in a curious little group on the bridge to see us come down over the falls, and doubtless hoping to see some of us score a capsize in the attempt.

"Now look out! This shoot is no child's play on this water, and we are all likely to strike at the last pitch down at the bottom. If any of you strike, jump out promptly, or there will probably be a canoe to repair!" said I, as we approached the head of the boat channel, and the long narrow lane of water could be seen, straight away down hill before us, with the big waves glittering and tossing their shaggy manes in the bright sunlight.

"Hold back a little, and let each man get half way down the rapid before the next man enters the shoot!" was my parting injunction, as my canoe was caught in the powerful suction over the verge of the rapid, and shot swiftly down the race. It was a rattling plunge and headlong rush down, while my canoe rode the big waves like a duck. The run was made without a mishap until I reached the shallow foot of the shoot, when in spite of skill and alertness I was swept broadside over a flat mass of reefs, where there was not water enough to float me, and my canoe careened helplessly over, high and dry on the rocks.

Of course all that there was left for me to do was to open my 'midship hatch and step out and lift her off and then scramble aboard again as nimbly as I could, with the whirl of waters tugging at my canoe, which I succeeded in doing, just in time to close my hatch again with a snap, and without waiting to see whether it was properly adjusted or not, hastily jerked the waterproof apron up to my chin, when my canoe dived head first over the final four-foot fall, and was buried in the yeasty suds below.

I paddled leisurely across the reach of still water below this fall toward the next and final fall of the series, keeping a careful lookout for the sunken reefs which everywhere abounded, and which were the more difficult to avoid because the still surface of the river gave no rippling indications of their presence, and looking back from time to time to enjoy the predicament in which the other fellows were finding themselves—all in a bunch, and stuck on the rocks, and all in the water; finally freeing themselves and getting aboard their canoes again as they best could, in time to make the final plunge over the fall.

Pretty well over to the left bank a channel some 50 or 75 yards long afforded us a straight, easy shoot through the last of the reefs just above and under the bridge, which (after a final sharp dodge to the right to avoid the reefs just below the bridge, which lie directly in line with the channel and are not easy to dodge, owing to the swift water which sets squarely across them—the Colonel broke a paddle here last year, merely in sweeping the water, in an unsuccessful attempt to swing his canoe around them) brought us into the still, deep pool in front of the village of Port Republic, into which South River pours its rippling waters, and the falls were run.

We stepped ashore, cup in hand, at the spring in the bank, at the foot of the main street of the village, which consisted of a bottomless barrel sunk in the ground, close to the river margin, and full to top with clear, cold water, which could be seen welling up in little eruptions of golden sands all over the bottom of the spring.

After a good drink, we closed and locked our hatches to protect the contents of the canoes from the swarm of little darkies of all ages, sizes, sexes and conditions, previous and present, who appeared to spring up out of the ground, so promptly on hand were they when we landed.

and were swarming over the fences and high banks, and from whose pilfering little fingers nothing exposed was safe. After locking our hatches our canoes were made fast to the rickety fence which straggled down the steep, high, clay bank into the river, and the paddles stacked against the bushes, and a good-sized darky boy subsidized to watch the outfit. All being made secure we separated for an hour, George and Lacy making as straight a course as possible for the railroad station and express office, half a mile away, across South River, to get the kodak, while the Colonel and I made our way to the village store to replenish our supplies and mail our letters and cards.

[TO BE CONTINUED.]

Canoeing in California.

CANOEING in California is widely different sport from canoeing in any other place in the world. In England, on the Continent and in the East it is taken up to pass away the few idle hours that are not used in the pursuit of the "might dollar." Men and women paddle around or hoist a bit of a sail in a slight zephyr that would hardly be a cat's-paw to an ordinary yacht. But in this State all the canoeing is done on the waters of the bay or its tributaries. The wind is never less than six miles an hour, enough to pull off an international race, and up to fifty miles. All the canoes have the hyking board, and the skippers spend most of their time when sailing out some 5ft. on the end of this contrivance. It is constant work of the most exhilarating kind. Slovenly sailing means a dip in the cold water. The canoes go over on the slightest provocation. There is no great danger, however, from such accidents, as the modern canoe is so built that it cannot sink, and it is a matter of but a few seconds to right it and go on sailing. In some of the races the leading boat has capsized and before it has been righted has lost the position, but by hard sailing has managed to win out.

The only canoeing organization in California is the Oakland C. C., which has its club house on Sessions' Basin, on the San Antonio Estuary. The club was started on Jan. 23, 1886, with but a handful of enthusiasts. The first club house was at the foot of Alice street. In a short time the club grew to such a size that the quarters had to be enlarged. Everything seemed to favor its existence, until they began to improve Oakland Harbor, when the club was forced to move to its present quarters. This was a hard blow, for it moved the club out of the way and the membership decreased until there were but some twenty left. For a few years it had a hard time to keep alive. At last the tide began to turn, and now the club is one of the best supported organizations on the coast.

Indirectly the club has been responsible for a large number of the expert yachtsmen on the bay. It was through the Oakland C. C. that the Oakland Navy was started some seven years ago. This association was a purely racing organization and for two years some of the best sport on the bay was had in its races. It finally gave way to the California Y. C., which put up a club house on the estuary below the bridges. When the scheme of the Navy ceased to exist its workings were taken out into the bay and the Pacific Interclub Yacht Association was formed. This latter body is part of the present history of the sport of yachting on the bay. So it may be claimed that from the Oakland C. C. the present success in the "sport of kings" on the bay originated.

The officers of the Canoe Club are: Com., Philip Caduc; Vice-Com., Howard S. Byxbee; Sec'y-Treas., Charles Stewart. Com. Caduc owns the sloops Annie and Zephyr. Annie is the noted craft in which Bill Tweed, the New York politician, escaped from that city years ago. Zephyr belongs to the mosquito fleet. Vice-Com. Byxbee owns the canoe Whim and a half interest in the raft-rater Ninette. Sec'y Stewart owns Beatrice, the smallest cruising sloop on the bay. Besides these boats there are some twenty-five others on the club roll.—San Francisco Chronicle.

Correspondence.

SAN FRANCISCO, March 6.—*Editor Forest and Stream:* At the annual meeting of the Oakland C. C., recently held, the officers of the past year were re-elected—Com., Philip Cadue, of the sloop Annie; Vice-Com., Howard S. Byxbee, canoe Whim; Sec'y-Treas., Chas. Stewart, sloop Beatrice; Membership Committee, S. A. Hackett and Chas. L. Taylor, Jr.

With us in California our season is without a definite beginning or an end, every month, winter included, lending some days that add to our round of sport. The regular trade winds, however, that make our sailing so full of exhilaration, generally begin in March and last through September and October, November to March being marked with but light zephyrs during pleasant weather, and as these trades can be depended on an average to give us a breeze of fifteen to eighteen miles an hour, with the combination of large expanse of open waters, canoeing is almost entirely confined to the sailing model, paddling having found but little vogue about our bay.

During 1900 our club held but few regattas or races, its energies being devoted to remodeling and renovating our quarters, recruiting strength and inducing new members to take out some of the older boats that had not seen much service for the past two or three years, so that now we have a roll of twenty-two active members regularly in attendance—six life, eight honorary and some six or eight members on the absentee list—with an enrollment of twelve racing and cruising sailing canoes, one paddler and two Eskimo skin paddlers in the house, which, with six open and four cabin sloops at moorings, make up our mosquito fleet.

The club house, a comfortable old rambling home, is situated on Session's Basin, a small arm of Oakland Estuary, some three miles distant from the bay proper, and in easy access of Oakland Basin, from the sailing canoeist's view point, an ideal body of salt water about two and one-half miles long and a mile wide, confined within low surrounding land that offers no impediment to a clean, free sweep of the westerly winds. Here racing courses are staked out, and this year bids fair to see a deal of activity, regattas and various races and cruises being well dispersed throughout the months from February to December. CHAS. L. TAYLOR, JR.

MONROVIA, Cal.—*Editor Forest and Stream:* Can you refer me to persons or literature on the navigableness by canoe of the Missouri and Yellowstone rivers from their sources to their mouths, also on the lower parts of the Snake and Columbia rivers? I would be greatly obliged for such information, for I am arranging for a long cruise on these rivers. I would also be obliged for the name and address of the present secretary of the American Canoe Association.

What are the best maps covering these rivers? I was referred to you by Mr. N. H. Bishop, who is spending the winter here. This service will greatly oblige.

N. C. STAATZ.

TROY, N. Y., March 27.—*Editor Forest and Stream:* I write to ask for advice and information regarding a proposed canoe trip which a friend and myself have been contemplating. We want to know if it is possible and feasible to travel through the Adirondacks by canoe from Old Forge through the Fulton Chain, Raquette, Forked and Long lakes; then Raquette River to a point where we could carry to the Saranac lakes, through them to the Saranac River, thence to Plattsburg.

How much of this waterway is unvavigable for canoes and which part of it? We expect to go unaccompanied except by map and compass, and about how long would it take to accomplish this trip? Or if others have made the same trip, can you tell me who and where they are, that I may write them? You may answer through your much valued paper, FOREST AND STREAM. A. S. JOHNSON.

A LETTER received by Mr. Joseph F. Eastmond, Purser Atlantic Division A. C. A., from Mr. H. Garrett Rolt, A. C. A. No. 3269, and member of the Royal C. C. of England, 16 Eastbury Road, Kingston-on-Thames, Surrey, England:

Purser Atlantic Division, A. C. A.

Dear Sir: If any of your members are coming over to England this summer and would let me know at the above address, I would fix things up for them so that they could come down and see some of our races and inspect our new boats, which are marvelous little crafts, and if they were in England during our fortnight's outing, which is to be held at Hayling Island in salt water, close to the Isle of Wight, I feel sure they would never regret spending a few days down here. Our cruisers carry two comfortably, so they would get plenty of sailing, and also witness some close racing, as even after a four-mile race it frequently happens that only a few seconds divide the winning boats. There is capital accommodation down there, either in rooms or hotels, and excellent golf links, and a good many of our members take their wives and children down, so they would be sure of a good time.

H. GARRETT ROLT.

Toronto Canoe Club.

THE Toronto C. C. held their annual dinner at the club house on Friday evening, March 8. The event was a most successful one and was participated in by over 200 canoeists. The interior of the large club room upstairs was a mass of bunting, flags and canoe trophies, which looked very pretty and spoke well for the racing element of the club. Among those seated at the head table were Com. Howell, of the Toronto C. C.; A. P. Galt, President of the Argonaut Rowing Club; Herb Begg, Secretary-Treasurer of the American Canoe Association; Alderman Loudon, of the Queen City Y. C.; Vice-Com. Forbush, of the Central Division; W. Ewart, of the Toronto Rowing Club, and W. E. Rundle, President of the Canadian Club.

After a most excellent menu had been disposed of, Com. Howell, who acted as toast master, proposed a toast in memory of the late Queen. "The King" was responded to by the singing of the national anthem. "Canada" was proposed by G. R. Wilkie, past Commodore, and responded to by President W. E. Rundle, of the Canadian Club. "Our Club," proposed by G. A. Howell, was responded to by Dr. Powell. "Canoeing" was proposed by Vice-Com. R. N. Brown and responded to by Harry Ford. "The A. C. A." was proposed by Sec'y-Treas. Herb Begg and replied to by C. P. Forbush, of Buffalo, in the absence of Com. Britton. "Kindred Sports" was proposed by W. G. MacKendrick and responded to by the representatives of the other clubs present. "The Ladies" was proposed by Com. Howell and replied to by Dr. Fowler.

The following talent contributed to the pleasure of the evening: J. Clegg, Master Clegg, Adam Dockray, Percy Hood, the Canoe Club quartette and P. C. Smeall.

Prospects for a successful racing season at the T. C. C. appear very bright. Gymnasium classes start on April 1 and will continue for a month. The Regatta Committee have ordered a new four racing boat, which will be ready about May 1. Dean, of Toronto, will build same.

Atlantic Division Meet.

THE Executive Committee of the Atlantic Division of the A. C. A. met on Saturday evening, March 23, at the Astor House, New York, and decided to hold the Division meet at the Lime Kiln on the Hudson River, May 30 and 31 and June 1. The camp dues were fixed at 50 cents.

The Camp Site Committee were authorized to proceed to get the site ready for the meet and to prepare material for a circular to be issued later.

A. C. A. Membership.

MR. HENRY A. BODWELL, of Andover, Mass., has been proposed for membership to the Eastern Division of the A. C. A.

Mr. E. T. Keyser, 27 Park place, New York city, has applied for membership to the Atlantic Division of the A. C. A.

The following have applied for membership in the Northern Division of the A. C. A.: John Morris, Kingston, Ont.; Fred J. Skinner and C. H. Bird, Gananoque, Ont.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

International Canoe Race.

ANOTHER international race on the water is in prospect. It is to be for canoes, and the Winchester Boat Club, of Winchester, Mass., will be the challenger, the prize being the international challenge cup offered by the Royal C. C. of England for a sailing race of ten miles. The race has been an annual affair for about ten years past, and occurs in August in Langston Harbor. The prime mover in the plan for American participation is Herman D. Murphy, of Winchester.

The trophy can be won with two races out of three, upon which plan it would be brought over to this country. But the following summer, as Mr. Murphy understands it, it would have to be taken back to England to be raced for there. T. W. Lawson will pay all the expenses for the building of the canoe and the trip of the challenger. The boat is to be designed by B. B. Crowninshield, and will be, roughly speaking, 17ft. over all, with a 15ft. waterline.

Mr. Murphy is a skillful canoeist, having participated in many races with Paul Butler, Dr. J. Arthur Gage and Howard Gray, of the Vesper Club, Lowell, who for years won most of the sailing honors at American Canoe Association meets.

Around the World in a Canoe.

FRANK SAXBY, a prospector of Victoria, B. C., who has been in this vicinity for about a year, is having a large Indian war canoe decked over, and in company with a companion will attempt to encircle the globe in it, going first to Hong Kong, via the Pacific Islands. The canoe is a very large one, such as the British Columbia Indians use in their travels up and down the coast, and when properly handled can withstand almost any kind of weather.

Atlantic Division Dinner.

NEW YORK, April 1.—*Editor Forest and Stream:* There will be an informal dinner of the Atlantic Division A. C. A. at the Arena, Thirty-first street, near Broadway, New York city, on Saturday evening, April 13, at 7 o'clock P. M. The price per plate will be $1.50. Members desiring to attend should notify Vice-Com. Henry M. Dater, No. 68 Broad street, New York city, not later than April 11, inclosing price for plate. HENRY M. DATER.

Vice-Commodore Atlantic Division A. C. A.

Yachting.

THE secretaries of all yacht clubs not belonging to the Massachusetts Y. R. A. or the Y. R. A. of Long Island Sound in the United States and Canada are kindly requested to forward to the publishers of FOREST AND STREAM a list of all their racing dates for the season of 1901 at their earliest convenience.

Our Boston Letter.

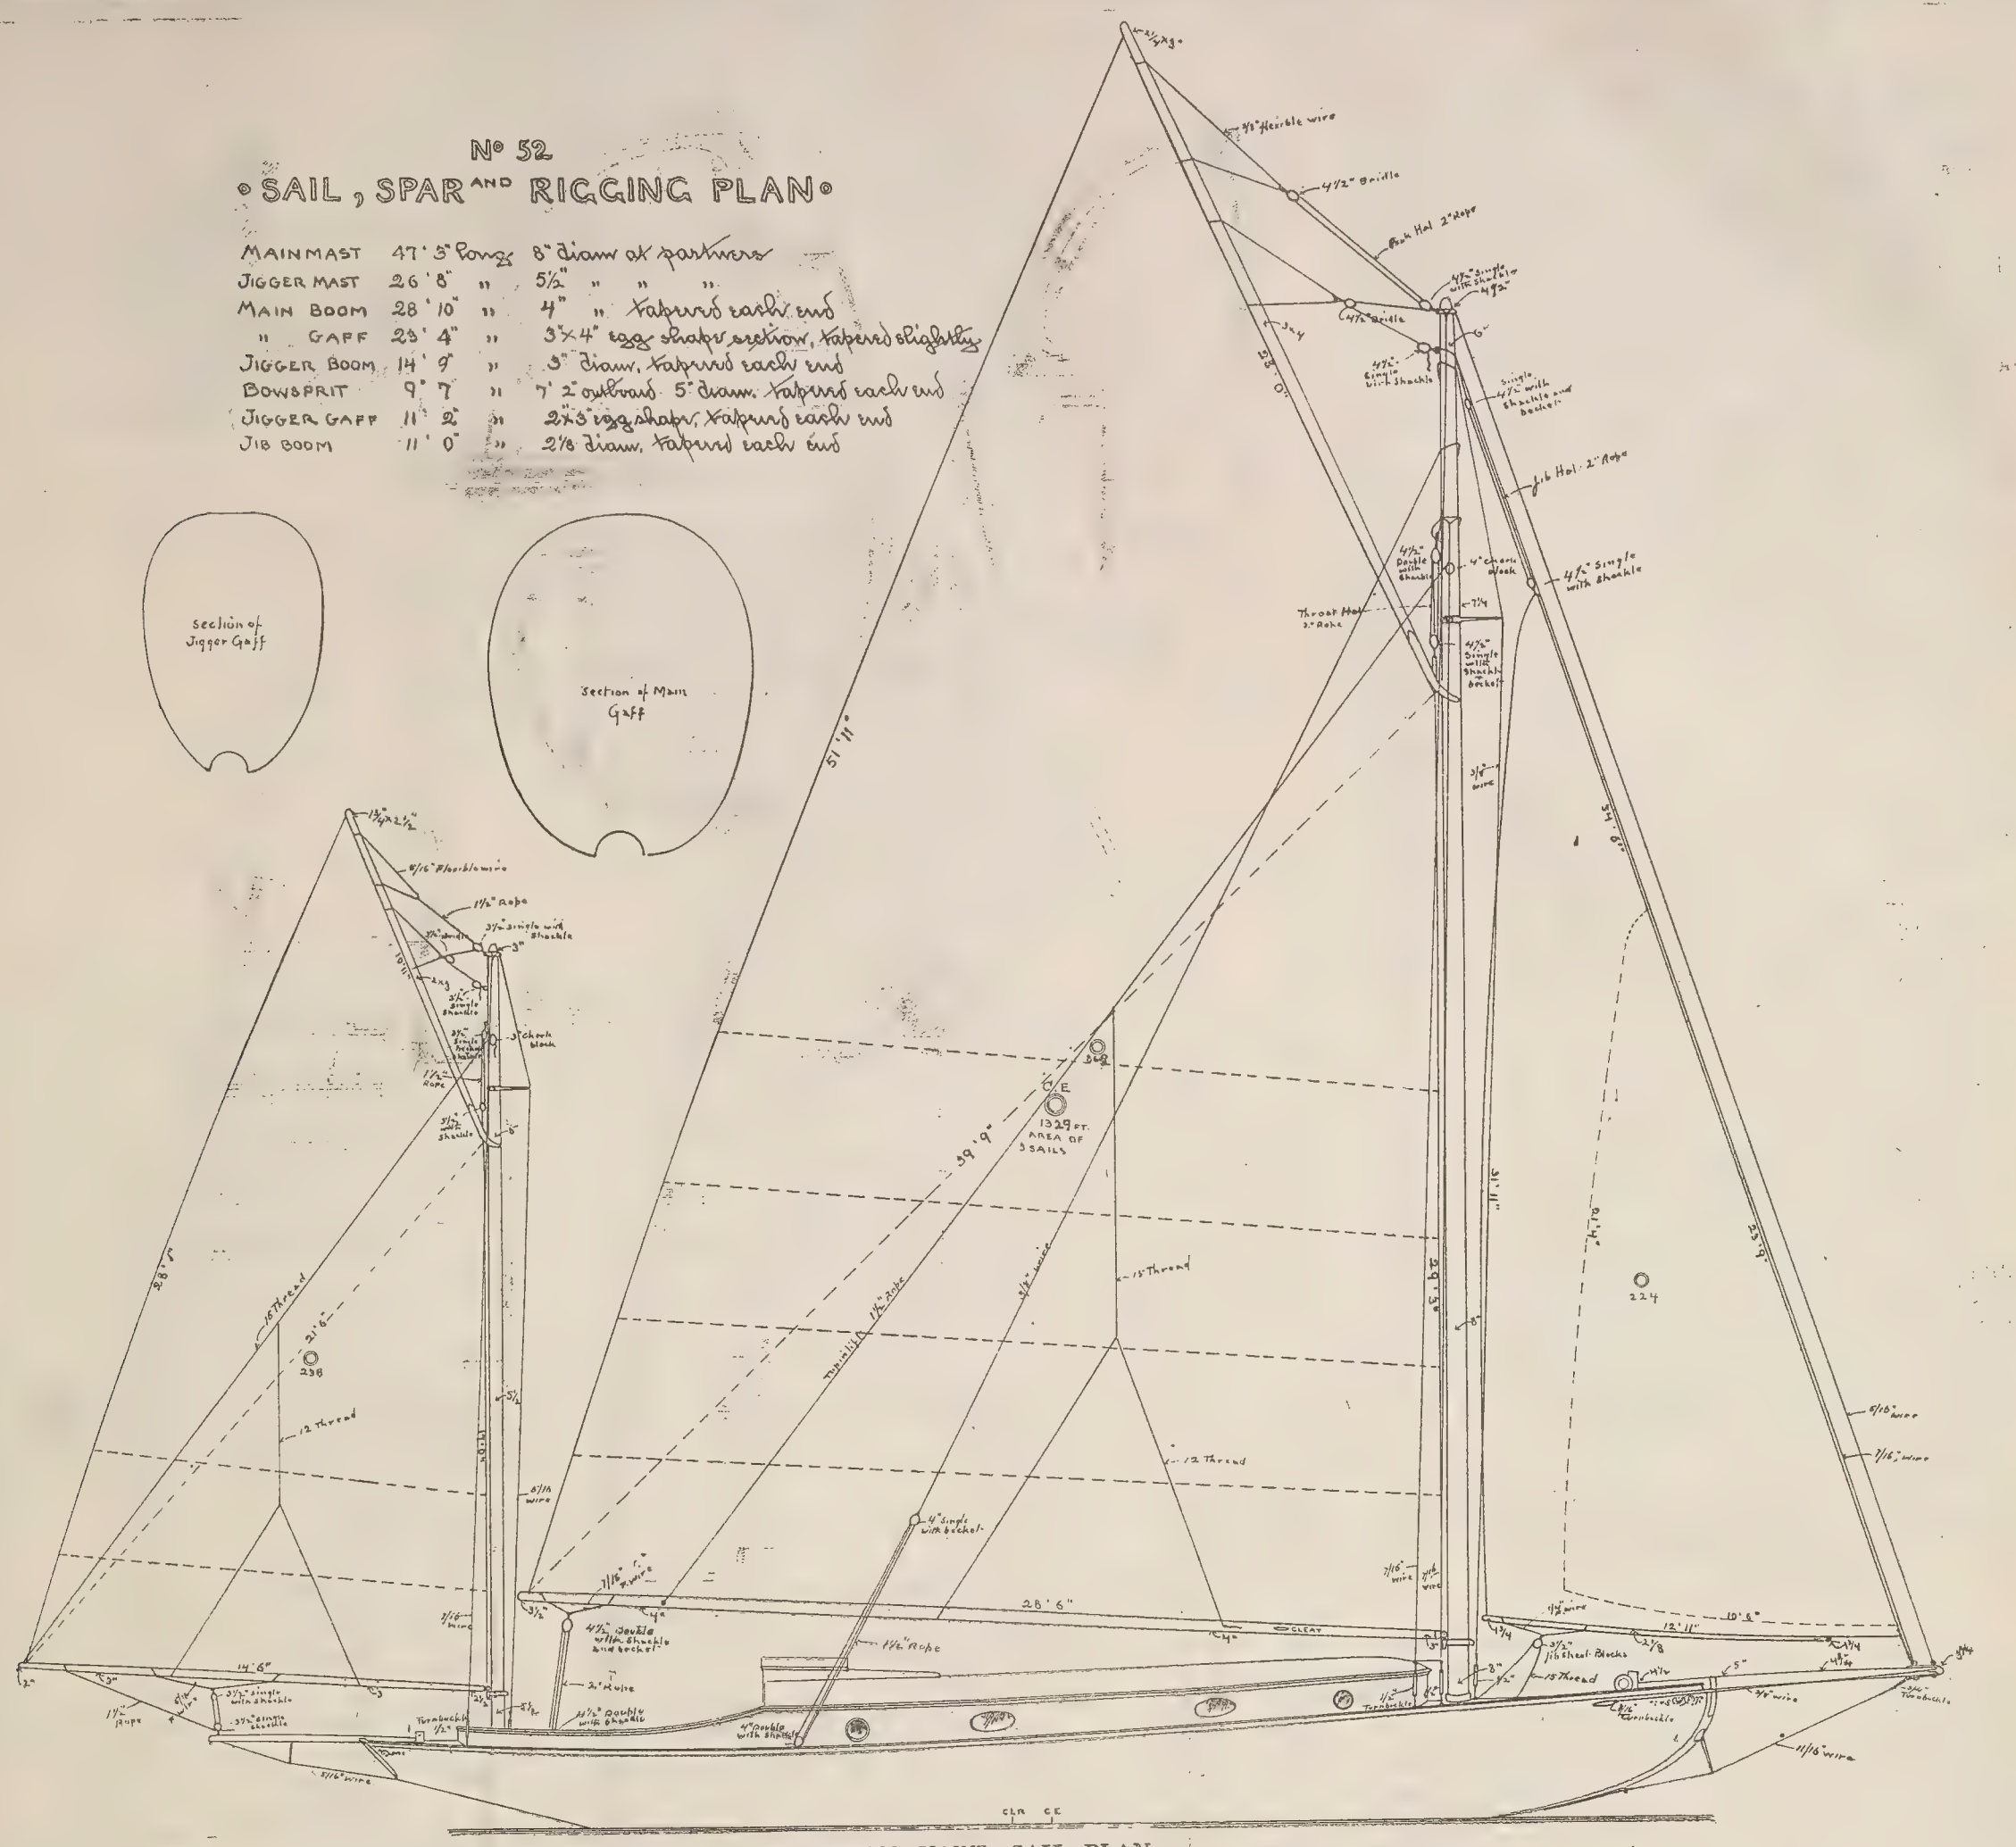
BOSTON, March 30.—Active preparations are being made by the clubs throughout New England for the season's racing. Many of the clubs have made up their lists of events, while others are expected to be heard from long before the racing season opens. This will probably be the greatest yachting year in the history of the sport, and regatta and other committees are taking time by the forelock.

At Marblehead the Corinthian Y. C. has already made up its list of dates. The club house will be opened on April 1, informally. This is to enable the yachtsmen who wish to make an early start to obtain their meals and to have a landing place. The opening of the club at such an early date speaks for itself in regard to the amount of yachting that is expected for the coming season. The Corinthian Y. C. is essentially a summer club, the majority of its active members being summer residents at the Neck and on the Marblehead shore. It is usually the custom to open the club house informally on May 1 and to have the formal opening of the season on May 30. This year the formal opening will be on May 1.

The Eastern Y. C. is making immense alterations in its already spacious quarters. Recently the property of the Samoset House, which adjoins the club house, was purchased with a view of enlarging the club quarters. The present club house is also to be enlarged. From this it may be expected that the Eastern Y. C. is again to go into racing extensively. For a number of years racing in this club has fallen off. There have been plenty of boats owned by members of the club, but there have not been many classes for them. The result has been that in order to race they have had to join the classes of the New York Y. C., either on its cruise or in the races off Newport. With the prospect of a racing visit of Sir Thomas Lipton, it may be possible that interest in the larger classes will be renewed and that big races will once more be the feature of Massachusetts Bay.

At present the Hull-Massachusetts Y. C. seems to be the most active racing club in New England. It has not yet made provisions for any of the very large classes, but the instituting of these classes is sure to become a feature of the club. The first boom in this direction will be the races for the cups and prizes offered by Thomas W. Lawson, which will be held under the auspices of this club. With this feature once started, there is no doubt that races for the larger classes will be permanent annual events in the future. The prospects of the club are immense. In coming up to its present magnitude it has not jumped into conditions which the size and prestige of the club do not warrant, but the growth has been steady and strong, and the gain made will never be lost. The club is liberal in its policy while still maintaining the dignity that becomes the leading yacht club of Boston and vicinity, if it does not, indeed, become the leading club of Massachusetts Bay.

It is expected that the classes in the Yacht Racing Association of Massachusetts will be larger this year than in any previous year since 1896. There have been many new boats built for the restricted classes, which is the best possible proof that these classes are finding favor with the reasonable yachtsman. While the classes have fallen off during the past five years, it has been something which might only be expected under the circumstances



CRUISING YAWL—SAIL PLAN.

A change was made in the rules in regard to racing length, time allowance was abolished and restrictions were put upon certain classes.

When a radical change is made in the racing rules of any club or association of clubs it takes considerable time for the majority of the yachtsmen to become accustomed to them. There was no more to be expected from the changes made by the Massachusetts Association than from those of any other association. When once a permanent change is made yachtsmen are always suspicious that others are to follow of a like nature, and consequently they are not very anxious to build new boats. In this case it has been found out that the general rules with regard to sailing length and scantling restrictions will not be changed and the yachtsmen are now confident of protection in building new boats.

Outside of these permanent rules, there are many things to be perfected in the Association. This is admitted by all, and its strongest supporters do not claim that the Association is perfect. The sliding scale of restrictions in regard to the ratio of sail area to ballast and waterline beam is one of the hardest problems that any association or regatta committee has to face. This has been the point that has been most discussed by the enemies of the Association. The Association has tried to make rules in this respect that will be fair for all, for it is by this means that the racing chances of all yachts in a class are expected to be made equal. So far it appears to have done all that is required in the only class where a fair comparison between different types of boats could be obtained. But if it should prove to be wrong, so that one boat would have a decided advantage over another, the Association is ready to make the necessary changes, provided, of course, that the present system of measurement and the scantling restrictions are not interfered with.

The South Boston Y. C. will give the opening Y. R. A. race of the season on Memorial Day, May 30. It has been the custom of this club for the past twenty-four years to open the racing season in Massachusetts Bay. This year an elaborate programme is to be given. For the first time in the general circuit there will be a class for the 18ft. knockabouts which conform to the restrictions of the Eighteen-foot Knockabout Association. One of the members of the Association has guaranteed the presence of at least a dozen of these boats, and one of the members of the Duxbury Y. C. has said that he will send his boat up and as many more as he can get. There will also be classes for sailing tenders, which have become very popular in Dorchester Bay during the past three years. The following schedule has been made up by the South Boston Y. C. for the season:

May 30, Y. R. A., open; June 8, club handicap; June 15, 16 and 17, club cruise; July 6, ladies' day; July 20, club handicap; Aug. 17, club handicap; Aug. 24, ladies' day.

Work on Independence is progressing smoothly. About two-thirds of her plating is now in position, and it is expected that another week will see her sides entirely covered in. Some of the plates have not been put on because of the non-arrival of those which go at the tuck. These have now been received and have been turned out. They will be put in place the first of the week, and the others, which have been cut out and bored, will soon follow. Most of the steel plates have been put on the deck, and the plate for the mast step is now in position. Another coupon was cut from the balance rudder frame and sent to the Massachusetts Institute of Technology for testing. This time the metal showed a tensile strength of 58,000lbs. to the square inch and an elongation of 38½ per cent. This is considered strong enough and no new frame will be cast. One complete suit of sails has been turned out by Wilson & Silsby.

W. Starling Burgess has another order for a Y. R. A. 21-footer. She will be a centerboard with about 9½ft. beam and an over all length of 35ft. She is for Boston parties, who do not want their names mentioned just yet.

Fred Lawley has an order for a 16-footer for Marblehead parties. He is also working on the lines of a 15-footer for Pawtucket parties, and a 46ft. schooner.

Crowninshield, in connection with F. Bowne Jones, has sold the Bar Harbor 25-footer Dickey to C. V. Brokaw, of New York.

JOHN B. KILLEEN.

A Cruising Yawl.

IN our issue of last week there appeared complete plans and description of a cruising yawl designed by Mr. W. Starling Burgess, of Boston, Mass. This week we reproduce plans of a cruising yawl designed by Small Brothers, also of Boston, Mass., for Mr. Joshua M. Dill, of Newton Center, Mass. The Burgess design is for a keel boat, while the Small design is for a centerboard boat, and as both are of exactly the same waterline (28ft. 6in.), it may be interesting to note the different points shown in the designing of modern centerboard and keel boats by representative men.

The plans of the boat for Mr. Dill show a very roomy and comfortable craft with good beam, shallow draft and moderate overhang. She will make a fine cruiser and will undoubtedly be fast.

Her dimensions are as follows:

Length—	
Over all	42ft. 3in.
L.W.L.	28ft. 6in.
Overhang—	
Bow	6ft. 9in.
Stern	7ft.
Beam—	
Extreme	12ft. 3in.
L.W.L.	11ft. 4in.
Draft—	
To rabbet	2ft. 2in.
Extreme	2ft. 8in.
Board down	8ft. 5in.
Freeboard—	
Bow	4ft.
Taffrail	2ft. 7in.
Least	2ft. 3in.
Sail Area—	
Mainsail	869 sq. ft.
Mizzen	236 sq. ft.
Jib	224 sq. ft.
Total sail area	1,329 sq. ft.
Ballast—	
Inside	1,000lbs.
Outside.	5,500lbs.
Total ballast	6,500lbs.
Displacement	15,000lbs.

The boat is well constructed and her cabin accommodation is very spacious for this size of boat. The centerboard trunk is short and does not project much above the cabin floor, so that this usually objectionable feature of centerboard boats is in this case reduced to a minimum. There are two large berths on each side of the cabin with wide transoms in front. The partition between the after berth and the transom may be removed, thus giving a very wide double berth. The toilet room, with a folding wash basin and closet, is on the port side of the companionway, while opposite on the starboard is a large clothes press. Forward is a light and roomy galley with a large ice box, sink, lockers, dish racks, etc. There is 6ft. headroom under the cabin house.

Yacht Club Notes.

Commodore Cass Ledyard presided at the second general meeting of the New York Y. C., which was held at the club house, on West Forty-fourth street, on Thursday evening, March 28.

The committee on the new club house made its final report, and received a vote of thanks for the diligence and ability which it had shown in carrying out its work. Upon the suggestion of Secretary Oddie the date of issue of the club book was postponed from June 1 to July 1, so that the many changes occurring in the fleet and otherwise may be correctly given. In the future the private signals of the non-yacht owners will be omitted from the book, but provision will be made for the permanent display at the club house.

Owing to the Cup races being set to begin on Aug. 20, it was decided that the fleet should rendezvous for the annual cruise on Monday, July 22. The place was not announced, but it will probably be at Glen Cove, as usual.

The constitution was amended so that the price of life membership will be $500. The amended article now reads:

"Article VIII.—Life members—Any member whose name shall have been upon the role of the club, and who shall have paid annual dues for fifteen consecutive years, shall be entitled to become a life member on the payment of $500, which shall be in lieu of any further annual dues."

Changes in the racing rules were ratified by the club. These chiefly are as follows:

"Rule I., section 7, page 180—After 'halyard block,' in line 13, add 'if in the judgment of the measurer there is any question as to the location of the hounds, the lower point of measurement for the topmast will be the upper side of the sheave in the upper throat halyard block.'"

"Page 181—Insert after first paragraph a new paragraph, to read: 'In pole-masted yachts and those not carrying topmasts, the distance between the under side of the sheave in throat halyard block and the under side of the sheave in the uppermost halyard block or sheave in the mast shall be used for determining the length of the base line, in the same way as is the topmast, when one is carried.'"

"Page 181—Strike out last paragraph and substitute: 'When in any case, owing to peculiarity of rig, the sail area of a yacht cannot, in the judgment of the measurer, be fairly measured in the cutomary way, he may, with the sanction of the Regatta Committee, take such measurements as will enable him to compute the actual area of sail carried or that may be carried on the spars used.'"

"Rule XVII., Section 3, Page 193—Alter the present section to read: 'Should a yacht, after having been officially measured, take on board any dead weight as ballast, or make alterations in her sail plan by lengthening any of the dimensions which have been measured, and start in a race without a remeasurement, or without notifying the Regatta Committee, in writing, that such changes have been made, together with a request for remeasurement, she shall be disqualified.'"

Secretary of the Navy J. D. Long was elected an honorary member of the club. He was proposed by Commodore Lewis Cass Ledyard, and seconded by former Commodore J. Pierpont Morgan. Honorary members have to be elected at two meetings. This was the second election of Secretary Long.

* * *

The Yacht Racing Association of Long Island Sound held its general meeting at the Yachtsmen's Club, West Forty-third street, on Tuesday evening, March 26. Mr. Charles T. Pierce, of the Executive Committee, was in the chair. Slight amendments to the racing rules were made: One was to provide for the measurement of yachts rigged like the Altair and the Shark, and another amendment was that a yacht after having been measured must not take in ballast without being remeasured, and a request for remeasurement must be made before a yacht may start in a race.

The following Executive Committee was elected: Charles T. Pierce, Chairman; Frank Bowne Jones, Robert C. Mitchell, C. H. Crane, E. M. MacLellan, T. H. Macdonald and Charles P. Tower, Secretary.

The following schedule of races for the season was adopted:

Saturday, May 18, Huguenot Y. C.; Saturday, May 25, New Rochelle Y. C.; Thursday, May 30, Harlem Y. C., Indian Harbor Y. C. and Bridgeport Y. C.; Saturday, June 1, Knickerbocker Y. C.; Saturday, June 8, Manhasset Bay Y. C.; Saturday, June 15, Norwalk Y. C.; Saturday, June 22, New Rochelle Y. C.; Thursday, Friday and Saturday, June 27, 28 and 29, Seawanhaka Y. C.; Tuesday, July 2, Indian Harbor Y. C.; Thursday, July 4, Hartford Y. C.; Saturday, July 6, Riverside Y. C.; Monday, July 8, Norwalk Y. C.; Saturday, July 20, Corinthian Y. C., of Stamford; Saturday, July 27, Sea Cliff Y. C. and Northport Y. C.; Saturday, Aug. 3, Hempstead Harbor Y. C.; Saturday, Aug. 10, Bridgeport Y. C. and Horseshoe Harbor Y. C.; Saturday, Aug. 17, Indian Harbor Y. C.; Saturday, Aug. 24, Huguenot Y. C.; Saturday, Aug. 31, Hartford Y. C. and Huntington Y. C.; Monday, Sept. 2, Norwalk Y. C. and Sachem's Head Y. C.; Thursday, Friday and Saturday, Sept. 5, 6 and 7, Seawanhaka Y. C.; Saturday, Sept. 14, Indian Harbor Y. C.; Saturday, Sept. 21, Manhasset Bay Y. C.; Saturday, Sept. 28, Riverside Y. C.

The racing circuit begins on June 22 and ends July 6, including the New Rochelle, Seawanhaka, Indian Harbor, Hartford and Riverside clubs.

* * *

Owing to the difficulty the several clubs having their anchorages and races in Gravesend Bay have had during the past few years it is probable that there will be an association formed for the mutual protection of the clubs in that vicinity, to be known as the Gravesend Bay Yacht Racing Association. Last season it was not unusual for two or three of the clubs to hold races on the same days and over the same courses, and unfortunate complications arose owing to the confusion that was bound to exist. As the interest in yachting is steadily increasing in that vicinity it is essential that steps should be taken at once to avoid further friction. At no time since the decline of the former organization has there been the same interest and rivalry that exists in the other waters of Long Island Sound at the present time.

The clubs so far interested in the movement are the

Marine and Field Club, the Brooklyn Yacht Club, the New York Canoe Club, The Royal Arcanum Shore and Royal Arcanum Outing Clubs, and possibly the Atlantic Yacht Club. A preliminary meeting of delegates from all but the Atlantic Y. C. was held at the Brooklyn Y. C. house, in Bensonhurst, a few days ago, to talk over the advisability of forming a local league. The matter was thoroughly discussed, and each representative pledged the support of his club to the proposed association. It was decided not to take final action in the matter until the Atlantic Y. C., which is the largest on the bay, could be heard from.

* * *

At the first annual meeting of the Bergen Beach Y. C. the following officers were elected for the ensuing year: Com., Robert E. Stillson; Vice-Com., George E. Fitzmaurice; Treas., Edward Chapman; Sec'y, Edward Wells; Measurer, L. Miller. Yachtsmen who are interested in furthering yachting interests at and around Bergen Beach are invited to communicate with A. MacDougal, 455 Broadway, who will be pleased to give any information regarding the club.

The Larchmont Y. C. announced its racing fixtures for the coming season. A spring regatta, open to all classes, will open the season on June 15. On Thursday, July 4, the twentieth annual regatta, open to all classes, will take place, and on Saturday, July 13, will begin the club's race week. Exclusive of the Sunday intervening, there will be races all that week, beginning on the 13th and ending on Saturday, July 20. During race week, series races will be given in class D of schooners and classes I, K, the Larchmont 25-footers and the 21ft. raceabouts. First and second prizes will be given for each race in each class. In addition thereto, Com. F. T. Adams offers to the winners of the greatest number of points in classes I, K, the Larchmont 25-footers and 21ft. raceabouts during the week, prizes to be known as "The Adams' Cups," and to the winners of the next greatest number of points in each class the club will award second prizes, also a prize to the winner of the greatest number of points in class D. Points to count as follows:

The winner is credited with twice the number of the second yacht, the second yacht with twice the number of the third, the third with twice the number of the fourth, etc., the last yacht being credited with one point.

During race week, should the owners of two or more yachts in any one class not provided for desire to race, the Regatta Committee will, upon application, provide for same, and suitable prizes will be awarded.

On Aug. 31 there will be a regatta open to Class D of schooners and for Class I, 70ft. R. L., and for Class K, 51ft. R. L., and for Class L, 43ft. R. L. The fall regatta will take place on Monday, Sept. 2, Labor Day, and will be open to all classes. The last regatta scheduled for the season will take place on Saturday, Sept. 14. This will include the race for the Larchmont cup for schooners; race for Class G yawls; race for Class I, 70ft. R. L.; race for Class K, 51ft. R. L., and race for Class L, 43ft. R. L. In all classes where two or more yachts start in a race with full intention of completing the course, a prize will be awarded. When three or more yachts start with like intention, a second prize will be awarded, and where five or more start with like intention, a third prize will be awarded.

* * *

The Newport Yacht Racing Association is arranging for next summer's races off that place, and has already decided upon two series, one on July 18, 20, and 23, and the other during the week succeeding the New York Y. C. cruise. There will also be the usual contests between the thirties and seventies, and a new series for the forty-fives.

* * *

Commander Henry H. Barroll, U. S. N., talked to members of the Yachtsmen's Club, New York city, on Wednesday evening, March 27, on "Methods of Determining Position at Sea."

YACHTING NEWS NOTES.

At Huntington's yard, at New Rochelle, the 51-footer Huguenot is nearing completion. The outside planking is all on and the second layer of the deck is in place. Joiners will soon begin work on the cabins. The boat will be launched shortly and taken to City Island to have her fin put on. It is the designer's intention to have the boat in commission as early in the season as possible, and there is a possibility of her being tried out with Hussar II., now that that boat has been altered and improved. It is thought that she will do far better work to windward than she did last year, and will make a good showing in her class.

* * *

The publishers of FOREST AND STREAM have received a copy of the book containing the signal code adopted by the Yokohama yachting clubs for their uses. The book is carefully compiled, and is of considerable interest.

* * *

At Abram's yard, Cold Spring Harbor, L. I., the following boats are hauled up: Dagmar, Lapwing, Scimitar, Clara, Penguin, Humming Bird, Lazana, Sea Gull, Loyalty, Corsair, Dovite, Oceonda, Nina and Gracie. Myerra, Guide and Idelwild are lying in mud berths. The bad weather that has prevailed for the past few weeks has greatly delayed the work of fitting out all these boats. The well-known sloop Penguin, recently purchased by Mr. A. Holland Forbes, N. Y. Y. C., is being entirely refitted; she is to have new decks and the sides of the cockpit and cabin house will be of mahogany. Below decks she is to be completely modernized and newly upholstered and carpeted throughout. Plumbing of the most improved make is being put in. A new gig has been made for this boat by Huntington, of New Rochelle.

* * *

The cutter Lotowana has been sold by Mr. T. O'Connor Sloane, through the agency of Mr. A. J. McIntosh, to Mr. John M. Knapp. Her rig will be changed from that of a cutter to that of a yawl.

* * *

The Herreshoff Mfg, Co. are completing three raceabouts for Massachusetts yachtsmen.

* * *

Mr. Joseph Fallert, of the New Rochelle Y. C., has purchased the yawl Scalpha from Mr. T. W. King, of Boston, Mass.

* * *

The Spaulding St. Lawrence Boat Co., of Ogdensburg, N. Y., have received an order from Mr. C. L. Watson, for a number of hollow spruce spars, to be used on the club topsail for Shamrock II.

There will be still another boat built to sail in the trial races for the defense of the Canada cup. She will be turned out by the Michigan Yacht & Power Co., from designs made by Capt. Wilds, of Toledo. The boat will be 47ft. over all, 25ft. on the waterline and 11ft. 6in. beam.

* * *

Mr. Percy Chubb has ordered a new suit of sails for Vigilant from Ratsey & Lapthorn, of Cowes, England.

* * *

Mr. Henry C. Rouse, former Commodore of the Seawanhaka Corinthian Y. C., has bought the English built brigantine rigged steam yacht Rosabell. Mr. Rouse formerly owned the schooner yacht Iroquis.

* * *

Mr. Harrison I. Drummond, N. Y. Y. C., has purchased through the agency of Mr. A. J. McIntosh the English built bark rigged auxiliary yacht White Heather, and she is about to leave Cowes, England, for New York. White Heather is built of steel, and is 180ft. long on the waterline, 220ft. over all, 28ft. 6in. beam and 16ft. 6in. draft. She was designed and built by Messrs. John Reid & Co., of Port Glasgow, Scotland, in 1890. White Heather has been around the world and is well known as an ocean cruiser. Mr. Drummond formerly owned the steam yacht Sapphire.

* * *

Lord Reudel, of Newcastle, England, has sold through Manning's yacht agency his steam yacht Lady Beatrice, to Mr. E. V. Douglas, of Philadelphia. Lady Beatrice was designed by Mr. W. C. Storey, and was built by Messrs. Ramage & Ferguson, at Leith. She is 175ft. long over all, 22ft. 6in. beam and 12ft. 6in. deep. Mr. Douglas will change the boat's name to Aroc. She is now at Tyne, fitting out for the voyage across.

* * *

Mr. J. R. DeLamar, former owner of the famous schooner Fleetwing, has purchased the English built steam yacht Sagitta. She was built by Messrs. W. Hamilton & Co., of Glasgow, Scotland, and is 191ft. long over all, 177ft. long on the waterline, 25ft. beam and draws 13ft. 6in.

* * *

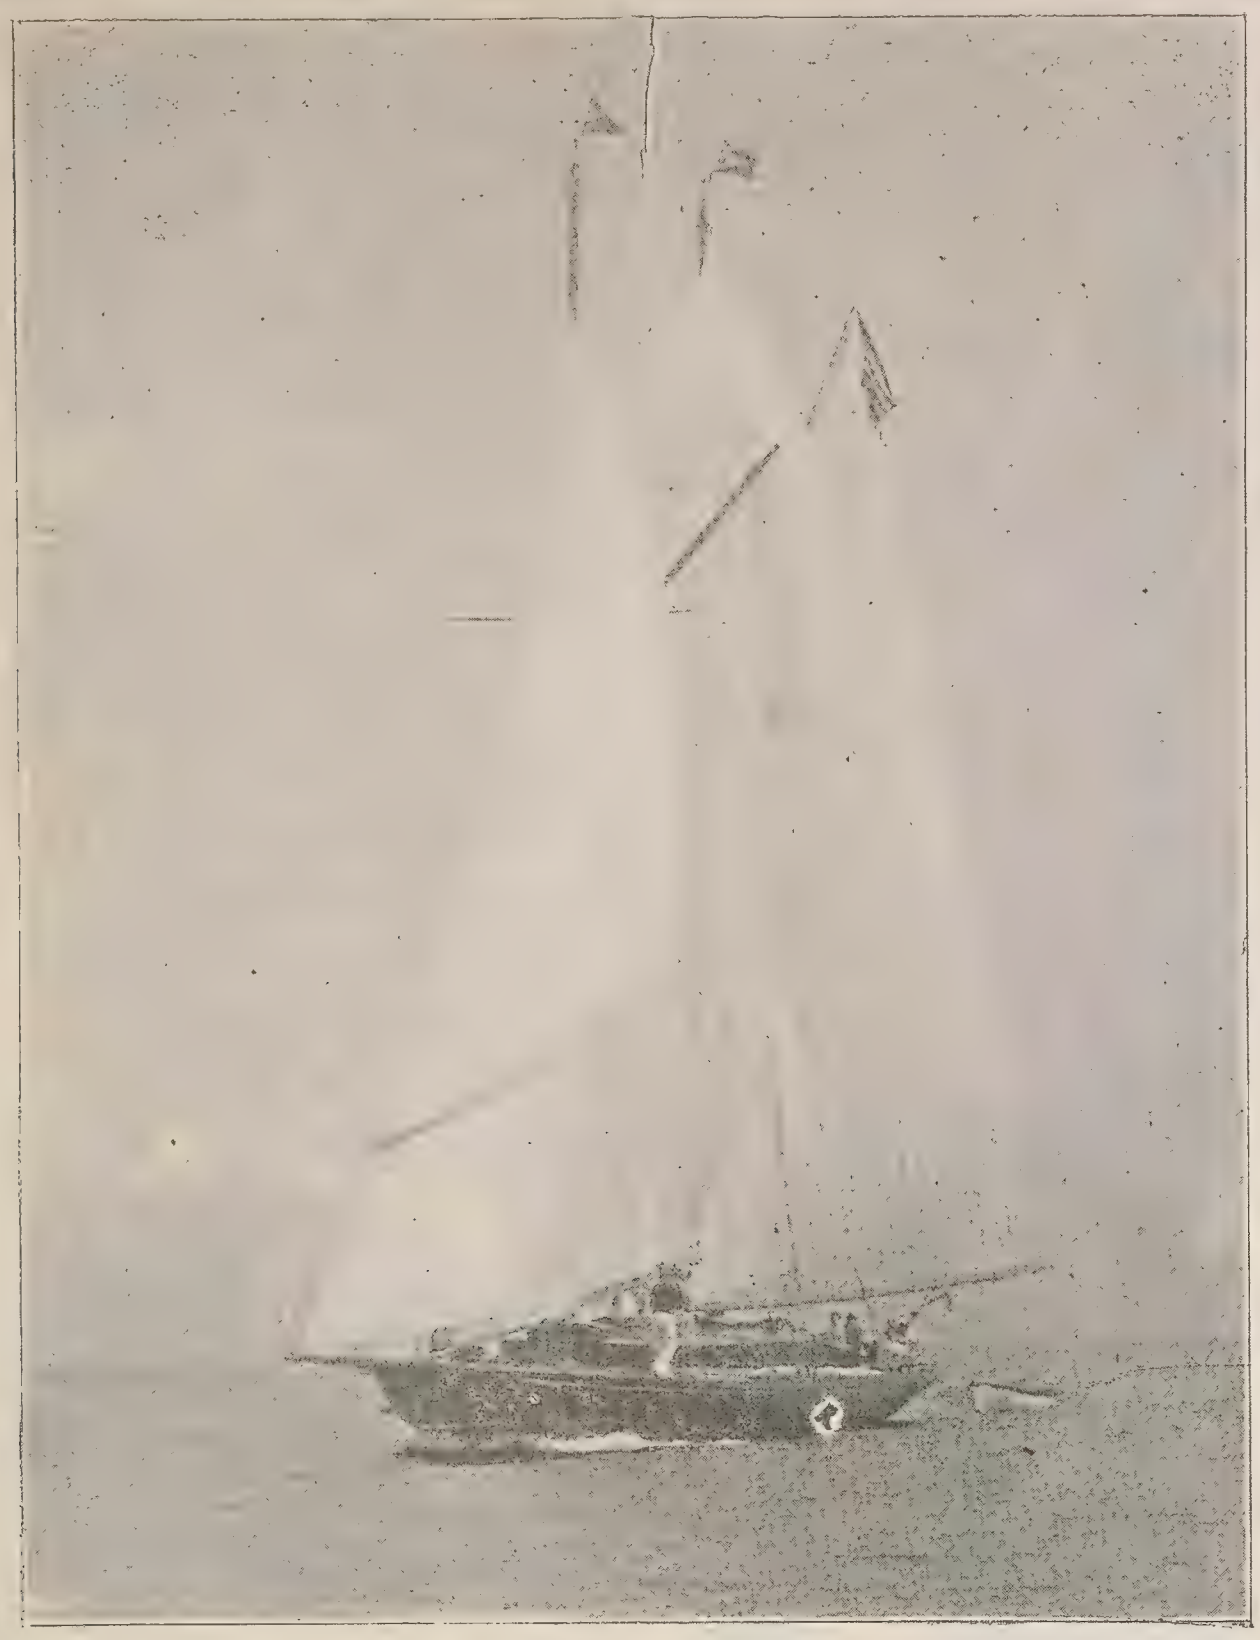
Mr. H. A. Hutchins, former owner of the steam yacht Jathneil, has chartered the English steam yacht Gunilda. She was built by Messrs. Ramage & Fergueson, at Leith, in 1897, from designs made by Messrs. Cox & King. She is 177ft. over all, 166ft. 6in. long on the waterline, 24ft. 6in. beam and 14ft. 2in. draft.

* * *

Dr. C. H. Ward-Humphries, the well-known British yachtsman, has purchased from Mr. Howard Gould the 20-rater Niagara, and she will be put in commission at once. She will be renamed Japonica. Niagara was designed and built by the Herreshoffs in 1895 for Mr. Gould, and was shipped to England on the deck of a steamer. She was raced with great success in English waters.

* * *

The large English yawl Brynhild, which has raced so successfully in the handicap classes in England, has been purchased by a New York yachtsman, whose name is withheld for the present. She was designed by Mr. C. E. Nicholson, and was built at Gosport by Messrs.



REDSKIN III.
Photo by Jackston, Marblehead.

Camper & Nicholson for the late Mr. J. Selwyn Caverly, of Portsmouth, England. She is 83ft. on the waterline, 20ft. beam and 12ft. 9in. draft. In her first season the Brynhild won eleven firsts and four prizes out of twenty-three starts, the total value being £530. Last year she started forty times, won fourteen firsts and nine other prizes valued at £785. Brynhild will meet Ailsa, Navahoe and Vigilant during the coming season.

Messrs. W. S. and J. T. Spaulding, former owners of the steam yacht Avenel, have commissioned Mr. J. Beaver Webb to design for them a steam yacht 200ft. long over all, 24ft. 6in. beam and 11ft. 6in. draft. The vessel will be ready for delivery to her owners May 1, 1902.

It is said that Captain Skeats, former master of the cutter Bona, will command in American waters during the coming season the yawl Ailsa, which Mr. H. S. Redmond, N. Y. Y. C., purchased from Mr. F. B. Jameson, of Glasgow.

Mr. C. M. Bush, of New York, is having a steam launch built by the Michigan Yacht & Power Co. The boat is being built for speed, and will have a 60 horse-power engine. She is 65ft. long and 8ft. 6in. beam. The same firm has completed a power launch for Mr. George Hill, measurer of the Atlantic Y. C. She is 30ft. long on the waterline, and will have a 12 horse-power motor.

Manning's Yacht Agency has sold for Mr. Charles A. Tatum the steam yacht Cosette to Mr. George H. Kimball, of Worcester, Mass. The same agency has chartered for Mr. James C. Hamlen, of Portland, Maine, his schooner yacht Beatrice to Mr. F. B. Hussey, of Pittsburg, Pa. The yawl Polly has been sold for Mr. Gustav E. Kissell, by the same agency, to Messrs. C. S. & E. A. Randall, of Portland, Maine.

Redskin III.

Owing to lack of space the photograph of the schooner Redskin III. was unavoidably held over until this week. A complete description of the boat appeared in last week's issue.

Rifle Range and Gallery.

Columbia Pistol and Rifle Club.

San Francisco, March 17.—Columbia Pistol and Rifle Club did itself proud on St. Patrick's day, more shooting being done than on any other day in the club's history—about 4,000 shots were fired. Pape made the fine score of 37, and was expected to break the rifle record when he had his first 6 shots in the 4-ring, but it was too close work to stand. Young, also with pistol, should have broken the record, but only succeeded in tieing his own record of 32. Hovey had a remarkably fine target, 8 of his shots being inside the 3½in. ring, with two high 9s. This target counted 41. Strange to say, these two scores (32 and 41), if measured by the standard American, would have tied Otto Fuedner, who is one of America's greatest shots with the shotgun, and is also a convert to pistol, and to-day demonstrated that he can wield it with the sharpshooters. After firing 200 shots and gaining 93 points on his 10 best scores for a bar, which is only 9 points short of the sharpshooters' average, he declared that he had enjoyed it intensely. He has ordered a Winchester rifle, .32-40, and will try his hand with that also. Fuedner had a new handle on his S. & W. pistol, which is longer and larger than the regular one. A. J. Brannigan did some fine revolver shooting; in fact, it is most remarkable for a beginner, being expert work. He uses the new .38 S. & W. Capt. Fred Kuhnle went back to his .22-7-45 and Peters cartridges, and led in that contest with 17, only one point behind the club record. J. R. Trego made a pistol out of the new .22 rifle action of the Winchester's latest model. It was too heavy at first, but he lightened it and got Young to try it to-day, and on his first trial Young made 2, 2, 2, 3, 3, 1, 1, 2, 6, 2—24, which is within one point of Mr. Partridge's great run. Trego had Partridge's style of sights. The pull of trigger was about 1½lbs., which is under the limit (2lbs.), and the score was made in practice. Young followed it with a 43 and 45. The Winchester Company should make one after this model. Young will test it further, and find out its actual merits, with proper pull of trigger.

Scores, Columbia target, 10 shots, off-hand shooting:

Rifle, 200yds.: A. H. Pape (Pope rifle), 37, 66, 61; F. O. Young (Pope rifle), 53, 65, 54, 54; W. G. Hoffman (Winchester .38), 54, 61; G. M. Barley, 62, 71, 84, 85; G. Mannel, 77, 79; G. W. Hoadley, 90, 108.

Pistol, 50yds.: F. O. Young (Stevens pistol, Peters long rifle cartridges), 32, 44, 46, 46, 38, 43; E. Hovey (S. & W. pistol), 38, 45, 47, 49, 41; C. M. Daiss, 46, 48, 56, 56, 61; Dr. J. F. Twist, 51, 63, 65, 70, 72, 72, 75, 75; G. W. Hoadley, 53, 64, 71; O. Fuedner, 54, 57, 58, 60, 61, 63, 64, 68, 67, 69; Mrs. G. Mannel, 58, 60, 70, 82, 82; G. Mannel, 80, 82, 89; E. A. Allen, 79, 92, 96, 99; W. G. Hoffman, 83; Mrs. Waltham, 97.

Revolver, 50yds.: A. J. Brannigan, 60, 66, 52, 45, 47; P. A. Becker, 60, 64, 65, 66, 72, 71; J. R. Trego, 75, 86. Brannigan had 43 out of 50 8in. bullseyes, consecutive shooting.

.22 rifle, 50yds.: Capt. Fred Kuhnle, 17, 22; A. B. Dorrell, 20; O. Fuedner, 30, 39; E. A. Allen, 31, 32; Mrs. C. F. Waltham, 32, 38.

F. O. Young, Rec. Sec'y.

Cincinnati Rifle Association.

The following scores were made in regular competition by members of the Cincinnati Rifle Association, at Four-Mile House, Reading road, March 31. Conditions: 200yds., off-hand, at the standard target. Gindele was declared champion for the day with the fine score of 91. Weather cloudy, thermometer 40, wind unsteady, 7 to 8 o'clock.

The day was devoted to a 100-shot individual championship match. The weather conditions were not very favorable for making good scores, the wind letting up at times, and at others requiring 1 to 1½ points windage:

As the kinds of revolvers which were used in the tournament during the week of the sportsmen's show are of interest to our readers, we present the following information concerning them. In the 100-shot indoor championship Sergt. Petty, Dr. R. H. Sayre, John A. Dietz, Jr., and J. A. Smith used Colts; J. E. Stoneman used Smith & Wesson.

In the revolver re-entry match Smith, Sayre, Dietz, Jr., Petty, L. R. Piercy, H. M. Pope, E. F. M. Wendelstadt, A. D. Shepard, Jr., and S. Scott used Colts; Dr. W. A. Smith and W. P. Uhler used Colts and Smith and Wesson; J. T. Humphrey, A. L. A. Himmelwright, K. K. V. Casey, J. B. Crabtree and L. C. Hundley used Smith & Wesson. In the revolver or pistol re-entry match Smith, Dietz, Jr., Petty, Sayre and Piercy used Colt revolvers; Crabtree and K. R. McAlpin, Smith & Wesson .22 pistol; Himmelwright and Humphrey, Smith and Wesson revolver.

In the indoor championship of the U. S. Revolver Association Colt revolvers were used by Petty, Dietz, Jr., Sayre and Smith, and Smith & Wesson by Himmelwright.

The revolver contests held in connection with the sportsmen's show, in Madison Square Garden recently, demonstrated that for accuracy the revolver can hold its own with the single shot to a degree heretofore considered impossible. In the 100-shot indoor re-entry match Sergt. W. E. Petty made 908 points, using a Colt New Service revolver, as did also Dr. Sayre, who won second. The Colt revolver took first, second and third in each one of the four events in which revolvers were eligible.

The Brewers' Protective Association of San Francisco, Cal., voted $1,500 in prizes, to be given at the third national bundes shooting festival, Shell Mound Park, July 14 to 23.

Trapshooting.

Fixtures.

April 6.—Bulls Head, S. I., N. Y.—A live-bird shoot for the championship of Richmond county, S. I., at Chelsea Heights Gun Club grounds. John S. Lewis, Sec'y.

April 9-12.—Baltimore, Md.—Seventh annual spring tournament of the Baltimore Shooting Association; two days targets, $100 per day added; two days live birds, $500 guaranteed. J. M. Hawkins, Sec'y.

April 10.—St. Louis, Mo.—Contest for Dupont trophy at Dupont Park.

April 12-13.—Newark, N. J.—Forester Gun Club's tournament. J. J. Fleming, Sec'y.

April 16-18.—Leavenworth, Kan.—Annual tournament of the Kansas Sportsmen's Association. W. H. Koehler, Sec'y.

April 16-18.—Pella, Ia.—Jim Sheehy's amateur target shoot.

April 18.—Newell, Ia.—Newell Gun Club's target shoot. Henry G. Hall, Sec'y.

April 23-25.—Spirit Lake, Ia.—Klein-Barmeister's third annual target tournament; $50 added each day.

April 26-28.—Chicago.—Annual spring tournament of the Crescent Gun Club. John S. Boa, Mgr.

May 1-2.—Toledo, O.—First annual handicap shoot of the Edgewater Gun Club. F. W. Dyar, Sec'y.

May 7-9.—Peru, Ind.—Fifth annual amateur tournament of the Peru Gun Club; two days at targets for amateurs; one day at live birds. Chas. Bruck, Sec'y.

May 7-10.—Tournament of the New Jersey State Sportsmen's Association. C. W. Feigenspan, Sec'y.

May 7-10.—Lincoln, Neb.—Twenty-fifth annual tournament of the Nebraska State Sportsmen's Association, under the auspices of the Lincoln Gun Club. W. D. Bain, Sec'y.

May 14-17.—Allentown, Pa.—State shoot of Pennsylvania State Sportsmen's Association. C. F. Kamlich, Cor. Sec'y. Elmer E. Shaner, Mgr.

May 1-3.—Newell, Ia.—Newell Gun Club's annual tournament; targets and live birds. Henry G. Hall, Sec'y.

May 14-16.—Elwood, Ind.—Tournament of the Zoo Rod and Gun Club.

May 14-17.—Newton, Ia.—Annual tournament of the Iowa State Sportsmen's Association, under auspices of the Newton Gun Club. D. R. Tripp, Sec'y.

May 21-25.—Springfield, Ill.—Twenty-seventh annual tournament and convention of the Illinois State Sportsmen's Association. Chas. T. Stickle, Sec'y.

May 22-23.—Mechanicsburg, O.—Ninth annual tournament of the Mechanicsburg Gun Club. C. W. Phellis, Sec'y.

May 28-30.—London, O.—Tournament of the London Gun Club.

May 28-30.—Saginaw, Mich.—Tournament of the Michigan Trapshooters' League, under auspices of the East Side Gun Club. John Parker, Mgr.

May 28-June 1.—St. Louis, Mo.—Twenty-fourth annual tournament of the Missouri State Game and Fish Protective Association. Herbert Taylor, Sec'y.

May 30.—Dansville, N. Y.—Amateur tournament of the Dansville Gun Club, on Decoration Day. Norman Tompkins, Sec'y.

May 30.—Canajoharie, N. Y.—Tournament of the Canajoharie Gun Club. C. Weeks, Sec'y.

May 30.—Auburn, Me.—Annual shoot of the Auburn Gun Club.

June 5-7.—Circleville, O.—Under auspices of the Pickaway Rod and Gun Club, annual tournament of the Ohio Trapshooters' League. G. R. Haswell, Sec'y.

June 11-13.—Sioux City, Ia.—Seventh annual amateur tournament of the Soo Gun Club. W. F. Duncan, Sec'y.

June 13-14.—Bellefontaine, O.—Fourth annual tournament of the Silver Lake Gun Club. B. G. Cushman, Sec'y.

June 17-20.—Warm Springs, Ga.—Southern Interstate tournament; two days targets, two days live birds. Chas. L. Davis, Mgr.

June 20.—Waterville, Me.—Amateur target shoot of the Waterville Gun Club; $75 added money. Dana P. Foster, Sec'y.

June 25-27.—Walla Walla, Wash.—Seventh annual tournament of the Sportsmen's Association of the Northwest. W. G. Campbell, Sec'y.

June —.—Columbus, Wis.—Tournament of the Trapshooters' League of Wisconsin. First week in June.

June 12-13.—St. Marys, W. Va.—Fifth annual tournament of the West Virginia State Sportsmen's Association, under auspices of West Virginia Gun Club. Mallory Brothers, Mgrs.

July 15-20.—Buffalo, N. Y.—Pan-American Exposition tournament. Elmer E. Shaner, Mgr.

July 30.—Dexter Park, Brooklyn, L. I.—Annual clambake and handicap merchandise shoot at targets. Eugene Doenick, Sec'y.

Newark, N. J.—South Side Gun Club target shoot every Saturday afternoon.

Chicago, Ill.—Garfield Gun Club's live-bird trophy shoots, first and third Saturdays of each month. Grounds, West Monroe street at Fifty-second avenue. Dr. J. W. Meek, Sec'y.

CONTESTS AT INTERSTATE PARK.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.

Monthly contest for the Dewar trophy till June, 1902; handicap; 25 live birds; $5 entrance. First contest took place June 20, 1900.

Interstate Park, Queens, L. I.—Weekly shoot of the New Utrecht Gun Club—Saturdays.

INTERSTATE ASSOCIATION CONTESTS.

Elmer E. Shaner, Manager.

April 17-18.—Jacksonville, Fla.—The Interstate Association's tournament, under the auspices of the Jacksonville Gun Club. B. W. Sperry, Sec'y.

May 8-10.—Memphis, Tenn.—The Interstate Association's tournament, under the auspices of the Memphis Gun Club.

June 19-21.—Cleveland, O.—The Interstate Association's tournament under the auspices of the Cleveland Gun Club.

July 1-2.—Sherbrooke, P. Q., Can.—The Interstate Association's tournament under the auspices of the Sherbrooke Gun Club. C. H. Foss, Sec'y.

July 10-11.—Jamestown, N. Y.—The Interstate Association's tournament, under the auspices of the Jamestown Gun Club. Dr. C. Rawson, Sec'y.

July 23-26.—Interstate Park, Queens, L. I.—The Interstate Association's second Grand American Handicap target tournament; $1,000 added money. Edward Banks, Sec'y-Treas., 318 Broadway, New York.

Aug. 7-9.—Providence, R. I.—The Interstate Association's tournament under the auspices of the Providence Gun Club. R. C. Root, Sec'y.

Aug. 21-22.—Auburn, Me.—The Interstate Association's tournament, under the auspices of the Auburn Gun Club. L. A. Barker, Sec'y.

PETERS CARTRIDGE COMPANY'S TOURNAMENTS.

April 23-24.—Olathe, Kans.—Peters Cartridge Company's amateur tournament, assisted by Mr. Frank Hodges.

April 24-25.—Binghamton, N. Y.—Amateur tournament of the Peters Cartridge Co.; $150 added money. H. W. Brown, Sec'y. John Parker, Mgr.

DRIVERS AND TWISTERS.

Concerning the recent roof garden target tournament, the New Yorker Staats-Zeitung, a German newspaper published in New York, dignified its pages with the following, which inversely bristles with wisdom and accurate knowledge. It may be considered as settling nothing further than the fact that the Zeitung didn't know the difference between bluerock targets and live birds, and that all shooters know that it didn't know the difference. The excerpt is as follows: "It has been resolved by the board of directors of the sporting exhibition to stop pigeon shooting. This is a very laudable purpose, still we cannot repress the remark that this cruel and aimless sport should not have been permitted from the start. Merely to shoot at animals which have even been maimed to serve the purpose in order to break again a cursed record is to be considered as distant from the true meaning of the word 'sport' as is the numerous killing of birds while migrating." Ja!

In appreciation and recognition of Mr. W. R. Crosby's great bluerock feat, Capt. A. W. Money, in behalf of his company, presented to Mr. Crosby last Saturday a beautiful gold repeater, intrinsically valuable in itself, and a perfect encyclopedia on all matters concerning time, for on pushing a button or something of that sort it chimes off the hours, quarters and minutes, etc. The obverse side bears, in beautifully engraved letters, the initials W. R. C., while on the reverse in drop figures is engraved the number of the great run, 345. The inner case bears the inscription: "Presented to W. R. Crosby by the American E. C. & Schultze Gunpowder Co., Ltd., in recognition of his record-breaking run of 345 straight at Interstate Park, Queens, N. Y., March 13, 1901."

Mr. E. Macdonald, of New York, writes us as follows: "I beg to advise you that on Dec. 14 of last year the Aschenbroedel Gun Club was organized with the following officers: President, Robert W. Iverson; Vice-President, Robert Ruhlender; Secretary, E. Macdonald; Treasurer, Paul Grunert. The regular club shoots will begin Friday, April 5, and will take place every other Friday thereafter. This club is composed of members of the Aschenbroedel Verein only, which in its turn is composed of the leading musicians of New York city. Therefore every member of the gun club is a musician, and a soloist, and if they will only shoot half as good as they play, they will soon be the champions of the metropolitan district."

Three officers of the Society for the Prevention of Cruelty to Animals were at Interstate Park on Monday of this week, in their official capacity. In deference to their wishes, courteously expressed, Manager Shaner suspended shooting a half hour shortly after midday and sent the force of trappers to gather the dead or wounded birds that were out of bounds. Thirteen were found. The space within the boundaries is kept clear of dead and wounded birds at all times, as each bird is gathered as killed. Manager Shaner will suspend the shooting at intervals each day, to clear up the outlying grounds.

The Edgewater Shooting Club, Toledo, O., announces its first annual handicap bluerock shoot, open to all, to take place May 1 and 2. The events are at 15, 20 and 25 bluerocks, entrance based on 10 cents per target. Event No. 8, the first day, has the Peters Cartridge Company's trophy for a prize. Handicaps 14 to 21yds. Targets 2 cents. Shells sent in care of the secretary, Mr. F. W. Dyar, will be delivered on the grounds. One cent for each target thrown will be deducted for average money.

Mr. John Barker, of the Peters Cartridge Company, has a busy season ahead. Besides his other duties, he is engaged to manage the Peru, Ind., Gun Club's shoot, May 7-9; the Zoo Gun Club's shoot at Sioux City, June 11-13; Binghamton, N. Y., April 24-25; Warm Springs, Ga., Southern Interstate tournament, June 17-20; the Michigan State Trapshooters' League, Saginaw, Mich., May 28-30, and a prospective shoot at Bristol, Tenn, June 24 and 25.

The prizes at the New Utrecht Gun Club's shoot last Saturday were miniature cups, six in all, of which three were for members and three for the visiting shooters who participated in the shoot at 25 live birds, handicaps 27 to 33yds. The cups have the following inscription: "Preliminary G. A. Handicap, Interstate Park, March 30, 1891. New Utrecht Gun Club. Won by ——."

The number of men of the 208 entered standing at each of the handicap distances in the G. A. H. is as follows: 25yds., 1; 26yds., 36; 27yds., 84; 28yds., 54; 29yds., 15; 30yds., 10; 31yds., 5; 32yds., 3. It will thus be noted that at 27yds. and less there are 121 shooters; back of 27yds., 87. Back of the 28yd. mark, the skill dwindles rapidly, as shown by the numbers, 15, 10, 5 and 3.

Parker Brothers, Meriden, Conn., will mail, free of charge, a copy of their calendar for 1901 to the secretary of any gun club who will send them his name and address. Also a copy to any one remitting 10 cents to them to pay mailing expenses. It contains portraits of many eminent shooters who use Parker guns, with their most recent records, etc.

After the shoot of the New Utrecht Gun Club, on Saturday, march 23, Mr. Frank Parmelee presented to the club the deer head which he won. In appreciation of his generosity, the club through its president, Mr. Walter F. Sykes, on last Saturday presented Mr. Parmelee a calendar watch.

Over 200 entries were in the Nitro Powder Handicap, an event at 16 birds, on Tuesday of this week. There was but little wind, and the conditions were therefore better for good scores than were those of the preceding day.

Capt. Money and Messrs. Denny, Vandegrift and Harold Money, members of the Carteret Gun Club, have entered the Grand American Handicap this year. Several of them have resigned from that club.

Mr. J. L. Head and party arrived safely last Sunday, after a pleasant trip. The number of Western shooters in attendance this year exceeds that of last year.

A novel and useful suggestion concerning the utility of professionals as squad captains at tournaments appears elsewhere in our trap columns this week.

The Dansville, N. Y., Gun Club, announces a Decoration Day amateur tournament. Mr. Norman Tompkins is secretary.

Mr. Fred Whitney informs us that Jim Sheehy's amateur target shoot will be held on April 23 and 24, at Pella, Ia.

BERNARD WATERS.

Grand American Handicap.

APRIL 1.—The preliminaries to the Grand American Handicap commenced to-day. The weather was ideal for pigeon shooting—a clear light, good birds and a stiff northwest wind, which as to the traps was about from 7 o'clock. There was a good number of contestants in the events to-day. No. 1, the Interstate Park Introductory, had 136 entries, and of this number 31 killed straight and each received $21,90. This event was at 8 birds, 30yds. rise, $5 entrance, birds extra, four moneys, 40, 30, 20 and 10 per cent. High guns, ties divided. The scores:

No. 2 was the Borough of Queens Sweepstakes. In this event the conditions were 12 birds, $7 entrance, birds extra, 30yds. rise, high guns, ties divided. The number of moneys into which the purse was divided was determined by the number of entries received. Twenty killed straight, and each received $40.70. Thirty-two killed 11 each, and each received $4.30. The scores:

J A R Elliott	2*2211201222—10	O R Dickey	2022222222201—10

Trenton Shooting Association.

Trenton, N. J.—The main feature of the shoot was the return match between teams of the Trenton Shooting Association and the White Hill Gun Club, six men per team, 25 targets per man. The result was as follows:

Trenton Shooting Association.		White Hill Gun Club.	
Taylor	17	Hill	17
Thomas	17	Sadler	16
Harper	16	Rossell	14
Wilson	15	Griffith	9
Cochran	10	J Hessley	10
Bignall	10—85	Cottrell	15—81

The White Hill Club is a young organization and has been making rapid strides in shooting circles lately.

The local team had to secure two White Hill team club shooters in order to make up its squad. Two of the local team could not get off.

Chickens, ducks, cigars and cash sweepstakes were held during the afternoon, and the local contingent had a good share of the prizes when it reached this city Saturday night.

The prizes made many of the Sunday dinners yesterday.

The "lobster" match between P. E. Wurfflein, of the True American, and Frank Thompson, of the State Gazette, finished in a defeat for the Gazette man by 1 target.

One dressed chicken to first: Thomas 2, Wilson 1, J. Taylor 3, J. Hessley 4, Harper 3, Hill 3, Platt 3, Kelly 0, Cottrell 4. Hessley won tie shoot-off.

One dressed chicken to first: Taylor 3, Wilson 4, Firth 3, Griffith 2, Rossell 3, Sadler 2, Cottrell 5, Taylor 2, Hessley 3, Thomas 4, Kelly 1, Griffith 2. Cottrell won.

Cash sweepstake, 5 pairs doubles: Taylor 6, Thomas 4, Wilson 4, Hill 4, Matthews 5, Cochran 5, Sadler 5. J. R. Taylor won.

Cash sweepstake, 5 pairs doubles: Taylor 6, Thomas 6, Matthews 4, Cochran 5, Taylor and Thomas divided.

Box of 50 cigars to first: Cochran 2, Thomas 5, Taylor 0, G. Hessley 1, Harper 5, Platt 3, Kelly 1, Griffith 1, Cottrell 3, Rossell 3, Hill 3, Hessley 3. Shoot-off of tie won by Thomas.

One dressed chicken to first: Thomas 2, Taylor 4, Harper 3, Platt 5, Hill 1, Cochran 3, Sadler 3. Won by Platt.

One dressed chicken to first: Taylor 2, Wilson 4, Thomas 3, Harper 4, Taylor 2, Hill 4, Hessley 3. Shoot-off of tie won by Taylor.

One dressed chicken to first: Thomas 5, Taylor 2, Cochran 4, Stanton 2, Hessley 1, Harper 4, Wilson 4, Cottrell 4. Dr. Thomas won the bird.

One chicken to first: Griffith 5, McHugh 0, Sadler 3, Kelly 0, Hill 4, Bignall 4, Taylor 1. Shoot-off of tie won by Cottrell breaking 15 straight to Harper's 14.

Pair of black wild ducks to first and mallard to second: Thomas 3, Harper 5, Taylor 2, Rossell 1, Stanton 3, Wilson 4, Griffith 4, Hessley 3, Hill 4, Bignall 4, Sadler 3, Kelly 2, Cottrell 3, McHugh 1. Won by Harper. Bignall won mallard in tie.

Pair of wild ducks to first: Taylor 1, Thomas 3, Wilson 4, Hessley 3, Harper 4, Hill 5, Sadler 5, Griffith 2, Stanton 2, Cottrell 2. Shoot-off of tie, miss-and-out, Sadler won.

Match race for lobsters: Wurfflein 1, Thompson 0.

Boston Gun Club.

BOSTON, March 27.—The eleventh weekly prize shoot of the Boston Gun Club was but lightly attended, though the weather was a little bit in our favor. Straight scores were few and far between, though Leroy managed to secure two, one at 21yds. and one at 16yds., with the use of two barrels, and Woodruff one from the 17yd. mark. The interest has again been aroused and is now up at the highest notch, due to the fact that Leroy put in a nice big 25 in to-day's score and jumped up 5 points, now being in first position tied with Spencer at 145. As there are now only four more shoots in the series, it will necessitate considerable hustling for either to make a decided gain. Baker, who is at present second, may have something to say yet, as he is only 5 points behind, and has a low score to throw out. Howe and S. W. were second in to-day's match, and, though as yet they have not put in enough scores to qualify, a couple of good scores would do them a world of good on points. Scores below:

Events Nos. 1, 2, 3, 4, 5 and 6, 10 unknown, handicap distance; all others 16yds.; event No. 8, 5 pairs:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13

Aquidnick Gun Club.

NEWPORT, R. I.—The Aquidnick Gun Club held its regular shoot on Wednesday of last week. Eight members participated and three events were shot—a 15 unknown and a 15 and 20 at known angles. The small number of events and targets is explained by the fact that for the present we are shooting one man up, with a single expert trap, but expect to soon make better arrangements for trapping. The scores are as follows:

Known.	Unknown.	Known.
Plumer—		
010100100001000— 4	11000010001110— 6	10101000001001001110— 8—18

Tunkhannock Rod and Gun Club.

TUNKHANNOCK, Pa.—The amateur tournament of the Tunkhannock Rod and Gun Club, March 25. Following are the scores at targets:

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7
Targets:	10	10	10	10	15	20	5	Targets:	10	10	10	10	15	20	5
Hull	9	10	8	10	15	17	..	Wright	7	7	4	6	11	..	4
Fanning	10	9	10	8	15	19	..	Graham	9	10	9	7	12	..	..
Stroh	9	10	6	9	11	14	5	Cleveland	6	8	8	8	9	11	..
Wells	3	7	10	8	9	11	4	Reed	8	8	8	10	13	13	4
Williams	9	9	9	8	10	13	4								

No. 6 was at 10 pairs. No. 7 was at 5 live birds.

The weather being bad prevented the attendance being very large. Mr. Hull, representing the Parker gun, and Mr. Fanning had their usual good nature with them.

S. D. REED.

WESTERN TRAPS.

Watson's Preparatory Shoot.

CHICAGO, Ill., March 30.—John Watson gave a little exercise shoot for a couple of days this week for the Western men who drifted into Chicago en route to the Grand American Handicap—a score of good men and true who all expect to win the big prize down East, and who have as good a right to hope so as anybody who will be there. The programme for Thursday and Friday was at 10 birds, $5, and at 15 birds, $8. The little meeting was very pleasant for all, and it served to tune up a man or two who needed only the finishing touches.

To-day saw most of the pilgrims off on their way to New York. Mr. J. L. Head has about a dozen in his party in all, seven or eight going by different routes; among these Messrs. E. S. Rice, J. L. Alabaster, Geo. Roll, Oswald Von Lengerke, etc. Gilbert, Hirschy, Neal, Ernie Fish, of Eau Claire; C. R. Stephens, of Moline; Jim Bush, of Milwaukee; J. S. Morrison, of St. Paul; W. P. Brown, of Minneapolis; W. D. Townsend and Frank Baird, of Omaha; H. P. Sperry, of Rock Island; Frank Kaufmann, of Two Rivers, Minn., and qite a lot of other well-known Western trap shots were at Watson's one time or another this week. Mr. Bush will not go on to the big shoot, but ran down to have a little fun with the boys, and to see whether Garden City Club would like a pigeon race with anybody up in Milwaukee. All these good fellows deserve to win, but not all can, no matter how wisely the purses be divided. In a few weeks they be stringing back through here, and each one will be telling just what kept him from taking the bakery home with him. The Grand American Handicap is a bigger gamble each year as to the winner, in these times of many fine shooters. Take the field against any dozen shooters anybody will pick and you will have the best of the betting. Pick a dark horse, and pick him from the West.

Important if True.

Tom Marshall did not seem dead sure that the team race between America and England would be brought off this summer, but maybe Tom doesn't know as much about it as some of the daily newspapers. Here is what a Chicago paper prints as news from London, and it is a good sample of daily paper shooting news:

"London, March 27.—The inanimate bird shooting clubs were delighted to-day by a dispatch from the United States announcing that the American clubs agree to their challenge to meet the English clubs in this country during the coming summer. A meeting will be held in London to-morrow evening to discuss the arrangements. Interest in the contest is enhanced by the fact that the American team is confirmed to the use of a single-barreled gun, which employs a larger charge, while the English team will use the national double-barreled gun. The result is expected to determine which is the better weapon, and it may lead to a revolution in the English gun trade."

This is important if true. Gread shades! where are those American single-barreled guns? Most of us laid them away when we were boys!

Sportsman and Editor.

Hon. Jas. R. B. Van Cleave, president of the Illinois State Sportsmen's Association, will on May 1 retire from his office as State Insurance Inspector and take up the editorship of a morning paper at Springfield. All the really good men are in the newspaper business, or are getting there.

Hirschy Trophy Race at Grand Rapids, Minn.

The Hirschy trophy, live-bird shoot, was pulled off on the grounds of the local club on March 16 under the most favorable conditions. The weather for the three days of the tournament was all that the most exacting could have wished for, and the birds were fine, healthy fellows, that kept the contestants guessing. Many of the twenty shooters for the trophy were in the best of form, and until the last three or four birds were shot at it looked as though quite a number would have to take part in the shoot-off. The fun began promptly at 1:30 P. M. Saturday, but Bergen, the holder of the trophy, made a clean miss of the first bird liberated, which tended to handicap him for the rest of the event. At the close of the 10th round, when an adjournment was taken until the following morning, Wilkinson, of St. Paul; Morrison, of St. Paul; Kribs, of Grand Rapids, and Wells, of Grand Forks, N. D., had each a clean score, and Hirschy and Parker, of Minneapolis; Fulton, of West Superior; Brown, of St. Paul, and Powers, of Grand Rapids, had each 15 birds to their credit. At 9:30 Sunday morning the trap was again sprung, and Kribs and Wells each fell down on the first bird, the latter much chagrined to see his fall dead just over the line. This left Wilkinson and Morrison in the lead, but Morrison's 18th got over the line, and he missed his 19th and 25th. Wilkinson failed to weight down his 24th sufficiently, and it got over the line, tieing him with Fulton, of West Superior, who let his 10th get out of bounds, but scored the balance of the string. The scores:

Bergen	0221112111111*011111111*—21
Wilkinson	1111122112111121122222*1—24
Hirschy	2222221222202222222202222—23
Morrison	1122222222221222*0222220—22

Robinson	001000020222w
Morrisey	210*01201200w
Bueneman	0111010212021121101222221—20
Clair	020021*10000w

In the shoot-off Wilkinson missed 2 in his first 5, and Fulton scored 4 straight, giving him the match and the cup.

Immediately following the live-bird event a clay-pigeon event of 150 to the man was pulled off with the following result: Hirschy 148, Parker 141, Morrison 139, Wilkinson 128, Warren 126, Powers 127, Brown 121, Bergen and Kremer each 115, Kribs 113, Wells 111.

On Monday morning a 10-live-bird match was shot; entrance $7.50, including birds, divided 40, 30, 20 and 10 per cent. The scores were as follows:

Morrison	2222222222—10	Bergen	2210210221— 8
Hirschy	2222212222—10	Brown	2220122222— 9
Wilkinson	2202202202— 7	A Kremer	1222111120— 9
Kribs	2222222222—10	Parker	2221112121—10
Powers	2202222121— 9		

This closed the tournament, the most successful one ever pulled off here. The local club entertained their visitors at a banquet given at the Hotel Pokegama Saturday evening and the sportsmen from out of town were profuse in their compliments to the management of the Grand Rapids Club for the royal manner in which they were entertained.

Trap at Richmond.

RICHMOND, Va., March 23.—Members of the various gun clubs in this city had a shoot this afternoon at the baseball park, and disposed of about 300 English sparrows and some pigeons. This was the second sparrow shoot ever held in this State, the first having taken place about a month ago, and the sport of sparrow shooting seems to have excited a good deal of interest, but owing to the great difficulty experienced in catching the little feathered aliens it is doubtful if it will ever become a permanent institution. On this occasion sparrows had to be imported from Indianapolis—and, goodness knows, there are plenty in Richmond and vicinity!

Mr. W. C. Lynham, the expert in pigeon matters, has succeeded in making a set of five traps suited to the size of the occupant, which appears to be an adaptation of the old three-sided conical pigeon trap, and which, with a little alteration, will answer the purpose admirably.

What a capital target these plucky little pests make! Certainly the still warm afternoon did not tend to make them hard, but occasionally the breeze blew freshly across the ground, and then the ciphers began to show up pretty lively. Some of the boys did some really good work, notably Mr. Stearns, who, after missing his third and fourth sparrows, killed 36 straight, and also went straight in the next event, which was at 10 pigeons, making a run of 46. Scores:

R. F. BANKS.

Gardner Rod and Gun Club.

WEST GARDNER, Mass., March 23.—The traps of the Gardner Rod and Gun Club were opened up this afternoon, for the first time since Christmas. Outside of being muddy, it was a very pleasant day.

Only eight of a membership of thirty took part in the shoot.

About 600 pigeons were thrown, and as this is the first time the boys have been out for some time the scores are exceedingly small. Will show you something warmer later on:

J. L. PAINE, Sec'y.

The West Virginia State Sportsmen's Association.

SISTERSVILLE, W. Va., March 26.—*Editor Forest and Stream:* In order to avoid having our dates conflict with those on which the Pan-American tournament is to be held, we have decided upon another change, going back to our old dates, June 12 and 13. Please correct our notice to read as follows and oblige: The fifth annual tournament of the West Virginia State Sportsmen's Association will be held at St. Marys, June 12 and 13, under auspices of the West Virginia Gun Club; $250 added money, and merchandise prizes.

ED O. BOWER, Sec'y-Treas.

Grand American Handicap Entries.

On Wednesday of last week the Handicap Committee met at the Astor House, New York, immediately after a session of the Tournament Committee, at which said committee passed upon the list of entries. Mr. J. L. Head, of Peru, Ind., was unanimously elected chairman. Owing to business reasons Mr. T. A. Divine, of Memphis, Tenn., was unable to attend. The other members were Messrs. C. W. Budd, of Des Moines, Ia.; Elmer E. Shaner, Pittsburg; Will K. Park, Philadelphia; W. R. Hobart, Newark; Bernard Waters, New York. The committee completed its labors expeditiously and pleasantly, as usual. Suitable resolutions were passed concerning the death of Jacob Pentz, an esteemed member of the Handicap Committee.

THE order of shooting, addresses of the contestants and the official handicaps are appended herewith:

No.	Name.	Address.	Yards.
1.	J. B. Robertson,	New Haven, Conn	26
2.	J. L. Weller,	Rochester, N. Y.	26
3.	G. W. Page,	Trenton, N. J.	27

Professionals as Squad Captains.

THE following appeared in the Republic, of St. Louis, March 24:

A great many of our local sportsmen have shown a decided interest in the coming St. Louis shooting tournament, which is to be held at Dupont Prak the week of May 28, 29, 30, 31 and June 1. The prominent feature of this tournament will be the final contest for the Republic cup, which is now held by Jim Elliott, who is the recognized champion of the United States, with no one to challenge him. He has held undisputed possession of the Republic cup for almost a year, and no one has come forward to claim his title. However, Mr. Elliott will relinquish the cup to the Missouri State Association, and a contest will be given to decide a new owner. The winner, whoever he may be, will not wear his honors long, for immediately after the open shoot is decided the winners of the cup in former years and those who have held it by winning it by challenge will meet in a 25-bird race to decide the final ownership.

The target races are a departure from previous tournaments. The St. Louis shoot has been famous for the liberality of the purses in the target events.

"We are going to be just as liberal this year, only in a different way," says Herbert Taylor. "The professional shooter—that is, the man who shoots at the traps representing a manufacturer—will not compete with the amateurs at this tournament in the target events. He will be here to display his skill and meet the boys from Salt River, but will shoot for exhibition only. The Association will ask Messrs. Gilbert, Elliott, Heikes, Fanning, Crosby, Parker and others to become captains of different squads, composed of amateurs, with no two professionals allowed in any one squad. The professionals will have the same incentive to make high scores as before, and it will break up the Indiam squad business which is such a terror to the heart of the amateur.

"This, by the way, is only a suggestion to these gentlemen. The Association does not presume to dictate to them how they shall shoot, but they will come here with the understanding that the Association would like to see this experiment tried and to give the amateur the chance to become intimately acquainted with the famous shots of the country.

"Another point which will arouse interest in the heart of the amateur is the merchandise events. There will be 15-bird races, in which everybody will get a prize. These prizes will be donated to the Association and shot for under the regular rules—a man can win a fine hammerless shotgun or a pair of socks, a silver tea set or a clock. All he has to do is to shoot for it and win it.

"The cost of attending this shoot will be very much less than at any other tournament. The target entries will cost only a dollar for the 15-bird races and a dollar and a half for the 20-bird races. This is a material reduction from last year. It will enable the amateur who shoots in hard luck to shoot longer for the same amount of money, and will also enable him to win as much as before, because first and second moneys will not be cut up by the professionals."

The Missouri State Game and Fish Protective Association is twenty-four years old. It has done its share to promote the noble sport of shooting, and also by influencing legislation and the distribution of literature to preserve game and fish and prevent the killing of game out of season.

Trapshooting provides a means for the sportsman to work off his enthusiasm when the closed season is at hand. It also makes him an expert with the gun in the field.

A trapshooter always makes a good soldier; a good soldier makes a good citizen, and a good citizen makes this country worth living in.

The tournament is given to promote a better feeling among sportsmen and to give them an opportunity to try their skill with men of their own kind.

Ossining Gun Club.

OSSINING, March 30.—Herewith find scores of the regular Saturday shoot of the Ossining Gun Club. A gusty wind pulled the averages down somewhat. Events 1 to 10 (exclusive of No. 9, which was at 5 pairs) were at 10 targets each; No. 11, at 5 targets:

C. G. B., Capt. O. Gun Club.

Chesapeake Gun Club.

NEWPORT NEWS, Va., March 27.—The Chesapeake Gun Club had a shoot to-day, and in the club event Mr. Thomas F. Stearns won the medal, with a score of 23 out of 25. The scores follow: T. F. Stearns 23, W. K. Stowe 21, E. S. Robinson 21, C. B. James 19, E. F. Milstead 17, Dr. C. Perkins 16, B. B. Semmes 15, F. K. Latimer 13.

In the second event, at 25 targets, Mr. Stearns again scored 23, and in shooting at doubles he made the excellent score of 23 targets out of a possible 26.

The Cleveland Gun Club Co.

CLEVELAND, O., March 28.—The regular semi-monthly club shoot at targets to-day resulted as follows:

Trap at Dupont Park.

ST. LOUIS, Mo.—The 10-bird handicap for Dupont Park medal, March 24, thirty-seven entries; birds good; weather bad:

Herbert, 28	212*222222	9	Wintrick, 30 1112112211 — 10
Mason, 28	11*0011211	7	Dr Sims, 28 0120002**2 — 4
Koeb, 28	0012212221	8	Ffiel, 27 020101010* — 4
Turner, 28	211202120*	7	Horton, 27 0202202100 — 5
White Rock, 28	1012211202	8	Dr Johnson, 28 2201011112 — 8
Dr Gaines, 31	2211121221	10	Heiligenstein, 30 2210222122 — 9
Dr Bond, 28	101221*122	8	Cummings, 28 *11012**20 — 5
Nason, 29	122211*122	9	Barker, 27 1022111102 — 8
Arvis, 30	2222212211	10	J Cabanne, 30 2221222112 — 10
Bowman, 28	2222022*20	7	E Prendergast, 31 *011220222 — 7
Meier, 29	1222221021	9	Sandberg, 28 *022222121 — 8
Kenyon, 28	2111211211	10	Spicer, 28 00101*2221 — 6
Campbell, 28	1111212222	10	Baggerman, 29 22112221*2 — 9
White, 28	220202*201	6	F Fink, 28 122**202*2 — 6
Walker, 28	1201211110	8	G Prendergast, 28 1222212220 — 9
L D Cabanne, 29	2212*22222	9	P Weber, 28 2022121112 — 9
Rock, 30	2121121111	10	C Weber, 28 2122102102 — 8
Spencer, 31	2222222222	10	Jonah, 28 11*22*2110 — 7

In the shoot-off Kenyon missed his 2d, Arvis his 4th, Spencer his 11th, Cabanne his 19th, Dr. Gaines his 21st, Wintick his 5th, while Campbell and Rock both missed their 30th, and Campbell his 37th, leaving Rock winner.

Match between Joe Walker, holder, and W. D. Kenyon, challenger, for Mermod championship trophy, March 24. Birds first class:

J Walker, 31	122112121**212112122*2102	—21
W D Kenyon, 30	112111121221*01*122112212	—22

Team race, gun below elbow; 10 birds; for price of birds:

J Walker	120**20110	5	Dr Gaines 11202*0012 — 6
Dute Cabanne	1121210*00	6—11	F Meier 1202111101 — 8—14

Winchester Gun Club.

DETROIT, Mich.—A fine spring day favored the regular bi-monthly shoot of the Winchester Gun Club Saturday, the 23d inst., at their Highland Park grounds. A good attendance and a very pleasant time were the result. Although some good shooting was done, the club event scores show a lack of form. The Class B men are very grateful to Mr. S. G. Lewis, who, as the true sportsman and genial fellow that he is, voluntarily surrendered his place in Class B, where this year's classification put him, to take his chance among the Class A men.

T. Reid successfully defended his right to wear the A medal another two weeks.

Hitchcock and Lane tied for the B honors, Hitchcock winning out in the shoot-off by 19 to 16, and the C medal was again won by Dr. Gibbes. The scores:

Targets:	10	10	10	10	10	10	10	10	10	25
Lane	..	7	4	..	..	6	..	..	..	16
Black	8	6	7	8	8	6	..	..	..	19
Hitchcock	..	5	..	..	4	7	..	5	6	16

PUBLISHERS' DEPARTMENT.

The Vartray Water Company, of Buffalo, N. Y., is to be congratulated on its exceptional victory at the Paris Exposition of 1900. In competition with the leading manufacturers of the world, in a class numbering 611 exhibitors, it was awarded the gold medal, the only and highest award for the superior excellence of its Vartray Ginger Ale.—*Adv.*

With the warm weather and the preparation for the season's outing comes the inquiry as to where camp outfits, sleeping bags, tents and sails for yachts and canoes may best be had. The National Tent and Awning Works, of Lockport, N. Y., will send catalogue of the goods they can supply.—*Adv.*

The Alligator brand of fishing tackle is familiar to FOREST AND STREAM readers through long advertising. It now appears in our columns again, and Mr. James L. Van Uxem offers to send a catalogue of his goods.—*Adv.*

Within easy reach of Chicago there is a splendid area of fishing ground used by sportsmen of the middle West in summer. The L. S. Wilkinson Company, whose goods are made especially for this region, will send their catalogue on receipt of a 2-cent stamp.—*Adv.*

No portion of an angler's outfit is more important than his landing net, which must be light, strong and easily handled. The Harrimac landing net, advertised by A. F. Meisselbach & Bro., will bear comparison with any other.—*Adv.*

The ice is going out of the Canadian lakes, and before long anglers will be visiting the Northern fishing ground. Many of them will go by the Quebec & Lake St. John Railway to the home of the ouananiche and the far-famed Saguenay River, through what has been called the Canadian Adirondacks. This railway sends out a beautifully illustrated guide book to those who apply for it.—*Adv.*

The name J. F. Marsters, of Brooklyn, is familiar to Eastern anglers, and Mr. Marsters is putting himself in closer touch with his patrons by offering to send for 3 cents in stamps a colored plate of 88 trout and bass flies.—*Adv.*

The familiar name of S. Hemmenway & Son, the old established firm of sail and tent makers, again appears in our advertising columns. Messrs. Hemmenway offer tents, camp furniture and yacht and canoe sails, and the prospective purchaser of any of these articles would do well to send for a catalogue to this old, reliable firm.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1901, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, APRIL 13, 1901.

VOL. LVI.—No. 15. No. 346 BROADWAY, NEW YORK

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

The Forest and Stream's Platform Plank.

"The sale of game should be prohibited at all seasons."

NAILS DRIVEN IN 1901.—No. III.

MISSOURI.

It is declared unlawful for any person to sell or offer to sell, buy or offer to buy any quail, pinnated grouse, prairie chicken, wild deer or wild turkey in this State for a period of five years from the passage of this act: Provided, this section shall not apply to game shipped into this State from any other State or Territory.

IT WILL PREVAIL.

THE FOREST AND STREAM'S Platform Plank, that the sale of game should be prohibited at all seasons, declares a principle which is coming to have universal recognition.

To forbid the sale of game is accepted as a necessity.

It is conceded to be an essential component feature of any efficient scheme of game protection.

Seven years ago, when the proposition was first made in these columns, the plan was warmly indorsed, but by many was regarded as Utopian.

To-day it is a familiar, established, practical part of the protective systems of many States.

Every year adds to the list of Legislatures which absolutely forbid the sale of game.

No extraordinary prescience is needed nor unduly sanguine faith in the principle required to predict the early coming of a day when the wild game of America shall not anywhere be a market commodity.

Even in those States which refuse it now, it is bound to come. The defeat of the principle in 1901 is only a temporary check. A check, not a final rejection. The actual working of the system wherever it is in operation is so conclusively for good, that its results carry their own argument. And against such an argument not even the corrupting lobby of the game dealers can always prevail. Just so soon as the people of a State shall come to a full understanding of the demonstrated fact that an anti-sale game law protects the game, they are going to have the system for themselves, Pennsylvania among the rest. The game bill introduced at Harrisburg by Hon. Frank G. Harris, by request of the State Board of Game Commissioners, contained a prohibition of the sale of deer or any feathered upland game killed within the Commonwealth, but allowed the sale of game killed elsewhere. The measure was fought by the cold storage interests, and they corrupted votes enough to defeat it. That is the record for the Legislature of 1901. It will be different in 1903. If not then, there will be another session in 1905. The principle is right. Temporary checks may be regarded with complacency. They do not in the least impair confidence in the final result. The sale of game will be "forbidden at all seasons" in Pennsylvania. Because, we repeat, the experience of the States which have made proof of the working of an anti-market law is uniformly and overwhelmingly in support of the wisdom and utility of the system. No other restrictive expedient has accomplished so much. To cut off the market solves the problem of abating the partridge snare. When Massachusetts stopped the sale of ruffed grouse and closed the Boston market, the bird strangler went out of business. That is precisely what will happen in every State, including New York, when the New York city market is closed to snared partridges, as it shall be some day.

THE MICHIGAN GRAYLING.

IN the current biennial report of the Michigan State Game and Fish Warden the fishery interests are divided into two classes—that of commercial fishes and another of "sentimental fishes." Sentimental fishes, we assume, are not such as are given to sentimentality in themselves, but such as provoke and promote it in the human breast. In this class the report includes the brook trout and the grayling, and by implication, though not specifically named, the landlocked salmon. Another category of "semi-sentimental fishes" is provided for "the sunfish and perch family." The black bass is not placed, nor the pickerel, nor the Johnny Grindle; we are all at liberty to class them according to individual estimation.

The Michigan fish to which most sentiment attaches is the grayling, for it is an example of a rare species of exquisite beauty which is doomed to an early disappearance unless the conditions now affecting it shall be changed. The grayling of Michigan is reduced to an extremity not unlike that of the heath hen of Massachusetts. Whether the heath hen is to be spoken of as in the present or the past tense is uncertain; it is known that a few lingering birds on Martha's Vineyard were alive last summer, but whether there are any living today is a grave question. The Michigan grayling is now said to be represented only by a remnant in the upper waters of the Manistee River, and unless it can there be given absolute protection its early extinction is inevitable.

Michigan should not permit this destruction of a form of life to come to pass. It need not come to pass if the preventive shall be applied. The grayling may be given new lease of life by stopping the fishing for it. Put an all-the-year-round close time on grayling and close the upper waters of the Manistee to all fishing. This is the simple expedient proposed by Mr. W. B. Mershon, of East Saginaw, who is thoroughly conversant with the Michigan grayling problem in all its bearings, and whose counsel in such an affair should be heeded by the Legislature. Opportunity has not gone by for action at the current session. There should be sentiment enough in the Legislature to provide for the preservation of this most "sentimental" of all Michigan fishes.

BITS OF TALK.

THE MAN TARGET IN THE MAINE WOODS.

IT was in Boston, and they were sitting about a large round table, after the meeting had broken up and the early birds had gone home. The talk was of Maine. When a knot of Boston sportsmen get together the talk is always of the Maine woods or of the Cape. They all go to the one or the other, and many to both. All have at one time or another been over the same grounds, made the same carries and camps, fished the same pools, lost the same big fish and missed the same old monster moose with the rocking chair on his head. So now it was Maine.

"And a moose would be vastly more frightened," said the Cambridge man, "if he knew just what it meant when the rifle cracked and the bullet whistled by him."

"Well, if he did know all about it, he couldn't get away any more quickly than that fellow disappeared after my shot," said the Back Bay member, who had been telling how he had missed the big moose he had been hunting for for five years.

"That is a nice point in moose psychology," suggested the President. "My moose have invariably taken such immediate and expeditious leave, and have kept on leaving for so long, that I have always considered them frightened to the limit of their capacity."

"No moose was ever so scared at a shot as I was last October," testified the man from Haverhill. "I had my boy with me, and a fool with a gun took him for game and blazed away."

"No man who loves his son will ever take him into the Maine woods in the hunting season," said the man with the trout preserve on the Cape.

"What did you do to the fool shooter?" asked the President.

"Do? I didn't do anything; he was scared too, and ran like a moose himself—and I forgot I had a gun."

"I'll tell you a little experience of my own down in Maine last season," said the President. "Two of us were deer hunting. A third man saw the motion of the scrub where we were forcing our way through and fired at us. The ball went between my companion and myself. We yelled, and the fellow instead of running away, as your man did, came to us. He said in a frivolous manner that he was sorry; he had seen the motion of the bushes, and had thought it was a deer. Then he grinned at the joke on himself and on us.

"We did not see it that way. We had been getting madder and madder, and it took us just about a minute and a half to give that fellow a jury trial and to make believe we were in Dover, Delaware. We undressed him and tied him to a big tree, face side to the bark; cut two good birch switches——"

"Is this a true story?" interrupted the Cambridge man.

"Every word of it; I am telling you precisely what happened. We laid on what we thought the Delaware code would give an idiot who shot at a motion made by a man; then we made him dress himself, bound his hands behind him, tied his gun on his back and told him to get. And he got."

"He also got what he deserved," observed the Secretary, "and is the first fool shooter I ever heard of who did."

"There would be others," said the man from Haverhill, "if Maine would borrow the Delaware whipping post and set it up on some convenient and central carry where the birch flourishes. Then these shooting at a noise or a motion idiots could be 'whipt into their senses,' as the Earl of Strafford said of Hampden."

The Cape man was right; a wise father will not take his son into the Maine woods in the hunting season. In fact, the prudent man will not betake himself there. The risk is too great. If the fool shooters multiply in some parts of the Maine woods for a few years more at the rate of the few past seasons, it will be impossible for a sane person to go there and avoid the charge of intending suicide.

The Maine Legislature has at length been moved to take long-needed action against the careless shooter. Chapter 263 of the Laws of 1901 provides that "Whoever, while on a hunting trip or in the pursuit of wild game or game birds, negligently or carelessly shoots and wounds or kills any human being, shall be punished by imprisonment not exceeding ten years, or by fine not exceeding one thousand dollars."

This law should be posted at every railway station and boat landing and tacked up on every carry and displayed in every camp in the hunting region. It should be so impressed upon the mind of every shooter that the thought of it may be with him constantly to restrain his hand from the "careless" or "accidental" shooting which is now an ever-present menace to human life.

SNAP SHOTS.

Senator Malby's bill to extend the term during which deer hounding shall be forbidden in the Adirondacks has passed the Senate and gone to the Assembly. There it is encountering opposition by certain interests in the North Woods. And our old friend appears once more upon the scene, the genius who argues that hounding really tends to increase the stock because it makes the deer wild and hard to get. If this were not so utterly foolish on the face of it, abundant evidence of the exact contrary, namely, that the deer increase immediately the hounds are barred, would be afforded by conditions prevailing in the Adirondacks, where the great abundance of deer has in part resulted from the operation of the law forbidding the use of hounds. Contributing also to this increased stock is the admirable law which forbids shipping venison from the woods except that an owner may bring out one carcass. The anti-hounding law has another year to run: it will not expire until August of next year. It should not expire then. Of deer hounding in the Adirondacks we should be permitted to say, as was written in one of the death notices in a Washington paper the other day—

My darling daughter has gone away,
She has gone for good and gone to stay.

The new Indiana game law forbids the use of field dogs for hunting. The law reads: "Whoever hunts with dog or dogs, or whoever hunts or shoots with any kind of firearms upon any inclosed land without first securing the written consent of the owner or tenant thereof, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined not less than ten nor more than twenty-five dollars."

The Sportsman Tourist.

Lost.

WERE you ever lost in the woods?

By this question I do not mean were you ever lost in some ten-acre woods lot back of a village farm.

What I do mean is this: Let us suppose that on some beautiful morning you set out from camp or settlement into the vast forest, in which you could roam for days and days without coming in contact with any civilization, when suddenly the sun becomes obscured, or in the excitement of the hunt you lose your reckoning and simply will not believe your compass. Then to my mind unless you have the homing instinct of the pigeon you are indeed lost.

As a hunter and scaler in the Maine woods for twenty-five years, I have been asked the question many, many times, "Were you ever lost?" But on account of never having been bewildered to this extent I have not been able to give a very satisfactory answer to those seeking a story. But my ability to reach camp at night, be the day rainy or cloudy, has always been perfectly satisfactory to myself.

When I was a young boy, however, there was one exception which is the excuse for the story; but to this day I have never conclusively made up my mind whether it was my companion or myself who was the lost one.

The wild lands of the State of Maine are laid out into townships. All these townships originally were six miles square, and the greater part of them remain to this day as they were originally located. The limits of these townships are defined by spots or blazes on the trees from 5 to 6 feet from the ground. A succession of spots constitutes a line, and is called either the north, east, south or west line of the town as the case may be.

Beginning at the eastern limit of the State between Maine and New Brunswick, and running north and south, is a series of lines or spotted trees just six miles apart and running parallel with each other. These lines of spotted trees define what are known as ranges.

Intersecting these lines at right angles, and also just six miles apart, is another series of parallel lines; thus by the intersection of these parallel lines or spotted trees we have townships laid out just six miles square and containing each thirty-six square miles.

The corners of each town are plainly marked by a cedar post about 6 feet long, hewed square like an ordinary piece of timber, marked with a gouge or marking chisel, indicating the number of the township, as well as the range in which it is, and driven well into the ground; so that instead of a name for every six miles of space in our wild lands we have Township 7, Range 9; or Township 3, Range 4, according to location.

It often happens that these range lines become very obscure, owing to age and the bark of the tree lipping or growing over the spots. This condition sometimes makes respotting necessary, and worldly wise is the timberland owner who not only keeps his lines plain and well defined but also has a trusty man go over the lines once or twice ever year to see that no one has trespassed.

The lumberman or operator who takes out a permit on one town often gets across the line on an adjoining town. This is called a trespass, and is either willful owing to a superior chance for getting fine lumber and a plentiful supply of it or unintentional owing to obscure lines. Be the case willful or not, if discovered, competent men are sent in after the snow is gone, who count the stumps, measure the distance from the stump to the top of the tree which is left lying on the ground where it fell when the log was hauled away, take the diameter of the top, and the scale rule will give the board measure of the log which has been taken. In this way they ascertain the scale of the trespass.

It was on just such an errand as this that Sylvester, the scaler, and I went many years ago. Poor lines and a willingness to take advantage of the fine timber just across the limit and a hope that because the region was so remote they would never be found out, caused the operators to "jump the line."

I was a young boy then, and my woods experience was very limited. My companion was at that time in the prime of life and was considered one of the best explorers and general all round woodsmen in the State of Miane. But unfortunately he was very deaf

Driving from Bangor to the town of Carrol, we here left our team. In order to reach the trespass which had been described to us by the explorer who had found it we were obliged to cross a part of the town of Carrol and then cross the dreaded Baskahegan Bog. This Baskahegan Bog was almost limitless in extent and was very treacherous. As we walked over it the bog water often reached our ankles. Hackmatack trees covered the bog, all apparently of the same height and shape. One locality looked exactly like every other on that bog. As I was young and not particularly strong my heavy pack, each moment made heavier by my increasing weakness and the fast-falling rain, caused me often to stop for rest, but I had succeeded so far in keeping my companion in sight, although his strong, vigorous strides set me a pace that was fast telling on me; but not a complaint did I make.

At last, thoroughly tired out, I lay down to get a drink at a little bog brook. I must have stayed there longer than I realized, for on getting up I could see nothing of Sylvester. I immediately began to halloa, but remembering that Sylvester was as deaf as a post I decided not to waste my breath in that manner. "I can't follow him on this trackless bog in the fog and rain. He is much more capable of finding me," I said to myself, and seating myself by the brook I patiently awaited results.

Now I had in my pack, besides the greater part of the food, Sylvester's tobacco—and what a luxury this was to him no one knew better than I; so I made up my mind that, taking everything into consideration, my best place to put in the night was right there by that little brook, and trust to luck that he would look me up the next day.

In the drizzling rain I took my supper of hardtack, a slice of raw pork and bog water—a fire was out of the question.

To say that that night, alone, in the rain, on that dreary bog, without a shelter of any kind, without companionship of even a dog or a star, was pleasant would hardly be correct; but my condition was infinitely better than that of Sylvester, for he had no food. To try and describe the long sleepless night would be impossible. During the seemingly endless hours I tramped back and forth in the darkness by the side of the brook in order to keep my blood circulating, and when at last daylight appeared I eagerly watched and listened for the approach of my companion.

Starting at break of day, Sylvester had retraced his route step by step hallooing as he came, and when at last we caught sight of each other great was the rejoicing.

"Had you attempted to follow me," said he, "I doubt if I ever could have found you. It was almost dark before I discovered that you were not following me. Something caused me to glance behind, when to my surprise you were nowhere in sight. No use for me to do anything till daylight. Then I remembered that the last time I saw you was at this little brook, and my only hope was that you would be woodsman enough to stay there and not attempt to follow me. Please can I have something to eat? Is my tobacco dry? But it's all right, son; I have put in a worse night than you."

Resuming our journey we crossed the bog without further adventure, and located the trespass.

Was I really lost?

I certainly have never been able to answer the question to my own satisfaction. Had Sylvester not returned I should have followed the brook down to Baskahegan Lake, followed the outlet of the lake to the river, and so have reached civilization. I planned this all out during the lonely hours of the night. I can truthfully say that I was neither excited, turned about nor hungry, and as long as my food lasted I was all right; but to stand alone on that bog in the rain, without fire or shelter, another night—never!

A few years later I was destined to meet a man in a very wild and remote part of the State who neither then nor since has ever had a shadow of doubt as to whether he was lost or not.

My Story.

It was late in the summer of '79 that I was at my camp on the beautiful Ebeeme Lake, entirely alone, making preparations for my fall hunting and trapping, meanwhile awaiting the arrival of my hunting companion, Joseph Rollins. I spent the great part of my time in filing the teeth of the massive bear traps, looking for signs of bear and occasionally catching a string of brook trout.

On the last day of August I decided to follow Babel Brook away upon old Ebeeme Mountain, and besides catching some brook trout, look for sign of bear. Putting a luncheon in my pocket and a notice on the door of the camp, written on birch bark with a small piece of charred wood from the fireplace, notifying any hunter or woodsman who happened that way that I would be back at night, and launching my canoe, I paddled up the lake, singing as I went.

How little did I realize what an experience was to come to me that day, and how different would be the conditions of my return!

Arriving at the outlet of the brook, and drawing the canoe out of the water, I slung my carbine on my shoulder and cut a small alder pole for fishing. I remember distinctly looking back over the pond as I adjusted my fishing line, and thought what a glorious day it was, and how beautiful to be alone with nature. There was a man within five miles of me who did not think as I did that day. Fishing the brook, pool after pool, I soon caught my string of fish.

Hanging them to a low bow of a tree, as I expected to return that way, I struck off up the mountain, looking about for a chance to set a bear trap later.

About four miles from the canoe, and in one of the most inaccessible parts of the mountain, I heard a faint halloo. As the halloo of the bear is almost identical with the halloo of man my only thought was, "Perhaps, old fellow, later on I'll have your pelt."

"Hall-o-a!"

"Holler away, old fellow."

"Hall-o-a!" again comes floating to me through the clear air.

"Can that call be that of a bear, so very human in its sound? I almost fear not; and if by chance any one should be lost in this wild place I pity him!"

Unslinging my carbine, I shoot.

"Halloa!—Halloa!—Halloa!"

No bear would call after hearing a rifle; so advancing and shooting occasionally after traveling a long distance I catch sight of a white object away up on the mountain. Behind a tree I remain perfectly silent and watch. Can that man possibly be sane? Coatless, hatless, vestless, he looked, as his eyes bulged out of his head, like a raving maniac, and so weak that he could walk with difficulty. On my approaching him he broke down completely and cried like a child.

His Story.

"Stopping at the Katahdin Iron Works for a few days to recuperate my tired body and mind, and hearing that you were in this locality, I engaged a man and team to take me to the Prairie, a settlement seven miles this side of the iron works. Here my man and team left me and I started to try to find your camp, much to the regret and notwithstanding the remonstrance of the two men who lived near by.

"'You will never in this world find that camp—never! There is no road leading to it—no trail. He gets there by canoe as well as by land. It is a blind trip for a stranger, and you better let one of us guide you.'

"Thinking they were after the money more than anything else, and in order to obtain the job were perhaps trying to scare me a bit, I decided that I was competent to find you myself. So bidding the men good-by and getting the general course to your camp, I started. Traveling for a while on an open ridge on horseback, as they had directed, I looked off to the left and saw a body of water, which I took to be Ebeeme thoroughfare, so leaving the ridge I struck out for it. No sooner had I got down into this low, boggy land than I was completely turned around. My reasoning faculties left me. I shouted. I hallooed. All to no purpose. I was terrified. Starting on with no fixed point in view I would travel on a while and then stop and halloo. To add to the horror of the situation I had only a small luncheon; no gun, no axe.

"I traveled on in this manner till dark. The night was not very cold, but oh! the lonesomeness of it! Alone, and with the fear of so remaining as long as my strength might hold out, and then starving to death. The morning found me weaker from exposure, loss of sleep and lack of nourishing food, but I felt as though I must keep on. About an hour ago I reached the climax, and in sheer desperation I threw away my coat, my vest, my hat and ran I knew not whither, hallooing as I ran."

For a long time I could not convince him that I knew the way out myself. Traveling short distances at a time and resting often we finally reached the canoe. Placing him carefully in the bottom of the canoe, I paddled out into the lake, well pleased with my day's work, if my string of fish was left hanging on the tree.

Before I got to camp my man was sound asleep—completely worn out. For two days he did not leave his bunk, and in two weeks he had hardly regained his equilibrium. Night after night he would moan and halloo in his dreams. During the day he was my shadow, and when at last he was well enough to return home he begged me to come out of the woods, for fear that some time I might meet with an experience similar to his own.

He has never been in the woods since then.

JOSEPH A. THOMPSON.

BANGOR, Me.

A Good Friday.

WHO does not like occasionally to leave the turmoil of the town, go to the woods and there lean up against a great tree and listen?

> Shuddering drums, trumpets hailing,
> Woodwinds moaning, strings weird wailing,
> Harps and viols rising, failing—
> All these are heard and more than these
> When wild winds wake with blast and breeze
> The music of the forest trees.

Gone were the merrymakers; hushed the music. Under the spreading elms the wide verandas of the great hotels echoed no longer to the tread of throngs on pleasure bent. The rustle and color which made gay the pavements during the floral fête had flitted to the treetops where the autumn cradle song was making drowsy the "Queen of the Spas."

The Colonel, sated with the social whirl, glanced from his paper to his wife sipping her coffee and remarked, "What's this dull town to me? Quail are ripe in Michigan; we better be moving."

And so it came about that one day when Jack and the Doctor had gone after a setter, the like of which never was on land or sea, the ladies declared their intention to drive out with us and witness the antics of men and dogs hunting quail. With guns and a brace of setters under the seats we were soon speeding northward, the crisp air and bright sunshine being pleasantly exhilarating. What is there in the ride to the shooting grounds which makes it an unmixed pleasure to sportsmen? Probably chief among conspiring elements may be mentioned good-fellowship, then pleasant anticipations and the imagination which endows every bushy pasture and wide stubble with a wealth of feathered possibilities.

Looking across an old meadow with here and there a clump of bushes. Lady J. remarked, "That looks like a good place," and in less time than it takes to tell it, Cap and Boy were beating up wind, the guns following leisurely, and the ladies keeping an eye on us from the carriage. Cap soon winded a bevy and roaded to a point. A glimpse of rushing wings and two sharp reports were productive of noise, nothing more. Fortunately we were not visible from the carriage; they did not come to see how not to do it. Fortunately, also, one or two of the bevy dropped in a brush pile, in full view of the ladies, and they so advised us. The dogs were worked up to the place, and did their part handsomely, amid many exclamations of appreciation. At the flush the Colonel with deliberate promptness pressed the trigger and the quail pitched upward and then onward and downward to the tall grass, whence Boy retrieved and delivered him to his master's hand. Quoth Lady B: "That was worth coming out to see; now I know how it is done."

About five miles from Alma is a place pleasant to the eye of a sportsman, about a hundred acres of lowland through which a little stream winds its sluggish way. Stretching back from its western bank, majestic swamp elms rise with occasional patches of willow between. Its east side is deeply fringed with alders having a deeper backing of deciduous trees merging into the cool, green gloom of hemlock and tamarack.

> If such you find, go, mark it well,
> For there ruffed grouse and woodcock dwell;
> There may be heard the plaintive pipe
> Of quail, and scaipe of Wilson's snipe.

Just as we emerged from the woods into the alders a grouse flushed unexpectedly, and at the crack of the gun another went away, only to be cut down instanter. Was the first one hit? After picking up the second, shaking out the loose feathers and admiring that blending of gray and brown which is the despair of artists—there was Cap staunchly standing, and before him slowly crossing an opening in the bushes was a wing-tipped grouse, head erect and tail spread, as proud as a peacock. O for a Wizard! There are times when "the lens is better than the gun."

Dropping the bird in the hand I rushed for the bird in the bush, and the next instant stretched my length over a trailing vine. Truly, "Evil communications corrupt good manners," for Cap went by my prostrate form like a flash, and caught what I could not. The value of a dog depends upon his master, and severe correction

for chasing would come with bad grace after such an example. As I took the struggling bird from under his paws and confronted the necessity of taking a life in cold blood, shadows of sadness followed twinges of regret. But when one considers freedom from cares of business and professional life, the refreshment of body and mind incident to field sports, and the privilege of laying a trophy at the ladies' feet, of leaving a plump brace at the door of an invalid friend, the accusing voice is hushed and one is easily persuaded that "the end justifies the means."

From a short distance the Colonel called out, "What are you shooting at?"

"Grouse."

"What luck?"

"Great luck; a brace of grouse."

And then, "Mark! mark!" Bang!

"What was it?"

"Woodcock."

"Get him?"

"Sure, and a groundkeeper, too."

The woodcock is not the least among the prizes offered by woodlands to sportsmen. What mystery envelops his career! Solitude is his joy and gloom his chosen habitation. Swift as a ghost he wings the moonlit space on long vernal and autumnal flights—here to-day; to-morrow, where? What music in the whistle of his wings! What light in those Madonna eyes, deep, dark and fathomless!

The Colonel meets the rhapsody with, "Yes, in cover or under cover, he's all right; and now if we could only pick up a snipe what a varied bag we should have." Joining the carriage a little later the ladies held the dogs in leash, while we tried to stalk a wisp of ring-necked plover, which settled in an open field near by. They were wary and took wing, their cries growing faint and fainter, but we waited motionless, confident of their return. Back they came and wheeled just near enough to draw an ineffectual volley, and then away on swifter wing to pastures new. Plover are grub, not game, anyway. Who cares for plover!

Just as we came to the rushy intersection of two open ditches, up jumped the fellow we were looking for, and with a 'scaipe, 'scaipe, was away on erratic wing. The first shot served only to change his flight to due west, but at the second, he wilted in mid air, done to death at 60 yards by a featherweight Daly. A fine shot that, and rewarded by a salvo of applause from the carriage.

Beating across the field a few quail were added to the bag, and then some calves gave chase to the dogs, but they could easily beat three of a kine. The shadows lengthened; top coats were donned, and bowling homeward, Lady J. declared, "I have seen it done; I can do it. And when Jack gets back I will do it." And she did.

And when the contents of the bag, from the lordly grouse to the slender "shad-spirit," were laid in state on the center-table that evening, we were all of one mind: For variety of wings and comfort of sportsmen and dogs a day with the upland game birds of Michigan is easily first.

ALMA.

Natural History.

A Herald of Spring.

BY J. HOBART EGBERT, A.M., M.D., PH.D., WITH ILLUSTRATIONS BY FREDERIC KNAB.

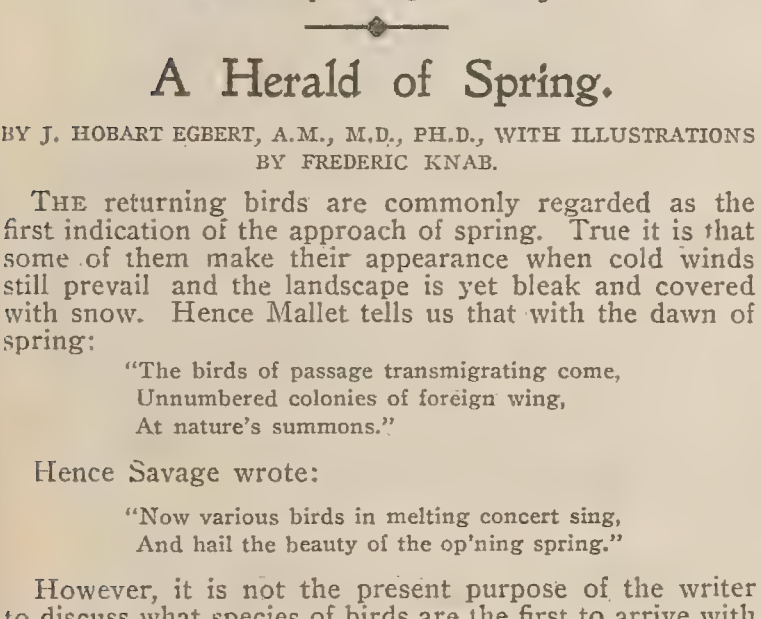
THE returning birds are commonly regarded as the first indication of the approach of spring. True it is that some of them make their appearance when cold winds still prevail and the landscape is yet bleak and covered with snow. Hence Mallet tells us that with the dawn of spring:

"The birds of passage transmigrating come,
Unnumbered colonies of foreign wing,
At nature's summons."

Hence Savage wrote:

"Now various birds in melting concert sing,
And hail the beauty of the op'ning spring."

However, it is not the present purpose of the writer to discuss what species of birds are the first to arrive with us, nor, in fact, to treat of our feathered friends at all. The creature we are about to describe shows itself before

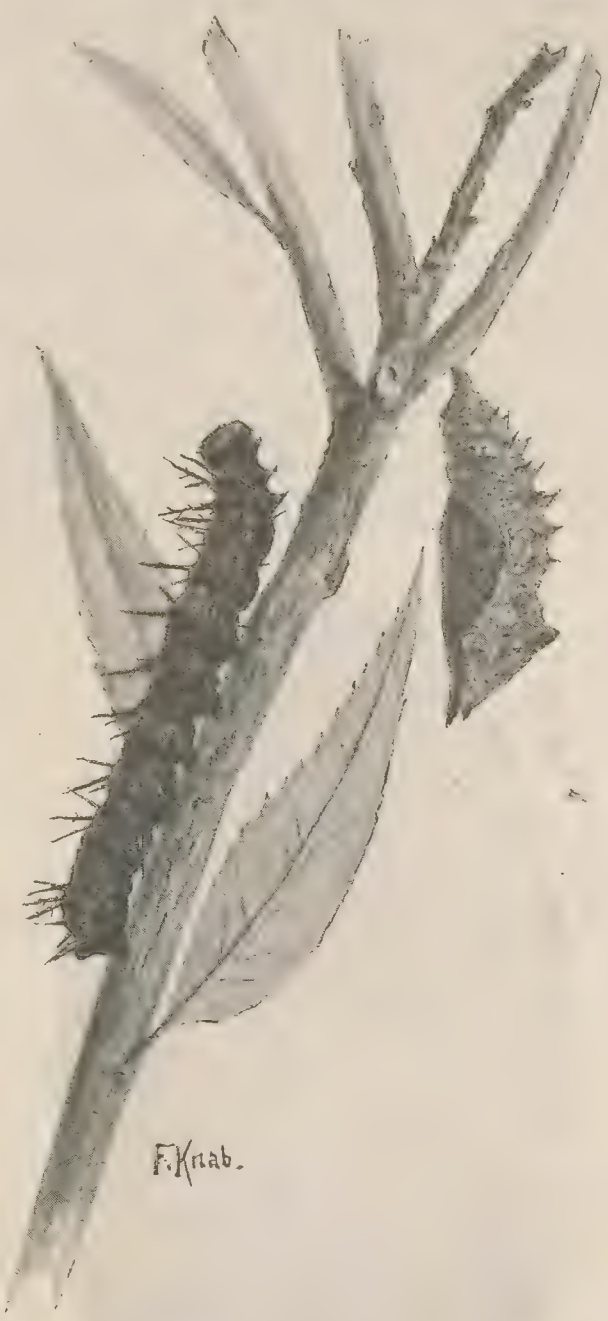


VANESSA ANTIOPA.

even the very earliest avian arrival from the South, and many will be surprised to learn that it is a frail insect.

Even in our cold New England, winter is brightened and cheered by occasional days of warming sunshine, especially as the days begin to lengthen. On such days the outdoor world irresistibly attracts the lover of nature and he sallies forth to drink in the beauties of air, of sky and of landscape, and to look for the first signs of returning spring. After the bitter cold and raging wind of the storm just past, the peace and quiet are indeed most enjoyable. As yet there is little indication of the awakening of animal life from its winter's sleep, or evidence of new arrivals from warmer climes. A flock of the ever busy little chickadees flit about among the leafless bushes, a woodpecker darts across our path and perhaps a squirrel is seen, lured out of his retreat by the warming sunshine. At length we come to an open glade in the woods; sheltered, and the temperature noticably warmer than elsewhere. Suddenly, almost from under our feet, a butterfly starts up and darts away into the air. A butterfly? In the dead of winter? Yes, and by no means the only one for, as he mounts above the treetops, he is joined by another—either mate or rival—and the two whirl about in rapid, constantly ascending flight till at last they separate, and each darts back to its favorite resort.

The butterfly in question is a common species with us. Its scientific name is *Vanessa antiopa*, and popularly it is known as the "mourning cloak." In England, where



VANESSA ANTIOPA—CATERPILLAR AND CHRYSALIS.

it is extremely rare, it is called "Camberwell beauty," and specimens which have actually been captured there are valued very highly by collectors. Unlike most species of the great insect order Lepidoptera, to which it belongs, it is distributed very widely and is not only found over the greater part of North America but also in Europe and many parts of Asia. It is one of our handsomest butterflies, and measures about three inches across the extended wings, the outline of which is notched and irregular. Above, the ground color of the wings is a rich purplish-brown, shading into black toward the body, and on the outer edge is a broad border of pale yellow. A row of blue spots on the purplish ground follows the border around. Beneath the colors are dark gray and brown with irregular black lines and mottlings. When at rest, with the wings closed, it closely resembles a chip of bark, and is then very difficult to detect, especially when perched on the trunk of a tree, as is often the case. However, the specimens found in winter and early spring have quite a different appearance, having suffered considerably from exposure to intense cold and stormy weather. The ground color becomes a faded reddish-brown, the border a dirty white, and the spots fade to palest blue. The wings are more or less tattered and worn, and no wonder, for he has lived all through the long winter in such poor shelter as he could find in some crevice or under a stone, and must have been frozen quite solid during the severe cold.

The Antiopa is one of the few butterflies which hibernate as fully developed insects. The others which are known to do so are close allies, such as *Vanessa J. album, Vanessa milberti* and the species of *Pyrameis* and *Grapta*. However, these others are much more rarely met with than the Antiopa, which one can count on finding with certainty during the first calm days of approaching spring. They prefer wooded tracts, and are generally seated on some damp spot sipping the moisture or on the side of a tree trunk, from which sap exudes. Like many of their tribe they seem to be much attached to a chosen spot, and often when pursued for some considerable distance will again return to it. This habit is, of course, taken advantage of by the experienced collectors of Lepidoptera.

These butterflies evidently enjoy the balmy days of returning spring, but their pleasure is short-lived, for by the first of May the most of them have disappeared, and only occasionally a female can be seen feebly flittering about in search of a proper place to deposit her eggs. These eggs, about two hundred in number, are laid on a twig of the caterpillar's food-plant, usually the willow or elm, but also the poplar, birch, and some others. The caterpillars are gregarious and voracious feeders. Branches and even small trees may often be seen completely defoliated by them, and the black masses of caterpillars are then very conspicuous. When full grown these caterpillars are nearly two inches long and black, with a row of brick-red spots along the back. All except the first of its twelve body-rings are armed with long stout spines, which are beset with small spikes, and arranged over the body in seven longitudinal rows. The head is bifid and beset with many short spikes. Through the black ground-color of the caterpillar's body are irregularly scattered very small white spots, from which rise fine long hairs. In persons with delicate skin, contact with the spines is said to occasion itching, as from nettles, but personally we have never suffered discomfort from handling the larvæ.

When the caterpillars have attained their full growth they become restless and wander about in search of a suitable place to assume the pupa state. As the chrysalis hangs downward, suspended by the tail only, the under surface of a projecting branch or similar situation is preferred, in order that it may swing clear. In color, the chrysalis varies in different individuals from yellow-brown to gray, is sometimes almost black, and is more or less mottled, so that it assimilates well with its surroundings and is not easily detected. Such protection is quite necessary, since in its horny case it is quite helpless and incapable of any motion except a wriggle by means of the abdominal segments. The head of the chrysalis—if we may speak of such, for the creature is now merged into one continuous whole without specialized external organs—ends in a couple of pointed projections, while on the sides there are other elevations, and along the back there is a double row of spines. On the flat and smooth side of the chrysalis, which corresponds with the under surface of the future butterfly, the legs, proboscis, antennæ and wings—all folded flat against the body—can already be traced. When reversed and viewed from the side, a superficial resemblance to a human profile can be discerned, and this has, in olden times, given rise to some curious notions and superstitions, which may be found scattered through various ancient learned works.

In Massachusetts the Antiopa, being double-brooded, may be seen on the wing nearly all through the warmer weather. The caterpillars of the first brood reach maturity by the middle of June, and early in July the butterflies appear. These give rise to a second brood from which the imagos emerge in September, and it is these that sleep through the winter and fly forth at the first sign of spring.

But these butterflies are by no means the only insects of early spring. A multitude of different species hibernate and come forth from their hiding places as soon as the sun's warming influence is felt. Indeed, it seems that a number of species, like our Antiopa, though matured in the fall do not until spring provide for the increase of their kind.

A number of peculiar species of insects find in the first days of early spring the conditions suitable to complete their development, and can be found at no other time. Among these may be mentioned *Boreus*, the snow insect; certain *Podurids*, or spring-tails, and some *Neuroptera*, as well as many species of *Diptera*, to which latter order belong the swarms of midgets which many have doubtless seen dancing in the sunshine on a quiet winter's day. Among the Lepidoptera, a considerable number of species, belonging to many different families, appear very early in the season. Even in Massachusetts newly-emerged moths may be found as early as January and February. The adults of the well-known destructive canker worm (*Anisopteryx vernata*) begin to leave the ground as soon as the snow melts. The beautiful little *Brephos infans* is found only in the early spring when the ground is still partly covered with snow. Still, on account of its size, its beauty, and its habits, the Antiopa remains the most notable of our insects of early spring.

HOLYOKE, MASS.

"The Woodpeckers."

AMONG the books on nature study, about which it is hard to say whether they are more useful or more attractive, Mrs. Fannie Hardy Eckstorm's "The Woodpeckers," published by Houghton, Mifflin & Co., easily stands in the first rank. It is devoted to a consideration of the North American members of the family, and though only five species are carefully considered as to their habits, the volume affords the means of identifying each one of the many species and subspecies scattered over the continent. Moreover, those chosen for special study—the downy, yellow-bellied sapsucker, California woodpecker, the red-head and the flicker—are so widely distributed, that it is quite certain that any one wishing to observe these interesting birds can find two or three at least in the locality where his observations will be made.

The woodpeckers are among the easiest of birds to recognize, and from ancient times have been highly regarded. They take their name from Virgil's character Picus, who was skilled in augury, and the birds themselves were used in divination. Mrs. Eckstorm's foreword seems to carry out his idea, and she suggests a great variety of questions to be asked about the birds—as indeed there are about many others—and in the happily written chapters of the book she answers many of them.

Some of the things which she explains are how to know a woodpecker, how the woodpecker earns his living, courts his mate and makes his house, and also how a flicker feeds her young. We are told much about the friendly downy, the wicked sapsucker and the industrious carpenter of California, as well as of the provident—but sometimes criminal—redhead woodpecker found as far West as the Rocky Mountains. Some of the extraordinary changes of habit acquired by the woodpecker through his association with civilized man are described, and then Mrs. Eckstorm passes to the woodpecker's tools—his bill, his foot, his tail and his tongue. The last two chapters treat of how each woodpecker is fitted for his own kind of life and the argument from design. This is followed by an Appendix, containing a Key to the Woodpeckers of North America and Descriptions of Them.

Although the woodpeckers are so generally useful, they are, like most other people, not without some faults, and about some of these we learn not only in reading the chapter on the sapsucker, but also in Mrs. Eckstorm's chapter on acquired habits.

Concerning the redhead, she says: "There is positive proof that sometimes the redhead has been guilty of crimes which would give a man a full column in the newspapers with staring headlines. If such deeds were not a

thousand times less common among woodpeckers than they are among men, the redhead would be declared an outlaw. He has been proved to be a hen roost robber, a murderer and a cannibal. In Florida he has sucked hen's eggs. In Iowa he has been seen to kill a duckling. There is a record in Ohio that he pecked holes in the walls of the eaves to swallows' nests and stole all the eggs, and that he was finally killed in the act of robbing a setting hen's nest. Within the space of fifteen years, from Montana, Georgia, Colorado, New York and Ontario, in addition to the records mentioned already from Florida, Ohio and Iowa, come accounts of his stealing bird eggs and murdering and eating other birds. The evidence is indisputable.

"It is charity to suppose that this is the work of natural criminals, or of degenerate, underwitted or demented woodpeckers. Why should there not be such individuals among birds? One point is certain; so notable a habit could not long escape detection, since it is a barnyard crime. He who robs hens' nests gets caught—if he is a bird. Either these occurrences are very rare, not seen because of their extreme rarity, or they indicate a new custom just coming in. And the same is true of the habit of hoarding food. It is rare, or it is new.

"The frequency of such occurrences can be determined only by observation, but the time of their origin might be approximated in another way. If we could fix the date when the bird could not have done what he is now doing for simple lack of opportunity, we might say that the habit has been acquired since a certain date—as we said of the English sparrow eating maize, of the chimney swift nesting in chimneys, and the cliff swallow building under the eaves. But we have no such help in the case of the redhead, which has never been without opportunities to get birds' eggs and to kill other birds.

"But there is a parallel case in another species, where the date of an acquired habit can be proved. In Florida the redbellied woodpecker has earned the name Orange Borer and Orange Sapsucker, because he eats oranges. It is true that he is not charged with doing damage, because he attacks only the overripe and unmarketable fruit; it is known that the habit is not general yet, for even where the birds are abundant only a single bird or a pair will be found eating oranges, and always the same pair, proving that it is a habit not yet learned by all of the species. Close observers declare, too, that it is but a few years since the bird took up the habit; and finally we know that this must be the case, for, though the wild orange was introduced by the Spaniards, the sweet fruit was not extensively cultivated until recently. Here is a habit which undoubtedly has been acquired within twenty years or so, which will in all probability increase until, instead of being the exception, it is the rule.

"Why may not the redhead's occasional cannibalism, unless this is mere individual degeneracy, and his more common custom of hoarding, be habits which he is acquiring? Why, indeed, may not the California woodpecker's distinguishing trait be a habit which began like these among a few birds here and there, wiser or more progressive than the rest, and which in time became general and established? Why may not the two observed instances of the Lewis' woodpecker be examples of a similar habit just beginning? The very differences in their methods point to that explanation. The Lewis' woodpecker that had seen the Carpenter's work tried to imitate him; the one that lived outside his range adopted a way of his own, unnoticed before among woodpeckers, and shelled and quartered his nuts before he stored them."

The volume is charmingly illustrated by five full-page colored plates drawn by Louis Agassiz Fuertes, as lifelike and as true to nature as his drawings always are, and by many cuts in the text by Mr. Jno. L. Ridgeway. The colored plates appear to be made by the so-called three-color process, and the colors are not quite as successful as one might wish.

Mrs. Eckstorm requires no introduction to readers of FOREST AND STREAM, for, as Fannie Hardy, before her marriage, she contributed to these columns many delightful letters of life and travel in the Maine woods. The daughter of Manly Hardy, and brought up under the tuition of that keen woodsman and ardent naturalist, her early training was such as to especially fit her for the work, to which, it may be hoped, she has now definitely set her hand—the writing of nature books.

The Bird Book.

"THE BIRD BOOK," by Mrs. Fannie Hardy Eckstorm, has just been issued by Messrs. D. C. Heath & Co. as one of their supplementary readers. It appears at a happy time, just before the coming of the birds, and should be a most useful introduction to field study, which it is especially designed to encourage. The ends which Mrs. Eckstorm has held in view in arranging the books are two. She has striven to adapt its study to the school year, and so to present it that when the pupil begins field work he shall be able to do this with some general idea of what is worth observing.

The volume is planned quite differently from most of the bird books with which of late years we have become so familiar. It is divided into four parts, of which Part I. treats of "Water Birds in Their Homes," Part II. of "Structure and Comparison," Part III. of "Problems of Bird Life," and Part IV. of "Some Common Land Birds." Of these the first and the fourth have to do with living birds, their surroundings and their modes of life, while Parts II. and III. deal with questions of structure and with certain broader principles of zoology.

The method of the book is a happy one. The reader is introduced first to the bird living its life, and is told how the grebe, the loon, the gull, the petrel and many other birds pass their days and nights; how they gather their food, rear their young and avoid their enemies. And these accounts take us to many different lands—New England and Alaska, Florida and Labrador, California and the Great Plains.

Having become interested in what these birds do and so in the birds themselves, we are naturally interested in their characteristics, and wish to find out how one differs from another, but first of all how birds differ from all other animals. Following this come the questions why are all these things as they are, on what is classification in birds founded, how do birds receive their Latin names, together with the answer to the three great questions—which the birds care far more about than they do about the names which men give them—the problems of food, of safety and of reproduction. Following these come brief but pregnant chapters on protection by color, distribution and migration.

The fourth part treats of certain habits of many of the land birds, but does not profess to give life histories nearly so full as those given in Part I. Finally, in the appendices are very short divisions on the zoogeographical divisions of the world, migration, hints on observing birds and on identifying living birds that are strange to the observer. Then the book closes with a list of useful bird books.

It is quite impossible in the limits of such a notice to do justice to this admirable volume. From title page to finis it is packed full of information, given in short chapters and in such extremely attractive fashion that it cannot fail to interest any one who may read it. Much of the matter also is original, much of it novel, and all of it so happily put—often from an entirely new and unexpected standpoint—that the volume is certain to be very effective and to do a great deal of good. It may truly be said that it is likely to be as interesting to the practical ornithologist as to the boy or girl who, knowing nothing about birds, would like to know about them.

Our older readers must still have a warm personal interest in the writer who, as Fannie Hardy, a few years ago contributed to the FOREST AND STREAM a notable series of papers on the Maine woods. Her vivacious letters descriptive of canoeing excursions with her father, Manly Hardy, were characterized by a rare knowledge of woodcraft; and when she wrote of the vexed and perplexing problems of Maine game protection, there was shown throughout such a sympathetic insight into actual conditions as to command respect. The man of the Maine

MRS. FANNIE HARDY ECKSTORM.

woods—the hunter, trapper, guide, who was confronted by a fast-coming changed order of things, who found it hard to give up the old ways and to face the new, who held stoutly to what he believed were his natural and inalienable rights, who was misunderstood or perhaps willfully slandered by the outside world—this man who could not speak for himself, found a friend and an advocate and champion of Fannie Hardy. No one may know the real history of those times who shall not have read her letters then published.

It is because of this interest in one so well known to FOREST AND STREAM readers that we have asked permission to print the following personal notes written by Mrs. Eckstorm at the request of her publishers, Messrs. Houghton, Mifflin & Co.

I was born in Maine some thirty-five years ago, and remained here on intimate terms with all outdoors until I went to school and college. From Smith College I carried away with my degree some of the rewards of hard work and some of the satisfaction of profitable leisure. Among the latter are to be numbered long and usually solitary walks in the woods and over the mountains; the organizing of the Smith College Audubon Society with Miss Florence Merriam, as recently related by her in "Bird Lore," when John Burroughs came to help us, and the rummaging of all of the old historical collections and old French narrations that were accessible.

Returning home, I acted two years as superintendent of schools, and then went into a publishing house to see what it was like. And in the course of time I went to the Pacific coast and was married.

As a clergyman's wife in the far West and later in the East again, I had little leisure for any of my old avocations, though my husband enjoyed them all and encouraged the preparation of the books about to be issued. He was an excellent naturalist, and our few outings were spent in woods and fields, trout fishing and watching the birds. Since his death, I have once more come back to my old haunts in Maine.

Yet it is the first period of my life that accounts for my tastes. As I recall it, it seems to me that few could have enjoyed a childhood so nearly ideal. It was all fairy land and romance, out of school hours. Most of the people I knew had met adventures or done large things—sea captains, hunters, trappers, missionaries, travelers to all lands. Each one told his story and went his way. The books on the shelves were books of adventure—Capt. Cook, Moffat, Livingstone, Sir Samuel Baker, Kane, Hall, and every other notable Northern voyage and African exploration as it appeared. And before I could read, Virgil was a nursery tale and Homer a fairy story. All the time a world as wild as theirs lay just outside, and men built on these large epic lines—trappers, moose hunters, deer stalkers, scalers, lumbermen, river drivers, crack watermen—were coming and going and breaking bread with us. When I teased for a story, I got, it might be, the "Trojan Horse," or Ulysses bending his great bow, or Thoreau's guide, Joe Aitteon, going to his own death in the rush and welter of Island Falls to save his boat's crew. Everything was of heroic size. King Arthur and Jack Mann, Robin Hood and Jock Darling were names of about equal weight and vividness, with the odds somewhat in favor of the one who could walk in to dinner and speak for himself as an abler man than the one who, for all his valiant deeds, had yielded and become a ghost.

It was my father's business that brought such a diversity of woods life to our doors. He and his father before him had dealt in all the products of the woods; had hunted, fished and trapped all over the Maine forests and knew most intimately everything that lived in the woods. With sixty years of such life behind me, it was impossible not to appreciate all the fine points of a bear skin a moose hide, a snowshoe or a canoe. Such knowledge was my inheritance. And I was taught as well the tricks of woodcraft that all hunters use; to know how to tell who caught a lot of fur by the way the skins were stretched and handled; and something of the differences almost inconceivably fine, but which my father could tell with all but magical correctness, the very section of country where a given mink or sable skin was taken.

Then there were the Indians, who came constantly, often a score of them in a day. They told me stories, brought me baskets and little birch bark or carved cedar canoes, and made a pet and plaything of me. I loved them all, without regard to comeliness, though perhaps my favorite was one of a scarred countenance, who explained that "She 'n' I 'n 'nother fellow we b'en fight; she bit it my nose off," meaning thereby that only two had joined battle, and that the nose was still in evidence, though very much damaged. With all the white hunters I was the daughter of the regiment. I levied tribute of spruce gum, and if my doll needed furs some lonely trapper far in the wilderness was sure to remember to save the skins of the weasels that entered his traps for a gift to me.

When I played school it was with fox skins stuffed with hay for my pupils. I remember how their black legs used to hang down and their pointed noses would stick up as they were ranged in line. I was permitted to play with all the skins except the black and silver foxes. Mink, sable with orange throats, otter, fisher, beaver, lynx and bear, I could roll and tumble among them as much as I desired, though the best fun was to slide down a great pile of foxes—a thousand or more in a heap sometimes—as they lay waiting the semi-annual shipment to London. And in all the packing, pressing and finishing of the bales I was permitted to help.

So my earliest associations were chiefly with the mammals. Birds came later. It was not till I was ten years old or so that my father began to collect and study birds. As I was his inseparable companion and adoring follower, it was inevitable that I should do as he did. For many years we worked together, making a representative collection of North American birds, doing most of the taxidermal work ourselves. And continually we were driving, walking or canoeing all through the woods near home and in the deep woods gathering notes of their habits. To grow up with a science under the tutelage of an accomplished naturalist and in surroundings adapted to one's pursuits is a good fortune that comes to few. So I had a childhood rarely happy and complete, nor can I think of anything more likely to gratify that "healthy curiosity" of which you speak than an account of these earlier years.

A Pest of Band-Tailed Pigeons.

SHEBOYGAN FALLS, Wis., March 19.—*Editor Forest and Stream:* I inclose a clipping from the Milwaukee Daily News of an article copied from the San Francisco Bulletin regarding a pest of pigeons:

"Immense flocks of wild pigeons have made their appearance in Santa Barbara county. The birds have never before been known to come down into the valleys. In former years they have always inhabited the mountains. They are so plentiful in the farming districts that they have proved a nuisance, and on many ranches poisoned wheat has been thrown out to them.

"In many sections of the country the birds have entirely destroyed newly planted fields of grain, and in some instances the farmers have been compelled to replant their fields, as the birds come down in large flocks and devour the seed before it can be harrowed into the ground. The birds have furnished great sport for local sportsmen, who are after the pests in large numbers."

I would like to ask if you know anything about the authenticity of this story, and whether they are the same kind of wild pigeons that were so plentiful about this part of the country twenty or twenty-five years ago. Bluish gray in color, some parts pale gray, green reflections on sides of neck, and breast purplish red. Over twenty years ago they were so thick here that at times they would obscure the sun from view when large flocks were flying over, but for many years they have been extinct through the country, as far as I have learned, except an occasional mention in FOREST AND STREAM of a stray few in some remote section.

W. C. THOMAS.

[These California birds are the band-tailed pigeon (*Calumba fascieta*), found from the Rocky Mountains to the Pacific coast. They are not the same bird that was formerly so abundant east of the Mississippi—the passenger pigeon (*Ectopistes migratorius*).]

Experience with Wild Animals.

Editor Forest and Stream:

As the talk concerning wild animals and their nature grows apace, it brings out more reliable information and becomes in turn more intersting. When the stories of our grandfathers' days began to appear again I thought the subject had as well be dropped if a rehash of tradition was to be the entire result.

In those days we had witches and goblins, but they have receded before the glare of the torch of reason, even as the panther that was chasing a man on horseback was abashed by the glare of light through the open door. We all have our traditions which are dear to us because grandmother told them. And what grandmother told "was so, whether it was so or not," but tradition and history have two separate and distinct places in literature. Let us be in earnest in matters of history.

To clear up the fog that has gathered round the subject of animal nature, as well as many others, is a field by no means overworked. It is a ripe subject, and fakism is crowding into it from all sides. Fakism is even more insistent than tradition. The leading magazines of the country are nearly all dabbling in it more or less. Only last night I read a review which stated that some magazine had sent an eminent writer into the wilds to write up the beaver in his native haunts. This had been supplemented by sending an eminent artist to illustrate him. The article, which was to appear in a current number, was expected to be a stunner, and I can readily imagine it will be, if the reader chances to know anything of the subject.

A good many years ago I spent three winters in a country where beaver were fairly plentiful. I learned to know their workings very well. One winter I caught thirty in steel traps. I spent much time prying about their dens and trying to pry into their secrets, but the results were meager. About the only thing I learned was to doubt the assertion that they plastered up their houses with their tail. I do not believe a beaver uses its tail as a trowel other than as the tail drags in the mud as they move about.

In three years I never saw but one beaver alive that had not been trapped, and he would have made a poor subject for illustration, as he lay far back in a dark den under the river bank, or as he shot through the water like a fish. Yet these men are expected to go from the land of the effete East and find out all about beaver in a few days. In my beaver experience they were quite plenty; now they are a rarity. I doubt if any great number of beaver are congregated in any part of the United States.

If the men had gone to some city park where beaver are kept they might have found out a little; in the wilds they can only vivify their imagination. The trouble is that what we don't know is so much more wonderful than what we do, that what we do know is lost in the shuffle. The greater part of what there is to learn of wild animals is how much of what we already know is false and without foundation in fact.

FOREST AND STREAM, with the aid of such correspondents as Wm. Wells, is in a position to advance the cause of truth in the matter. It is an unfought field. Let the good work go on.

The grimace made by some of the sportsmen in swallowing recent game protective laws reminds me of one of Capt. Hurd's favorite yarns: A party went out for a camp hunt, and decided to draw lots to see which should do the cooking. Whoever drew the prize was to officiate until some one found fault, and then the fault finder was to step in and do the work. The first dish at the first meal was soup. The first man to taste it looked blank and said, "well, if that ain't the dashety dashed mess I ever—but, but—er, I like it first rate."

E. P. JAQUES.

ELMO, Kan.

Editor Forest and Stream:

THE efforts FOREST AND STREAM is making, backed by the personal experiences of many practical hunters, to do away with the old yarns of men being wantonly attacked by wild animals should meet with the success it deserves. I think, however, human nature likes to be harrowed by the blood curdling tales of furious combats between men and panthers, wolves, snakes or even eagles and hawks. (For further particulars, see Philadelphia Sunday Times of any date.) For my part, I think almost any animal will fight when wounded or cornered, but if given half a chance it will put as many miles of country between itself and the genus homo as possible. And this seems to be the general opinion, though sometimes there are exceptions. Personally, I believe I've been in considerably more danger from a savage old sow or cross-grained bull than I ever was from any other animal, though it's only fair to say that I have hunted more feathered than fur game. I had an adventure with an alligator, however, some eighteen years ago, which, for a few minutes, was rather exciting.

I was in Florida at the time, and one morning a neighbor rode over to ask me to go out on the lake and shoot a couple of alligators in order to get their oil for rheumatism or something of the kind. My boat was a small double-ended affair, just about capable of carrying two men, and in that we paddled out on the lake. I soon had a shot at a rather big fellow, hitting him in the back of the head and killing him, as I thought, as he turned over and waved one foot in the air. We ran the boat up to him, and leaning over the bow I was in the act of passing a line around him, when he came to life very unexpectedly, made a vicious sweep with his tail, just missing my head, and dove. My friend promptly backed water and the boat was some little distance from where he had gone down, when he came to the surface and rushed at us, mouth wide open and displaying a fine set of teeth.

I had picked up my rifle, so fired directly into his mouth at six or eight feet. This shot laid him out again, and we got the line around him and towed him into shallow water, but when he touched bottom he came to life for the second time, and before we could do anything to prevent he was half in our cranky boat. We would have been willing to get out, but the saw grass was full of snakes, and I couldn't shoot for fear of hitting Jim, but he ended the excitement by splitting the 'gator's head with his hatchet. That time he stayed dead, and we towed him down to the landing.

I had shot lots of them before, and also after that adventure, but never knew one to show fight. And I don't know that that particular alligator knew what he was doing. He was doubtless stunned by the bullet and may or may not have charged with evil intent.

I had a tamish episode with a mountain lion in the Sierra Madres four years ago. We had gone part of the way up Wilson's trail and were camping for a couple of weeks. There was a small, two-roomed frame house with a gallery along the front, and at one end I put up my tent, in which two of us slept, while my daughter and little five-year-old boy had cots in the living room of the house. The weather was very warm and as the windows were covered (except one) with heavy wire netting, she only closed the doors at night, while we slept with the tent flaps open.

I had been told that a pair of lions had been recently seen near there, but that didn't trouble any of us. One day my daughter went down to the village to be gone till the following afternoon, leaving the little fellow to sleep in the house alone. Somehow that unguarded window was left open, and I was awakened by a crash of falling tinware in the kitchen. I dashed into the house, and all I could find was some tin plates and cups on the floor. I had no light except some matches, so couldn't see very well, but fearing the youngster might be frightened if he found himself alone, I gathered him up and carried him into the tent, where I soon fell asleep.

Before long I heard another rattle-to-bang in the kitchen, and made a rush, catching up my hunting knife, and that time I heard a soft thump as an animal of some kind jumped out of the window. Procuring a light from a candle in the tent, I discovered, as before, tin things all over the floor, and a leg of mutton gone from the kitchen, that had just been sent up. I at once surmised that a lion had been there, but in making his exit the first time he must almost have jumped over the baby. Fortunately he preferred dead mutton to live kid, or there would have been serious trouble in the camp.

The next day when my daughter came back I told her of our visitor, and she expressed some objection to sleeping in the shack by herself, but as I closed up the open window and told her the beast could get in no other way, she was at length satisfied. Besides, I didn't believe it would come back, and wasn't sure that it was a lion anyhow.

Well, that night was dark as pitch, but I laid my rifle handy and would have stayed awake had it been possible to see. About midnight I heard a scream and rushed out, but a frightened girl was all I found. She said that she had been unable to sleep, and lay on her cot for hours. All at once she heard the floor of the gallery creak, and some heavy, soft-footed animal walking up and down, occasionally giving a sniff; she lay still, hoping I was awake and would hear it, but when it presently reared up and putting its paws on the wire netting, looked in the room, her nerves gave way and she screamed. She had a good look at it, as its head was against the sky, and it was undoubtedly a mountain lion. I afterward made a pointer dog stand up on her hind legs under the window, but a person inside could not see her head over the window sill.

The next night I was resolved to get a shot. There was no moon, so we all moved into the house, and before tuning in I fried a bit of bacon and carried the pan outside the house in order that the smell might float around, then spilled a trail of hot grease along the gallery up to the window, and hung what was left of the meat inside the netting. I then made a bed for myself on the floor so I could see the head of any animal against the sky. Well, I did this for three nights, and thought it a good scheme, but—the cat didn't come back, and I lost the best part of a good story.

CLIFFORD MORRIS.

EASTON, Md., April 8.

Editor Forest and Stream:

Your discussion of the wolf and man subject reminds me of a very effective painting which I saw in the art gallery of the World's Fair at Chicago. It pictured a winter night scene. In the distance was a cottage, the door open, and in the doorway, through which the light was streaming, stood a woman looking out and watching, as if for the return of some one. And in the foreground was a wolf devouring the some one. It was all very gruesome and effective, but as the scene was laid in a foreign land we may not cite the artist's canvas as any evidence that in this country the wolves eat up the good man of the house when night overtakes him abroad from home.

SARCEL.

Southern California Notes.

NORDHOFF, Cal., April 2.—Southern California, after passing through three excessively dry years, has been restored to previous conditions by heavy rains this winter, and now the surface of the country is covered everywhere with luxuriant verdure and rich with pretty streams of the clearest water, thus insuring a good crop of quail and plenty of trout in the near future. The first heavy rainfall occurred about Nov. 18, a deluge of nearly half a foot, and ever since there have been spells of wet weather. My sleeping tent was leveled by a hard storm, and living in the house since has been almost a new experience to me, for I had lived chiefly in the open air for twenty months. But one grows accustomed to the change. Outdoor air, sent up from the sea and mixed with mountain sparkle, had been an elixir quite wholesome.

The first downpour was nuts to pupils of the Thacher Schools in the Ojai, our valley. Every boy up there has a pony. All the creeks were dangerously flooded. Boys at Nordhoff were ambitious to get to the schools, and those at the schools just had to get to Nordhoff. There was a fine mix-up. Many had to go around Robin Hood's barn to make the trip. In a few instances horses accomplished deep fords only by swimming. Then the head of the schools, at the end of a telephone, assumed charge, and some of the pupils were housed at the hotel near town; others no doubt were closeted up there. Much to the joy of the valley people, who take great interest in the schools, an unusual sentiment, there were no mishaps except a few delightful duckings, a phase of the sport that makes this item strictly suitable for your paper.

For a week this winter the sprouting grain in the valley suffered from the presence of thousands of ban-tailed or collared pigeons, a variety not unlike blue Antwerps, specimens averaging a pound, and I crossed the creek one day to guard a piece of barley on the mesa beyond, only to find every tree, bush or ditch occupied by a gun. It was a wearisome wait then. Toward evening, flocks began to drop into the field from a near-by range of hills; but these assaults were warmly received by every man doing his duty. No large bags were made, yet it was lots of fun—for us. Perhaps those millions of passenger pigeons that used to visit the East in the "good old days" were something of a nuisance in spite of all the sentimental regret we read in the papers; perhaps the good old farmer shed a tear or two with a better thought in mind when he saw the sprouting grain destroyed.

California has just passed a new set of game laws. One feature of them is that they cannot be modified by county regulations. The open season for deer now begins Aug. 1 instead of July 15. If a dog chase or destroy game out of season his owner becomes liable. I have seen only a brief synopsis of what has been done, but hope to get fuller information. Ventura county, so far as I know, has not a game club. Santa Barbara and Los Angeles counties, though, have live associations of this kind, and these by rewards are doing a great deal to prevent illegal hunting. Public sentiment everywhere favors rigid measures to protect sport.

H. R. STEIGER.

A Bit of Buffalo History.

YUMA, Ariz., April 4.—*Editor Forest and Stream:* The following curious item appeared in the Citizen, a newspaper published in Tucson, Ariz., June 17, 1871:

"Time's wonderful changes never realized a more marked illustration than by the introduction of a bill in the House of Representatives prohibiting the indiscriminate slaughter of buffaloes along the line of the Pacific Railroad, and providing for the preservation of the bison, which, under the present system of wanton destruction, would soon be exterminated. The author of this game preserving article, Mr. McCormick, of Arizona, informed the House that in passing over the Kansas Pacific Railroad last winter he was snowed in, and for ten days the only food for about one hundred passengers was buffalo meat, and had this not been at hand they must all have starved. It is in view of the probable recurrence of circumstances of the same character for years to come that, as a measure to preserve those animals, the bill was suggested and will be supported. When the idea of a Pacific railroad was first broached in Congress a quarter of a century ago, the opponents of the 'improvement' insisted that no railroad could ever be maintained on the plains for a single week, because of the herds of buffaloes that would trample the tracks and sleepers out of place and deep into the soil, and now, before the Pacific Railroad has been an actual fact for three years, it is deemed necessary to protect the buffalo that he may serve as food to the passengers crossing the continent over the very roads that his vast and roaming herds were to render an impossibility."

The Mr. McCormick referred to is the Hon. Richard McCormick, then delegate to Congress from Arizona, but more recently delegate to Congress from the First District, New York city. To Arizona then belongs the honor of having first introduced a bill in Congress for the preservation of the buffalo. Notwithstanding the fears of Mr. McCormick, Congress could not be induced to take action and prevent the total annihilation of the vast herds it was feared would trample a railroad out of existence, and which were themselves trodden out of existence by the iron hoofs of the very thing it was feared they would destroy.

PIMA.

The Elk and the Sheep.

ALBANY, N. Y., April 4.—*Editor Forest and Stream:* Upon reading Judge Smith's "Appeal for the Wapiti," published in FOREST AND STREAM of April 6, I am constrained to join my voice in the protest which I hope may be effectually raised against the invasion of the Snake River Basin by those bleating besoms of destruction, the domestic sheep, and the consequent annihilation of the noble wapiti.

While my acquaintance with the West is not as varied and intimate as that of many others, yet I have had some opportunities there to observe the results of the invasion of the game ranges by large bands of sheep. In my opinion Judge Smith's statement of the case is not exaggerated, and if the sheep come in, the wapiti and the ranchmen's cattle as well must go. In feeding over a range the sheep utterly destroy for that year the food resources of every acre they scarify with their cloven hoofs, and they also defile the country to such an extent that all game as well as other animals will avoid it for the season.

Last autumn, after traveling for several days into the game ranges of the Hoback's (or Fall) River Basin in northwestern Wyoming and encamping late one evening in what was known to be an excellent country for wapiti, we awakened the next morning to the discordant bleating of thousands of domestic sheep, which before our arrival had been bedded for the night within less than a mile from us. During our absence on a hunt our camp was overrun by the advancing horde. Upon our return the feed for our horses was gone and about all that remained of vegetation after the passage of the destroyers were the ashes of the camp-fire, and even those were polluted. It is scarcely necessary to say that no wapiti were found in that region. I had previously seen large tracts of country which had been devastated by sheep, but this experience impressed more deeply than ever before upon my mind their destructive qualities. Small wonder that the Jackson's Hole settlers are ready to expel the woolly invaders *vi et armis*. If the combined action of sportsmen can accomplish anything toward preventing the sacrifice of the last small remnant of our noble wapiti to the sheep industry, I for one am ready to lend a hand.

CHAUNCEY P. WILLIAMS.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

Black Duck on the North Shore.

THE well-known ring of the alarm clock wakes us. It is 11 P. M., and we have been snoozing for some hours. We get up, yawning and reluctant, for it is February, and somehow ducks don't seem as important as they did over the pipes a while ago.

Stepping outside the door, we find ourselves in the full beauty of a midwinter moon, lighting up for miles the long stretches of ice-coated marsh and glistening tidal creeks. There is hardly a breath of wind, the tide is nearly full, and altogether the prospect for a successful night in the float is so good that we take heart and disregard the warning mercury, which has dropped to 12 degrees.

In a few moments we have assembled our outfit, consisting of two horse blankets, a skulling oar and an 8-gauge and 12-gauge gun. Observe that the 8 has an enormous drop, and when we come to take a sitting shot while lying nearly flat the advantage of this is readily seen.

Dressed in white from head to waist, we hasten to the float, which is lying well above the water mark on the great blocks of ice along the shore. It is painted as white as its surroundings, and when seen from the front looks almost exactly like the ice itself.

We embark with as little noise as possible, for there is no telling how near the crafty old black ducks may be lurking. I take my place in the bow, lying flat on my back, with my head elevated just enough to enable me to see over the rail. T. is furnishing the means of propulsion. His feet are on each side of my head, and he, too, is flat on his back. I wrap a blanket carefully about my feet, cock the 8-gauge and lay it across me with the stock almost in shooting position and the muzzle in the bow.

Once off, I have a chance to recall the fascination of a winter night in the marsh. The clear air, the silent and mysterious motion, and the Arctic surroundings, are such a change from the city I have left only twenty-five miles away that it seems hard to realize it is the same world. We glide ahead just as the ice cakes are floating up the creeks, only we gain on these and slip by them silently. To the east the snow-covered dunes of Plum Island loom like a mountain range along the horizon and shut out the ocean, while on either side the frozen creek banks rise strangely tall and shine like marble. Nothing can be heard save an occasional gurgle as the ripple from the passing float strikes the hollowed edges of the ice. But what is that whitish mass ahead? It is slush ice forming, and we can do nothing but try to make through it. With a slight hissing sound the bow of our craft pushes in, and a quack, a roar of wings, a dozen shadows in the air bring me up like a jack-in-the-box. A warning from T. and I lie flat again, for the ducks are too far, and we never take a shot unless it is a good one, for the noise will stir up many birds which otherwise might give us a chance.

We push through the slush, and soon see three ducks in a streak of white water ahead. They must be over 200 yards away, but so wonderful is the light that they loom as big as geese. Now the utmost science of the skuller is brought into play. We creep ahead without the slightest ripple or sound, our bow pointed exactly at the ducks, whichever way they swim. The moon is ahead, there is floating ice enough to make our deception perfect, and we are pretty sure to get a shot. I have pulled my hands from under the blanket, and now they are freezing against the cold steel. In a few moments I feel they will be too cold to pull the trigger. Fifty yards! My eyes are glued to the water, and when I see one long neck stretch up I know I must shoot, and do it quickly. I push the butt under my arm, rise very slowly for a few inches, and then catching two together, pull on them and see only one rise.

By the way, it is very strange how plainly you can often see these ducks a long way off, and then when it comes time to shoot and you raise your gun all trace of them vanishes, or at best a shadowy sort of blur remains.

We pick up our pair, one of which gives us a chase, and then skull still further northward. We see ducks continually, and hear now and then the whistle of wings as a bunch changes its feeding grounds, but something always prevents our getting near enough for a shot. Perhaps the moon or wind is wrong, or perhaps the birds are sitting where it is impossible to skull a float, or again the surroundings may be so dark that the shy old fellows stretch their long necks at fully 150 yards, and then with a parting quack disappear in the gloom.

We are now ascending the Rowley River against a searching westerly breeze which has just risen and is fast penetrating to the innermost parts of my body. The beauty of the night fails to impress me any more, and all my senses are on the alert for ducks. Another hour of this and even the ducks will fail to interest, as I lie shivering in the bow, counting the minutes till we can reach the stove side.

A whisper from T., and as I peep over the ice bank to our right I catch sight of a black mass on the thatch. They are ducks, a large bunch, and carefully the float is worked up till its side touches the bank. We discuss the advisability of a shot, for it is a long way, and then I decide to try it. Carefully slipping in a BB shell, I point the gun, elevate it some inches, and shoot, stopping one bird.

We disembark, pull the float across a piece of mud, and while T. paddles after the duck I dance frantically up and down the bank in a vain attempt to start the blood going.

By this time the tide is ebbing fast, and we drift toward home, keeping along close to the mud banks, which, newly arisen from the water, and scraped clean by passing ice, offer a good feeding ground. A pair whirl up not 15 yards from the bow, but before I have brought the gun to bear on them they are 80 yards away, and I lie down, muttering a few adjectives. Buz! Whiz! and two more shadows are hurled into the sky. This time I am a little better, and in the blur of the distance I can just see a falling shape. I get out on to the marsh and look around everywhere, and after narrowly escaping a ducking in a salt hole, I see about 2 inches of the tail of my bird projecting above the snow.

Our cruise is again continued with varying success. We hear the wheezing of drakes and soft chatter of ducks, and soon see a bunch of nearly one hundred lying like a great black raft ahead of us. Just as we think we may get a shot the ever troublesome slush ice intervenes, and with a roar the flock rises like a great fan, shooting into the sky.

I succeed in making another wing shot on a single, and then as we swing round the corner of a high mud bank I catch sight of a small flock just in time to pull on them before they scatter. We pick up four ducks, and well satisfied give it up for the night, and start for home. I seize an extra paddle, and soon the exercise has warmed me so that when at last our bow grates on the pebbles I can scarcely believe that I have been suffering from cold.

We find it is 3:30 A. M. We have been out four and a half hours, and have eight black ducks to show for it. Not a large bag, but one to be proud of when it is taken into account that of all the wildfowl race the old blacks that use off the New England coast in winter have developed the highest intellect. From constant persecution, these birds have become practically nocturnal, spending the day in the open ocean and resorting to the creeks and marshes after dark, or in daytime only under great stress of weather.

The time-honored custom of "creeking" after sunset, which is practiced almost everywhere along the shore, is not nearly so successful as it used to be, and the above is a sport which has been to me one of the most exciting forms of duck shooting. Floating at night is sometimes quite successful; at other times only fairly so, and more often not successful at all. It can only be used on calm, bright nights, so that sometimes during a whole moon there may be only one or two really favorable opportunities.

J. C. PHILLIPS.

New Jersey Deer and Flickers.

MR. CHARLES A. SHRINER, ex-game protector of New Jersey, writes in the Paterson Chronicle of the game law blundering by the last Legislature:

Croake James in his "Curiosities of Law and Lawyers" quotes a high English authority as saying that laws would be a great deal better if lawyers had no hand in framing them. If the same authority had lived in New Jersey at the present day there is no doubt that he would have amended his remark by advising the people of this State in future to elect none but farmers and blacksmiths to the Legislature of New Jersey. Lawyers are supposed to know a great deal about law, but they evidently never passed through a school in which the framing of laws was taught. Only a few pages of the laws passed by the last Legislature have been printed, but there is already enough to indicate the methods pursued in making these laws. A glance at one kind of laws, those pertaining to fish and game, will show some amusing errors.

Deer have never been extinct in the southern tier of counties in this State, and by reason of legislation and enforcing the laws the deer were permitted to exist. In order to keep up the breed, the laws provided that they should not be killed excepting for ten days in each year, from Oct. 25 to Nov. 5, or some such period. For a number of years between fifty or sixty deer annually were killed until two years ago, when the Legislature passed a law providing that no deer should be killed for three years. This law was enforced for two years, and recently a complaint was heard from some deer hunters that the deer had increased in such numbers that a limited amount of gunning would do no harm. The State Board of Fish and Game Commissioners accordingly provided in their bill that deer might be killed every Wednesday in November, a law something similar to that which obtains in Long Island. In the last clause of the bill, of course, there was a repeal of the law prohibiting the killing of deer for three years. The bill passed the House as drafted by the Commission, the assemblymen believing that the Commissioners ought to know what was wanted. But the Senators had to do some tinkering. It was there argued that if the law were left as it was the deer would increase a great deal more and that there would be glorious sport if the hunters would wait only another year. So the section permitting the killing of deer in November was stricken out, but the Senators forgot to strike out the clause repealing the three-year limit law. Of course any blacksmith or farmer would have seen the result, that by such legislation all protection would be removed from deer, but the wise lawyers in the Senate and those in the House, for the amended bill passed the House, failed to see it and so New Jersey now enjoys the unenviable distinction of being the only State in the Union which does not protect deer.

Another section in the same law is calculated to excite laughter at the ignorance of the lawyers. Some one wanted to shoot flickers and so amended the section providing for open and close seasons by declaring that flickers might be shot in September and October, but neglected to impose any penalty for shooting these birds at any other time of the year. Of course, any farmer or blacksmith would have known that permitting the killing of flickers in September or October would mean license to all the pot-hunters and bird-killers to pursue their alleged sport and that every other kind of game would also be killed off, but the wise lawyers did not see this. Any farmer or blacksmith would also have known that the bird known as flicker devotes his whole life to killing the insects and that there is perhaps no bird more deserving of living than the flicker. But this is not the end of this chapter. In the very next section the law just passed imposes a penalty of $20 for every woodpecker killed or had in possession. Now a flicker is a woodpecker every day in the year, the word "flicker" being merely a provincial term common to the southern part of the State, where the bird is also frequently called a clape. So in one section of a law killing flickers is made legitimate and in the next a crime. But this is not all. Immediately after the passage of this bill the Legislature passed Senator Cross' bird act, which is a very extreme measure. It mentions a number of game birds and then declares that no person shall ever kill or have in possession any other bird or part thereof. The act is aimed at the women who insist on adorning themselves with the feathers of birds. So the Legislature provided that the murderous bird-killers might go on, but that the women who wear feathers shall be subjected to the rigors of the law. Of course any blacksmith or farmer would have known better, but unfortunately the Legislature was composed principally of lawyers.

Then the Legislature provided that $750 should be at once spent in improving the sturgeon fishing in the Delaware, but not a cent was appropriated for that purpose.

In this way the laws might be dissected, showing some astounding ignorance or carelessness. Such might be expected from the Governor who signed the bills and thus made them laws, but it is certainly a pity that there was not at least one farmer or blacksmith in the Legislature to teach a little law to the lawyers.

Perils of Fashion.

UNDER this heading the London St. James Gazette recently printed these remarks: "An incident pregnant with moral lessons for society leaders has occurred to a young lady in Berlin, who wore a fox's head at the end of her boa. A dog, which seemed strangely well informed for a German dog, was seized with the delusion that he was 'up against a good thing,' got into full cry at once, and, after an exciting run, made a good kill of the dead fox, the young lady being so much mauled that she was nearly in at her own death. At the flower garden period of millinery not long ago cab horses used constantly to browse on fashionable hats in Bond street, with the intention of stealing a march on the cab proprietor and securing unauthorized fodder. Some day a lady wearing an up-to-date farmyard bonnet in the country will get shot by a sportsman who mistakes her mounted collection of poultry for a covey of birds. Conversely, a newly arrived Yeoman at the Cape is said to have mistaken a sleeping ostrich for a tree the other day, and tried to pick the feathers of it. The shrub, when awakened, nearly murdered him."

Almost precisely what the Gazette predicted actually occurred not long ago in Colorado, as was noticed at the time. A man, who was wearing his sweetheart's feather-trimmed hat to shade his eyes while focusing a camera, was shot in the head and killed by a gunner who saw the hat moving over a bank behind which the couple were concealed from him, and took it for a bird. It might be advanced as an argument against the authenticity of this statement that the feather trimming worn on women's hats within the last few years resembles no bird that ever was on land or sea, but this is really no argument at all, since there are gunners who would rather than not shoot at an unrecognizable object in the hope that it may prove either some rare species never seen before in his locality, or the last individual of some extinct and vanishing form. There are some who would rather shoot the last dodo, great auk, pied duck, wild pigeon or buffalo than kill many canvasbacks or lions, so singular a thing is that human nature which we all share.

There has been much discussion as to whether these shootings of human beings for game should be classed as accidents. In this particular case it was so considered, for the General Accident Assurance Company of Perth, Scotland, paid the heirs of the man who was killed the amount of the insurance that he was carrying.

Spring Shooting.

TORONTO, Ont., April 2.—*Editor Forest and Stream:* The good work of education—thanks to FOREST AND STREAM—in game and fish protection matters is becoming a live issue. The prospect of inducing spring shooters to repent of their unwise and destructive system and conform to the laws of nature and common sense is becoming more hopeful. All that is required for the conversion of reasonable advocates of shooting birds when breeding—if there are any such—is for them to let the birds pass to the breeding grounds unmolested for a season or two. I often wish your versatile Western correspondent would refrain from reporting the doings of those who glory in their shame by making public the amount of birds shot by them, full of eggs and unfit for food. When reading these reports I am apt to become very uncharitable, and conclude that it would be in the interest of the public at large and certainly to the benefit of posterity if a special gun were invented for spring shooters that would have a simultaneous discharge from both ends.

There is no possible excuse for such vandalism now. Many years ago we were met with the excuse that spring shooting was done for practice. This was before the advent of glass balls and clay targets, which for some years has enabled shooters to have all the practice they require during nature's close season for game.

There is at the present time far more urgency in having spring shooting abolished than heretofore, in consequence of the immense increase of wing shots the trap shooting has developed.

It is a fair inference, if we desire to perpetuate the love of manly field sports and a fair supply of game that we must meet the constantly increasing destructive facilities with corresponding legislative restrictions. How can this be accomplished? By having wise and well-considered laws enacted and honestly enforced in the interest of the general public irrespective of party exigency. No matter how perfect game laws may be, there will always be a number of chronic grumblers, men who have such an exaggerated opinion of their own abilities that they fondly believe that if the work of creating this world of ours had been left to them they could have made a better job of it. This class are sometimes annoying, but not dangerous; the result of their efforts are similar to those of pig-shearing—more noise than wool.

There has been considerable discussion during the past year of gun licenses. Such action would be unpopular in consequence of guns being private property. But game being the property of the State, there should be few objections to a reasonable general license fee, covering the

killing of all kinds of game during the respective open seasons for same.

The non-sale and license clauses of the game laws will be the principal factors in game protection. These measures will have a tendency to prevent the boy with the gun killing everything in sight during the close season. It is a source of gratification to those who have for many years fought for game protection, to have the increased interest taken by the better class of true sportsmen, as evinced by the attendance of leading men from many of the States and Provinces at the recent meeting of the North American Fish and Game Protective Association in Montreal, all intent in doing all possible to assist in the good work of perpetuating and preventing the extermination of the game and fish of this vast continent.

One of the most pleasing features at that meeting—to me an Englishman, and all that the word implies—was the eloquent tributes of respect paid to the memory and character of our beloved Queen by the gentlemen from Maine, Vermont, etc., in terms eloquent and sincere, insuring them for all time a warm place in the heart of

RANGER.

CHICAGO AND THE WEST.

Western Ducks Still Coming.

CHICAGO, Ill., April 6.—The unprecedentedly good duck shooting of this spring still holds on. We have not had such shooting in this part of the country in any spring that I can remember, and it is like the old times come back again. The mallards and pintails made the bulk of the first flight, as was reported at the time. There are still large numbers of the marsh ducks at the better localities on the Kankakee and the Illinois rivers, but the likelihood is that the bulk of this marsh duck flight has now swept on past and is well up across Wisconsin or even further north. Singularly enough, the season seems to have been even earlier in the far West than it has been in the Mississippi Valley. The geese and ducks were as far north as the Blackfoot reservation in Montana a month ago, and by this time may have left even that far northern latitude.

It is the bluebills, redheads and other deep-water ducks which are making this second flight and prolonging the spring shooting season in this region. Ten days ago the bluebill flight struck in at Lake Senochwine, and the shrooting has been good around Putnam ever since. They have also landed in the Shelby, Cumberland and lake regions of the Kankakee Valley, and every one who has been at those places this week reports very heavy shooting. Still further north, at the Fox Lake and Grass Lake country, just below the northern edge of Illinois, clouds of bluebills appeared this week. Billy Wells and Eddie Pope left there at just about the time the best flight was coming in. Mr. Wells killed eighteen on his last day, and might have gotten many more the day following. Charlie Grubbs returned last week from the Illinois River, near Putnam. He and a friend bagged between seventy and eighty ducks in two half-days, mostly bluebills. The weather continues very capricious, one fair day being followed by a day of rain and half-snow and overcast skies. It has been an ideal spring for ducks and for duck shooters. There is every likelihood that the last week of the spring season of 1901 will furnish the best shooting on deep-water ducks that we have known here for a very long time.

As stated earlier, this wonderful flight of ducks has called out the Chicago shooters across the Indiana line in spite of the non-resident license tax. Nearly all the members of the leading clubs have taken out their licenses and consider that they are getting their shooting cheap. It is rather amusing that this unusual duck supply should follow close upon the enactment of this non-resident law. The explanation of the heavy flight, as previously mentioned, is simply that we are having an unusual amount of water all over this country. I can remember that out in Iowa, where I did my boyhood shooting, whenever the old Skunk River bottoms were overflowed we always had lots of ducks. A dry year meant poor duck shooting.

Duck Flight in Nebraska.

Mr. John W. Carpenter, of Whitman, Neb., who is an experienced hunter and knows what he is writing about, states that this spring has shown the biggest flight of wildfowl known in Nebraska for years. There has been good shooting on all the adjacent lakes. He says a party of hunters went out with his son George to a point forty miles north of Whitman, were gone about a week and killed 150 ducks and four geese, about half the ducks canvasbacks and mallards. Mr. Carpenter says that the hunters in his part of the hills are worked up over the stopping of market-shooting, but he "thinks they will get over their mad spell." "If we can stop spring shooting," says Mr. Carpenter, "we shall have plenty of ducks and geese. They breed in this country if not bothered, and do not need to go to Alaska to nest." Curlew and all kinds of snipe are now near Whitman, Neb., and Mr. Carpenter thinks there will be no more cold weather in his part of the country this spring.

Italian Joe.

Our old-time Italian Joe came in from his place at Summit, at the southwest edge of Chicago, this week, in order to get his spring supplies of ammunition. He was buying shells loaded with No. 2 shot. "I killa the duck sure," said he, "when I hitta him with the bigga shot. I not lika to hit duck four, five times witha the shot and no getta the duck." Joe's theory of loading is not quite that of the average duck shooter, but as a matter of fact, when he goes out he nearly always manages to "getta the duck," big shot or not. Joe openly bewails the clause of the Illinois law which stops plover shooting April 25 as he says that is just about the time the plocer flight is on in this country. He says next week he will go down to Gilman, Ill., and he hopes there to get a little of his favorite decoy shooting on golden plover. He says mysteriously that if I will join him he can put me on to some very fine jacksnipe shooting next week. I do not think I would care for any spring shooting, unless it were on carp. Roll Organ and I have been figuring out for two or three years that we could take a bow and arrows and have more fun shooting carp on the Kankakee Marsh than we could doing anything else in the wide, wide world. I do not know what the Game Commission of Indiana would think about our project, but at least presume they would not bar us from shooting jacksnipe or cottontail rabbits with the bow and arrow.

In Wisconsin.

Mr. D. J. Hotchkiss, of Fox Lake, Wis., seems to live in a rather arctic region, the ice at the time of his writing, April 2, not having left the lakes in his vicinity. He writes: "I took a walk up on the ice in the lake today. It is still quite firm, but beginning to soften up, and will be out in a week or ten days probably. A big flock of geese were sitting out on the ice about a mile away. I walked up to within about 100 rods of them and turned the old Mauser loose at them as they got up, but did not manage to connect with one. Lots of ducks here in pond holes and the country boys, and some town boys, too, are shooting a little, but there is not much of it done. An effort is being made to kill our law prohibiting spring shooting, but we do not think it will succeed—hope not, any way."

Mr. Hotchkiss states on April 5 that the ice is still in Fox Lake, Wis., and that numbers of geese and swan were to be seen on the ice. One gunner by the name of Dooley killed five wild geese near Portage this week.

Wisconsin Quail.

Mr. Howard Bosworth, of Milwaukee, advises me that the Legislature has established a five-years' close season on quail. This, in the opinion of most Wisconsin shooters, was an altogether unnecessary measure, for quail have not been so abundant at any time in the history of that State as they were last fall. The northward march of this bird is one of the most distinct changes of the fauna of the West. Mr. Bosworth says that he has shot all over Illinois and Indiana, and indeed in some of the best quail covers of America, yet he knew of no place where he could get so good quail shooting as he could at one or two points in the Wisconsin River valley. He said that he could easily kill seventy-five birds a day if he had cared to do so. Under such circumstances the five-years close season would seem to be unnecessary. At the end of the five years' term, as many, perhaps more and perhaps less, might be in that State as there are to-day. A country will only stand about so much of a stock of game of any kind. This, however, only goes to corroborate earlier statements regarding the peculiarly progressive, not to say aggressive, methods of Western protective legislation within the past year. We are surely waking up in game law matters out here, not only in the way of enacting statutes, but in enforcing them.

Chief Thunder Dead.

Chief, or more properly speaking, Doctor, John Thunder, medicine man of the Winnebago tribe of Wisconsin, died at Black River Falls this week. This I take to be the same Doctor John Thunder who was here with the Tom Roddy Indians at the Sportsmen's Show last month. He did something of a business as a doctor while here. There was very much sickness among all the people who were obliged to be at the Coliseum a great deal during the show, and it is quite likely that Chief Thunder did not long survive his visit here.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Iowa Fields, Marshes and Waters.

MARSHALLTOWN, Ia.—The slaughter has been great among the ducks this spring. Press dispatches from all over the northern and central part of the State are full of the bags made by the various parties of sportsmen. The Wapsipinicon bottoms, the northern lakes and sloughs have been alive with ducks and hunters this spring, and if there is any shooting for the fall it will not be because the shooters were merciful. Bags of 100 are reported by single parties.

From Clinton a reliable correspondent of the Marshalltown Times-Republican stated that the people of his city were unable to rest by reason of the clamor of the ducks and geese that filled the reaches of the Mississippi and its bayous. Ducks and geese were so plentiful in the markets of that city as to be sold for 15 cents each, and a drag on the market at that. It is certainly time for concerted action against spring shooting. Over on the Wapsipinicon River the farmers turned out and slaughtered and sold ducks until the markets of Clinton and neighboring towns were glutted, and mallards sold at $1.50 per dozen. This is an unusual thing for farmers to do, and shows how plentiful the genus anser was in Iowa this spring.

They are not all gone from the northern lakes, and a party of Marshalltown sportsmen are at Lost Island Lake near Ruthven, where U. S. Consul S. C. McFarlane, of Nottingham, England, and Congressman Robert G. Cousins will be guests of a bunch of Marshalltown field and trap shooters at their shack on the banks of this very good body of shooting water. Charley Cook, Pete Densel, Chas. Hull, Sam Abbott, P. S. Balch, C. J. Lander and Dr. W. B. Kebbey are among the party. All are good shots and carry good guns.

From appearances fishing will be good this year. The old gang are waiting patiently for the season to open, and the new ones are fairly frothing in their anxiety. One of the more recent converts here keeps his reel in a burglar-proof safe and worries over every burglary reported in press dispatches.

Iowa people on the Coast are having good luck fishing. As a letter from Paadena says: "Marvin Gates, of Clinton, in company with some Chicago gentlemen, had fine luck fishing at Coronado. So fine a string of fish has but seldom been caught in so short a space of time, even at Coronado. It consisted of thirty-two Spanish mackerel, weighing in all 320 pounds; one yellowtail of 27 pounds, and eighty-seven barracuda which tipped the beam at 696 pounds; 1,043 pounds of fish for the time devoted to the sport was quite enough to make the members of the little party particularly happy."

Game Warden Delavan, who has lately been succeeded by Lincoln, of Cedar Rapids, did some elegant work on market shooters and trappers during the last days of his incumbency. He captured poachers at Webster City, Union and other points in the State by watching the Chicago express offices and pinching consignments of game. The poachers paid for a number of quail and chickens trapped and shot since Jan. 1. Advices from Sioux City tell of the capture of seiners and the confiscation of seines. It may be that the game laws are going to be strictly enforced, but a wager that Sept. 1 will find ninety-nine coveys out of one hundred broken would be a reasonably safe one.

There is talk of a fishermen's club at this place. It is needed, and might be made extremely effective toward the conservation of the game fish in the Iowa River. Much seining goes on and a club might do what individuals neglect.

MOSCRIP.

The Quebec Association.

QUEBEC, April 5.—*Editor Forest and Stream:* Every sportsman who comes to Canada, and especially every member of a fish and game club in the Province of Quebec, is deeply interested in the matter of fish and game protection, and consequently in the work of the newly established Sportsmen's Fish and Game Protective Association of the Province of Quebec. Portions of this Province may aptly be termed the poacher's paradise. As many as twenty-eight moose have been known to have been butchered by one Indian in a single season. Caribou have been snared by the hundred and partridges by the tens of thousands. A local newspaper reported only a few weeks ago that one tannery not very far from Quebec, had three to four hundred deer skins in process of tanning, which had been obtained from poachers, though investigation showed this report to have been somewhat exaggerated. The spearing and netting of salmon in rivers leased for angling purposes was carried on as a regular business, while trout were caught in large quantities through the ice in winter for commercial purposes, and netted in such enormous lots in summer that over thirty tons were exported last summer from Montreal to the United States. It is of course absolutely certain that no country, no matter what its supply of fish and game, can long withstand this constant drain, and consequently the initiative in the formation of a practical, working fish and game protective association has been undertaken by a number of sportsmen in the city and district of Quebec, in the confident belief that they would receive the moral and material support of every sportsman who comes to this Province for his fishing or hunting. Although very little has yet been noised abroad concerning the new Association and its work, I am glad to say that most of the members of two of the fish and game clubs holding preserves in this Province have already joined us in a body. We hope to obtain a membership of several hundred sportsmen, which, we trust, will enable us, if not to entirely prevent poaching throughout the Province, at least to very materially restrict it. We are incorporated under the laws of the Province of Quebec and are assured of Government assistance and support.

Our influence with the Government has already proved to be very great. Upon our representation, the Prime Minister of the Province, who is also Minister of Lands, Mines and Fisheries, has appointed an additional guardian for a portion of the territory traversed by the Quebec & Lake St. John Railway. It is our intention to appoint and employ fish and game guardians of our own, as soon as our means will permit, and knowing that there is plenty of work for any number of them to do, I make this special appeal to all sportsmen who are interested in the work of protection in this Province, to forward me their subscriptions and applications for membership without delay. In the meantime we are far from resting upon our oars. Until we can afford to employ our own guardians, we are, with Hon. Mr. Parent's kind permission, utilizing those of the Government.

Early in March three prominent young men about town left for the woods by Quebec & Lake St. John R. R. with guns and other paraphernalia. One of our officers heard of the expedition, and feeling sure that the guns had not beeen taken to the woods for the sole purpose of firing at wooden targets, he telephoned the Department of Fish and Game, asking that an officer meet them at the station on their return to town. His request was at once acceded to, but Mr. Joncas, instead of waiting for their return home, sent the detective up the line to meet them. His presence on the train was quite unknown to the returning party, and when they reached the city and complained to the baggageman that two large pieces of baggage were missing, the officer stepped forward to assure them that they had not been lost, but were quite safe in his possession. One package consisted of a part of the carcass of a caribou and the other of a quantity of brook trout. The gentleman who claimed the baggage was proceeded against in the courts, pleaded guilty and paid the fine and costs, amounting in all to quite a round sum. He is a well-known physician of this city, and the facts that neither his high social and professional standing nor yet the powerful influences that were employed in his behalf could succeed in preventing his prosecution and punishment will have a splendid effect in strengthening the hands of our Association when it comes to deal with professional and other poachers in the country districts.

We are interesting ourselves with the improvement of the laws as well as in their maintenance and enforcement, and consider that we have every reason to be proud of the work which we have already accomplished in this direction. At the sole request of our Association, Mr. Parent has amended the game laws so that lessees of hunting territories from the Government can now prosecute trespassers upon such territories and recover damages from them if they invade any of their rights. Heretofore this right was reserved by the Government. In company with a delegation from a sister club in Montreal, which has done much excellent work, several of our members waited upon Mr. Parent some days ago in connection with suggested amendments to the fish and game laws. The delegation urged upon the Minister most of the recommendations made by the North American Fish and Game Association at its recent meeting in Montreal, and it is gratifying to note how many of them were accepted by the Minister and are now the law of the land. The sale of partridges has been prohibited up to Oct. 1, 1903. Instead of being permitted to kill two moose, two caribou

and three deer in one season, a hunter can now only kill one moose, two caribou and two deer. While the Minister could not see his way clear to entirely prohibit the spring shooting of ducks, the season has been materially shortened, so that now ducks can only be killed up to March 1, instead of April 15, with the exception of the bufflehead ducks, commonly known as pied ducks or divers. We have gained much, but not all that we want. For the balance we shall continue to agitate and to struggle. Mr. Parent is doing all that he reasonably can to aid us in our work, and we are looking to him for financial assistance as well.

I have only to add that we look for similar aid from all sportsmen interested in this work, that the annual subscription of members has been fixed at the low figure of two dollars a year, in order that all angling and hunting visitors to the Province of Quebec may be induced to join us, and that I shall be glad to receive their subscriptions and applications for membership.

E. T. D. CHAMBERS,
Secretary Sportsmen's Fish and Game Protective Association of the Province of Quebec.

No Spring Shooting in Jefferson.

WATERTOWN, N. Y., April 5.—*Editor Forest and Stream:* We have finished that protection fence around Jefferson. Governor Odell drove the last nail on April 4 when he signed the bill prohibiting spring shooting in Jefferson for three years. It is perhaps needless to say that we are proud of our job and that nothing would please us better than to have the gentleman from Oswego try to sneak under that fence and let us catch him at it. Up here in Jefferson we think just as much of the fellow that shoots a hen grouse on her nest and then sucks the eggs as we do of the spring duck shooter. Now, boys, you who want spring shooting stopped, pull off your coats and get to work and stop it. If Long Island wants to shoot in the spring, let her. If Oswego wants to shoot in the spring, put a protection fence around her and she can't. I am talking to you, Lewis, Oneida, Madison, Onondaga and Cayuga. Oswego will never consent to stop as long as you permit her to kill ducks in your counties in the spring. She's a great county for ducks, and the black duck is her favorite, but she would get mighty few of them on her own side of that fence. What a splendid duck preserve those five counties would make. Almost as good as Jefferson. If the other counties want to come in let them, but if I had my way about it I wouldn't let Oswego in if she wanted to. Just think of it, boys, every year since 1894 we have had a bill at Albany to stop spring shooting, and every year Oswego has bluffed us to a standstill with this same old gag. "We won't stop unless Long Island does." Let Long Island shoot; we can't stop her. But we can atke Oswego by the neck and expel her, and stop it in the rest of the State, and if you want Jefferson to help you to do it next winter, and if you more than willing.

And now before I close this article, which is probably the last I shall be permitted to inflict upon you, I wish to express our sincere thanks, 1st, to FOREST AND STREAM for their kind and courteous treatment, and for their earnest fight in our cause, for which we hoped so much and secured so little; 2d, our new Commissioner, Mr. De Witt C. Middleton, who has given all our bills his earnest support. I have known Mr. Middleton for over twenty years, and if honesty, good executive ability and a determination to enforce the game laws are what you want, you have got it in your new Commissioner. 3d, Senator Brown and Assemblymen Bryan and Roberts for their earnest and persistent fight for the State, as well as the county bill. (By the way, have you noticed that since Senator Brown has been chairman of the Senate Fish and Game Committee, no bad bills have ever come out of that committee?) 4th, Governor Robert B. Odell, who signed the bill that started the fence we are going to put up around Oswego county.

W. H. TALLETT,
President Jefferson County Sportsmen's Association.

Michigan Quail.

ALMA, Mich.—*Editor Forest and Stream:* March has been hard on our little friend Bob White. Sunday, March 10, ushered in a long storm of high winds, rain and sleet that froze as it fell, so that by Monday morning forest trees as well as the grasses and weeds of the field were ice coated. It moderated by the 13th, so weed seeds were available then; then we had a heavy snow storm—the severest of the season. The 16th and 17th were sweet and mild as one could desire, then another storm of wind and snow set in, until Wednesday night, when everything was again in crystal mail, which held till the 21st ult. I have heard of no dead quail being found since the storms, and as there were many left over for seed, should think the prospects were good for next autumn. ALMA.

New Brunswick Moose.

PERTH CENTRE, N. B., April 6.—*Editor Forest and Stream:* I just returned from the hunting grounds of the headwaters of the Tobique and Miramichi rivers, where I have been looking after my camps. I found game very plentiful, especially moose and caribou. The moose are looking fine, as they have had a good winter. The snow is not very deep this year—about half as much as last year—so the moose and deer have had no trouble to get all the feed they wanted.

This spring is much earlier than last spring here.

GEO. E. ARMSTRONG.

Monomoy Brant Club.

BOSTON, April 5.—The "Boys' Party" of the Monomoy Brant Club held its annual dinner at the Boston Tavern on Saturday evening. Thirteen sat down to table, and though the number is considered unlucky, the "Boys" are ready to pin their faith on excellent luck in "the boxes" next week. There were present James Wright, Edward Gray, William Colburn, Benjamin Dorr, Joseph Dorr, Edward Bigelow, George Hopkins, H. R. Burbick, H. D. Reed and George Hall. The plan of the party is to be on the shooting grounds this week and next, and they are hopeful of great success. The parties that have already been shooting at the preserve have not had the greatest of luck, but have had a good deal of cold weather and high winds to contend with. A great many brant have been seen flying, but they have been far out, and have not come well to the decoys. SPECIAL.

Narrows Island Club Meeting.

THE annual meeting of the Narrows Island Club was held Monday, April 8, at the Hoffman House, New York city, at 8:30 P. M. There were present Messrs. F. B. Austin, W. J. Boardman, B. Dominick, Chas. Greer, G. B. Grinnell, E. N. Lawrence, J. B. Lawrence, Dr. F. H. Markoe, C. R. Purdy, R. H. Robertson, Henry Sampson, Norman Schultz, Wm. Trotter and T. S. Young, Jr.

The following officers were elected for the ensuing year: President, J. B. Lawrence; Vice-President, Henry Sampson; Secretary and Treasurer, Wm. Trotter; Executive Committee, R. H. Robertson, T. S. Young, Jr., G. B. Grinnell and the officers.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

ANGLING NOTES.

The Aflalo Pad.

ANY one who has the pleasure of knowing Mr. Frederick G. Aflalo would probably guess that any pad with which his name was associated would be either a writing pad or a fishing pad, for he is one of the best known of English angling writers, and he who guessed the last would guess right the very first time. Mr. Aflalo has sent me one of the pads from London, and it is designed to hold a fish with spines, like a black bass or a fish covered with slime, like an eel, while it is taken from the hook. One who has tried to hold an eel in one hand while trying to remove the hook with the other will appreciate the Aflalo pad. In shape the pad is very like the palm side of a mitten, solid from wrist to tips of finger, with a projecting thumb piece. This is of canvas-like material and to this is attached what I might call a wire brush that is very flexible, the ends of the wires being so close together that they hold rather than pierce. On the pad are two loops, one for the hand and one for the thumb, and the hand and thumb slip into them easily. The pad is made for use on the left hand, and once it is wrapped around an eel with a man's hand in the loops, the eel will stay put until its captor desires to release it. It strikes me that the Aflalo pad is a most convenient invention, and its use will obviate lacerated fingers and strong language when an angler is fishing for the kinds of fish that it is designed to be used upon.

Supplement to "Bibliotheca Piscatoria."

The first edition of "Bibliotheca Piscatoria" was printed in 1861, and the second in 1883, by Westwood & Satchell. The preface of the second edition states that "The Waltonian Library of Dr. Bethune, the able, erudite and sympathetic editor of the American edition of 'The Complete Angler', * * * contains about threee hundred entries, * * * The new 'Bibliotheca Piscatoria' included six hundred and fifty distinct works on the sport."

In a postcript, Messrs. Westwood & Satchell say: "There are 3,158 editions and reprints of 2,148 distinct works here registered."

Mr. Marston has now issued a supplement to the "Bibliotheca Piscatoria" of Westwood & Satchell, and I find that he gives 869 titles of what may properly be styled books upon angling, sixty-nine titles of books on fish-culture and 118 titles of books on fisheries, or a total of 1,056 titles. Who can say in the face of this evidence that the interest in angling, fishculture and the fisheries is not advancing with mighty strides? I have had no time to analyze Mr. Marston's list, but a glance shows that there are just forty titles relating to Walton, or Walton and Calton.

I will note here but one omission. Marston gives: "Garlick (Theodotus, M. D.). A treatise on the Artificial Propagation of Fish. 2d ed. 8 vo. New York: A. O. Moore, '58.

["Bibliotheca Piscatoria" does not mention this, but gives the third edition, which it refers to as the second.]

Just before the death of Dr. Garlick (who spelled his first name Theodotus) he sent me six copies of the first edition of his book, which bears the imprint: "Cleveland: Tho. Brown, publisher. Ohio Farmer Office, 1857."

What I have hitherto called the second edition was presented to me by Dr. Elisha Sterling, a classmate of Garlick's, and the only American to witness the experiments of Remey in Paris, when under Prof. Coste he hatched trout artificially. This edition declares on the title page: "Second Edition (enlarged), published by the Kirtland Society of Natural Sciences. Cleveland, Ohio. J. B. Savage, printer, Frankfort street, 1880."

Dr. Sterling wrote on the title page, "This, second edition, has been published by the Kirtland Society at the expense of R. K. Winslow, its president."

Dr. Garlick, "the father of fishculture in America," read a paper before the Cleveland Academy of Natural Sciences on Feb. 17, 1854, in which he described how he artificially hatched the first trout in this country. The Cleveland Academy subsequently changed its name to the Kirtland Society, as Prof. Jared Potter Kirtland was its founder, and to him Dr. Garlich dedicated what I have called the second edition of Garlick's book, the same that Westwood & Satchell called the second, and which Marston proves to be the third.

Only last week I read a paper before the Buffalo Society of Natural Sciences on the "Development of Fish-culture," in which I tried to correct some errors and incidentally show that Garlick was really the first to hatch trout artificially in this country in spite of the claim of another, and now I shall ask Brother Marston to include Garlick's first edition, it being the first publication on the subject in America. Marston's list can be obtained in this country at the office of the Publishers' Weekly, 59 Duane street, New York city, the cost being nominal. The editor's note in the list concludes: "I shall be greatly obliged to collectors of angling books and others who will send me a note of any corrections in or omissions from this list which they may notice. They should be addressed to R. B. Marston, Editor Fishing Gazette, St. Dunstan's House, Fetter lane, London." Mr. Marston credits the Hon. D. B. Fearing, of Newport, R. I., with many of the entries in his list, and Mr. Fearing is said to have one of the most complete angling libraries in the world.

Fishes of Porto Rico.

Dr. Barton W. Evermann's report on the investigations in Porto Rico of the United States Fish Commission steamer Fish Hawk in 1899 is a sumptuous volume, containing, as it does, plates of forty-nine fishes in colors. The fishes are drawn in colors by C. B. Hudson and A. H. Baldwin, and are remarkable for accuracy in drawing and coloring. The reports of the Forest, Fish and Game Commission of New York have never contained more than sixteen colored plates in one year, but here are forty-nine, every one striking in coloration. The New York reports have been almost universally commended at home and abroad. I say almost, for I have seen one adverse criticism, and while it is not now before me, the chief objection seemed to be that a report should not be issued that a taxpayer could not obtain, and some taxpayers could not obtain the New York report. As there are seven thousand New York reports printed by law, and as there are more than seven thousand taxpayers in the State, and as public libraries and school libraries and fishery commissions at home and abroad are supplied with copies, it is quite certain that some taxpayers have to go without a report. If reports of other State commissions would serve, I think all taxpayers could be supplied, for I think I saw five cords of the reports of one commission carted off to the paper mills. The true solution of the matter is to prepare a report that no one, taxpayers or otherwise, will accept, and there will be no trouble. Now I am curious to know how the United States Fish Commission will come out in supplying all the taxpayers with copies of the Porto Rico report. A. N. CHENEY.

District of Columbia.

THE Game and Fish Protective Association of the District of Columbia held its adjourned annual meeting on April 3 in the parlors of the Ebbitt House, Dr. Walter S. Harban presiding. A scheme of reorganization was adopted broadening the proposed field of operations and adding to the officials and committees. The following officers were elected for the ensuing year:

President, Admiral Robley D. Evans; Vice-President District of Columbia, Dr. Walter S. Harban; Vice-President Maryland, George Dobbin Penniman; Vice-President Virginia, Capt. Joseph E. Willard; Vice-President West Virginia, John J. Cornwell; Secretary-Treasurer, Dr. W. P. Young; Warden, Major Richard Sylvester; Chairman of Executive Committee, Harrison Dingman. Chairmen of Committees—Membership, John Breen; Press, H. L. West; Ways and Means, George W. Rouzer; Auditing, Rudolph Kauffmann; State Laws, I. W. Sharp; Fish Stocking, Frank B. Curtis; Fish Places, Jesse Middleton; Game Stocking and Hunting Grounds, Dr. George Henderson; Library and Literature, Dr. Thomas S. Palmer; Entertainment, E. H. Neumeyer; Pollution, Henry Talbott; Foreign Relations, Charles A. Neale; Headquarters, J. Robert Sutton; Transportation, W. S. Bronson.

In line with the new purpose of the Association, the following resolution was offered by Major Sylvester, and adopted:

"Whereas the neighboring States of Maryland, Virginia and West Virginia, with attractive resorts that are a perennial delight to nature-loving citizens with camera, rod and gun, and from whose wooded slopes and pretty valleys come the streams which furnish the District with its water supply, have an interest common with our own in their preservation; and

"Whereas the health and pleasure resorts, hotels, boarding houses, boatmen, liverymen, merchants, railroads and various other interests derive a large financial support from the tourist sportsmen and temporary sojourners from the cities, all of whom are interested in clear and pure water; and

"Whereas the streams in these States are being rapidly despoiled of their beauty and their fish and rendered unfit for human use by their abuse as sewers for corporations and sluices for factories; therefore, be it

"Resolved, That this Association invite every interested organization and individual in these States, officials, legislators, municipalities, protective associations, scientific and educational institutions, the press and citizens, to cooperate with us to save the streams which yet remain uncontaminated and in redeeming those already polluted."

Hon. John J. Cornwell, of Romney, W. Va., editor of the Hampshire Review, and Vice-President of the Association for West Virginia, addressed the Association on the subject of the impending ruin of the South Branch of the Potomac, and a further threat to the already polluted water supply of Washington by the proposed establishment of new tanneries on the only pure stream left in West Virginia.

Mr. Wm. Cornwell, County Attorney from the same locality, spoke briefly of the legal aspects of the case, announcing that the laws of West Virginia were ample to prevent such outrages if they could be enforced.

On motion of Major Sylvester, the Chairman of the Committee on Pollution was directed by the Association to confer with the presidents of the Board of Trade and Business Men's Association of the city of Washington, looking to a more general organization in defense of the city's water supply and incidentally the famous and loved fishing places in the upper river.

Talks [to] Boys.—XV.

Trout Fishing.

IN approaching the subject of fishing for brook trout, I must first of all ask you, as I did when we were speaking of the question of bass fishing, to use your judgment and your reason. In order to be successful in the pursuit of any wild creature, it is necessary for one to know the habits of that creature, and in order to know those habits it is essential that one be familiar with the surroundings of the creature itself. Now, when we come to study the country in which the brook trout is found, we find that it lives, not in deep, quiet and rather warm streams, or in broad and shallow lakes, as does the black bass, but, on the contrary, it is always found in rapid and cool streams or in deep and cold lakes. The best of our trout country is situated in the northern part of the United States, or across the line in the British possessions, or high up in the mountains which cross this country in the eastern or western parts of the United States. The brook trout cannot live in shallow or muddy waters. It is a creature of the wilderness, and goes with the forests of pine, spruce and balsam, with the granite rocks of the mountains and with the cold and spring-fed streams which issue from the floor of the ancient forest. You will find bass in the eddies of deep and sluggish rivers, and you will sometimes find big trout in the eddies of the rivers which they inhabit; but the trout stream is apt to be flat, shallow, wide, uneasy and turbulent, and its deepest holes will perhaps not exceed a few feet in depth. One would think it impossible for a fish to live in so heavy and turbulent a water. Yet the trout finds himself quite at home there and is able to make his living under what would at first seem to be very hard conditions.

Now your reason will readily teach you that an animal that has survived in these peculiar surroundings must be one of great vigor and of great shrewdness and alertness. These qualities fit perfectly in the description of the brook trout. It is not a very large fish. The heaviest specimens, taken from deep and still waters, where there is abundant food, rarely go over eight or ten pounds, and the average trout of the forest stream rarely attain a weight of over a pound or a pound and a half. Yet it is a fish of great muscular vigor for its size, its combat with the waters having given it a firm muscular condition. Moreover, being obliged to seek its food amid the foam-flecked, rushing waters of rapid streams, it has long been necessary for this fish to be possessed of great quickness of sight and of great rapidity of motion. The little half-drowned insect which is floating down a trout brook is hardly visible to the eye of the angler. Yet the trout must not only be able to detect it among all the drift wood of the streams, but able also to grasp it as quick as a flash, without any hesitancy or any delay in making up its mind about it.

Now, if you have used your reason you will see that these very peculiarities of the brook trout make it desirable as prey for the angler who uses the artificial fly. There is no creature, no matter how shrewd it be, which cannot be outwitted by man and his superior mental acuteness. A long time ago, no one knows just how long, some man discovered that even the quick vision of the trout could be deceived, and that it could be induced to strike at an artificial fly which more or less resembled the natural insect upon which the trout sometimes feeds. From this ancient discovery all the modern evolution in fly-fishing and fly-fishing tackle has come. Of all the sports of the field or the stream, this fly-fishing for trout has perhaps the most distinct fascination for those who follow it persistently. One may always learn something about fly-fishing, and there never was a man who knew it all. It would, therefore, clearly be of no avail for us to try to tell you all about fly-fishing, for that is something which no one has ever done or ever will do. The main thing for you is to learn a few of the broad principles of the art, and then to do your own experimenting and your own thinking afterward.

We will say that you and I are on the banks of a typical trout stream, situated in the far north woods of Canada, or Maine, or Michigan, or Wisconsin. Perhaps the stream is so large that we are obliged to use a boat, in which case each angler must have a boatman to handle the canoe or the boat as it slips down stream while the fly-fisher is plying his rod along the likely places. In so large a stream as this we may expect to take larger fish than in the little brooks, for there seems to be a rule that big waters produce big feed, and that big feed means big fish. Perhaps, for our purposes, however, since we intend to study rather the first principles of fly-fishing for trout, we may do better to conduct our experiments in the smaller streams, one shallow enough for wading. Here our first question is one of proper preparation for the sport. If you are young and vigorous, you may perhaps be able to stand exposure to the cold weather all day long if you are provided simply with heavy woolen clothing and with heavy shoes to protect your feet in the wading. For myself, I have grown too old for that sort of thing, and I usually provide myself with a pair of wading socks, which may be bought at the sporting goods houses. Over these water-proof wading socks, which come up to the hips, or perhaps about the waist, I draw on a pair of light canvas overalls to protect the mackintosh against snags and sharp stones. Over the feet of the waders and over the bottoms also of the overalls I pull on a pair of very heavy wool stockings, and over these stockings use a pair of stout shoes provided with plenty of hob nails on the soles. This sort of an outfit you will find gives you a good footing on the bottom of even the most slippery and rock-strewn stream. If you use only the ordinary rubber-soled boot-foot of the mackintosh wading trousers, you will find that you are not secure upon a slippery bottom and are especially in danger if you are wading in a deep bold stream where, once in a while, you strike a streak of slippery clay along the bottom. In such case you might, perhaps, take a rapid slide and get a bad ducking in a deep hole at the end of the riffle. It is unpleasant to be submerged when you are wearing a high pair of wading trousers. In some streams, such as the bolder rivers of lower Michigan, anglers sometimes use a wading staff to help them against the heavy current.

For the rest of your costume, I would advise plenty of heavy woolen underwear, a short jacket with pockets in which you can put your fly-books, your lunch, etc., and almost any kind of light hat, into which you can stick your spare flies when not in use. If it is in midsummer and you are in a country much infested with black flies or mosquitoes, you may need perhaps to wear a netting over your head, dropping the net inside the collar of your coat. I find it well to wear soft gauntlet gloves with fingers cut out. This protects the hands against the flies. Personally, I never wear a net, but sometimes tie a handkerchief over the back of the head and neck, protecting the face by using a "fly dope" made of vaseline, tar and pennyroyal. The mosquitoes will bite you sometimes through this unless you keep it constantly renewed; but I would not advise you to be what is known as a dude or tenderfoot fisherman. Learn to take a little punishment along with your sport and you will be all the better sportsman for it.

For rod I should counsel about a five or six pound split bamboo as a practical tool. It will cost you some money, but it will wear you for many years. You may save money by getting a lancewood or a Bethabara, but some do not fancy these latter materials so much. Some use a heavier rod than that above suggested, and others go to so light a weight as four ounces. A four and a half ounce rod may be a very deadly tool, provided that its length do not exceed about eight feet. I fancy these shorter rods more than the extremely long ones, as they are much handier in getting about on the trout streams and quite powerful enough to subdue even a heavy fish when properly handled.

For your line, you will use a heavy, smoothly finished enameled line, just the opposite from the soft, raw silk line which you employed in your bass fishing. This heavy line is tapered at both ends, and is so smooth that it slips readily through the guides of your rod. With it you may cast 40 or 50 feet. Some experts are able to cast 100, 110 and even 125 feet, with a heavy rod and heavy line. Do not concern your mind about such things, for they have nothing to do with practical fishing. On the trout stream you will not need to cast more than 30 feet on the average, and you may perhaps catch a great many of your trout at distances of less than 20 feet, contrary to the general belief of most anglers, who have firmly fixed in their minds the old ideas about casting a long line and a light fly.

Your leaders, made, as of course you know, from the gut of the Spanish silk worm, should be of the best quality, drawn fine and neither too light nor too heavy for the purpose in hand. You must remember that the eye of the trout is very keen, and that he looks up and sees the latter between the eye and the background of the sky. Some anglers prefer their leaders stained a light blue or mist color, but it is questionable whether the color makes so much difference. The main thing is to have the gut as fine as is consistent with strength, and then to lay it out straight and not allow it to sag or belly in going down stream, so that the leader shows to the trout in advance of the fly. Of course, after your first day's trout fishing you will know that you should soak three or four leaders in a wet pad of flannel before you go on the stream to fish. This delicate gut when dry breaks almost like glass, but when wet it grows very must stronger. It is well enough to soak your leaders in your leader pad over night before going out on the stream.

As to the flies which you are to use, I shall not attempt to tell you anything, nor try to settle all the infinite controversies which have arisen over the question of the artificial fly since the first days when anglers went after trout. In general, there are two schools of fly-fishermen—those who believe in imitating the natural insect, and those who believe that the trout does not strike at the artificial fly because it takes it to be a real insect. No one can settle the ancient difficulty between these two schools. There is no law under which the trout of all streams can be classified. Sometimes on one stream and for an entire season, a bright, gaudy fly, unlike any winged insect on earth, will prove most killing, and on the same stream during the next year this same fly will not prove effective. Sometimes the same will be true in regard to the small and dark-colored fly. It is the common belief that in bright, clear streams, in meadow brooks and in waters very much fished, a small and dark colored fly is the best to use; this is, however, merely theory, and I have seen it entirely controverted in actual experiments on more than one much fished stream. I shall not attempt to give you specific directions in regard to the choice of your fly, but will advise you only in a general way to use, on the ordinary Northern stream of the United States, a fly not larger than No. 8, with perhaps a brown body and scanty hackle and wings of white, brown or gray. I would not counsel gaudy flies. You yourself will find that on one stream a certain fly will do which will not do on another, and you will also learn in your experience that at different times of day on the same stream the trout will want different flies. Thus you see the infinite range which is before you in the way of theory and experiment.

Suppose you use for your first fly (the stretcher or the one furtherest from the rod) a coachman, which is a white-winged fly having a peacock body. Your leader should not be over six feet, for you cannot handle your flies well with too long a leader, since sometimes you want to get at your last fly and you do not want the leader knot to strike the guide at the tip of the rod. Now you will find that by pressing on the leader on each side of the knots which fasten its links of gut together, you can nearly always open this knot, so that it shows a little slit between the two ties of the knot. I would suggest that you cut off the loop attached to the snell of your fly and poke the head of the snell between the two strands of the knot thus opened. Now pull them tight again and you have your fly fastened to your leader, perhaps a couple of feet above your stretcher fly, in such way that the knot shows but very little in the water and much less than the double strand of the loop would show. You will see that we are trying to fool the sharpest witted fish that swims, and we do not want him to see any commotion on the surface of the water.

Suppose we are contented with two flies to start. I am sure you will cast much better with two than with three flies. Personally, I rarely fish with more than one fly, and I do not care to cast too long a line.

It is about 9 o'clock in the morning. The sky is a little overcast and there is a light wind blowing. The surface of the water is all broken up into ripples and swirls, so that one would think that no fish could see through the water any distance. Yet I must assure you that the trout can see you at a considerable distance, and if he does see you, he is not apt to take your fly. This, however, must be said with certain qualifications. Personally, I have very often taken trout which, it seems to me, must have seen me. The great secret of successful trout fishing is to move along quietly in the water, putting the feet down gently on the bottom and making as little disturbance at the bottom of the stream and on the surface of the water as can possibly be made. Go along slowly. Keep your eyes alert as the Indian does who is hunting for game. Watch every little log and every dark place under the overhanging bushes, every pocket under the roots of the trees which overhang the waters. Early in the summer the trout may be out in the shallows in mid-stream, but these are not apt to be big trout. The old fellows lie down under the bank, and if you go splashing down stream you would never know there were any big trout near you. Go slowly, and do not be in any hurry. Some think it is better to fish up stream, and for the skillful angler on a much-fished stream this is no doubt true; yet, as we are beginning, I will take you down stream, as that is the pleasantest and most successful way for the beginner to do his angling.

You see a little winged fly struggling across the water ahead of you. It dips into the water now and again, unable to keep on further in its flight. In an instant there is a little flash and you do not see the fly any more. A trout has seen it and has made it part of his morning meal. Again and again, if you watch closely, you will see these little splashes along the edges of the water, most often at the tail of some pool which lies at the bottom of the stretch of fast and shallow water. You will hardly ever strike the trout at the upper part of the pool, but as your fly goes drowning down in the middle of the fast water, until it gets into the deep water at the tail of the pool, then you will see that the trout knows what is going on.

You have learned to cast, of course, before you have gone upon the trout stream. I must counsel you not to try to let out too much line. Run out your line to 25 or 30 feet. Your rod will handle it perfectly and keep it straight all the time. Take plenty of time in your back cast, always looking around to see what is behind you. A long line is always apt to be tangled in the tree tops. There are, however, trout streams in the upper part of the United States where one can wade and cast nicely with a long line. Having seen your way clear both in front and behind and taken plenty of time with your back cast, as you have been so often told before, you will not whip off your fly. Just the instant your line straightens out behind, pitch it forward with a turn of the wrist. Your fly will go forward the full length of the line in front. Aim at some point just a little above the water. This will make your fly light upon the water more delicately. Pick along in this way at all the likely spots next to the bank as you go down stream, and allow your fly to drift out into mid-current, moving it all the time with a gentle twitching of the wrist. This is the common or conventional way of fishing for trout in a rapid stream, and it will kill trout. Ordinarily it will take the most trout just about the time the line straightens out in midstream. You may also let your fly drift on ahead of you in the pools which lie between the riffles. The water will give it a certain motion and you must give it a little different motion with this same tremulous twitching of the wrist.

Presently you feel a sharp twitching tug. You do not know where it came from, for it has been done so quickly you could not tell. Perhaps you saw the flash of the fish as it turned and struck your fly. Perhaps you hooked the fish, and, again, very likely you did not. In regard to striking the fish as it rises to the fly, I can only say, do so as quickly as you possibly can, for the trout, unless it hooks itself, will at once leave the fly, if it finds it is the real article. It is not an unusual thing for a trout to hook itself. Do not jerk back with your arm as you strike, but just strike with a little motion of the hand and wrist. It will not take much to hook the fish.

Once having hooked your trout keep the top of your rod up and let him swing. He will be up, down and all over the stream, all in a flash, as quick as a bird in the air, but if you keep a tight line on him he cannot very well break away from the spring of the rod. After awhile he will try to get down to the bottom or undertake to get under some root or snag. Swing him away from that if you can without breaking your tackle. It is in such times that the biggest fish usually break away, for as quick as they get resistance enough from the rod they tear away or break the gut. The rod is just to give the fish all the strain that the tackle will stand and so keep him plunging until he becomes tired out. Then you may reel him up and pass the landing net under him. Break his neck gently and place him in your basket, already lined with grass or green leaves. Before you put him in the basket, hold him out in your hand and look at him, for he is the loveliest creature you will find in all the wild wilderness, as sweet as a violet, as handsome as a rose, as clean as the clear blue sky.

W. G. DE GROOT.

Food Fish and Fertilizers.

A BILL now in the New Jersey Legislature provides that it shall be unlawful to catch by the use of pound nets or in any other manner, "for the purpose of converting or manufacturing, or attempting to convert or manufacture, or by disposing of the same in any manner for the purpose of manufacture or converting into oil or fertilizing material of any kind whatsoever, by any kind of chemical or manufacturing process, any of the following food fish: Shad, bluefish, weakfish, striped bass, sea bass, porgy, sea trout, salmon or kingfish." The measure is needed, and the bill should not fail to be made a law.

Dr. George P. Rowell and Capt. Toten returned Saturday from a hunting trip into the Devil's Garden, where they had a wonderful experience, seeing great quantities of all kinds of game, including thirty-five deer.—Fort Myer (Fla.) Press, March 7.

Notes from Quebec.

THE arrival of the crows and the dwindling of the snowdrifts are not the only indications of the near approach of another fishing season. The letter carrier's burden grows heavier, and almost every day I find among my mail matter one or more letters on matters connected with fishing. I am asked all kinds of questions concerning the fishing season of 1901, and the probable date of its practical opening, of which, so far, I am totally ignorant. The season in which trout may be legally taken commences, of course, on May 1. But the leopard of the brook sets all State and Federal fish laws at defiance, and may not be taken by fair and legitimate angling at any fixed date or season. Upon this point I can only say that we have winter still with us. We are no longer, it is true, rubbing our ears to keep them from freezing, but some people are still to be seen on the streets wearing fur caps, and though wheeled vehicles have commenced to appear upon the principal city thoroughfares, four to five feet of snow is still piled up upon many of the country roads. The winter has been unusually severe so far as frost is concerned, though the snowfall was lighter than that of last winter. No rain fell from November till March and there was no thaw during that period. Consequently there is no ice on the ground under the snow, and the thaw is likely to be rapid and to cause heavy freshets. In rivers where logs are to be floated there is therefore reason to hope that they will be driven out before the best fishing of the season commences.

The prospects for northern travel during the coming summer are said to be very promising, the number of inquiries for accommodation at the various angling resorts being in excess of those of former years. Never were there so few salmon pools offered for lease or so many disappointed anglers seeking for salmon fishing. Salmon rivers in Canada are safer investments than gold mines.

Several American parties of anglers from the New England States are expected upon their preserves in the country due north of Quebec during the third and fourth weeks of May, and some of them write that they are bringing guests with them. Lake Edward has booked a number of angling guests, who are to come north as soon as notified that the ice is out. The hotel at the Grande Décharge will not be opened until the month of June, but there will undoubtedly be good ouananiche fishing from soon after the middle of May around the shores of Lake St. John, though it is astonishing how very few take advantage of this earliest spring fishing.

Among the fish and game clubs which will be represented in the first angling arrivals from the United States are the Triton, the Metabetchouan, the Tourilli and the Amabalish. Some members of the Nonantum Club may also be here early in the season. I shall endeavor, as usual, to keep you posted as to the progress of the season.

A most determined effort is now being made to put an end to the poaching that has so long been indulged in upon the limits of the different clubs in the Lake St. John district. The story of the good work now being done in this direction finds a more appropriate place in another letter which I am sending the editor, but the remark may fitiingly be made here that every member of a fish and game club in the Province of Quebec and every sportsman who comes to Canada should extend a helping hand to the newly established Sportsmen's Fish and Game Protective Association of the Province of Quebec, which has its headquarters in this city. E. T. D. CHAMBERS.

QUEBEC CITY, April 6.

Trout Waters.

Some Good Trout Streams in the States of New York and Pennsylvania.

WE will first take a few first-class streams on the line of the Delaware, Lackawanna & Western Railroad, because the waters on this line have never been advertised, consequently are not generally known and overfished.

We will select to start with the country surrounding the Utica Branch, as the waters are central to the large inland towns of New York State. First and foremost among these streams is the Geneganset Creek, which is the outlet of the lake bearing the same name. For twenty miles from Geneganset Lake it winds in and out among rolling hills until it reaches and empties into the Chenango River, five miles below Greene's Station. Throughout its whole length it is a perfect trout stream; dozens of fish are annually taken that weigh from 2 to 2½ pounds each, while occasionally one of even 4 pounds is recorded.

If there is one part of this stream better than another it is Smithville Flats, and up to the lake the biggest fish are most likely to be found in the mill dam at Smithville. Several small streams empty into the Geneganset, all of which contain trout.

In this stream and its tributaries is enough good water for a hundred sportsmen to fish at the same time. No angler worthy of the name can come away from Geneganset Creek after a few days' acquaintance without feeling satisfied with the result, and a determination to pay it another visit as soon as time and opportunity offer.

At Green's Station we find Wheeler Brook. It is a first-class piece of water, yielding some good large fish, and if thoroughly fished will always yield an ordinary sized creel of trout. Below the dam the stream is full of bass, therefore has but few attractions for the trout fisherman.

At Hubbardsville we come across the headwaters of the Chenango River, which are well stocked with trout, and some of the best trout fishing in New York State is to be found in the Chenango above Hubbardsville. At Chenango Bridge we come across the Thomas Brook, an excellent little trout water.

For the trout fisherman who enjoys a good scramble over rocks and through the woods, and a healthful walk after his speckled friends, we can recommend the streams in the Pocono Mountains; there are plenty of them, and all have trout. Get off at any station from Stroudsburg to the top of the mountains, and the angler will find good streams within reasonable distances. At Henryville especially there are some excellent ones. Passing to the opposite side of the mountains we find a pretty little stream running alongside of the railroad track. Moscow is the station of this stream. Walk up the track a couple of miles, strike the stream and fish down to a couple of miles below Moscow. There are two magnificent streams about ten miles from Moscow, in an easterly direction; two years ago it was an easy matter to catch a hundred in a day in either stream.

We will now take a few streams on the line of the Erie Railroad, which have been advertised, and are therefore known.

Mongaup River, reached from Port Jervis, 6 to 10 miles. It is a large open water, and after the first week in may excellent for fly-fishing. It contains. many large trout that can only be tempted with minnows.

Carpenter's Brook is reached from Pond Eddy. Go back 3 miles and fish down to the Delaware. It is a first-class early stream for bass fishing.

Shohola Brook is reached from Shohola Station. Drive back to the falls 10 miles distant, and fish down. About two miles below the falls are a series or 20 or 30 large, deep pools. These pools all contain some enormous trout, but they can only be taken with either minnows or spoons—they will not rise to a fly, and but seldom can be tempted with worms.

About a mile below these pools a stream runs into the Shohola on the left, about half a mile above the farmhouses. The pool where this feeder joins Shohola is very deep under the bank. On a fine day if one approaches carefully he can generally count from 30 to 40 trout lying out in the pool, any one of which would reach ¾ to 1½ pounds.

If the readers of FOREST AND STREAM want another list of trout streams, we shall be glad to give them, but as all fishermen know, trout want catching. As an old Maine guide once said to the writer, "Tre-out be the most cussedest of fish. Always a-biting at what you haven't got." Still the pleasure of seeing a fair catch beautifying one's creel more than repays for the hard trudging, bramble scratches and torn gorments that are generally the accessories of a trouting expedition.

J. CHURCHWARD.

NEW YORK, April 8.

CHICAGO AND THE WEST.

The Tarpon Club of Texas.

CHICAGO, Ill., April 6.—Mr. Ralph H. Hobart, briefly mentioned as having taken the first tarpon of the season at Aransas Pass, Texas, has been good enough to forward a little account of the doings at the Tarpon Club this spring, writing interestingly last week as follows:

"TARPON CLUB, Texas, April 1.—The first tarpon of the season to be caught off the coast of Texas were taken from the waters of Aransas Pass on March 24. Two were landed on that date by guests of the Tarpon Club. Charles P. Frame, of New York, took the first fish, a large one, measuring 6 feet 3 inches. The second, measuring 4 feet 10 inches, was landed by myself. Although in previous years tarpon have been taken at the Pass as early as the middle of March, the month just past has been an unusually poor one for fishing, owing to the prevalence of high winds, which have kept the water muddy. During the last few days conditions have improved materially. Several fish have been taken, and from the large number seen jumping it is anticipated that the season will be a good one.

"Within the last half-dozen years the attention of fishermen from all parts of the country has been directed toward the magnificent sport to be had at Aransas Pass, and many who had heretofore been going to Florida waters for tarpon have of late been visiting Texas. The method of fishing at Aransas Pass differs materially from that generally followed in Florida. At the Pass trolling with rod and reel, some 300 feet of line being carried, is followed exclusively. The bait, a live mullet, hooked through the mouth, is kept near the surface of the water, generally not more than four feet below. This means that the boat must be kept in constant motion except when a strong tide is running.

"The Aransas Pass is a channel of water from two to four hundred yards wide, and perhaps half a mile in length, which separates two long islands and connects the Gulf of Mexico with Aransas Bay. Practically all the tarpon that are taken in the locality are caught in this limited area of water. Both the Tarpon Club, located on the island to the north, and the town of Tarpon, on the island to the south, are within a few minutes' row of the Pass, and it is in the town of Tarpon that the men who pull the boats live. A hotel is run at Tarpon for the accommodation of sportsmen not members or guests of the club.

"The Tarpon Club, now entering its third year, and having a membership of 330, is an organization somewhat unique and certainly one which appeals to the man who has ever felt the thrill that comes when the gamy tarpon makes his strike. The club owns and keeps open throughout the year a large and well-appointed club house. The building, wharf, etc., are lighted by electricity, the lounging room is provided with a most entertaining electric piano, and a naphtha launch is at hand when an excursion to some other point is desired. The club house is of comparatively easy access to the mainland, it being a matter of a twelve-mile sail in the mail boat, or if time is an object, a more speedy trip in the naphtha to the town of Rockport, located on the mainland.

"Rockport is 160 miles from San Antonio, and is reached in an afternoon's ride on the San Antonio & Aransas Pass Railway. Rockport is located in the heart of one of the finest duck shooting localities in the country, and it is doubtful whether better redhead and canvasback shooting can be found than was had in this vicinity last November. As the tarpon are not caught at Aransas Pass later than October, some members of the club put in the winter months at duck shooting, and many are the good bags made.

"A glance at the roster of the Tarpon Club is interesting. Some fifteen States are represented, and while Texas naturally has a large preponderance, there are fifty-four members who hail from St. Louis, twenty-four from Denver and fourteen from New York. Among the New York members are found the names of Edwin Gould, Henry C. Rouse, the late Collis P. Huntington, John W. Gates and several others of prominence. Among the Chicago contingent are T. H. Wickes, vice-president of the Pullman Company, and Dr. Nicholas Senn. Mr. E. H. R. Green, of Terrell, Texas, known before he came to the Lone Star State and made a name for himself as president of the Texas Midland Railway, as the son of Hetty Green, is president of the Tarpon Club, and it is largely owing to Mr. Green's efforts that the club was established."

The Spring Run.

The first of the Western fishes to begin the spring run are the pickerel, suckers and wall-eyed pike. Most anglers are unaware of the numbers of these fish in the streams or the destruction to which they are subjected, for the reason that the regular angling season does not begin until May or June, whereas the first run of the fish in the little creeks and overflows begins in March and April. In the neighborhood of Beaver Dam and Fox Lake, Wis., the carp and suckers have been running for a week, and the residents of the farming precincts thereabout have been spearing them by wagon loads. The pickerel in that vicinity are also being speared in very large numbers over all the marshes. A good many parties are thought to be spearing for the market. Of course, in this blind spring run of the spawning fishes they are altogether careless and practically helpless. While seining for minnows in a little creek running into the Fox Rixer, I have more than once taken twenty or thirty pounds of big suckers which had crowded up into the little run, seeking to get as far up as they could into the shallow water. With a spear one could have done a great amount of destruction in such a place, and there are many such places visited by many men who have no scruples about spearing the most fish they can. Were it only carp and suckers which got killed, the matter would not be so bad, but the better class of fishes also suffer. Of course, there are laws against it, but what would you have? Is not this America, the land of the free? E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

New England Fishing.

BOSTON, April 5.—According to his usual custom the president of the Massachusetts Fish and Game Protective Association opened the trout season, at the preserve of the Tihonet Club. His first trout was one of a pound and a quarter, a good one for Massachusetts waters. One or two others were about as large, with several of smaller caliber. Secretary Kimball took a good one (?) weighing several ounces. The weather was very cold, with need of fur coats and mittens. Some fourteen miles of stream was covered on Monday, by the shore fishermen of the party, while others tried to fish from boats, but the wind blew and the water was very rough. Altogether it was a cold and rough opening of the trout season. Only a few trout were taken by the Monument Club members who went down for the opening. The weather was so severe that members of the party fished but little, some not at all. Mr. George N. Talbot and F. H. Warner have gone to their Connecticut trout preserve for the opening of the season. There are no reports of success there yet. Mr. Charles Sias, who is a member of the same club, and is usually there at the opening of the season, is still in the South with Mrs. Sias.

A Bangor, Me. report of Thursday says that the first salmon of the season has been taken at the Big Pool, and that a lady was the captor. The fish weighed 18 pounds, and sold for $1.25 per pound. The first salmon of the season there is usually purchased and donated to the Governor of the State or the Mayor of the city. It has been several times proposed to send this first fish to the President, but I am not sure it has ever been done.

BOSTON, April 8.—Now it seems to be likely that the entire Rangeley region is to be opened up by a further extension of the Portland & Rumford Falls Road. It has long been understood by sportsmen that there is a region of fish and game country above the Rangeleys and to the north and west that has been visited but little, because not easy of access. This region lies between the Rangeleys and Megantic region. A crew of surveyors and prospectors will commence looking out the route from Bemis to Haines' Landing as soon as the snow is out of the way, and that part of the road is soon to be built. It is also reported that the Canadian Pacific is desirious of a more direct connection with Portland, and is planning a connection with the Portland & Rumford Falls line at Haines' Landing or Indian Rock. It is not known what the course will be from the Megantic country to Indian Rock, but it will follow one of the water courses, either of them good fish and game sections. Thus a large section of country will be made easier of access to the sportsmen.

A handsome string of brook trout was shown in Faneuil Hall Marekt Thursday, and the captor claimed that they were wild trout. He is mum as to where he caught them, however. Some of the brooks to the northeast of Boston were fished early in the week, but the weather was too cold and the water too high. The fishermen brought back nothing. Fish Commissioner L. T. Carleton, of Maine, is in receipt of several communications asking as to the probabilities of the departure of the ice from Lake Cobbosseecontee. The writers desire to be first at the opening, since some good salmon are usually taken at that time. The lake is easily reached by rail to Gardiner.

The measure for an appropriation of $5,000 for a fish hatchery at Moosehead Lake, Me., was not defeated after all. This hatchery is to be arranged to furnish as many young fish as all four of the other hatcheries of the State, and should give superior propagating and restocking facilities. SPECIAL.

Four miles west of Thomaston, Conn., on an unfrequented road, stands a house which shows evident signs of age. In front, beneath a shady maple, are two tombstones of persons who died in 1776 and 1778. A long, lank individual named Worrell lives a sort of hermit life in the house, which is reached by a long pair of stairs. The house within is a veritable curiosity shop, the walls being covered with huge hornet nests, wreaths made from potato bugs, all grasses of the field, besides innumerable butterflies and insects fastened to the walls with pins. A shelf room in the rear is a museum in itself—cases of stuffed birds and snakes, frogs, owls, hawks, pigeons, minerals, a chair 120 years old, a wreath of snake skins, another of potatoes, a third of eggs, a whisky bottle 160 years old, lizards of all species, a frame inclosing a wreath made of the claws of animals, 4,800 in all, and all sorts of odd things from the woods.

Rhode Island Notes.

Providence, R. I., April 6.—*Editor Forest and Stream:* The trout law went off at midnight Sunday last, and at that hour there were many anxious anglers ready to throw their lines into the brooks in every section of the State. The best trout fishing in Rhode Island is down through the central part of the State, and the trolley cars which now invade these sections have carried many a fisherman to these destinations during the week. The catches reported indicate that there is plenty of fish to be caught.

Dr. Arthur C. Pierce, author of "The Man for Corpus Christi," is seriously ill at his home in Riverside, R. I.

The Providence Telegram of March 31 published the following in its Olneyville correspondence: "Since the ice has thawed on the small ponds a great number of fish has been found dead and the lovers of sport greatly deplore this. This condition is noticeable in the small ponds near Hartford avenue. At these places the late Fred French stocked the ponds with pout and pickerel. During the past winter the ponds were frozen solid and the fish killed. The shores are now lined with the dead fish, some of which weigh one and two pounds."

Large flocks of geese going north have been reported from various parts of the State the past fortnight. One flock estimated at containing thousands of birds was reported as flying northward over Pawtucket Valley.

Flatfish are commencing to bite in Narragansett Bay, and good catches are reported.

Most of the early birds have arrived and from the numbers already in evidence it is apparent that the song birds will be more numerous this year than in several years past. Ospreys are reported as unusually plentiful this spring at Bristol. W. H. M.

Training the Hunting Dog.

By B. Waters, Author of "Fetch and Carry: A Treatise on Retrieving."

XVI.—Retrieving.

Although in America retrieving is made a part of the dog's field work, it is not a natural quality in the sense that pointing, roading, etc., are so. There are those, however, who maintain that it is instinctive, and moreover that it is so implanted in the dog's nature for the especial benefit of man. The fact that an exceptional puppy will grasp a bird in his mouth on opportunity in his first experiences afield and carry it with more or less directness to his master is cited as proof of its natural origin. The fact that the puppy will grasp the bird on his own account, even if his master is absent, is entirely ignored.

Whether in a wild or domestic state, if his prey is of a size which permits of his doing so the dog frequently carries it to his home. That he should attempt to carry it when in the presence of his master has therefore no special significance as an instinct whose purpose is the furtherance of his master's interests.

When the puppy first grasps the bird and makes what is termed a natural retrieve his every expression and purpose denote that the act has an entire reference to himself. His eyes glare with the triumph of possession; he grasps the bird with unnecessary firmness, oftentimes rolling and crushing it in his mouth, and he goes near to where his master stands as being the most secure and restful place under the circumstances. He would do precisely the same thing when he ceased work and wished to rest. At the juncture when the dog is near to him the trainer interposes, and by intimidation and restraint robs him, as it were, of his prey. If he is of a mild or timid disposition he may yield his prize to his trainer at the first stern word or act in reference to it. Under similar circumstances he would in like manner desist from any other purpose or act in which he was engaged. But if the puppy is left to his own pleasure in the matter he retains possession of the bird, lies down in a place to his liking and proceeds to devour it.

The mere picking up of the bird in the presence of the trainer and the success of the latter in plundering the dog of his prey are exceedingly limited data on which to found a theory that the act of retrieving is instinctive. Intelligent retrieving in the service of the gun is the result of education.

If the dog retrieved naturally for the benefit of man he would exhibit and maintain a consistent purpose of doing so, instead of a consistent purpose to possess and eat the bird. Furthermore, it would seem that if the dog retrieved naturally for man the latter would know instinctively why the dog pointed and retrieved, but man has to be taught these things before he knows them.

Some dogs, it is true, learn to retrieve much more quickly than others, and take a great interest and delight in it. But this may be said of any other work imposed on the dog by man.

The average dog is exceedingly susceptible to praise or flattery, and if he is skillfully handled in this respect he will do many things of no special interest or benefit to himself other than the vain gratification which he feels from evoking the approbation of his master. His keenness of observation and discrimination in determining what acts are pleasing and what are displeasing to the latter are purely matters of mental discernment.

The fact that almost any dog, whether he be cur or well bred, may be taught to retrieve indicates that the act is not a matter of instinct peculiar to setters and pointers. When done with any degree of finish and intelligent purpose it is an educational act quite as much as is the act of shooting the bird when displayed by his master. Incidentally, is it not strange that the dog should instinctively retrieve the bird which his master has learned to shoot, not instinctively, but by skill derived from education? It would seem that instinct would work alike in respect to both man and dog.

Dogs, as individuals, whether pointers or setters, vary greatly in their aptness for retrieving. Some manifest the greatest delight in it, and in fact in any other act within their compass which wins the approval of their masters; others perform in an indifferent or perfunctory manner, while still others detest and rebel against it heartily.

As a general proposition, by far the greater number of pointers and setters may be taught to retrieve with some degree of satisfactory ability. However, dull nose, weak intellect or constitutional indolence will affect the dog's performance adversely in this respect as they will in all the other parts of his field work.

As a matter of good training it is much better to defer all attempts to teach retriveing till the dog's second season. When the teacher attempts to combine retrieving with the dog's other field schooling he retards instead of advances it.

The disadvantages consequent to retrieving are as follows: Nearly all puppies—and indeed many old dogs—take an unbounded pleasure in capturing their prey. Each one has a keen desire to have individual possession of it. In their own eagerness to be the first to the dead bird and gain possession of it they forget or disregard their training or obedience, so far as it refers to steadiness to the gun. The desire to retrieve incites the dog to break shot; to be riotous when drawing on birds instead of being careful, and to lawless casting about after the gun is fired in search of a real or imaginary dead bird, the report of the gun having to him but that one significance. The energetic efforts of the trainer at such junctures avail but little. The dog furiously charges about to find the bird. When at length the trainer gets control of him, his mind is still filled with the ardent desire and purpose to find the bird, and if freed he again begins his riotous search. If at length the trainer, by energetic effort, gets control of him and leads him away a quarter of a mile, more or less, from the place where the dead bird is supposed to be, when released the puppy returns and persistently searches for it till he is pleased to desist, regardless of his handler's whistling and ordering in the meantime. At every report of the gun the puppy's misbehavior is amplified or modified, accordingly as the circumstances permit. If there are scattered birds about, his riotous charging is sure to flush them all, while he, heedless or oblivious of them, is absorbed in the one idea and effort to possess the dead bird.

This lawlessness, incorporated as a part of his field work, complicates matters seriously and harmfully. It lowers the standard of all his work as it relates to the service of the gun. The idea of possession incites him to lawless alertness. The real or imaginary dead bird is a constant inducement to independent and lawless effort.

If the dog has been properly schooled the first season, he is steady to shot and wing, besides having acquired an interest in working for the success of the gun. In the second season retrieving may be taught as a special branch, the dog having a preparatory good schooling to steadiness in his work to the gun as a finder. It requires no argument to prove that it is easier and better to perfect the dog first as a finding dog one season and second as a retriever the ensuing season than it is to attempt to perfect him in both branches at the same time.

Nevertheless, some dogs will exhibit all the undesirable traits enumerated; other dogs one or more of them, while others again may engage in retrieving with discouraging indifference. As a general proposition the majority of dogs may be educated into being good retrievers, while a part may be educated into excellent ones.

Dogs of superior "bird sense" learn to engage in all the details of field work with an intelligent comprehension of what constitute proper effort and action in every part of it.

Notwithstanding the disadvantages which are likely to accrue when the dog is used both as a finder and retriever, the demands of sport as conducted in America require that the dog be so used. The average American sportsman owns but one or two dogs, and he desires that they serve him as finders. He has neither the time nor inclination to bother with a dog whose sole specialty is retrieving, and as a matter of economy some sportsmen would not consider that his services counterbalanced the extra expense.

The average American sportsman has but a few days of shooting in each season, and therefore his one dog in his service must be broadly proficient. While the dog may not be so good a finder if he retrieves, nor so good a retriever if he finds, a compromise may be established which will insure at least passable performance in both finding and retrieving, thus affording to the shooter the advantages of both. Moreover, two dogs, the one a finder, the other a retriever, could not be handled at the same time by the average American sportsman, who, as a rule, finds quite enough difficulty in handling one dog at a time.

Without a retriever the success and pleasure of a day's shooting is materially impaired. Birds which fall in heavy weeds or grass or bushes are extremely difficult to find, and such as fall in mud or marshes, though in plain sight, are gathered with much difficulty and discomfort. When the shooter does his own retrieving a large percentage of dead and wounded birds and much time are lost.

As to the specific injuries to the work of the dog employed as a finder-retriever, they are as folloys: The best manner of seeking live birds, in respect to the manner in which the dog uses his nose, is distinctly different from the best manner of using it in retrieving. The best manner of finding is with a high nose, and therewith the dog cannot go to the birds too quickly consistently with steady performance. His work then is on both bevies and single birds. As a retriever his work is entirely on single birds. He has a puzzling single trail to follow if the bird is wounded, and none at all if the bird is dead. To best find the wounded or dead bird it is essential that he carry his nose close to the ground and trail slowly, and this manner of retrieving the average dog soon learns. Unfortunately, this manner may be used after a time by the dog when seeking live birds, thus using the one manner whether seeking or finding.

It is comporatively easy to mar the best manner in which the dog uses his nose in finding, and when so marred it is beyond the power of the trainer to correct it.

'Mid Reef and Rapid.—VII.

BY F. R. WEBB.

The early settlers of the valley and mountain regions of the Virginias seem to have been blessed with a singular paucity of invention when it came to naming their rivers. The scarcity of Indian names is readily accounted for when we recall the fact that, numerous as they were in the lower countries and along the seas and bays, no Indian tribes dwelt in the valley or in the mountain regions, only visiting these regions from time to time when on hunting or other expeditions, and affixing their names to but few streams besides the Shenandoah and Potomac among the mountain streams; hence the settlers were called on to name the streams themselves, and the numerous North forks, South forks, North rivers, South rivers, etc., bear testimony to their lack of ideas in this respect. There is the North Fork and South Fork of the Potomac; the North Branch of the South Fork and the South Branch of the South Fork. There is also the North Fork and the South Fork of the Shenandoah, besides the North River of the Shenandoah, also the North River of the James, both of which latter streams are in Augusta county.

There are two South rivers of the Shenandoah—the South Fork, as the larger stream or main river, upon which we were now cruising, is termed, above Front Royal, where the North Fork unites with it, and the smaller South River of Augusta county, which, with North and Middle rivers, unite to form the South Fork or main stream of the Shenandoah, and there are also two North rivers of the Shenandoah—the North Fork, which, emerging from the mountains through Brock's Gap, in Rockingham county, meanders down the beautiful Shenandoah Valley and unites with the South Fork, the main stream, at Riverton, near Front Royal, and the smaller North River of Augusta county, which, rising in the Alleghany Mountains, flows out into the valley through the wild and picturesque North River Gap, its bold, swift, cold waters affording fine trout fishing among these fastnesses, and meanders directly across the valley and the county until, just at the Rockingham line and almost at the foot of the Blue Ridge, it receives the waters of Middle River, which zigzags across the middle of the county in a remarkably sinuous course, to become merged into its sister stream. Five miles further down the third and smallest stream—South River—comes in, after pursuing a more direct and rapid course along the base of the Blue Ridge in the eastern part of Augusta. At

this point of junction in Rockingham county, with the dilapidated little village of Port Republic nestled in the forks, with a river on either side, the three crystal-pure mountain streams lose their individuality and become the bright, sparkling Shenandoah (South Fork), the "Beautiful Daughter of the Stars" of the Indians, which winds its sinuous, silvery way along down the base of the Blue Ridge for 100 miles, vainly seeking an outlet to the sea, until, mingling its waters with those of the Potomac, the two united streams burst their way through the mighty barrier at the point of junction in the world-famous gorge at Harper's Ferry.

These streams are all navigable for canoes, even at the lowest stages, excepting, perhaps, the Augusta South River. The waters are usually clear and of a slaty blue tint, but are apt to get very muddy after heavy rains, the color then being of an ugly brick red from the Virginia red clay soil.

As is natural in a mountain stream of this character, the entire bed of the river from the sources of its triple head streams to its final swift, glad union with the Potomac is literally ribbed and seamed with great limestone reefs or "saw-tooth" ledges. Owing to its very considerable descent, the river abounds in rapids and falls, some of which are several miles in extent, and in all of which the ledges and reefs play a particularly prominent part. They seem to generally run in a course parallel with the mountains, or directly up and down the valley; consequently when the rapids occur in reaches of the river that lie in the general line of the valley, they are bold, open, swift rushes of water, always liberally bestrewn with rocks and reefs, of course, but as these occur in more or less regular lines, which run with the stream, they form but little obstruction and are not difficult to avoid. Where, however, the rapids occur—as is frequently the case, particularly in that part of the river between Massanutton and Riverton—in the reaches that lie directly across the valley, they then present peculiar difficulties, as the reefs and ledges appear in innumerable parallel lines directly across the river, more or less regular in their formation, and the falls or rapids, instead of being bold and open, become simply so many little pools and falls, the river being literally terraced. It would be impossible to safely navigate many of these places were it not for the boat channel—an artificial relic of the days before the Shenandoah Valley Railroad was built along the river and down the valley, when all the products of the numerous mills and mines of this fertile region found their only outlet to a market by means of the river, being carried down in gondolas (or "Gunaloes," as the common flatboats are termed in local parlance) to Front Royal or Harper's Ferry, where railroads were reached, and at which point the boats were sold for lumber, while the crews returned home overland.

The Blue Ridge section of the Appalachian system presents a curious feature in that being a part of this general system of mountains, and presenting the same parallel chain, yet it stands so far off from the other mountain ranges as to present a separate range by itself. It preserves a general average distance of about twenty to thirty miles from the nearest parallel range on the west, and the broad, beautiful, fertile valley lying between is designated in different sections by various names, as north of the Potomac and across Pennsylvania it is called the Cumberland Valley, while south of the James and across the Carolinas it is known as the Valley.

Nowhere in its whole extent, however, is it so beautiful, so fertile and so salubrious as in that portion which lies across the Virginias from the Augusta county highlands to the Potomac, which is designated as the Shenandoah Valley, or in local State parlance "the Valley."

With an elevation averaging throughout its extent considerably over 1 000ft., its climate is pleasant and salubrious. Malaria is unknown, its atmosphere is always bracing, even in the hottest weather, while, protected by its massive mountain walls, its winters are mild, and severe and destructive storms are warded off. With its rolling floor and general downward trend toward the Potomac, its drainage is perfect, the considerable fall of the rivers and streams quickly carrying off all surplus waters.

The valley is drained by the two Shenandoahs and their tributaries, which, owing to the close proximity of the mountains on either side, while numerous, are all small, there being no room to develop length or size.

A peculiar geological feature is presented in the Massanutton Mountains—a complete, isolated range, standing out in the valley and dividing it into two unequal parts.

This range rises abruptly from the valley in the southern part of Rockingham, and extends in bold, rugged peaks and parallel ranges some fifty or sixty miles down toward the Potomac, where it sinks into the plain again as abruptly as it rises, the peaks at either end looking remarkably alike.

The great strategist, Stonewall Jackson, was thoroughly familiar with this topographical feature, and made effective use of it in his memorable and remarkable valley campaigns, and played hide and seek around and among their fastnesses in a manner both bewildering and detrimental to the Northern invaders. The Confederate signal stations on the peaks at the ends of the range were familiar institutions at intervals throughout the war.

Although, as a rule, not so lofty as the neighboring peaks and domes of the Blue Ridge, from which they are separated by the narrow Page, or Luray, Valley, not over from three to six miles in width, the Massanutton Mountains are much more rugged, precipitous and wild, and add much to the picturesque beauty of the landscapes. The beautiful and diversified panorama of rich, green forests, rolling fields, sparkling, rippling rivers and bold, rugged mountain peaks, with the gentle, soft blue background of the more distant ranges and ridges, the prospect changing with every elevation or from every point of view, make up a region unsurpassed for exquisite beauty of scenery, perhaps, in America.

As before stated, the North Fork rises among the mountains west of Rockingham, and winds down through the broader Shenandoah Valley west of and along the base of the Massanutton Mountains and passed close around the base of its northern peaks to unite at Riverton with the South Fork, or main stream, which, after drawing its primary supplies in Augusta county from the entire breadth of the valley, from the pastoral slopes of the Blue Ridge on the east to the wild fastnesses of the Alleghanies on the west, and draining pretty much the entire broad surface of the county through its triple head streams, takes its sinuous course down the narrow defile between the Blue Ridge and the Massanutton Mountains, descending more than 500ft. in its fifty miles' extent.

The entire fall of the river proper, from Port Republic to Harper's Ferry, a distance of ninety miles in an air line, but in which distance the river develops a length of 156 miles, is 797ft. The river may be divided into three nearly equal lengths or sections, for convenience in describing. From Port Republic to Massanutton, opposite Luray, which lies three miles inland, a distance of forty-nine miles, the fall is 304ft., and except for the backsets from the numerous mill dams and an occasional eddy, the river is practically one continuous rapid. In this section of the river it is, while very winding, not so tortuous in its course as it becomes lower down, and as the trend of the river is more lengthwise of the valley, without so much zigzagging back and forth across it, it happens that the reefs are more generally to be found running lengthwise with the river instead of across it, consequently these upper rapids are more bold, free and open than those further down.

The next section of the river, from Massanutton to Riverton, is fifty-two miles in length with a slightly diminished fall of 282ft.

In this section the character of the river materially changes. It is remarkably crooked, the entire length being a never-ending succession of great letter S loops back and forth across the narrow valley. The rapids or, more properly speaking, falls occur entirely in the long cross reaches of the river, with deep, still pools or eddies in the angles or bends, and, as a consequence, these rapids, instead of the bold, swift, down-hill rush of the upper rapids, present a bewildering succession of long lines of saw-tooth ledges, which stretch across the river from shore to shore in more or less regular parallel lines, forming little cascades or falls of from 1 to 3 or 4ft. in height. In some few instances a single line will form a fall of several feet, but more generally they occur in innumerable parallel lines several miles in extent. Frequent large masses of stone, some of them of considerable size and more or less overgrown with scrubby bushes and grasses, rise from the bed of the river and add a savage wildness and picturesqueness to the prospect. The boat channel, which is an artificial channel, blasted out through these reefs and ledges, is generally found close up against one bank or the other—so close that the passing flatboats would frequently brush along under the overhanging trees—and provides a tolerably safe and very interesting run down through these troublesome and often formidable falls, which could otherwise be navigated only at some risk to canoe and canoeist, if at all.

This portion of the valley does not seem to be so rich, prosperous and well settled as the upper portion; only occasional mills and houses are seen—the latter, with some few creditable exceptions, generally poor and small, and occupied chiefly by the mountaineers, and the general impression made by the river on the mind of the canoeist is one of solitude and loneliness—sometimes no sign of human habitation will be seen for hours at a time, and the constant procession of forest trees marching solemnly by up-stream—with the imposing, towering mountain walls shutting in the view at either end of the long reaches, and the wildness of the long falls and rapids, with their rugged masses of reefs and rocks studding the waters, create an oppressive feeling of awe in the mind of the cruiser as he communes face to face with nature in her most beautiful but impressive aspect; while the only sounds that break the Sabbath-like stillness are the occasional scream of a fish hawk, the far off cry of the loon, the rustling murmur of the breeze through the treetops, and the ever present, hoarse complaint of the river, as it frets and stumbles in foam-crested waves over and among the illimitable ledges and reefs that perpetually obstruct its course.

The third section, from Riverton to Harper's Ferry, between the mouth of the North Fork and the Potomac, comprises the Shanandoah River proper, both forks having now united, and embraces a length of 55 miles, with a fall of 211 feet, more than 100 feet of which is found in the lower six miles of the river, between Bloomery and Harper's Ferry. This short section is highly dangerous to any but the most expert boatmen and canoeists. The river is a perfect chaotic wilderness of reefs and rocks, and in many places becomes absolutely lost to sight among the huge masses of limestone—water-worn and gullied to an inconceivable degree—that completely fill its bed; around and among which the water rushes and roars through a labyrinth of crevices and channels, worn and gullied deep in the heart of the solid rock; as it cuts its way deep down to the very foundation sills of the mountains—which tower aloft close at hand, on either side—in its irresistible course down to the bottom of the gorge, through which the Potomac has eaten its way out to the sea.

Above this chaotic section—from Bloomery back up to Riverton—the river flows broad, stately and majestic, broken by frequent long, beautiful rapids, most of which are quite rough, but owing to the boat channels, present no special difficulty to the practiced canoeist.

The broadest and most beautiful, historic and interesting portion of the valley lies in this section also. The Massanutton Mountains have long ago ceased to divide the valley, which here sweeps in beautiful undulations, in an unbroken expanse of fertile fields and beautiful woodlands from the Blue Ridge to the Alleghanies; dotted with thrifty farmhouses and imposing old mansions, some of which date back to the Colonial period. Here too, at a later day, the contending armies of a divided nation swayed back and forth in a death grapple upon which the world looked with interest; and the battle-scarred towns of Strasburg, Harper's Ferry and Winchester are all close at hand.

The entire stream, from Port Republic to Harper's Ferry, is exceedingly beautiful; with its bold, blufflike banks and rocky headlands, its grand and imposing mountain scenery, and its sparkling, limpid, slaty-blue waters, reflecting the bright rays of the sun from their foam-crested waves and surges. In places the river in its gigantic letter S loops, impinges squarely against the base of the Massanutton Mountains, whose rugged, rocky sides, their harshness toned down by a dense growth of scrubby, hardy oak, pine, hemlock and other trees, tower aloft almost perpendicularly from the water to the summit of the range, from one to two thousand feet above, and in many places long lines of perpendicular or overhanging cliffs rear their beetling, tree-clad brows a couple of hundred feet or so above the dark, still water at their bases; and in whose black, reflective depths they are faithfully pictured in an inverted position, suggesting mysterious, unfathomable depths to the beholder.

Fierce, gamy bass abound in the entire river, clear up into the remote headwaters of the Augusta county forks, and as they usually rise readily to the fly, fine sport is afforded all along the river when the water is clear.

The people living along the river are uniformly kind, hospitable and obliging, and supplies can readily be obtained at any farmhouse at reasonable prices, and a small party of canoeists might easily run the river without any camping outfit, by stopping at farmhouses. My first cruise on this stream was made alone, some years ago. It was a short cruise of five or six days, and during this cruise I only camped one night; the other nights were passed in farmhouses; the night's lodging, with supper and breakfast, being freely and cordially given me for the asking, with a true old Virginia hospitality, and on my tendering payment it was in no instance accepted.

The oldest inhabitant has no recollection of ever seeing the river so low as it was on this cruise, and in all our experience we never found it so low; yet after entering the Shenandoah, at Port Republic, we experienced but little difficulty on account of low water, although with from six to twelve inches more water than we had—which is about the usual low water stage—the cruising would have been much better and safer. I cannot say that, as a rule, we ran any very great personal risks; for where the water is swift and studded with rocks, it is correspondingly shallow, and in case of disaster we could doubtless have easily waded ashore, but it required great care and patience to preserve our frail canoes from damage, which would entail inconvenience and delay, and which might easily terminate the cruise.

The river never gets so low but what it can be cruised without special difficulty, in a light draft canoe, handled by an experienced canoeist. It is, in fact, an ideal cruising stream for the experienced canoeist, but the novice should, perhaps, acquire a little experience on a more placid stream before attempting the Shenandoah. Dame Nature presents a smiling face in this favored region, but she is stern and relentless, and is no respecter of persons, and therefore one not skilled in the management of canoes or not versed in the vagaries of rough, rocky streams had best be cautious about courting the good dame under such circumstances, or he will be pretty apt to come to grief.

Above all let no one attempt this stream in an ordinary open skiff or rowboat. Nearly every year parties from various points along or near the river, attempt to run it in such boats; and I have never yet heard of such an attempt that did not end in disaster, and in some of them lives have been lost. Open canoes can no doubt be used by those accustomed to their management, but when I recall how our canoes are completely buried in the big waves of the numerous falls and rapids—their decks and closed hatches alone preventing them from swamping—I am strongly of the opinion that the only suitable boat for this swift, rocky stream is a light, flat-bottomed, decked canoe, well rounded away at both ends, and without keel (other than a broad, flat, oak strip half an inch thick by three or four inches broad), centerboard, rudder or other projection on the bottom, and with the bottom and sides well protected with bilge keels.

An experienced canoeist in such a canoe may safely and comfortably run this beautiful mountain stream on any water, high or low, with the exception of the few miles immediately above the Potomac. This should be avoided in high water, as it can then be run only at the risk of life.

[TO BE CONTINUED.]

A. C. A. Membership.

Mr. F. H. Whiton, of Wollaston, Mass., has been proposed for membership to the Eastern Division of the A. C. A.

Mr. Frank Declinch, of New York, has been proposed for membership in the Atlantic Division of the A. C. A.

Yachting.

MR. W. B. DUNCAN, JR., has announced that the name of the Cup defender now being built at Herreshoff's for the syndicate composed of Vice-Commodore August Belmont, James Stillman, Frederick G. Bourne, Col. Oliver H. Payne and Henry Walters is to be Constitution.

THE Boston Globe of Sunday, April 7, in speaking of Illinois, says:

The Chicago Cup defender Illinois was launched yesterday at Lawley's yard, and also had her first tryout under sail. No further trial is necessary to convince the Chicago men that they have the fastest boat of her inches in the country, but she will go out again to-day to get her rigging in easy running order.

On board the Illinois were B. B. Crowninshield, the designer; George M. Pynchon, head of the syndicate that built the boat; Benjamin Carpenter, who made her sails; Morrill Dunn, one of the members of the syndicate, and Albert de W. Erskine and Stewart G. Shepard, Chicago amateurs, who will make up the crew.

Mr. Pynchon had the tiller, and headed his boat down the bay in a light southeaster, under which the water lay as smooth as glass. But the Illinois slid along as if she had auxiliary power, her speed surprising those on board and the large crowd of yachtsmen who were watching her from the shore.

She was tried all around in the light air of the upper harbor, and every hitch brought out some new strong point. Close hauled she stood up as squarely as when running free and slipped along fast. In stays she is

the quickest thing in the keel type ever seen in these waters, and that is saying a great deal.

After this maneuvering Skipper Pynchon steered for the open sea, looking for more wind and rougher water, and his search was rewarded. The wind was blowing a good capful, but the Illinois only bent into it a little more and began to run through a fleet of fishermen. She left them with ease, although one of the fastest, the Edna Perry, spread every kite and tried to hold the saucy little wonder, which carried four-fifths less sail. The fishermen were not downcast at being vanquished by such a diminutive opponent, for with cheers, horns and bells they gave her a sailor's welcome that also carried warm wishes for success.

The Illinois remained outside about four hours, going through every point of sailing on and off the wind, and gave the same satisfaction as in the lighter air. She returned to her mooring at Lawley's, where Mr. Crowninshield and Mr. Pynchon had a consultation over a few minor changes in arrangement of rigging, which were made very easily. The boat was then formally accepted.

It was remarked by many who have seen the boats that the Illinois is a miniature Independence. She has the flattest of flat floors. If the big one only shows as great superiority over the 90-footers as the Illinois promises to develop in her contests, the America Cup will again be defended by a Boston boat.

Mr. Pynchon can hardly find words to express his gratification at the showing made by the Illinois. He expected a fast boat, as Boston men designed and built her, but she is far superior to his anticipations, he said: If she does not win he will be the most surprised man in Chicago. He, of course, does not say that it is a "cinch" for the Illinois, but it is beyond his comprehension what kind of a boat can be built to defeat her. He is sure the club which he represents will be proud of the Illinois.

The Cruise of the Foam.

IN our latitude the weather in May is generally so unreliable that few owners of power boats care to go in commission before the first days of June.

Should there be, however, any desirous of making an early start, this short account of a cruise of the Foam to Annapolis, Md., where May is usually very pleasant, and her return later to Shelter Island, may prove of interest.

Annapolis Harbor has already become the resort of steam yachts during the graduating exercises at the U. S. Naval Academy. If my yarn induces some power boat owner to take the same trip, I believe he will be amply repaid.

The Foam is a 42ft. cabin naphtha launch of the regular Gas Engine and Power Company type, with a 12-h.p. engine. She was put overboard at Morris Heights at the beginning of May, and after several preliminary trials to ascertain whether all was in order, was provisioned and prepared for her contemplated trip.

The crew consisted of the Skipper, a seasoned sea dog; of Billy, who was unseasoned and had no great fondness for the water, and of Edward, styled Ed for short, who filled the billets of engineer and cook.

On the morning of Saturday, May 8, Billy and the Skipper arrived at Morris Heights with their traps and found the Foam ready for the start. The valises were stowed away, the naphtha and water tanks filled up, the remaining stores and also the many little odds and ends that seem to be always omitted until the last minute were taken on board; then at 10:40 A. M. the Foam left the dock and stood to the northward through the Harlem River, a hand from the shops acting as pilot as far as Spuyten Duyvil. On reaching that point we found the bridge down, so ran up to the trestle, landed our pilot, and, after waiting some time for a belated train, passed through the draw and into the Hudson River, bound south.

Everything promised a fair trip, the barometer being steady at 30.28, the sky clear though hazy, and a gentle breeze blowing from the N.N.E. Tide, flood.

At noon the Foam was off 106th street, keeping as much out of the tide as possible, dodging tugs, tows, steamers and ferry boats as the need presented itself. The Battery was reached just at the turn of the tide. As the sea was smooth, the Skipper steered for the Narrows, deeming it better to pass outside of Staten Island, under the circumstances, rather than through the Kills.

Past the Statue of Liberty went the Foam, then by Bay Ridge (at this season without its usual complement of yachts), close around the end of the wharf at Fort Tompkins and along the shore of Staten Island. As the engine was running smoothly and well, Ed started up a fire and soon had a piping hot bowl of ox-tail soup on the table, with cold roast beef, baked potatoes, bread, butter and crackers, for our dinner. Ed then relieved the wheel while the Skipper and Billy set to with fine appetites to do justice to the fare.

At 4:11 P. M. the Foam was abreast of the Great Beds Light, standing for the mouth of the Raritan, and at 4:40 passed under the railroad bridge and up the river, fighting a strong ebb.

This being new ground to the whole party, the Skipper was obliged to trust entirely to the chart, the study of which, the steering and the desire to take in the landscape kept hands and eyes quite busy. After many a twist and turn, at 7 we locked into the Delaware & Raritan Canal at New Brunswick.

Though late, the Skipper decided to seek a more quiet berth to tie up, for canal boatmen are not always pleasant neighbors, especially of a Saturday night, so he ran on to Lock No. 12, and in the stretch above, near Bridge No. 25, at 8 P. M. the Foam was made fast to the bank. Barometer 30.18.

SUNDAY, MAY 9.

Clear, cool and pleasant; barometer at 8 A. M. 30.10. That so fine a day could not be utilized seemed a pity, but both Delaware & Raritan and Delaware & Chesapeake canals are closed to traffic from Saturday at midnight until 12 of the following night.

The Skipper and Billy spent the morning quietly on board, and toward noon walked up the tow path about a mile and a half into Bound Brook. They had a look around the town and finally sat down to dinner at the best hotel the place afforded, but afterward regretted that they had not dined on board.

The barometer continued to fall slowly during the day; the sky also clouded over slightly.

MONDAY, MAY 10.

The day opened calm and pleasant, but hazy, cirro-cumulus and cirro-stratus clouds with hard, oily looking edges showing on the western horizon. Barometer at 5 A. M. 29.78.

At 5:10 the Foam's head was shoved off from the bank; Ed had been stationed aft with a boat hook to push her stern well out, but was so taken up with a pretty girl in a market wagon that he neglected to do so. On starting the engine a propeller blade struck a projecting stone; the jar aroused Ed, who then, to the great amusement of the girl, shoved off so vigorously that he nearly fell overboard.

The Foam was passing Trenton at noon, it being then very hazy and the barometer still marking 29.78. Reaching Bordentown at 1 P. M., we locked out of the canal into the Delaware.

A telegram was sent to the home folks to apprise them of our whereabouts, and then the launch started down the river with a fair tide. Wind, W.S.W., blowing in squalls that were at times quite fresh, the weather warm with a great deal of haze, while the clouds banking to the westward looked threatening. As we worked down stream the squalls increased in frequency and force, they and the tide being contrary, causing a short, ugly cross sea, in which the boat at times pounded heavily.

The strong tide and rough sea made an attempt to land just below Torresdale dangerous. Notwithstanding all our care, the boat struk the wharf, but fortunately without injury. Billy found it impossible to hold on unaided, yet both engine and wheel required our constant attention to prevent accident. The Skipper therefore gave it up, backed off and continued down the river.

The barometer had not marked 29.78 all day for nothing. The clouds that had banked to the westward were now rising rapidly, and it was evident that we were to have a heavy squall. Being then north of the railway bridge, the skipper decided to run in, anchor among some yachts near shore and ride out the blow. Fortunately he noted their bearing per compass and the set of the tide, for before the Foam could reach her berth the squall struck her, coming very heavy and with blinding rain. Thanks to the precautions noted above, the launch fetched in among the yachts, where, dropping our heaviest anchor, we veered our line almost to the bitter end.

The downpour of rain completely killed the sea, and the river was soon as smooth as a mill pond. About an hour later it began to clear, and the tide changed to flood. During the slack water, on account of the long scope at which we were riding, while the other yachts were moored, it required care to avoid fouling our neighbors.

At 5:15, though still drizzling, we got under way and continued down the river, passing Philadelphia and the League Island Navy Yard, where could be seen the battleship Iowa lying at the wharf.

Here we were made the victims of a practical joke that might have entailed serious consequences. The river being nearly clear of shipping and perfectly smooth, Ed put dinner on the table; not far from us was a large tug, crossing the river from Red Bank, and apparently bound into the Schuylkill.

This tug, if she kept her course, would pass well astern of the Foam, so no further attention was paid her, and Ed went forward to relieve the wheel. After taking a look at the chart, the Skipper and Billy sat down to a bowl of scalding hot soup, which they were unable to eat immediately. The next instant, above the noise of the engine, was heard the rush of water. Through the after doorway we caught a glimpse of a tug close astern. Jumping up, the Skipper rushed into the pilot house and grabbed the wheel; Billy hurried aft. With the whole river before her, that tug had altered her course so as to cross not 5ft. from us, her bow wave tossing our stern high in air and making us roll deeply, the engine racing badly. This upset the table, threw the scalding soup over the seat we had vacated but a few seconds before, smashed some dishes, while the tender on the roof broke adrift and went sliding down to leeward. With a jeer from her crew the tug ported her helm and stood away for the Schuylkill, having lost half a mile for the sake of perpetrating that joke.

Had the Foam not been an excellent sea boat she might have swamped or upset and the lives of her crew been endangered, all for a senseless joke.

We righted matters, opened a new can of soup, and, as soon as it was hot, finished our meal in not the best of tempers.

The Foam passed Chester in the twilight, Wilmington and New Castle during the night. Finally at 11:15 P. M., having made a long day of it, we dropped anchor on the Bulkhead Shoal, north of Pea Patch Island, within the red sector of Finn's Point rear light, and just south of the line of the New Castle range.

Having thus secured quite a safe berth, we hoisted our riding light, made all snug for the night and turned in.

TUESDAY, MAY 11.

The day dawned clear and pleasant, with a light breeze from the N.W. At 5 A. M. called all hands; the barometer was then 29.90 and rising. Got under way at 5:40 and stood for Delaware City, which was reached at 7 A. M., where the Foam locked into the Delaware & Chesapeake Canal. We landed at this quaint old town to purchase fresh bread and a few other necessaries, starting away at 7:30.

At 8 we entered St. George's lock. From this point the scenery is wild and bold—for a canal, that is, all things in life being relative. Reached Chesapeake City at 9:45, where we locked out into Back Creek. The channel of this creek being changeable and the chart unreliable, the Skipper thought it advisable to take a pilot, especially as it was dead low water. A boatman was soon found, and under his guidance we started off at 10 A. M. The weather was then partly cloudy and hazy, with light airs from the S.E.; barometer 29.98. At 10:40 dropped our pilot at Bohemia Manor wharf and stood down the Elk River. Turkey Point Light bore abeam at 11:25, and we then entered the Chesapeake, standing to the southward against a flood tide.

Spesutie Island, with its gun club, was left to the right. On past Sassafras River, Poole's Island, Tolchester Beach (then getting ready for its summer visitors) and the mouth of the Patapsco went the Foam.

During the afternoon we had southerly airs; the weather was warm and sultry, with an occasional sprinkle of rain.

At 4 P. M. sighted Sandy Point Light ahead. An hour's run brought the State House dome, Annapolis, to view. Soon the Foam was passing close to the bug light off Greenbury's Point, and after saluting the keeper, made for Spa Creek. At 5:45, after tooting awhile with the foghorn, the draw was opened, and five minutes later we dropped anchor off Boucher's boathouse.

The Dinghy was soon lowered, Billy and the Skipper stepped in and Ed rowed them ashore.

The ladies of the party, who shirked the discomforts of a long trip when possible, were already in Annapolis; to the Skipper it was familiar and oft-trodden ground.

The reader might ask, Has Annapolis anything to offer a prospective visitor during the latter part of May which he could not find in any other town of like size?

Yes; it has. There is the U. S. Naval Academy with its park-like grounds, monuments and buildings, also new buildings now in process of erection that will be a credit to the nation; morning and evening concerts by a fine band; practice ships and others, one of which, the Gloucester, won for herself and commander undying fame off Santiago de Cuba; other relics are also there of that Spanish-American war which was not even dreamt of at the time of our visit. A State Capitol that saw many scenes of the American Revolution, and in which Washington resigned his commission; St. John's College; also many old colonial residences, the counterparts of some of those mentioned in "Richard Carvel."

Then the surrounding scenery is fine. There are beautiful stretches of water for the yachtsman; the harbor itself, the Severn River with Round Bay at its head, the Chesapeake, South and West rivers, the Magothy and Patapsco rivers to the north, and many points of interest on the Eastern Shore can also be visited from Annapolis as a base.

In the afternoons the drills at the U. S. N. A., both ashore and afloat, occupy and deserve a large share of attention.

I would warn possible visitors, however, that as graduation day approaches the town fills up with friends and relatives of the cadets. He who comes late and without having pre-empted a lodging may find himself without a place wherein to lay his head.

The programme of exercises during the annual examination of 1897 is here given:

Monday, May 31.

10:45 A. M.—Reception of the Board of Visitors.
3:00 P. M.—Seamanship drill (Monongahela).
6:30 P. M.—Dress parade.

Tuesday, June 1.

9:00 A. M.—Battle drill afloat (Standish and boats).
10:30 A. M.—Target practice (Standish).
3:00 P. M.—Machine-shop drill.
6:30 P. M.—Dress parade.

Wednesday, June 2.

9:00 A. M.—Battalion of artillery.
3:00 P. M.—Boat drill.
6:30 P. M.—Dress parade.

Thursday, June 3.

9:00 A. M.—Battalion of infantry.
3:00 P. M.—Fencing, setting up and gymnastics.
6:30 P. M.—Dress parade.

In the evening the dinner of the U. S. N. A. graduates. Around those tables met many officers and ex-officers, some gray-headed and venerable, others middle aged, but the majority men in the prime of life, full of promise and enthusiasm. The President of the Association (also the oldest graduate) had worn the gray, others were business men of standing and ability, who were delighted to meet old class and ship mates of former years; others again there were whose names, all unwitting to them, would shortly be borne on the nation's roll of honor. The speech-making and toasts carried the thing well on into the night.

Friday, June 4.

10:30 A. M.—Graduation ceremonies.

And that night the ball.

During the week there were three promenade concerts, the Academy grounds being lighted by Chinese lanterns, and also a serenade to the Board of Visitors.

After the graduation ball the town empties rapidly. Some few parents remain with their boys until the practice ships sail, and then Annapolis resumes its wonted aspect.

As for ourselves, we saw all that was to be seen; enjoyed the music, the drills, the concerts, also meetings with old friends and acquaintances. The Foam took many sailing parties up the Severn, round the harbor and across to Kent Island, besides following the drills afloat, but was carefully kept from interfering in any way with the maneuvers.

After all was over, the engine was overhauled, the hull outside given a touch of paint and the tender was revarnished. These preparations for our return trip and a rainy spell kept us in port until June 12.

TABLE OF DISTANCES SAILED.

	Miles.
In the Harlem River	2.5
In the Hudson River and to Great Beds Light	36.0
Raritan River	13.0
Delaware & Raritan Canal	44.0
Delaware River	68.0
Delaware & Chesapeake Canal	14.0
Chesapeake Bay and tributaries	57.5
Total	235.0

WM. P. CLASON.

[TO BE CONTINUED.]

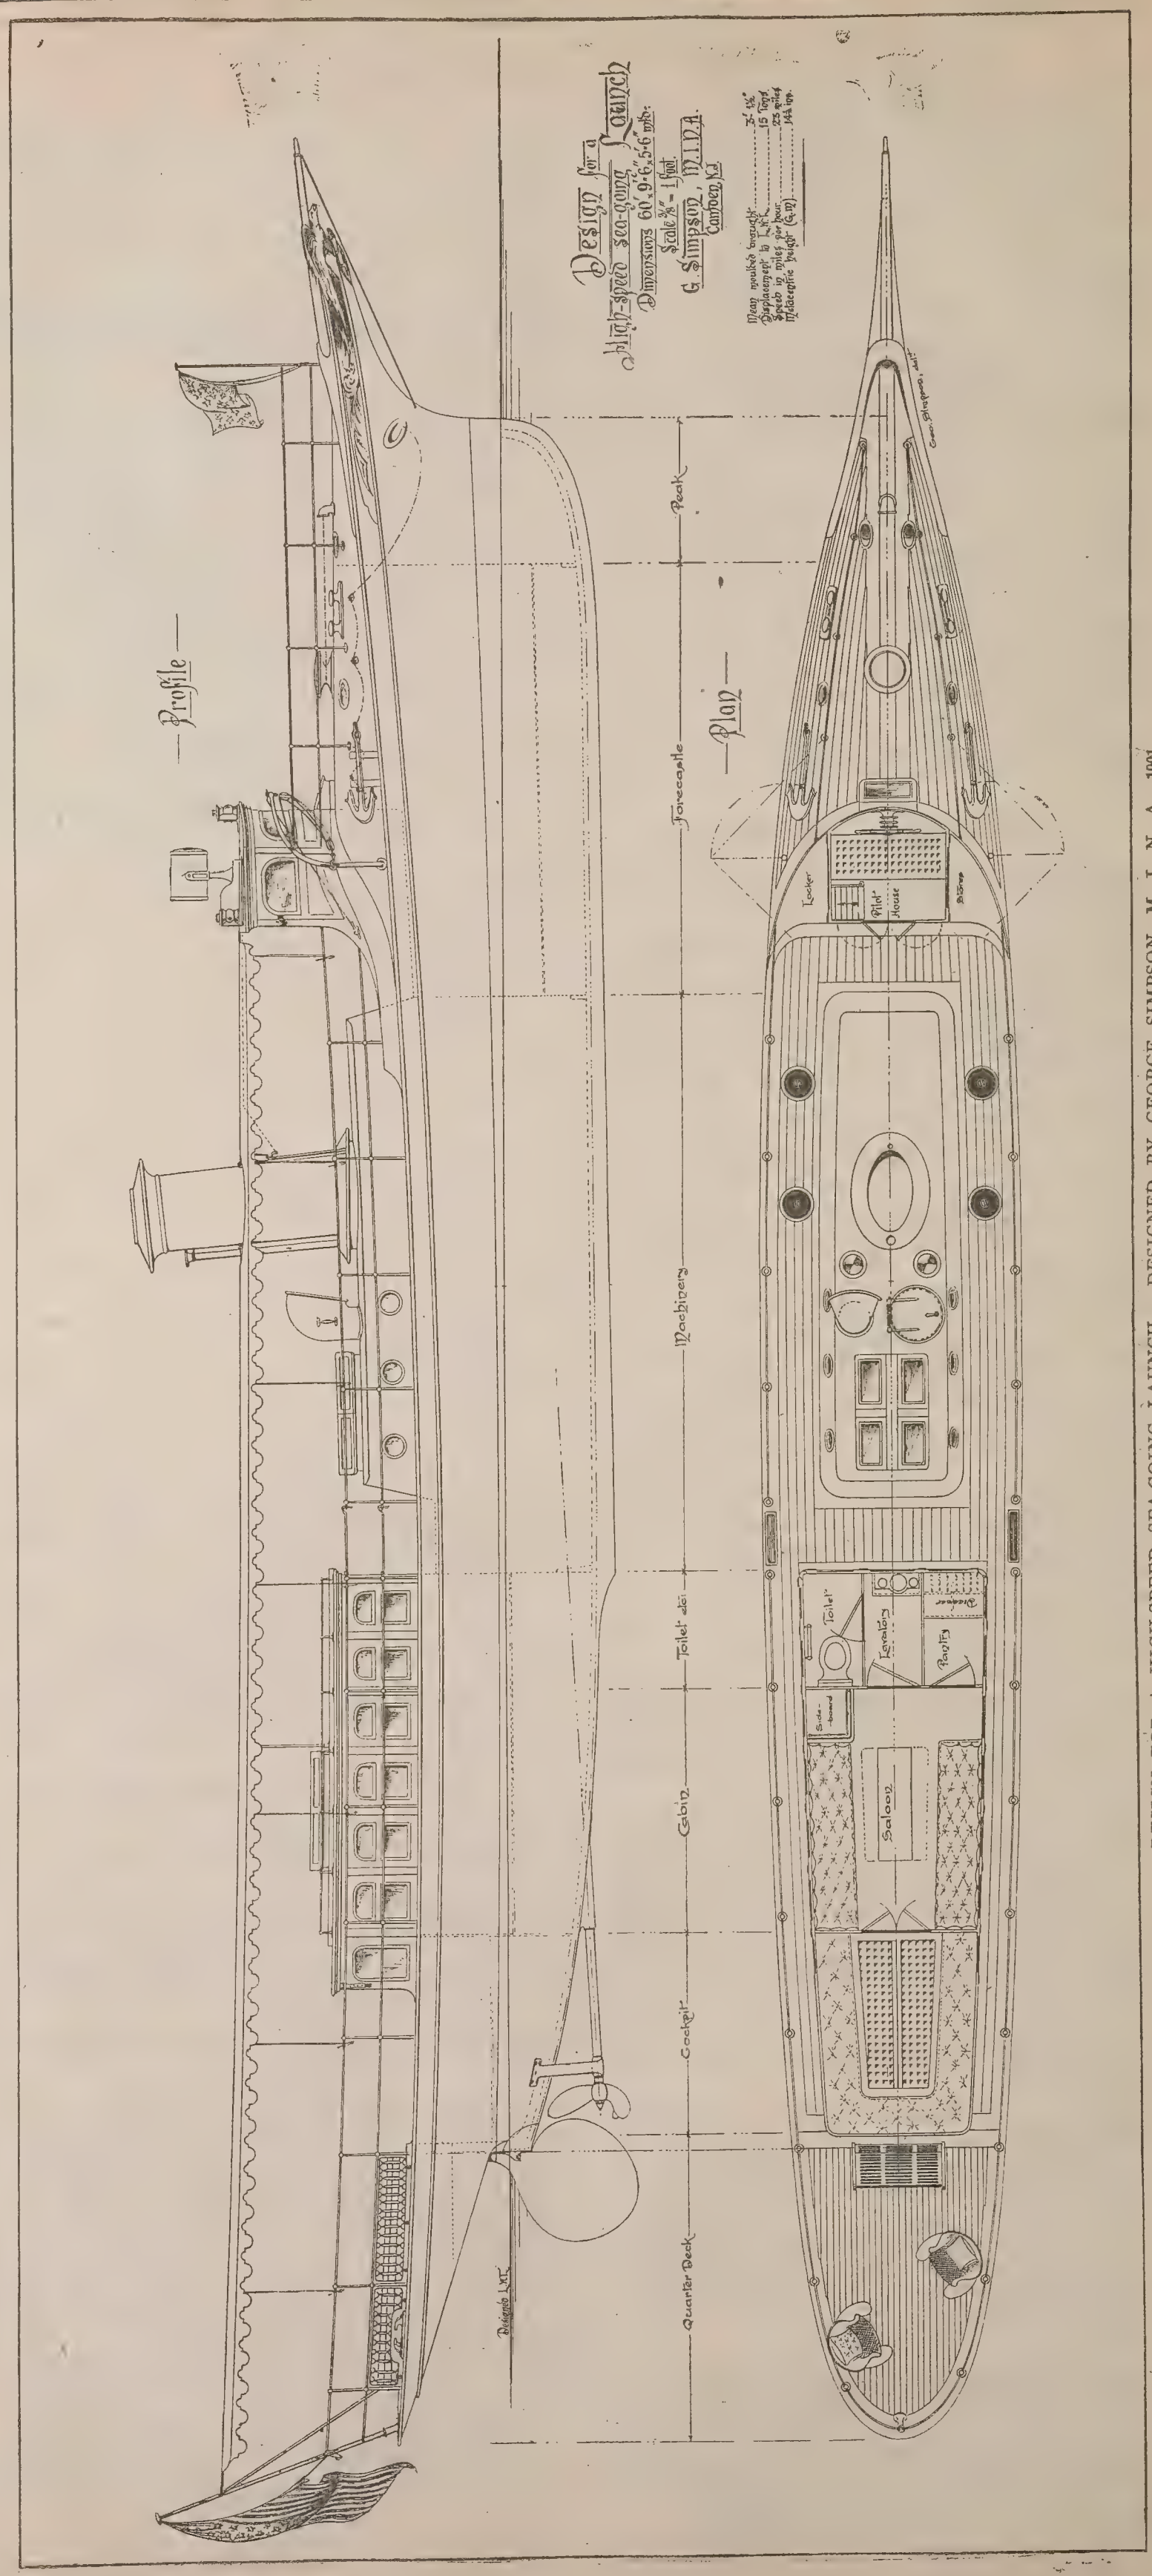
Mr. A. C. Aborn, of New York City, is having Messrs. Rogers and Baker, of Bay Shore, L. I., build for him, from Mr. Mower's design, a 20ft. knockabout. This boat will have a summer cabin and a large cockpit. She will not be fitted with a bowsprit. She is 31ft. 6in. over all, 20ft. on the waterline, 10ft. beam and 20in. draft.

A High Speed Sea-Going Launch.

THE accompanying design is for a high-speed day boat for use on rivers or inland waters, although having sufficient metacentric height for sea-going cruising. The launch would be diagonally built of cedar to insure lightness combined with the necessary strength, although watertight bulkheads, boiler, deck casings and bunkers would be constructed of about 17-gauge galvanized nickel steel plating. The dimensions are: Length on load waterline plane, 60ft.; beam, moulded, 9ft. 6in.; depth, moulded, 5ft. 6in, with a 9in. bulwark all round. The maximum draft of water to bottom of propeller in cruising condition is 5ft. The long, graceful counter stern permits of building a roomy, raised quarter deck, giving a freer space for deck lounging than the cockpit, which itself is quite a spacious one.

The dwarf deck house has the panels arranged for two windows each, the upper and smaller ones being made to hinge inboard at top for ventilation. An additional panel has been fitted to after end of house to form a wind shelter for corners of cockpit. This deck house incloses the owner's accommodation, comprising cabin, pantry and toilet. The forward part of vessel has been arranged as crew's quarters—that is for skipper, engineer and deck hand. The launch is steered from the pilot house right forward, and the steering leads tiller, etc., are fitted below deck. Although designed with a clipper stem, a straight or a ram bow could readily be substituted, as in some recently built high-speed launches by the same designer, without in any way militating against the speed estimated—viz., 23 statute miles.

The propelling machinery would consist of a set of compound surface condensing engines with a large ratio L. P. cylinder. Steam to be generated by water tube boiler at working pressure of 250lbs., making engine revolutions of about 700 per minute. The launch was designed by Geo. Simpson, M. I. N. A., of 116 North Sixth street, Camden, N. J., who has designed a number of the fastest launches and yachts on the other side, including Scud, 20½ knots; Orel, 18½ knots; Zaida, Xarifa, etc.



Yacht Club Notes.

The Ocean Y. C., of Stapleton, S. I., has elected the following officers: Com., Herman Seimer; Vice-Com., Fred Rierson; Rear-Com., Theodore Tompkins; Fin. Sec'y, John H. Schron; Cor. Sec'y, Otto E. Schroeder; Treas., Charles H. Robinson; Meas., James A. Dunn.

Com. A. Curtis James, of the Seawanhaka Y. C., has appointed Mr. D. Le Roy Dresser Fleet Captain. The third regular meeting of the Seawanhakas for the year will be held at Delmonico's, Forty-fourth street and Fifth avenue, on Wednesday, April 10, at 8:30 o'clock in the evening. Supper will be served after the meeting.

Com. David Banks, of the Atlantic Y. C. has appointed Mr. George Hill Fleet Captain, and Dr. Robert Millbank Fleet Surgeon.

Com. Frederick T. Adams, of the Larchmont Y. C., has appointed Mr. Joseph H. Sterling Fleet Captain.

The annual meeting of the Hempstead Bay Y. C. will be held on Wednesday evening, April 17.

YACHTING NEWS NOTES.

The racing sloop Ashumet has been sold by Mr. Richard C. Kipp to Mr. Gouverneur Paulding through the agency of F. Bowne Jones. This yacht will be raced by Mr. Paulding in the 36ft. class on Long Island Sound, and will probably be taken to Buffalo for the Exposition races there.

The raceabout Jolly Roger, owned by Mr. B. B. Crowninshield, was sold to some members of the Northport Y. C., who will race the boat throughout the season in her class. This sale was made through the agency of F. Bowne Jones.

Mr. F. Bowne Jones has sold one of the Bar Harbor 25ft. knockabouts to Mr. Clifford V. Brokaw, lately owner of Queen Mab, and the raceabout Spindrift to Mr. Samuel Comly, of the Indian Harbor Y. C.

The steam yacht Rapidan, owned by Mr. R. Hall McCormick, has been chartered through the agency of F. Bowne Jones to Mr. H. P. Shippy for a part of the coming season.

Capt. Howard Blackburn, the Gloucester navigator who last year crossed the Atlantic alone in a 25ft. sloop from Gloucester, Mass., to Gloucester, England, in sixty-two days, and who now wants to race Capt. Andrews or any other man in the world a similar race for $500, has a unique plan for visiting the Pan-American Exposition in his famous sloop.

Capt. Blackburn's idea is to go to the Buffalo Exposition by an all-water route and return home to Gloucester by water. His idea is to sail from Gloucester in August upon his return from his trip to Lisbon Portugal, to New York, up the Hudson River, via the Erie Canal into the lake to Buffalo. After taking in the sights of the Exposition for several weeks, Capt. Blackburn will continue through the lakes to the St. Lawrence River, down by the Thousand Islands, stopping at all the principal cities to the Gulf of St. Lawrence, and down the Atlantic coast, putting into Halifax, St. John and other principal ports, until he arrives home in Gloucester.—New York Sun.

The steam yacht Tide has been purchased by Messrs. Thomas & Post. The new owners will change her name from Tide to Taro, owing to the confusion arising from having two steam yachts in this part of the country of the same name. Taro is the ocean lily of the Pacific and the name is also applied to a food product of Polynesia.

Mr. George J. Gould has chartered the English steam yacht Sybarite, owned by Mr. Whittaker Wright, through the agency of Messrs. Gardner & Cox. Ever since Mr. Gould sold his steam yacht Atalanta to the Venezuelan Government he has been looking for a suitable vessel for the coming season. Sybarite is a steel steam yacht schooner rigged and 924 tons Thames measurement. She is 220ft. long on the waterline, 29.15ft. beam and 18.9ft. depth. She was built by the Naval Construction and Armaments Company, of Barrow (now Messrs. Vicker's Sons & Maxim), in 1893 for Lord Ashburton, and was named Venetia. She was bought in 1897 by Mr. Whittaker Wright.

Mr. Howard Gould has ordered from the Herreshoffs a steam yacht 80ft. long. She will be similar to Scout and Mirage, the tenders to the 70-footers that were built by the Herreshoffs last season.

Mr. Charles D. Mower has a number of new orders for cruising and racing yachts, both large and small. A prominent artist has commissioned Mr. Mower to design for him a motor house-boat. She will be 60ft. over all, 16ft. beam and 2ft. draft, and will be fitted with a 20-horse-power motor that will drive her about eight miles an hour. The accommodations are spacious and well arranged. Forward is the owner's stateroom, 7ft. long and running the full width of the boat. Aft from the owner's room to the main saloon is a passage 3ft. wide. On the starboard side of the passage is a smaller stateroom 7 ft. long; opposite on the port side is a bathroom fitted with a porcelain tub, set marble wash basin and patent closet. Next aft comes the main saloon, which is 17ft. long, extending the full width of the boat. The room is fitted with sideboards, bookcases and transoms. Aft of the main cabin is the engine room, with a large and well-fitted galley, 11ft long on the port side, and on the starboard side is a stateroom for the engineer and steward. There is 7ft. headroom under the cabin house, and the top of the cabin house will be protected by an awning, and used for a promenade deck.

Mr. Benjamin Carpenter, of Chicago, Ill., has ordered a racing boat to be built from designs made by Mr. Mower. This boat will race in class A of the Inland Lake Yacht Racing Association. She is 25ft. 6in. on the waterline, 38ft. over all, 8ft. beam and 6in. draft of hull. She will have a metal dagger centerboard, and will carry 500 sq. ft. of sail.

The American Y. C. have selected a design made by Mr. Mower for a small one-design class. Eight of these boats are being built by E. G. Emmonds, of Swampscott, Mass. These boats are intended for afternoon sailing, and are 19ft. 8in. over all, 15ft. on the waterline, 6ft. beam and 8in. draft. They have a jib and mainsail rig, which contains about 200 square feet of canvas. These boats are decked over forward, and have a roomy cockpit aft.

Mr. Mower has gotten out plans for a single-handed centerboard yawl for Mr. Thomas F. Day. She will be built by Huntington, of New Rochelle. She is 20ft. on the waterline, 25ft. 6in. over all, 8ft. beam and draws 2ft. She will have a small compact rig.

The 25-footer building at Thomas Fearon's yard, at Yonkers, for Commodore Gabriel Reeves, of the Yonkers Y. C., was designed by Mr. Mower. The boat is now in frame, and the work of planking will soon commence.

Mr. Adrian Iselin, Jr., N. Y. Y. C., has chartered the English steam yacht Christabel, through Messrs. Tams, Lemoine & Crane, for the coming season. She will sail for New York about June 1. The same firm has chartered to Mr. William Salomon, N. Y. Y. C., the English steam yacht Clementina, who will join her at Gibralter for a short cruise in foreign waters. Upon the expiration of Mr. Salomon's charter the Clementina will sail for New York, as she has been chartered for the balance of the season to Mr. Walter Jennings, N. Y. Y. C.

The Royal Canadian Y. C. has received definite word from Captain J. H. Fearnside, of Hamilton, Ontario, that he has under construction a 35-footer for the trial races for the Canada cup challenger under way. The keel of the boat was laid some six weeks ago.

The steam yacht Alcedo, Mr. George W. Childs Drexel, N. Y. Y. C., has been chartered for the coming season to Mr. Daniel R. Reid.

The twin screw steam yacht Franeda has been sold through the Gas Engine & Power Co. and Charles L. Seabury Co. to Mr. J. H. Oliphant. The same corporation has sold the steam yacht Allegra to Mr. Alexander Stein.

The steam yacht building at Morris Heights for Mr. Guy Norman, of Boston, from Arthur Binney's designs, is to be named Hope.

Mr. A. L. Pope, of Hartford, Conn., has sold the steam yacht Columbia to Mr. Montgomery Rowlands, of Boston.

Mr. Winthrop Rutherford has bought from Mr. Almerich Paget the 30-footer Pollywog.

Mr. Oscar Lipton has sold his yacht Lawrena to Mr. James Harkness, of Burlington, Vt.

Mr. F. N. Smith, owner of the 36-footer Effort, has placed another order with the Herreshoffs for a boat to race in the 43ft. class. She will be named Effort II.

Mrs. Nancy McKinney, who died recently near Cadiz, O., at the age of one hundred, had the unique experience in her infancy of being carried off by a bear. The incident occurred in the fall of 1800. After several hours' scouring of the woods the crying of an infant directed the searchers to some underbrush, where the child was discovered. The bear ran away when the party approached it, leaving the infant unhurt.—New York World.

Trapshooting.

Fixtures.

April 9-12.—Baltimore, Md.—Seventh annual spring tournament of the Baltimore Shooting Association; two days targets, $100 per day added; two days live birds, $500 guaranteed. J. M. Hawkins, Sec'y.

April 10.—St. Louis, Mo.—Contest for Dupont trophy at Dupont Park.

April 12-13.—Newark, N. J.—Forester Gun Club's tournament. J. J. Fleming, Sec'y.

April 15.—Dexter Park, Brooklyn.—Henry Koegel vs. S. M. Van Allen, 50 live birds, for $100.

April 16-18.—Leavenworth, Kan.—Annual tournament of the Kansas Sportsmen's Association. W. H. Koehler, Sec'y.

April 16-18.—Pella, Ia.—Jim Sheehy's amateur target shoot.

April 18.—Newell, Ia.—Newell Gun Club's target shoot. Henry G. Hall, Sec'y.

April 19.—Haverhill, Mass.—Patriots' Day open handicap shoot. S. G. Miller, Sec'y.

April 23-25.—Spirit Lake, Ia.—Klein-Barmeister's third annual target tournament; $50 added each day.

April 26.—Owego, N. Y.—Amateur shoot of the Owego Gun Club. John Parker, Mgr.

April 26-28.—Chicago.—Annual spring tournament of the Crescent Gun Club. John S. Boa, Mgr.

May 1-2.—Toledo, O.—First annual handicap shoot of the Edgewater Gun Club. F. W. Dyar, Sec'y.

May 7-9.—Peru, Ind.—Fifth annual amateur tournament of the Peru Gun Club; two days at targets for amateurs; one day at live birds. Chas. Bruck, Sec'y.

May 7-10.—Tournament of the New Jersey State Sportsmen's Association. C. W. Feigenspan, Sec'y.

May 7-10.—Lincoln, Neb.—Twenty-fifth annual tournament of the Nebraska State Sportsmen's Association, under the auspices of the Lincoln Gun Club. W. D. Bain, Sec'y.

May 12.—Brooklyn, L. I.—All-day shoot of the Fulton Gun Club, East New York. Team race: Oceanics vs. Fultons. Address Bob Schneider or A. A. Schoverling, P. O. Box 475.

May 14-17.—Allentown, Pa.—State shoot of Pennsylvania State Sportsmen's Association. C. F. Kamlich, Cor. Sec'y. Elmer E. Shaner, Mgr.

May 1-3.—Newell, Ia.—Newell Gun Club's annual tournament; targets and live birds. Henry G. Hall, Sec'y.

May 14-16.—Elwood, Ind.—Tournament of the Zoo Rod and Gun Club.

May 14-17.—Newton, Ia.—Annual tournament of the Iowa State Sportsmen's Association, under auspices of the Newton Gun Club. D. R. Tripp, Sec'y.

May 21-25.—Springfield, Ill.—Twenty-seventh annual tournament and convention of the Illinois State Sportsmen's Association. Chas. T. Stickle, Sec'y.

May 22-23.—Mechanicsburg, O.—Ninth annual tournament of the Mechanicsburg Gun Club. C. W. Phellis, Sec'y.

May 28-30.—London, O.—Tournament of the London Gun Club.

May 28-30.—Saginaw, Mich.—Tournament of the Michigan Trapshooters' League, under auspices of the East Side Gun Club. John Parker, Mgr.

May 28-June 1.—St. Louis, Mo.—Twenty-fourth annual tournament of the Missouri State Game and Fish Protective Association. Herbert Taylor, Sec'y.

May 30.—Dansville, N. Y.—Amateur tournament of the Dansville Gun Club, on Decoration Day. Norman Tompkins, Sec'y.

May 30.—Canajoharie, N. Y.—Tournament of the Canajoharie Gun Club. C. Weeks, Sec'y.

May 30.—Auburn, Me.—Annual shoot of the Auburn Gun Club.

June 5-7.—Circleville, O.—Under auspices of the Pickaway Rod and Gun Club, annual tournament of the Ohio Trapshooters' League. G. R. Haswell, Sec'y.

June 11-13.—Sioux City, Ia.—Seventh annual amateur tournament of the Soo Gun Club. W. F. Duncan, Sec'y.

June 13-14.—Bellefontaine, O.—Fourth annual tournament of the Silver Lake Gun Club. B. G. Cushman, Sec'y.

June 17-20.—Warm Springs, Ga.—Southern Interstate tournament; two days targets, two days live birds. Chas. L. Davis, Mgr.

June 20.—Waterville, Me.—Amateur target shoot of the Waterville Gun Club; $75 added money. Dana P. Foster, Sec'y.

June 26-27.—Walla Walla, Wash.—Seventh annual tournament of the Sportsmen's Association of the Northwest. W. G. Campbell, Sec'y.

June —.—Columbus, Wis.—Tournament of the Trapshooters' League of Wisconsin. First week in June

June 12-13.—St. Marys, W. Va.—Fifth annual tournament of the West Virginia State Sportsmen's Association, under auspices of West Virginia Gun Club. Mallory Brothers, Mgrs.

July 15-20.—Buffalo, N. Y.—Pan-American Exposition tournament. Elmer E. Shaner, Mgr.

July 30.—Dexter Park, Brooklyn, L. I.—Annual clambake and handicap merchandise shoot at targets. Eugene Doenick, Sec'y.

Newark, N. J.—South Side Gun Club target shoot every Saturday afternoon.

Chicago, Ill.—Garfield Gun Club's live-bird trophy shoots, first and third Saturdays of each month. Grounds, West Monroe street at Fifty-second avenue. Dr. J. W. Meek, Sec'y.

CONTESTS AT INTERSTATE PARK.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.

Monthly contest for the Dewar trophy till June, 1902; handicap; 25 live birds; $5 entrance. First contest took place June 20, 1900.

Interstate Park, Queens, L. I.—Weekly shoot of the New Utrecht Gun Club—Saturdays.

INTERSTATE ASSOCIATION CONTESTS.

Elmer E. Shaner, Manager.

April 17-18.—Jacksonville, Fla.—The Interstate Association's tournament, under the auspices of the Jacksonville Gun Club. B. W. Sperry, Sec'y.

May 8-10.—Memphis, Tenn.—The Interstate Association's tournament, under the auspices of the Memphis Gun Club.

June 19-21.—Cleveland, O.—The Interstate Association's tournament under the auspices of the Cleveland Gun Club.

July 1-2.—Sherbrooke, P. Q., Can.—The Interstate Association's tournament under the auspices of the Sherbrooke Gun Club. C. H. Foss, Sec'y.

July 10-11.—Jamestown, N. Y.—The Interstate Association's tournament, under the auspices of the Jamestown Gun Club. Dr. C. Rawson, Sec'y.

July 23-26.—Interstate Park, Queens, L. I.—The Interstate Association's second Grand American Handicap target tournament; $1,000 added money. Edward Banks, Sec'y-Treas., 318 Broadway, New York.

Aug. 7-9.—Providence, R. I.—The Interstate Association's tournament under the auspices of the Providence Gun Club. R. C. Root, Sec'y.

Aug. 21-22.—Auburn, Me.—The Interstate Association's tournament, under the auspices of the Auburn Gun Club. L. A. Barker, Sec'y.

PETERS CARTRIDGE COMPANY'S TOURNAMENTS.

April 23-24.—Chattanooga, Tenn.—The Peters Cartridge Company amateur tournament, under the auspices of the Chattanooga Trapshooters' Club. Dr. Robert S. Henry, Capt.

April 23-24.—Olathe, Kans.—Peters Cartridge Company's amateur tournament, assisted by Mr. Frank Hodges.

April 24-25.—Binghamton, N. Y.—Amateur tournament of the Peters Cartridge Co.; $150 added money. H. W. Brown, Sec'y. John Parker, Mgr.

DRIVERS AND TWISTERS.

Forest and Stream's graphic trap score type in the report of the G. A. H. gives a condensed history of America's greatest shooting event, such as no other journal can have, because Forest and Stream years ago appreciated the importance of trapshooting and made and copyrighted a trapshooters' sign language.

The programme of the second annual trophy tournament of the Zoo Rod and Gun Club, May 14 to 16, Elwood, Ind., can be obtained of the secretary, Mr. J. M. Livingston. Mr. John Parker will manage the shoot. The first day there are fourteen events at 10 and 15 targets, $1 and $1.50 entrance. The programme has the same number of events for the second day, each at 15 targets, $1.50 entrance. Live-bird shooting is provided for the third day. The first event is at 5 birds, $3, three moneys; the second is for the live-bird championship of the State of Indiana and the Leiber trophy, at 25 birds, $20 entrance, birds included. Only residents of the State are eligible to compete for this. Manufacturers' agents may shoot for targets only. Live-bird events open to all. All events are at 30yds. rise. Pigeons 25 cents; targets 2 cents. Shooting commences at 9 each day. Ship guns, shells, etc., to the secretary.

The Haverhill (Mass.) Gun Club will observe Patriots' Day, April 19, with a target shoot, which will be held on its grounds. It will be an open handicap shoot. There will be fifteen events, each at 10 targets, with a uniform entrance of $1. Handicaps: Shooters whose average is 60 per cent. or under, 15yds.; 70 or under, 16yds.; 80 or under, 17yds.; 85 or under, 18yds.; 90 or under, 19yds.; over 90, 21yds. The amateur breaking the greatest number of targets in events 7, 8, 9, 10 and 11 will receive a sole leather gun case; second, a Powers cleaning rod; third, a Tomlinson cleaner. Money divided by the Rose system. Targets included in entrance at 1½ cents each. Sweepstakes optional. Loaded shells for sale. Lunch served free. Take Main street cars for Dustin square. S. G. Miller, Secretary.

The amateur shoot of the Owego Gun Club, Owego, N. Y., April 26, has a programme of twelve events, 15 targets to each event, 180 in all, with a total of $18 entrance and $36 in added money. Bluerocks, 2 cents. A magautrap will be used. Class shooting, 40, 30, 20 and 10 per cent. Manufacturers' agents may shoot for targets only. Guns and ammunition shipped to Frank B. Tracy will be delivered on the grounds free of charge. This shoot takes place the next day after the Binghamton shoot. Owego is only one and one-half hours' ride from that place. The famous expert, Mr. John Parker, will manage both shoots.

The programme of Jim Sheehy's three-day amateur shoot, April 16, 17 and 18, at Pella, Ia., provides twelve events on each of the first two days, at 15 and 20 targets, $1.50 and $2 entrance. The third day will be devoted to sweepstakes and private matches at live birds. Shooting commences at 9 o'clock. Black powder and 10-bores barred. Targets 2 cents. A smoker will be given on Wednesday evening. Ship shells to Jim Sheehy. Mr. C. W. Budd and F. C. Whitney, of Des Moines, will manage.

The Frankford (Pa.) Gun Club announces an all-day shoot to take place May 4, on its grounds, at Summerdale Station, on the Frankford branch of the P. & R. R. R. The conditions of the main event are twelve-men teams, 25 bluerocks from a magautrap per man, for a challenge trophy. Targets 1 cent. Optional 50-cent sweep, Rose system. Shooting commences at 10 o'clock. Team match at 2 o'clock. The programme has twelve events, at 10, 15, 20 and 25 targets, optional sweeps.

Mr. H. D. Kirkover, of Fredonia, N. Y., who is actively engaged in furthering the interests of the Pan-American shooting tournament, was energetic in presenting its claims to recognition during the G. A. H. at Interstate Park, and he succeeded admirably in his efforts. The dates are July 15 to 20. There will be $2,000 added money. The E C cup will be put up for competition.

The Peters Cartridge Company, of Cincinnati, through its secretary, Mr. J. H. McKibben, announces that on April 23-24 the Peters Cartridge Company amateur tournament will be held at Chattanooga, Tenn., under the auspices of the Chattanooga Trapshooters' Club. Dr. Robert S. Henry, captain.

We have a query, dated at Jamaica, L. I., in respect to whether a certain shooter is a professional or not. If the party in question receives free ammunition or a free gun in consideration of his shooting, he would be classed as a professional. Otherwise, he would not.

The first bird or the last bird? A shooter is due to miss at any moment. Therefore, whether the miss is the first or the last or intermediate, it is not necessarily a question of nerve. If a contestant's miss is not the first nor the last it is purely a question of chance.

A return match will be shot between Mr. Henry Koegel, of the East Side Gun Club, of Newark, and Mr. S. M. Van Allen, of the Emerald Gun Club, 50 birds per man, for $100, the afternoon of April 5 at Dexter Park, Brooklyn, N. Y.

On Friday of this week there will be a match between Mr. Charles Meyer, of the Jeannette Gun Club, and Mr. John T. Wellbrock, of the New York German Gun Club, 100 live birds per man, for $100, at Interstate Park.

Messrs. L. Duryea and T. W. Morfey have arranged a match for $100, at 50 live birds, 33yds., 8-gauge Francotte guns, each to weigh over 12lbs., at Interstate Park, if the Carteret Gun Club will permit Mr. Duryea to shoot.

On April 13, the Spring Valley Shooting Association, of Reading, Pa., will hold a target tournament. Besides sweepstakes, there will be merchandise shoots and a contest for the individual target championship of Berks county.

John S. Wright, manager of the Brooklyn Gun Club, announces that he will hold a target shoot each Saturday of this year, commencing April 13, and will throw targets at 1½ cents each.

There will be a team contest between the Oceanic Rod and Gun Club and the Fulton Gun Club, Crescent street, East New York, May 12. Shooting commences at 10 o'clock.

A large contingent of the G. A. H. contestants started thitherward for Baltimore, to be present and participate in the great shoot which there obtains this week.

For the last two meetings Col. J. H. Voss was the only member who responded to the call.

Bernard Waters.

The F. Van Dyke Memorial Fund.

Mr. J. Hildreth, of the Winchester Repeating Arms Company, was present at the G. A. H. last week, and called the attention of the shooters present to the Van Dyke Memorial Fund, with a result that $152 was subscribed toward it. There now is a total of about $300 in the fund. Mr. Hildreth desired that his thanks be expressed to the stenographer at Interstate Park for gratuitous work in making copies of the list of subscribers, as follows:

R. O. Heikes, F. E. McKay, Fred Gilbert, R. L. Trimble, S. M. Van Allen, H. C. Hirschy, J. R. Painter, C. W. Budd, Wm. Wolstencroft, J. M. Lilly, E. H. Tripp, Wilbur Parker, T. A. Marshall, J. B. Mosby, A. L. Ivins, E. D. Fulford, C. F. Ayling, C. A. Young, Tramp Irwin, Leroy Woodard, H. P. Collins, F. S. Parmelee, J. C. Timmons, J. Hathaway, Dan Lefever, A. H. Fox, Ed Hickman, E. C. Griffith, W. L. Townsend, C. F. Lambert, J. J. Drake, C. R. Stephens, H. D. Bates, Chas. North, C. C. Naumann, T. H. Keller, Jack Parker, C. W. Phellis, Guy Burnside, W. C. Beers, W. P. Brown, Allan Willey, T. H. Clay, Jr., J. B. Savage, J. W. Hoffman, F. D. Creamer, E. S. Johnson, W. S. Cannon, C. Angier, H. W. Lempke, Haro'd Money Murray Ballou, W. Sherer, Phil Daly, Jr., J. Tod Sloan, J. O'H. Denny, G. R. Hunnewell, J. S. Fanning, R. E. Merrill, F. D. Alkire, W. R. Crosby, R. S. Rhoads, G. D. Darby, R. L. Peirce, Emil Werk, O. R. Dickey, C. Gottlieb, J. A. R. Elliott, Paul North, H. C. Bridgers, H. H. Stevens, M. M. Mayhew, B. F. Popham, W. S. Allen, F. Stearns, Hood Waters, Tom Laflin, C. M. Lincoln, A. W. du Bray, I. W. Budd, J. R. Malone, J. B. Barto, J. J. Hallowell, Ed Voris, P. F. Dupont, J. L. D. Morrison, A. Woodruff, B. H. Norton, C. W. Feigenspan, Geo. Roll, R. S. Waddell, U. F. Bender, F. P. O'Leary, J. B. Ward, A. G. Courtney, H. B. Wallack, C. R. Hooker, G. H. Piercy, Henry Koegel, J. M. Williams, J. M. Bramhall, J. A. Ross, J. L. Weller, Dr. Hudson, Ralph Worthington, B. W. Claridge, U. M. C. Thomas, J. A. H. Dressel, Irby Bennett, L. J. Gaines, T. W. Morfey, Mingo, Will K. Park.

Interstate Association Tournament.

THE Grand American Handicap for 1901, with its incidental events, like its predecessors, was a distinct success in every particular, and thereby justified the confidence of its friends in its present and future greatness.

The ruling of the Carteret Gun Club in respect to its own members who shot on other grounds with professionals no doubt caused the loss of a few entries, but such loss was more than counterbalanced by an increased number of new contestants. The Western shooters were present in greater numbers than they were last year, although there was not the same organized effort in the West to induce their attendance. Notwithstanding the few but important seemingly adverse conditions, the entries numbered 222. As the total number of entries last year was 224, that of this year was but two less. Last year 13 forfeited; this year 21 forfeited, so that the actual number of contestants this year was 201. Of the total number of entries, New York and the New England States furnished over 30 per cent. If therewith are included New Jersey, Pennsylvania, Delaware, Maryland, North and South Carolina, the sections producing over 60 per cent. of the entries are accounted for, leaving less than 40 per cent. of the entries for all other sources.

E. C. GRIFFITH—WINNER OF G. A. H., 1901.
Copyright, 1901, by Joseph Hall.

In respect to the weather, the greatest shooting event was distinctly unfortunate. As a week, it was one of rain, with little wind, during the days on which the handicap was contested. Therefore, while these conditions were much against the comfort of the shooters, they, on the other hand, were much in their favor as against the birds. The latter were a remarkably good lot, and had there been any wind to help them the scores in general would have been much lower than they were.

The social features of the gathering were novel in respect to this shoot, and pleasingly diverting to the participants. Of these features the initiation of Mr. C. C. Naumann, of San Francisco, into the Modern Order of Buffaloes, on Tuesday, was the event of the evening, and was well attended. Capt. J. A. H. Dressel, Hon. T. A. Marshall and Mr. F. S. Parmelee were the masters of ceremonies, and they presided in due and modern form. A goat was purchased for the occasion, but as the ritual of the order is recent nothing is known to the unitiated other than that now Mr. Naumann is a Buffalo in good standing, tried and proved worthy. On Thursday evening the management provided a vaudeville entertainment, artistic and pleasing, which was much appreciated by the audience present. Professional and amateur talent rendered vocal and instrumental music of a high order.

There are four sets of traps, which last year were numbered from 1 to 4 in regular order, but this year No. 1 is what was No. 2 last year. The shooters started in at No. 1, thence went to Nos. 2 and 3, then returned back to No. 4, which was No. 1 last year. This change in the numbering was found necessary for several reasons. It brought the commencement of the competition on the set of traps in front of the Casino, where it could be seen by the spectators; it was nearer to the large assembly room and lockers, where the contestants congregated, hence it saved time in getting them in readiness and to the scores. The arduous labor of the squad hustlers was much lessened thereby.

The scoring of the G. A. H. was kept in double form—that is, one set on sheets which went to the office of the compiler of scores, the other on large sheets on the outer wall of the shooting boxes, where they were in plain view of the contestants. Thus each contestant had ample opportunity to observe precisely what he was scored at each set of traps.

At No. 1 set of traps the veteran expert referee, Mr. Harold Wallack, of Long Branch, N. J., presided. No 2 this year was in charge of Mr. Geo. S. Mott, manager of the shooting grounds of the Westminster Kennel Club at Babylon, L. I., who is a gentleman of vast experience as referee, and who acquitted himself with skill and satisfaction in this great event. No. 3 was in charge of Mr. Charles North, of Cleveland, O., who was one of the referees last year, and who also presided with ease and grace, and who had some of the most important problems of the event to decide, notably in the matter of misfires and opening of guns thereafter by the contestants. No. 4 was in charge of Mr. J. Frank Kleintz, of Philadelphia, also a gentleman of thorough experience as a referee. Though this was the first appearance of Messrs. Kleintz and Mott as referees in the Interstate Association's competitions, they were fully qualified from thorough prior experience. Messrs. Ed Taylor, T. H. Keller, W. R. Hobart and B. Waters acted as assistant referees whenever their services were required.

The programme for money had two events, the Interstate Park Introductory and the Borough of Queens Sweepstakes, the scores of which were published in full in FOREST AND STREAM of last week.

Second Day, April 2, Tuesday—Nitro Powder Handicap.

The second day was ideal as to weather. There was a springtime balminess in the air, while the sun was lightly obscured betimes in a manner which mellowed the light to the advantage of the shooter. There was hardly any wind.

The event of the day was the Nitro Powder Handicap, in which the shooters stood at the marks allotted to them in the G. A. H. There were 199 contestants. The conditions were 16 birds, $10 entrance, birds extra; 25 to 33yds.; high guns. The number of moneys into which the purse was divided was determined by the number of entries. As there were over 150 entries there were thirty moneys, divided as follows, 10½, 9, 7, 6, 6, 5½, 5½, 5, 5, 4, 3, 3, 3, 2, 2, 2, 2, 2, 2, 2, 2, 2, 1½, 1½, 1½, 1, 1, 1, 1 and 1 per cent. The conditions further stated that "This event cannot be carried over, and it must be finished the same day; therefore should the entries be so numerous that it will be impossible to finish by adhering to the 'three misses out,' the Association reserves the right to change the rule for this event at any time it may be deemed necessary to do so, and drop all who have missed one or more birds."

There was much surprise manifested by those who had missed but one bird, and to avoid the constant answering of the same question concerning what the 15s would have, a notice was put up in the compiler of scores' office, as follows: "The 15s get nothing. See?" The preliminary events are really miss-and-outs, so far as those who miss are concerned.

Thirty-one tied with straight scores, and the purse, $1,990, was divided, each receiving $64.20. J. J. Drake's gun burst during the afternoon, from an overload of powder, loaded differently from the plain direction of the manufacturers, but fortunately he and the referee, Mr. Wallack, were not injured. The scores:

J. A. R. Elliott (32) 16, G. E. Mink (27) 16, A. S. Teal (28) 16, Dr. Ellis Duncan (26) 16, R. L. Trimble (28) 16, A. H. Fox (30) 16, I. W. Budd (27) 16, A. B. Dover (27) 16, F. M. Bird (27) 16, E. S. Johnson (28) 16, George B. Darby (26) 16, A. D. Sperry (27) 16, R. Rahm (27) 16, H. D. Bates (31) 16, George J. Roll (30) 16, J. L. Alabaster (27) 16, W. R. Crosby (32) 16, Fred Gilbert (32) 16, P. Steubener (27) 16, H. C. Hirschy (28) 16, J. Von Lengerke (27) 16, F. Emmers (27) 16, C. Gottlieb (29) 16, L. Howard (27) 16, D. B. Foster (26) 16, Col. Tom Martin (28) 16, O. W. Von der Busch (27) 16, J. S. Fanning (31) 16, G. H. Piercy (28) 16, W. F. Parker (27) 16, H. M. Herbert (28) 16, S. M. Van Allen (30) 15, Simeon Glover (29) 15, J. Third Day, April 3, Wednesday.

The weather was exceedingly tempestuous. An easterly gale of wind and a downpour of rain prevented all shooting. Hopes were entertained that the main event might be commenced according to programme, but as there was no sign of good weather, and some of the shooters becoming impatient at the irksome delay and expressing a wish to return to New York between 1 and 2 o'clock, Manager Shaner announced that shooting for the day was declared off, and that those who wished to might shoot at the traps. Soon thereafter the weather cleared up nicely, and with such a peaceful atmosphere that one could know only as a matter of memory that a short time before the sky was heavily overcast and a gale and driving rain prevailed instead of sunshine. As the programme had set forth that the G. A. H. would begin on this day, there were a few who could not find it convenient to continue. It was set forth that, as the shoot had been set for to-day without any reservation, and that as it had not been begun according to agreement, those who desired to do so had a right to cancel their entries entirely. The point was considered as being well taken. Their forfeit was returned to them, and also to all the others who did not fill their entrance, whether they contemplated competition

THE STRAIGHTS. Copyright, 1901, by Joseph Hall.

or not. This action cleared up the record fully, but the incident calls attention to the need of having the conditions properly qualified to safeguard the great event when unforseen circumstances arise for which the Association is in no wise to blame.

However, while the storm was raging without, all was not idle within doors. The matter of the international shoot was much discussed, and it was thought advisable to take some public action then and there. Mr. Justus Von Lengerke mounted a chair in the large assembly hall and made a sound speech, in which the merits of the match were set forth. The need of money to pay the expenses was mentioned as the question of the present.

There was a popular call for Capt. Money, and in response he made a short speech, in closing which he hoped that the shooters would have a good time.

Expressing the sentiment of the West, Mr. J. M. Lilly, of Indianapolis, Ind., made a witty speech, but he assured his audience that the people of the West would do their part toward the expense, and closed with the advice to his hearers, "Don't be show to put up money, and put up plenty."

Col. T. Martin, of Bluffton, S. C., speaking for the South, delivered an exceedingly sensible and diplomatic address, which was marked by an absence of announcing any victories before they were won.

Mr. Paul North next had the floor, and he gave an interesting résumé of how the contemplated match originated. He mentioned that the Chamberlin Cartridge and Target Company would contribute $1,000 to the expenses of the shoot.

There seemed to be a general consensus of opinion that the match would be an easy one for the American team, the use of one barrel against the use of two on the part of the English team, but in these matters it is always best to win the match by competition rather than by assertion.

The Grand American Handicap.

The weather again was unfavorable. The sky was overcast, and there was rain all day, which betimes was a drizzle or a good commonplace rain. There was no wind of importance, hence the conditions were decidedly against the birds and in favor of the shooters. After noon the light became better for a while, when it again darkened and the rain fell persistently. Nevertheless, the shooting was not easy to a certainty, for, while the birds were good as a whole, an occasional bird would spring from the traps and dart toward the horizon with a swiftness which taxed the skill of the best, and drew forth a pathetic gaze, full of broken hopes, from him who, looking backward at the bird as he himself walked in from the score, saw with it trophies and cups gone a-glimmering for a twelvemonth at least.

The shooting was kept actively going all day, and by this energetic management the 20th round was finished by evening. A review of the scores showed that there were forty straights, and about fifty who had missed but 1 bird, so that there were prospects that there would be a record-breaking number in moneys. Quite a number shot below their form, and either retired or withdrew in the 8th, 12th and 16th rounds, as will be noted on reference to the scores. Fred Gilbert was the only man still in the straight scores at the 20th round out of those whose mark was back of 30yds., Elliott, Bates, Fanning, Malone, Crosby, Marshall and Harold Money having lost one or more. Of the 30yd. men only Fox, Parmelee and Feigenspan remained at the end of this round.

While the handicapping was received well as a whole, there were a few individuals here and there who, according to their best belief and their best information, could have done it in whole or in part much better. The results in many instances did not vindicate their wisdom. It is an easy matter to have brave opinions when there is an entire absence of responsibility. The average mushroom handicapper bases his estimates on a 25-bird race being a race like all other 25-bird races. That is his data. All races of that number are alike. He knows that a certain man has shown a form so and so in shooting at 25 birds, and therefore he should be placed at a mark so and so. It is an easy problem for the irresponsible mushroom handicapper. But the official handicappers look upon the matter from an entirely different point of view. The records show that only men of the very highest class skill are likely to hold their competitive form through the contest. There is no opportunity to get keyed up to the proper tension. The contestant shoots one bird at one set of traps, then walks 100yds. to the next set of traps, etc. After shooting 4 birds, there is a long wait. The nervous shooter gets still more nervous; the phlegmatic shooter loses in part his power of concentration. At each set of traps there is a difference of background, a difference of slope of the ground, probably a difference in the force of the wind—all of which is quite different from shooting 25 birds at one set of traps with relatively short intervals of waiting, as in ordinary shooting; yet all of which is quite sufficient to make differences in the handicapping.

The fact that such a majority of the shooters were bunched up so closely at the end of the 20th round speaks volumes for the accuracy of the handicapping.

There were twelve post entries, which raised the total number of entries to 222. The post entries were Messrs. "S. McPherson," Pittsburg; J. W. Orth, Philadelphia; W. C. Clark, Atlantic Highlands, N. J.; W. P. Brown and H. C. Hirschy, Minneapolis; A. S. White, Syracuse; J. Thompson, Granville, N. Y.; J. W. Knevels, Orange, N. J.; T. P. Laflin, Rock Island, Ill.; H. Kirkover, Fredonia, N. Y.; J. B. Hopkins, Jamaica, L. I., and Col. T. Martin, Bluffton, S. C.

Arno, G. A. Comstock, A. B. Dover, Doc, J. Douglas, Jim Jones, Dr. Casey, Farmer Jones, J. H. Hanlon, H. Henry, L. Howard, C. Henry, Herbert, Hood, J. R. P., Kommodore, Le Roy, Losee, F. MacWilcox, Wm. Massey, J. Hack, Mingo, On-da-wa, Puck, Phil, Rex, M. Rogers, Jack Rogers, Ranger, R. Rahm, Red Wing, R. G. C., J. A. Scott, Simmonds, Sen Sen, Dr. H. Snyder, J. A. Sherburne, L. R. Tramp, Tar Heel, Teal, 13-27, 333, G. K. United, Vermont, and S. McPherson are shooting names.

Those who forfeited were Ahlers, Casey, Mitchell, Jack Rogers, A. C. Johnson, Mosher, On-da-wa, J. H. O'Brien, Guild, Kommodore, Tripp, E. G. White, Vermont, Massey, Tar Heel, Bramhall, Edey, Arno, De Long, J. C. Hicks, A. Cella and W. J. Thompson.

The officers of the S. P. C. A. were in evidence on the grounds, and while they asserted that the shooting was properly conducted, they were rather inclined to super-officiousness in the discharge of their duties. The shoot was stopped betimes and all outlying birds gathered far out in the grounds. Mr. Ralph Waldo Trine, a member of the Boston Society for the Prevention of Cruelty to Animals, was quite a conspicuous personage in the interests of anti-cruelty, and while he admitted that the whole shooting proceeding was legal, he deplored the existence of the law which made it so. He talked a great deal during several visits, and then went away.

Fifth Day, April 5, Friday.

The weather conditions were again favorable for good scores. A damp and cloudy morning gradually changed to clear weather, so that by the middle of the forenoon the day was pleasant.

Still, though there were but five rounds to go, what with the high grade of the birds and the strain of the competition, eighteen fell out of the straiglit scores in these rounds. Mr. J. Von Lengerke was unfortunate at No. 3 in having a misfire, whereupon, without thinking, he opened his gun, and the referee declared it a lost bird. Mr. C. W. Budd had a similar bit of ill luck on the previous day. Under the Interstate Association's rules the referee has no discretion whatever in such cases. It is then mandatory upon him to declare the bird lost.

There was no division of the money this year among the straights. So far as is known they shot it out to a finish. E. C. Griffith, winner of the trophy, received $600; Mr. J. L. Morrison, the runner up, received $500, and Mr. R. R. Bennett (R. Rahm) received $400. The remaining amounts were: J. B. Barto, $255.15; C. Gottlieb, $218.70; Dr. J. G. Knowlton, $182.25; Messrs. R. R. Merrill and H. Trumbaur, $127.55 each; Messrs. C. W. Feigenspan, R. B. Bond, Ed Hickman, and C. C. Naumann, $109.35 each; Messrs. Fox, Pierce, Townsend, Henry C., McKay, Alabaster, E. S. Johnson, Parmelee, Lockwood and Greiff, $72.90 each.

The Shoot-off.

The main event was finished about noon. As soon as score sheets could be adjusted in the office of the compiler of scores to prepare for the shoot-off, with the other incidental details to be rearranged, the shoot-off was begun. There was a great crowd of gentlemen and ladies present to witness the closing scene of the great competition. A great mass of them were on the balcony of the Casino. Some of the more enthusiastic shooters were massed around the No. 1 set of traps, where the shoot-off took place. Mr. Shaner at length walked up and down the dead line and notified all those who were not contestants or their handlers or members of the press that they would have to retire. After some delay the space was cleared. Mr. Harold Wallack was the referee.

So far as exteriors were concerned, the contestants were cool and steady of nerve, yet each one had a serious look of earnest purpose. Mr. Shaner announced at about 12:45 that the shoot-off of the tie should begin. Soon after the shooting commenced Mr. Shaner stopped it while he requested some of the S. P. C. A. officers to withdraw from within the boundary line. This they refused to do. Under the threat that an officer would be immediately ordered to arrest them if they did not comply they reluctantly obeyed. Their egotistical personal desire to be conspicuous seemed to excite their zeal greater than did their official duties. The shoot was then resumed and concluded without further interference.

The contestants shot in the order of their numbers. Of the twenty-two, five went out on the first round. Fox, Pierce and Townsend, respectively caught swift straight drivers, which were out of the boundary in a twinkling, while McKay from No. 5 and Lockwood from No. 2 drew right-quartering incomers. Apparently the five birds escaped untouched. Alabaster was the only contestant to lose in the second round, his bird, a straightaway from No. 3, dying out not far away from the boundary.

The third round was disastrous for Johnson, the expert from Atlantic City. He caught a twisting driver from No. 2, which went away faster than Johnson could negotiate, and escaped untouched.

The fourth round was an evil one for Henry C. (Henry C. Koegel), one of Newark's steadiest shots, as it also was for the Indian from Omaha, Frank Parmelee, the former retiring in good order on a left driver from No. 1, while Parmelee gathered a cipher from a hot left driver from No. 3.

The fifth and sixth rounds abounded with good shooting. Greiff retired in the latter round on a circling right driver from No. 1, seemingly a bit over-careful with his second, thereby letting the bird get started for a through trip.

The seventh round was gloomy in spots. Naumann drew a leathern right driver from No. 3, which, though hit with deadly aim, lived till it got out of the boundary. It was a tough bird. Bond drew a left driver from No. 2, and though it was hard hit it winged its way strongly into the ambient ether. Feigenspan, one of New Jersey's greatest shots, was shooting in fine form. He was the object of much friendly applause after each kill. A right-quartering incomer detached him from further participation. Hickman, eminent in the shooting annals of Kansas City and the West, drew an assertive bird, which circled boldly but hurriedly as a right driver, and roamed away as free as a bird.

There were still eight left in when the eighth round began, but two tarried by the wayside before the finish. Merrill drew a left driver from No. 2, which went like a rocket, and it dropped dead out. Trumbaur drew a right-twisting driver from No. 5, and as the load did not twist accordingly as the bird did, the latter did not tarry.

There were six men left in, all of whom were shooting in fine form. Dr. Knowlton drew a warm right-circling driver from No. 1 and missed it with precision. Two rounds afterward Gottlieb, of Kansas City, drew a lively driver from No. 2, and waiting on it too long with his second, there then was a narrowing of the competition to three contestants.

Barto, of Chicago, dropped out in the 12th round on a hot bird which started from No. 2 as a right driver, and finished merrily at the coops unhurt.

It was now narrowed down to three, Minnesota, Pennsylvania and Rhode Island, each against the others, and each performing magnificently. Morrison was shooting his Winchester repeating shotgun in masterly style. He was catching his birds quickly, putting in his shots in excellent time, without a hitch or readjustment, and it was rarely that each load did not center the bird. His gun failed to extract properly once, but it was, after examination, declared a no bird by the referee, after which he killed his next neatly.

"Rahm," of Pittsburg, was doing some good work, though he was quite a bit slower in time than were his two competitors, and therefore now and then having harder birds in consequence. In the 15th round he drew a hot driver from No. 5, and then there were two competitors left. "Rahm" is Mr. R. R. Bennett, of the Herron Hill Gun Club.

It now seemed a very close race between Morrison and Griffith. Each was shooting in admirable time and with admirable precision. The preference seemed to lean toward Morrison, for he lived in Minnesota, a large State, and had a fame as a pigeon shooter, while Griffith came from Rhode Island, wherein pigeon shooting is prohibited by law, even though its boundaries did not prohibit it as a matter of space. However, Griffith was shooting pigeons as a fact. He was negotiating all kinds of birds freely right and left, but so was Morrison. The latter, however, seemed to be showing up slightly in his time. In the 18th round he drew a good bird, a left driver from No. 1, which he missed entirely, apparently, and then it was left to Griffith to win if he could kill his next bird. At such a juncture one might quite reasonably expect to see some signs of nervousness or determination or anxiety, but Griffith went to the score with the calm and stolidly beneficent expression of an Indian cigar sign, killed his bird in the same manner that he had killed the others, and the cup and first money were his.

Then there were doings. Hearty applause greeted the victor. The winning bird was captured, and handed to the victor hero. Mr. Irby Bennett bore on his shoulders the giant victor off the grounds, with a man holding him steadily on each side as he lurched to larboard and starboard, yet keeping carefully the dead bird from further injury. Congratulations and handshakings came from all points, and for a while it was a bewilderment. After a time, amid the great assemblage in front of the Casino, Capt. J. A. H. Dressel presented the cup to Mr. Griffith in well chosen words, much to the rejoicing of those who were directly interested and those who were onlookers. The account of the finish is set forth in more condensed form as follows:

Shoot-off, miss-and-out. Commenced about 12:45 and ended at 1:52 o'clock:

Guns, Loads, Shells, Etc.

The guns weighed under 8lbs. The following gives the equipment of the winners, those who tied on 25 and 24:

What the 25s Used.

C. C. Nauman used Clabrough gun, Trap shells, 3½ Dupont powder and 1¼ No. 7 shot.

J. G. Knowlton—Greener, Leader, 38 Rifleite, 1¼ No. 7.

A. H. Fox—Winchester, Leader, 46½ Dupont, 1¼ No. 7½.

R. L. Peirce—Purdy, Trap, 3½ Schultze, 1¼ No. 7.

R. B. Bond—Baltimore Arms Co., Leader, 3¼ Dupont, 1¼ No. 7½.

J. L. D. Morrison—Winchester, Smokeless, 3½ Schultze, 1¼ No. 7.

W. D. Townsend—Parker, Trap, 3½ Schultze, 1¼ No. 7.

R. Rahm—Parker, Trap, 42 Dupont, 1¼ Nos. 7½ and 7.

Henry C.—Smith, Acme, 43 L. & R., 1¼ No. 7.

Chris. Gottlieb—Smith, Trap, 3½ Schultze, 1¼ No. 7½.

F. E. McKay—Smith, Pigeon, 3½ Hazard, 1¼ No. 7.

J. L. Alabaster—Greener, Smokeless, 3½ Dupont, 1¼ No. 7.

R. R. Merrill—Cashmore, Leader, 43 Dupont, 1¼ No. 7.

E. S. Johnson—Greener, Acme, 45 L. & R., 1¼ No. 7.

J. B. Barto—Parker, Smokeless, 44 Dupont, 1¼ No. 7.

F. S. Parmelee—Parker, Acme, 45 L. & R., 1¼ No. 7.

C. W. Feigenspan—Parker, Trap, 3½ E C, 1¼ No. 7.

C. A. Lockwood—Riley, Smokeless, 3 E C, 1⅛ Nos. 7½ and 7.

H. Trumbauer—Parker, Smokeless and Trap, 3¼ and 3½ Dupont, 1¼ Nos. 7 and 7½.

E. C. Griffith—Parker, Leader, 45 L. ½ R., 1¼ No. 7.

G. E. Greiff—Francotte, V. L. & D., 3½ Schultze, 1¼ No. 7.

Ed Hickman—Smith, Trap, 3¾ Schultze, 1¼ No. 8.

What the 24s Used.

Franklin Stearns—Parker, Acme, 42 L. & R., 1¼ No. 7.

Alf. Gardiner—Smith, Leader, 45 Hazard, 1¼ No. 7.

G. McG. Morris—Parker, Leader, 3½ Dupont, 1¼ Nos. 7½ and 7.

W. R. Crosby—Smith, Leader, 48 E C, 1¼ Nos. 7½ and 7.

W. Hopkins—Parker, Acme, 45 L. & R., 1¼ No. 7.

J. S. Duston—Smith, Trap, 48 Schultze, 1¼ Nos. 8 and 7.

Jim Jones—Scott, Acme, 28 Ballistite, 1 3-16 No. 7.

Teal—Parker, Smokeless, 3½ Dupont, 1¼ No. 7.

C. E. Mink—Winchester, Leader and Pigeon, 42 Dupont, 1¼ No. 7.

Sim Glover—Parker, Trap, 3½ Schultze, 1¼ Nos. 7½ and 7.

13-27—Smith, Smokeless and Trap, 3½ Schultze, 1¼ Nos. 8 and 7.

W. W. Hassinger—Smith, Acme, 49 L. & R., 1¼ No. 7½.

F. W. Cooper—Smith, Peters, 3¼ Kings, 1¼ No. 7.

Fred Gilbert—Parker, Leader, 3½ Dupont, 1¼ No. 7.

J. H. Voss—W. Richards, Smokeless, 3½ Dupont, 1¼ No. 7.

E. Emmers—Parker, Leader, 29 Ballistite, 1¼ No. 7½.

O. Von Lengerke—Francotte, Trap and Leader, 3¼ and 3½ Schultze, 1¼ Nos. 7½ and 7.

C. D. Linderman—Parker, Smokeless, 3¾ Schultze, 1¼ No. 7.

Edward Banks—Winchester, U. M. C., V. L. & D. and Leader, 3½ E C and 29 S. G. R., 1¼ No. 7.

L. E. Parker—Parker, Leader, 3½ Hazard, 1¼ No. 7.

J. H. Jack—Daly, Acme, 3½ E C, 1¼ No. 7.

Leroy—Remington, Trap, 3½ Dupont, 1¼ No. 7.

W. F. Quimby—Smith, Smokeless and Leader, 3½ Schultze, 1¼ No. 7½.

W. J. Buzby—Smith, Smokeless, 3½ Schultze, 1¼ No. 7.

Capt. A. W. Money—Parker, Trap and Leader, 3½ Schultze, 1¼ No. 7.

H. Schimmell—Francotte, Smokeless, 26 Ballistite, 3½ Schultze, 1¼ Nos. 8 and 7.

J. W. Hoffman—Francotte, Smokeless, 3¼ E C No. 1, 1¼ No. 7.

J. R. Malone—Parker, Trap, 3½ Schultze, 1¼ Nos. 7½ and 7.

G. A. Comstock—Francotte, Trap, 3¼ E C, Nos. 7½ and 7.

F. D. Alkire—Parker, Smokeless, 3½ Dupont, 1¼ No. 7.

E. C. Fort—Cashmore, Robin Hood, 3¼ Robin Hood, 1¼ No. 7.

Wm. Wagner—Parker, Trap, 3½ E C, 1¼ No. 7.

A. Woodruff—Parker, Trap, 3½ Schultze, 1¼ No. 7.

Phil—Parker, Leader, 43 Hazard, 1¼ Nos. 7½ and 7.

C. E. Geikler—Smith, Leader, 44 L. & R., 1¼ No. 7.

Sen Sen—Smith, Trap and Smokeless, 3¼ and 3½ Schultze, 1¼ Nos. 8 and 7.

E. A. Geoffroy—Greener, V. L. and D., 48 Schultze, 1¼ Nos. 7½ and 7.

J. Von Lengerke—Francotte, V. L. and D. Lightning, 3½ Schultze, 1¼ No. 7½.

W. P. Brown—Parker, Trap, 3¾ Schultze and E C, 1¼ Nos. 8 and 7.

H. C. Hirschy—Smith, Pigeon, 3½ Hazard, 1¼ No. 7.

J. W. Knevels—Remington, Acme, 44 L. & R., 1¼ Nos. 7½ and 7.

Col. Martin—Parker, Smokeless, 3½ Schultze, 1¼ No. 7.

The Tie on 24.

Immediately after the ties on 25 were shot off, Mr. Shaner called out through the megaphone an inquiry in respect to what the 24s wished to do, whether to shoot off or divide. There were numerous calls for a divide, and the tie was divided, each of the contestants in this tie receiving $34.05.

The Consolation Handicap, a 16-bird event, $10 entrance, birds extra, high guns, followed the Grand American Handicap immediately. All winners of money in the G. A. H. went back 1yd. Naumann, Bates, Brown, Sperry, Parmelee, Gottlieb, H. Money, Griffith, Col. Martin, Tramp, Greiff, Merrill, Lilly and Steubner killed straight. Each received $55. There were sixteen in the second ties, each of whom received $4.20.

Previous Winners.

The previous winners were: 1893, R. A. Welch, Dexter Park; 1894, T. W. Morfey, Dexter Park; 1895, J. G. Messner, Willard Park; 1896, O. R. Dickey, Elkwood Park; 1897, T. A. Marshall, Elkwood Park; 1898, E. D. Fulford, Elkwood Park; 1899, T. A. Marshall, Elkwood Park; 1900, H. D. Bates, Interstate Park. All the previous winners were participants this year with the exception of Mr. Welch, who was restrained by the ruling of his club from contesting, and Mr. Messner.

The Staff Personnel.

Mr. Elmer E. Shaner managed the tournament. He had all the departments fully organized before the shoot began, and as each man was an expert in his special branch the shoot proceeded without any friction. The office of compiler of scores was in charge of Mr. Edward Banks, and he had for assistants Messrs. J. K. Starr, H. H. Stevens, J. Mockridge and F. Young. Mr. A. Myerhoff was cashier, assisted by Mr. L. Lautenslager. The scorers were: No. 1, Mr. J. H. W. Fleming; No. 3, H. Kerr; No. 4, Walter P. Everhard. Squad hustler, Mr. G. Schneider. Messengers, Messrs. J. Purcell and F. Keating.

Saturday, April 6.

The competition of this day was under the management of the Interstate Park Association. There were two great events on the day's programme. The first was the Gilman-Barnes international trophy, which was placed in competition through the kindness of Mr. John Parker, of Detroit. The conditions governing it were 25 live birds, $15 entrance, birds extra; handicaps 25 to 32yds.; class shooting; four moneys, 40, 30, 20 and 10 per cent. When won three times by a contestant it becomes his property. Those who had scored wins on it were Mr. H. D. Bates, who had two wins. The following had one each: Messrs. L. T. Duryea, R. O. Heikes, A. H. King, R. Merrill, Clarence Lane, J. H. Bortle, Jacob Klein, Thomas W. Latham, W. R. Ellison and Jas. Coffey.

The second event was the Sportsmen's Association's trophy at 25 live birds, $15 entrance, class shooting; handicaps 25 to 33yds; four moneys, 40, 30, 20 and 10 per cent. In addition to first money the winner received a trophy presented by the National Sportsmen's Association.

The weather was consistently rainy. The wind was about 12 o'clock, blowing in the face of the shooter when at the score. The conditions were such that the event was changed to 15 birds instead of 25. It was near midday when the shoot began.

Gilman-Barnes Trophy.

In the Gilman-Barnes trophy contest there were forty-one competitors. There were a number of ties, and it was agreed among them that they draw for the prizes. Mr. J. L. D. Morrison won the cup. The shooting of the latter was admirable, he having missed but one bird in the whole programme events. The scores:

Gottlieb, 29	222202212222122—14

The Sportsmen's Association Trophy.

This event also, on account of the inclemency of the weather, was reduced to 15 birds. There were thirty-six contestants. The ties were decided in this event as in the other—by chance—and Mr. F. S. Parmelee won it. His shooting was admirable. He missed but one bird in all the programme events. The scores:

Gottlieb, 29	101121112212101—13

IN NEW JERSEY.

Trenton Shooting Association.

Trenton, N. J., March 30.—The last two shoots of March 27 and 30, in spite of the disagreeable weather, were well attended, and every one, shooters and visitors, enjoyed himself immensely. Of the many different plans that have been tried from time to time which had for their object the awakening of more enthusiasm and interest among the members, none have succeeded so well as the "capon sweeps" that were provided for in all the programmes for visiting different shooting organizations for the purpose of noting how they ran things. I observed carefully and inquired into the methods and plans that were used to hold the interest and keep up the attendance of the members. After experimenting with various plans, we found that until we began offering something good to eat in the shape of turkeys and capons we had not hit the correct combination. We ran 5 targets, entrance 25 cents, targets included. Scores:

March 27:

SECRETARY.

April 6.—In the teeth of a fierce northeast storm and a driving rain nine members and one visitor shot through a programme of fifteen events, and Messrs. Thomas, J. R. Taylor, J. E. Thropp, Jr., Frank Wilkes and Harry Smith will partake of roast capon for Sunday dinner. Our magautrap again broke down just at the time we did not wish it to, and after pottering around it for an hour we closed it up, and finished the programme on the five-trap battery. The scores are away below par, but the man that won in either the capon or cash events certainly earned all that came his way, for old Jupiter Pluvius outdid himself in the way of handing out a sample of his stock of a cold spring rain. In spite of the discomfort of wet feet and clothing, every one was in the best of humor and enjoyed himself immensely. It is proposed to hold Saturday afternoon shoots from now until fall, in addition to our regular monthly badge contests, which are fixtures for each second Wednesday in each month.

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

A. A. SCHOVERLING, Ass't Sec'y.

Boston Gun Club.

BOSTON, April 3.—Wednesday, April 3, the date for the Boston Gun Club's twelfth weekly prize shoot, was a corker of a day, as the five trapshooters present are willing to testify. After once reaching the grounds no one thought of improving their scores and one went so far as to say he did not want to shoot. But when two of the five began to shoot and burn up powder and shot with very little success, his enthusiastic gun nature cropped out, and when his turn to shoot came he was in his place and on both feet. Only in the match events did any one care to take advantage of their handicap, and then only two, Howe and Horace, and as the youngest member present stated for just a few shattered targets got a good soaking. Scores below. All shot from the 28yd. mark, except events 5, 6 and 7, where Abbott shot 28yds. and the rest at handicap distances:

Events:	1	2	3	4	5	6	7
Abbott, 17	1	6	1	1	2	4	6
Howe, 19	3	6	4	6	6	5	5
Horace, 18	3	2	2	1	8	7	6
Frederick, 14	..	..	..	..	..	..	3
Henry, 16	..	..	..	..	..	..	1

Prize match, 30 singles, unknown; distance handicap:

Horace, 18	111111101010110010111010110101—20
Howe, 19	001110101100001101110011110010—16
Abbott, 17	100001000101000110010101111001—12

Brockton vs. Harvard.

BROCKTON, Mass., March 30.—The Brockton Gun Club to-day defeated the Harvard Gun Club in a five-men team match by 2 targets. The weather was cold and very windy, and the shooting was difficult. Scores:

Harvard.	
Blake	0100111011111101011011111011111—22
Dana	1110111001110110011010010000—17

A. F. LEONARD, Sec'y.

WESTERN TRAPS.

Audubon Gun Club.

Chicago, Ill., March 30.—The Audubon Gun Club held its regular monthly shoot here to-day. The weather was very bad; there was snow and rain, and the birds were hard to see. The bad weather kept most of the members from coming out. Scores:

C E Felton, 2	2*022210221011220—12
J M Gillis, 1	2002120*11*12011 —10

Garfield Gun Club.

Chicago, Ill, April 6.—The appended scores were made on our grounds to-day on the occasion of the thirteenth trophy shoot of the series. R. Kuss was handling his new Greener in a very killing style; so much so as to go straight in the main event, and being the only one to do so. The birds were an excellent lot, being extremely fast and erratic in their flight. A strong and very chilly northeast wind blew directly across the traps, and a very large majority of the birds took advantage of it and started promptly for Peoria, and, for all we know, many of them went there. One more shoot closes our pigeon series, and then for the bluerocks.

The annual meeting of the club was held on Wednesday, April 3. The secretary reported the club in fine condition, all bills paid and the membership full to the limit, with eleven applicants on the waiting list. The treasurer reported about $225 in the treasury. Three new directors were elected, viz., W. A. Jones, A. D. Dorman and A. Hellman. Election of officers resulted as follows: President, W. A. Jones; Vice-President, A. Hellman; Secretary, Dr. J. W. Meek; Treasurer, Thos. W. Eaton; Captain, A. D. Dorman.

Classification of shooters remains same as before, viz., A, B and C. The club has glowing prospects for a prosperous and active year ahead. The scores:

	No. 1.	No. 2.	No. 3.
Kuss, 31	2212222222—10	1222110202— 8	*12122—5
Dr Shaw, 31	1*11211212— 9	22201*2222— 8	111111—6
T Eaton, 30	1212*01012— 7	2002*02*11— 5	221111—6

Midgley, 28	220122222*— 8	.....	.....

DR. J. W. MEEK, Sec'y.

Minneapolis Gun Club.

MINNEAPOLIS, Minn., April 1.—The following scores were made at Intercity Park to-day. The live-bird event was for the Review cup, and should have been at 25 birds, but the express company failed to deliver the birds till late in the day, and this made the 25-bird event impossible. The strong wind made the live birds a good lot and the targets very erratic. Scores:

No. 1, 10 live birds:

Perry	1212022221— 9	Johnston	0111*20*11— 6
Earl	1212*21101— 8	Mrs Johnston	2222122222—10
Wilkinson	2222220222— 9	French	2121212212—10

No. 2, 25 targets, magautrap: Perry 17, Earl 21, Wilkinson 19, Johnston 21, Mrs. Johnston 19.

No. 3, 25 targets: Perry 16, Earl 21, Wilkinson 20, Johnston 23, Mrs. Johnston 21, French 22.

SECRETARY.

Mississippi Valley Notes.

The Twin City Gun Club, of Pekin and Peoria, has claimed May 16 and 17 as dates for its annual spring target tournament. The boys will operate two sets of expert traps, and the shoot coming thus just ahead of the Illinois State meet will be sure of a good attendance. This club has twenty members entered to contest for honors in the State tourney.

The programme of the twenty-seventh annual tournament and convention of the Illinois State Sportsmen's Association will be issued next week, and it will present to the trap shots of Illinois and the middle West one of the best all-week entertainments of the year. The splendid grounds of the Illinois Gun Club have been turned over in toto to the State Association for this event. There is not a better ground anywhere in the West for a big gathering of this kind, and it seems as if nothing can bar this being the finest meeting in the history of the sport in Illinois. There will be a full target programme for six days, besides live-bird sweeps, the various State trophy contests and the big match for the Dupont trophy, which the Messrs. Dupont de Nemours & Co. have redeemed and offer in competition here as a special feature.

The programme of the twelfth annual tournament of the Kansas State Sportsmen's Association, to be held at Leavenworth, April 16, 17 and 18, presents a very tempting layout to the shooters of the West. The Kansas boys are noted among the best of the host of good fellows who make up the shooting aggregation of this big basin, and three of the merriest and most popular of them all—to wit, Jim Sexton, Harry (Jap) Kooler and Louis Erhardt—are the guiding spirits in this big event. Their introductory address to the shooters, while not exactly suited to be classed as an epic, will appeal with keen humor to every reader and prepare him for the good time coming if he attends this shoot. The regular programme carries sixteen 15-target events daily; $5 added in each. Besides, there will be the Kansas State championship and Rochester Brewing Company interstate championship cups to be contested for. Targets will be thrown at 2 cents each. Money divided on the Rose system, 4, 3, 2, 1; and manufacturers' agents will be permitted to shoot in programme for targets only, at a charge of 1 cent for targets.

And the St. Louis boys are still whooping things up as never before for the State meet the last week in May. There are from thirty to forty entries whenever manager Dave Elliott hangs up a programme at Dupont Park.

The genial Chas. Spencer is winning success and friends in his new capacity as the local representative of the King Powder Company, while Alex Mermod is creditably filling the position formerly held by Mr. Spencer, with the Rawlings Sporting Goods Company.

F. C. RIEHL.

The International Team Match.

A MEETING of influential trapshooters was held in New York city on Monday of this week. Hon. T. A. Marshall in the chair, Mr. R. O. Heikes secretary.

The following resolution was passed:

That Paul North be authorized, on behalf of of the American team, to send to A. H. Gale, representing the English team, a challenge accompanied by a forfeit of $500, to bind a match at inanimate targets for $2,500 a side, such a match to commence on or about Aug. 12 next.

Matters of further interest are as follows:

The International Inanimate Target Team Match.

In behalf of the trapshooters of the United States, this challenge is sent to trapshooters of England, Ireland and Scotland for a series of contests to be shot under the following rules and conditions, and as an earnest of good intentions, inclosed find New York draft for $500 to bind the match. Paul North.

Rules and Conditions Governing International Match.

Match to consist of a series of contests for a stake of $2,500 a side and the winner of the best three in five contests to be declared as winner of the match and stakes.

A forfeit of $500 to be deposited with A. H. Gale, honorable secretary of the Middlesex Gun Club, on the sending of the challenge, and the balance of the stake, $2,000, on or before July 15.

Match to be shot between Aug. 10 and 20. Exact date to be mutually agreed upon and shot upon the grounds most suitable, and the American team to have the privilege of a week's practice on the grounds selected for the match.

Match to be play or pay.

All gate receipts to be equally divided between the teams. Teams to consist of ten men on a side, and to be composed of any ten men from the United States and any ten men from England, Ireland or Scotland.

Each team to have the privilege of using an unlimited number of substitutes in the series of contests, but no change to be made during any one contest.

Contest to consist of 100 targets per man, thrown from Ely traps, or 1,000 per team, and to be shot on as many successive days as is necessary to decide the match.

I. B. S. A. rules to govern, with following exceptions: Targets to be thrown not less than 40 nor more than 60yds. Targets to be thrown not lower than 6ft., nor higher than 10ft. at a point 10yds. from the trap.

One judge to be selected by each team, and these two to select a referee, and in the case the judges disagree, the referee to decide, and his decision to be final.

Shooting to be in squads of six men, and composed of three from each team. This would leave last team with one man each, and team can be filled up with substitutes, whose scores will not count.

American team to use one barrel only, and to be allowed 1¼oz. shot, struck measure, 1106 Dixon's or American Shooting Association measure.

English team to use both barrels, and I. B. S. A. rules to govern as to charge of shot. Any length of shell, and any charge of powder allowable. Twelve-gauge guns only.

Aschenbroedel Gun Club.

NEW YORK, April 6.—The following scores were made at our first regular club shoot, Friday, April 5:

Events:	1	2	3	4	5	6	
Targets:	10	10	10	10	5	5	Total.
R Ruhlender	7	6	8	7	3	3	34
P Grunert	2	3	5	6	1	3	20
H Heiser	5	2	2	3	2	1	15
J Knittel	2	1	1	2	2	0	8
E Macdonald	7	7	7	6	2	2	31
E Wagner	6	6	4	7	2	3	28
C Waters	..	..	4	3	1	..	8
J Siemers	..	..	7	2	4	..	13
J Sprague	..	..	0	9	5	..	0

These scores are not as good as they will be later on, this being the first time in many months that several of our members handled a gun. This was proven when the gun of one of those whom we call "Splinters" for short, went off and blew a hole in the side of our shooting box. (He was called Splinters before he made this break.) When asked how it happened he said he was just practicing. We will hereafter furnish him with blank cartridges for that purpose.

J. Sprague's score of duck eggs was not made in view of the approach of Easter, but was caused by that gentleman insisting upon wearing a Prince Albert coat while shooting, the tails of which being blown up by the wind rather spoiled his aim. At least this is the most charitable explanation we can find for his performance. Our next shoot will take place Friday, April 19.

E. MACDONALD, Sec'y.

Crawford Gun Club.

ALTOONA, Pa., April 5.—The following scores at clay targets were made by members and visitors of the Crawford Gun Club on Good Friday afternoon:

Events:	1	2	3	4	5	6	7	8	9
Targets:	10	15	10	15	10	20	10	15	20
Selwitz	5	7	4	8	..	..	5	7	..
Epright	6	11	..	..	7	..	..	..	..
Waite	4	10	..	..	..	..	..	9	w
Shatzer	5	8	8	5	5	7	8	3	..
Peters	6	10	6	11	10	15	9	..	14
Kelly	5	8	..	..	5	..	..	..	..
Martin	3	8	..	..	4	5	..	..	..
Wright	6	7	..	..	..	..	..	..	..
Shoenfelt	4	6	..	..	..	..	..	..	..
Hurley	1	3	..	..	..	..	..	..	..
Burkholder	..	..	5	11	..	..	8	..	..
Rampling	..	..	2	2	..	..	..	..	..
Bastain	..	..	..	..	8	8	10	6	14

Nos. 5 and 7, walking match; No. 6, 10 pairs.

F. C. WRIGHT, Sec'y.

Rifle Range and Gallery.

Fixtures.

July 14-23.—San Francisco, Cal.—National Schuetzenbund of North America's annual tournament in Shell Mound Park. Offhand, 200yds.

Aug. 6-7.—Taftsville, Conn.—South New England Schuetzenbund's annual festival and prize shoot.

Columbia Pistol and Rifle Club.

SAN FRANCISCO, March 31.—Several members of Columbia Pistol and Rifle Club went to the range for a 50-shot revolver match to-day. Brannigan carried off the honors with a fine score, beating his own record, and it was expected that he would beat the Coast record on his fourth score, which he spoiled by ending with a 9. He uses a .38 Smith & Wesson.

Mr. J. B. Bradley, of Wyoming, was present and shot well with this weapon, expressing himself well pleased with his day's sport and a desire to be with us.

Daiss' shooting was experimental, and not up to his average. Scores, revolver, 50yds., Columbia target:

A J Brannigan	6	6	3	7	2	9	3	5	6	3—50
	10	6	4	10	11	4	6	6	6	3—66
	5	4	9	6	4	4	3	3	7	3—48
	2	2	1	3	6	6	5	4	2	9—40
	5	6	8	5	5	5	6	9	7	4—59—263
F O Young	65	61	58	57	49—279					
G M Barley	54	50	52	76	68—300					
C M Daiss	83	54	56	55	60—308					
J B Bradley	70	99	89	72	89—119					

Brannigan had 43 shots out of 50 in 8in. ring, Young had 42 and Barley and Daiss each 41; E. Hovey 64, 70; S. Carr 77, A. J. Brannigan 53, 55.

With pistol Young made 40 and 48.

Dr. J. F. Twist, who had just got the powder burns cured from his recent accident, and who was looking rather improved in his facial appearance over his former self because of the ruddy glow of youth being imparted to the new skin, took a spin on his wheel for a change to-day. He was thrown from his wheel and came home with the right eye blackened and that side of his face badly lacerated, several stitches being needed over the eye. He and Young are trying to think up a new sport where accidents have no place.

F. O. YOUNG.

The contemplated international rifle contest between American and English teams was definitely abandoned recently. The Englishmen declined to challenge the National Rifle Association, on the ground that they had not a sufficient number of skilled men available for the contest.

A post card, dated at Hanover, March 22, bearing the portraits of Cooke and Clinton, American rifle and pistol shots, bears the following kindly inscription, for which we thank the fair experts who sent it: "Compliments and best wishes to FOREST AND STREAM, from Cooke and Clinton, Wintergarten, Berlin, Month of April."

PUBLISHERS' DEPARTMENT.

Mr. A. G. Cuthbert, who comes into the columns of the FOREST AND STREAM for the first time this week, is one of the few yacht and boat builders of this vicinity. His place, on an island in the Calumet River, is a picturesque and happy one. In his indestructible metal skiffs Mr. Cuthbert has a new idea. These are wonderfully easy running boats, and it seems literally true that you cannot sink them and cannot hurt them.—*Adv.*

In Mr. J. H. Rushton's new catalogue of rowboats and canoes may be found almost everything in the way of pleasure boats—not power boats—that the summer outer could desire. Mr. Rushton's boats have won high praise on many waters, and those who are considering the purchase of a boat or canoe, or anything connected with either, would do well to see this catalogue.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1901, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, APRIL 20, 1901.

VOL. LVI.—No. 16. No. 346 BROADWAY, NEW YORK

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

"The sale of game should be prohibited at all seasons."

NAILS DRIVEN IN 1901.—No. IV.

QUEBEC.

R. S., Art. 1400 a.—It is forbidden to sell, expose for sale or to have in possession for the purpose of sale, any birch= or swamp=partridge before the first day of October, 1903.

In his many sided nature were an infinite gentleness with weak things, a vigorous hatred for those who inflicted suffering unnecessarily on man or beast, that came from a sympathy which made him feel the extent of that suffering. This may seem a strange claim to make for a man who was so keen a sportsman, but it is an essential part of the true sportsman. There is as fundamental a difference between a true sportsman and a man who loves inflicting death or suffering from sheer love of cruelty as there is between either of these and the nervous lady who shrieks at an earwig and takes to the table top when mouse or beetle claims the floor.—Mary H. Kingsley's Memoir of George Henry Kingsley.

MANY MEN OF MANY MINDS.

A WEST VIRGINIA correspondent wrote the other day in criticism of the New England mode of fox hunting, which is to drive the fox by dogs within gun range and then to shoot it. The West Virginia view was that this was not sportsmanlike, but that the better way was the one pursued in the South, of driving the fox with hounds until it is overtaken and killed by dog or huntsman. And in illustration of truly sportsmanlike fox hunting, two famous cases were cited. In one thirty hounds started a fox in the morning and kept him going all day, until, eight dogs having stayed in to the finish, at the end of thirteen hours the fox was overtaken and killed. In the other case cited three hounds having started a fox on a Saturday morning went out of hearing of the hunters who had put them out, and ran the fox until sundown of the Sunday following, when, at a point seventy-five miles from the start, being cheered on by three men who had been attracted by the cries of the chase, "the dogs quickened up a bit and caught the fox. All fell in a heap and could not be persuaded to move a step." Whether the fox died of exhaustion or not is not told. In this case it appears that the sportsmanship consisted in starting the dogs on the trail of the fox and leaving them to do the rest; to keep up the hunt through the night while the huntsman was asleep in his bed at home, and during Sunday while he was in church, and enjoying his Sunday dinner and his siesta. It would be more nearly accurate to say, however, that while this incident affords an illustration of the extraordinary staying powers of fox and hound, it is not a typical Southern fox hunt, in which the hounds are followed by mounted huntsmen and the enchantment of the sport is found in the glorious cross country riding.

When a fox hunter, by which is meant the rider to hounds, contemplates the New England mode of hunting the game with dogs and gun—where the hunter concealed behind the stone wall shoots the fox when it comes within range—he very naturally decries and condemns the sport because it is in all respects so different from his own hunting. And on the other hand the fox hunter of the New England hills, where riding to hounds is unknown and for many reasons impracticable, makes an equally strong argument in advocating his methods as the one best adapted to local conditions and affording abundant satisfaction in its successful, or on occasion unsuccessful, pursuit.

But "sportsmanship" is so much a matter of individual training, custom, prejudice and partiality, and these in turn are so largely or so wholly determined by local conditions of opportunity and restriction, that instead of the followers of one practice denouncing those of another as unsportsmanlike, it is much more sensible for each to consider that the other, though different from his own, may yet be quite as correct and defensible and commendable. Certainly no person may justly set himself up as an oracle to pass judgment in condemnation of either, until he shall have made test for himself of both, the exultation of the gallop and the satisfaction of the shot.

It is in our modes of recreation, as in many other phases of life, we are given to disapprove certain things just because they are different from what we are accustomed to for ourselves. We have a notion that our own way is the right way, and any other way is the wrong way. Intolerance of fox hunting methods is only another expression of that human nature which makes us intolerant in politics and art, and has caused the history of religion to be in large measure a record of persecution. We ridicule the foreigner who does not dress or walk or eat or smoke as we do, and we persist in making shirts for the heathen and insist upon their wearing them, when the heathen think that the more sportsmanlike way is to go about clothed only in their pristine purity. In sport, as in religion, we "lengthen the creed" even if we do not "shorten the decalogue."

The accepted ethics of sport are for the most part purely artificial in origin and development, although they may not be for that reason any the less deserving of recognition nor any the less binding. For instance, the rule that a sportsman should not sell his game is accepted only because of lively appreciation of the game depleting effects of market hunting. The rule that forbids shooting at birds on the ground is accepted because of the recognition of the higher skill required for wing shooting and the satisfaction one finds in the attainment and practice of that skill. The rule that one must not kill an excessive amount of game is based upon economic grounds and considerations of justice to others—namely, that the parent stock must not be unwisely reduced, that wanton waste is wicked and that other shooters have a right to their share of the game. Aside from these considerations, there is no wrong in the making of a big bag of game, for if on other grounds there is nothing censurable in the killing of one quail, there can be nothing censurable in the killing of a hundred quail, since one hundred times nothing is nothing, and a thousand times nothing remains nothing still.

The restrictions provided in our game codes are based upon economical considerations and not upon ethical whimsies. The statute which forbids certain modes of capturing game, such as deer crusting, partridge snaring, shooting ducks with swivel guns, netting quail or game fish, taking game and fish at certain seasons, or taking more than prescribed numbers—all these are concerned only with so limiting the destruction as not to imperil the perpetuity of the breeding stock.

The whole purpose and theory of game protection as embodied in the statutes is the application to wild game of the principles which govern us with respect to domestic animals—namely, to breed for use, deer as sheep, moose as cattle, prairie chickens as domestic poultry, wild ducks and geese as barnyard fowl, wild turkeys as domestic turkeys. The several species are protected and conserved and kept in existence, that successive generations of them may be hunted and killed and eaten by successive generations of mankind. This purpose aside, we would have no game protection to-day nor any game.

The conditions which affect the supply of a game species may differ in different localities or in different countries, and with the varying conditions there will be found a corresponding variation both of ethics and of what are regarded as necessary laws. An example in point is one to which we have more than once alluded, that of the big bags of game which are common in European countries and there approved and warranted on economic grounds because the game is artificially bred and the supply may be kept up equal to the demand, but which are not sanctioned in America because here the conditions as to supply and demand are quite different.

Again, in America we anathematize the big gunner who steals upon the wild ducks in the night and rakes them with a pound of swan shot, and our feeling against the poacher and our laws which forbid it are amply justified by the ruinous effect night ducking and the use of big guns have upon the local shooting. But in the waters of Great Britain the punt gun is an approved appliance of the wildfowler's art, and the most decided satisfaction is experienced by the fowler who by arduous toil and consummate craft succeeds at last in training his cannon on the fowl. Here is a paragraph from a chapter on the art of wildfowling as set forth by an authority:

Another hour passes; it is 3 o'clock, and we can now begin to gauge the chances of the night. So far, everything points to this being our "night out," the lucky one in a hundred (mostly blanks). To-night the fowl are setting in toward the mussel beds of the highest bank, the last to be covered by the tide; hence the most favorable for a shot, since the big gun is at least twice as effective on fowl ashore as on fowl afloat. Yes; we are indeed in luck to-night, for, as the punt draws in to the final advance, we just clear the point of the high land with its dark loom; and now, full in the bright water and the horizontal rays of the sinking moon, we at length perceive our friends. They are still in full "flock"; but anxious moments remain ere that last hundred yards is made good. In no other sport within my knowledge is there more concentration of excitement, more prolonged suspense, than is experienced during these critical moments of yet undecided fate, with the noisy masses of wildfowl already almost in shot, and the trigger lanyard tightly twisted around one's fingers—no, not even when at length, for the first time, the fore sight of the rifle dwells in thrice-refined aim on the shoulder of some grand beast one has sought out in his haunts, hunted or stalked, perhaps for days, it may be for weeks on end; or when the rod bends to the first mad rush of a 30-pounder. There before us are the ducks we have worked for all night—aye, for a score of nights; there they sit, five hundred of them, all crowding in the moonlight on to that last low mussel scaup that in five more minutes will be submerged. What a spectacle of animation they present during those few seconds while the punt shoots silently forward. The dark outline keeps altering as outsiders spring on wing and attempt to wedge themselves into the center of the crowd. All is life and movement, while a torrent of sibilant voices, of purrs and growls, rolls along in undulating waves of sound. A record shot now seems a certainty. Yet well we know that a score of mischances may ruin the game at the last moment—one untoward noise of man, boat, gun or gear; the touch of the iron-shod setting pole on a stone; the boat taking the ground forward, and swinging round with the racing tide; straggling ducks springing and giving the alarm. A cruel mischance is a distant shot from another gunner; but cruelest luck of all, a misfire; and one may have to pull homeward with an empty boat and a deadly sickness about the heart. But luck is not always bad. In all things, even in wildfowling, the hardest and most precarious sport of all, one occasionally has a moment of bliss, and this serves to leaven the rest. And of those happy hours, none exceeds in sense of true triumph that glorious moment when one sees the wary widgeon at last out-maneuvered, and their ranks well raked at close quarters by a pound of No. 2. The man who has done this has done something of which he may be proud for life, for he has surmounted one of nature's stiffest barriers, and that at no gap or gateway, but precisely at that point where she has made the handicap the most severe.

What with the growing number and ubiquity of tramps, it is strange that the gentle angler pursuing his art removed from the protection of the propinquity of the crowd does not more often fall victim to thieves. We have chronicled from time to time highway or streamside robberies of fishermen by muscular hoboes, but such cases are after all extremely rare. A new and ingenious mode of robbery in the woods has been devised. The perpetrators are, in given cases, game wardens, real or pretended, who find their victim in the unhappy fisherman or shooter who by an infraction of the law has made himself amenable to the attack. The non-resident shooter afield without a license is the favorite prey of these gentry. The warden, or pretended warden, appears in camp and demands that the stranger shall accompany him to headquarters, it may be forty or a hundred miles away by arduous trail. If the victim scares, as he is likely to do, he begs for a compromise. The warden compromises. Usually he takes all there is in sight. Then he tells his victim that he may now kill game, when, where and as much as he will, without regard to the law. When a warden gives such license as this, the man who has paid the money may be sure that the warden is a thief who has put the money into his own pocket.

From the peaks and glaciers of British Columbia to the sand dunes of Long Island the outdoor world is for the enjoyment and delight of the sportsman tourist. Whether one follows Mr. Frisbie on a far journey into a strange country, or with Mr. Moonan finds interest in familiar nearby scenes, there is abundant reward for going afield. The world is very beautiful all about us if only we would give ourselves the opportunity and privilege of looking upon it.

Mr. J. von Lengerke's account of beaver existing in a wild state within fifty miles of New York city is one of the most interesting natural history records we have ever printed. It is an excellent illustration of the persistence of wild life if only immunity be assured, and we trust that these enterprising colonists may be jealously guarded by Mr. von Lengerke that their stay may be permanent.

The Sportsman Tourist.

Sailing Amid the Peaks and Clouds of British Columbia.

In Two Parts.—Part I.

Amid the peaks so dark and high,
With rugged sides that mist enshroud;
Along the lakes with rock-bound shores
That mirror back each passing cloud;
Down streams that rage thro' cañons deep,
Thro' riven mountains, that strive in vain
To hold the rushing waters of the North,
And keep them from the distant main.
We sail along 'mid cloud and peak so grand,
In this the enchanted Western land.

IT was my good fortune in 1894 to make a tour of the Canadian Northwest via the Canadian Pacific Railway, a full account of which was published in the FOREST AND STREAM of July 6, 1895, and subsequent numbers.

So charmed with this country did we become that it has been one of the desires of our hearts to visit again the "enchanted land." But the years have passed on "wings so swift" that no time seemed to be opportune. The summer of 1900 was nearly gone before the "signs were right," and it was decided on the spur of the moment to round up a few missing wonders of the British Columbia land. Our former trip was very satisfactory, but we had missed a few things, and we wanted to "fill in the chinks."

As the descriptive article* referred to is quite complete, we will ask any reader who would like to know all about the journey to read the back files of the FOREST AND STREAM. We might say more about it here, for each journey to the far West unfolds new wonders and charms, but it is not our intention to rewrite old matter, but to describe the new points visited, and which were only mentioned in the last article.

ANTELOPE IN CANADIAN NATIONAL PARK.

Banff, the beautiful, was our first stop, and the six years that had rolled past had not detracted from the charms of this paradise of the Rockies. Neither had the years added many new attractions worthy of note, excepting the game park, which the Canadian Government has made a prominent feature. Here, in as near a primitive state as possible, are confined in a very extensive area a herd of about twenty-five buffalo and a number of antelope. As the buffalo are fast becoming a great curiosity, to see them in and among such wild surroundings is worth a long journey. The territory over which they roam is of such great extent that they do not seem to be in confinement, and the sight brought back vividly to the writer the old days when, on his first trip West, he hunted these great bison of the plains. Then there were thousands, and instead of making snap shots with a camera he made snap shots with a six-shooter and pot shots with a Sharps' old reliable. The buffalo at Banff are in good condition and include some large bulls in the herd. The herd bids fair to increase, and it is to be hoped that the Canadian Government will continue to take good care of them. The herd was purchased near Winnipeg from a private party, and it was a very wise move to preserve them.

The antelope in the park were not doing as well as the buffalo. They were mostly young ones, and any one who is posted knows that it is hard to raise young antelope. However, there are hundreds of antelope in the Canadian Northwest to-day where there is not one buffalo, and the stock can be renewed.

The Canadian Government has also completed its museum in the national park, and many things of interest to the sportsman and tourist are being added every year.

The fishing at Banff has neither improved nor become much poorer. One has to get away from the vicinity of the hotels if he wants good sport, though a few fish of good size can be taken by the persevering angler right below the C. P. R. Hotel.

Banff of to-day is still the beautiful spot of six years ago, and man can never change the face of nature in this garden spot. Old Cascade, Rundle and the others of the great family will continue to look down into this charming valley when he who pens these lines has ceased to be and when the countless thousands who will come after him to gaze upon the wonders of the Rockies have also crossed the dark river, for, as Ruskin says, "Mountains are the beginning and ending of all things."

On to the west, and this time we give more than a passing glance and notice to the Lakes in the Clouds. At Laggan, thirty-four miles from Banff, we leave the train, and in a rain storm start for the chalet at Lake Louise. The conveyance was an open buckboard, and it was all the sturdy team of bays wanted to do to pull the outfit up the mountain road. We were offered the option of riding a pony up the trail, but as it was decidedly wet we concluded that the buckboard, even if open, would give us a better chance to keep dry. The ride of three miles is a pleasant one—on a pleasant day—and is a climb from the start. We follow up through the dense forest the creek that comes dashing down the mountain side—Louise Creek it is called, a mountain torrent fed by the melting snow and ice of the great glaciers above. It looks very fishy, and no doubt many a trout lies hidden under the rocks and logs that fill the bed of the ice-cold stream. One does not see Lake Louise until right at the chalet, and then such a vision bursts upon our sight as is not often given to mortal to behold.

BUFFALO IN THE CANADIAN NATIONAL PARK.

Here nestling amid dark green forests flanked by high snow-capped peaks and bounded by an immense ice field lies a lake of crystal——. "Blue, did you say?" "Or green?" cries the other. An indescribable color, either blue or green, or both, or neither, ever changing, ever beautiful. Mirror-like at times, its placid bosom gives back to the clouds and peaks their counterparts, only enhanced in beauty. Ruffled with gentle breezes it changes from a splendid mirror to a dancing lakelet. A mile and one-half long, did you say? Never! Why, it is not a stone's throw to yon ice field. So clear is the rarified air of this home of the ice king, that distance is annihilated. On the shores of this enchanted lake has been built by the sacriligious hand of man a hotel. It seems out of place, but mortals must live and the best has been done that could be not to destroy the primitive wildness of the primeval forest, just enough of which has been cut down to make room for a little chalet, the exterior of which is surrounded by broad porches from which the beautiful vista may be seen. The interior is a pleasing combination of the primitive and the modern. The main room of the building is a combined lounging place and dining room. At one end is an immense fireplace, in which a huge fire of four-foot wood is burning all the time. The side toward the lake is one immense window, or more properly a series of windows, out of which one may gaze while dining and see across the shining waters, the sun gleaming on the glistening blue ice, or watch some cloud hover lower and lower, until the white crest of Victoria Peak is hidden from view.

We must not be selfish and try to keep all the good things of this world to one's self, but part of the great charm of this spot will be lost when people flock in as they are beginning to do. This year it was necessary to engage accommodations several days ahead, and to meet the demand the chalet has been enlarged to double its former capacity. The fly-fisherman can have some sport here, which if not of a very exciting nature, serves to pass many hours if he becomes tired of the beauties of the mountains and lake. The trout taken are of the beautiful rainbow variety, and average small, but they rise nicely to the fly and are fine in the pan.

BUFFALO IN THE CANADIAN NATIONAL PARK.

There are numerous trips to be taken from Lake Louise, and ponies can be hired or one can climb the trails. The altitude is about 6,000 feet, and one gets up some 500 to 800 feet more at various points without going on to the peaks. A climb of two miles takes us to the second lake, Mirror Lake, which lies on a bench 550 feet above Lake Louise, into which its waters flow underground. About 300 feet higher up lies the third lake, which forms the group known as the Lakes in the Clouds. This Lake Agnes is fed by the everlasting snows and ice of the high peaks back of it, and its waters run down the steep side of the mountain into Mirror Lake. From a point back of Lake Agnes all three of the lakes lie below one and present a scene of beauty seldom rivaled. From the steep trail between Mirror and Agnes a grand view is had of Hazel Peak and Glacier. As you stand above Lake Agnes you look down over the three lakes and see the little chalet far below you, just peeping above the dark green forest, the light blue smoke curling lazily above the red chimney and floating upward into the darker blue of the cloud flecked sky, and still on your gaze wanders down, down, into the valley, and here you can just trace the Silvery Bow, beyond which again rise the rugged peaks of the Rocky Range. No fairer view mortal eye has gazed upon, and no description or photograph will ever tell or show its grandeur and charm.

Another day and we are off in just the opposite direction to climb the Saddleback for a peep into Paradise Valley. Little shelter chalets have been built at Lake Agnes and at Saddleback, where one could camp if desired. Storms are frequent in this locality, and clouds hang low for a large portion of the time; but these clouds tend to enhance rather than detract from the charms of the place. No more entrancing effects can be imagined than the rolling down, as if of some immense curtain, of a vapor laden mass of clouds over the snow-white crests and darker sides of these peaks that surround Lake Louise and its sisters. Then as they break into various forms and give the god of day an opportunity to send his shafts of light down to play with the glistening ice and dance over the white snow fields, just disclosing glimpses of the blue ether beyond, one stands in awe, silent and enraptured, and if moved to speak can only say, "Great are thy works, O Nature." All who visit Louise yield to her charms and many linger weeks beside the crystal waters of this lakelet in the clouds.

One old English gentleman with his wife, who were trotting round the world, went up with us on the buckboard and remained with us while there, and have since written, "That of all the spots visited on their long journey, Lake Louise was the gem." Oh, that vacations could run on like the brook, forever, but time and tide

HAZEL PEAK AND GLACIER FROM THE TRAIL.

wait for no man, and though loth to do so, we journey on toward the setting sun, leaving behind us

The three sisters of this upper world,
That 'mid the snow and ice of ages hide,
And from unruffled bosoms reflect the giant peaks,
'Adown whose sides the avalanches glide,
With dark green forests encircled round,
With rocky shores and ice-bound bay,
Around thy feet the mossy ferns abound,
And o'er thy depths the flying clouds doth play.

Back at Laggan we catch the west-bound and once more enjoy one of the grandest rides that can be found on this or any other continent. I am almost tempted to risk the censure of the editor and again tell of the grand thrilling ride through the Kicking Horse Pass and Cañon, and I know that no matter how much I might write, not half of the beauties of this trip could be told. However, the reader is once more asked to see the back numbers of FOREST AND STREAM referred to.

Fifty-one miles soon are left behind, when each mile one passes over has new charms and excitements. So ere we know it, we are in Golden, and here the Kicking Horse pours its flood into the Columbia, the great river

Which thro' continents pushes its pathway forever
To fling its fond heart in the sea.

On our former tour we were obliged to pass Golden and could not take the trip up to the source of this mighty river of the West, but this time it was our intention not to miss what we had been told was one of the finest of all the side trips. So we left our good friends on the train and were soon established at the Columbia House in Golden. The town of Golden is a thriving little place and a good point to outfit for the mountains round about. The British Columbian Government has a mining district recorder here and a very interesting museum, where one can see specimens of all the rich ore of this and other districts. No one who has not been in British Columbia has any idea of the great mineral wealth of the country, but as I have no mines to sell, it is not my intention to go into details. Suffice it to say that Golden has a future, and it is a "golden" one, too.

We had arranged our plans so as to reach Golden on the day the steamer for the up-river trip departed, so we could make close connections, and in the evening we went aboard the Duchess (as she left before or just at daylight the next morning, and every one was supposed to be on board). The very pleasant and accommodating general manager of the line did the best he could for us, but we had to take a berth in the main saloon, the staterooms having all been taken, as a number of gentlemen were going up to some new mines. The Duchess was a typical Western river steamer, about 100 feet long and built to run in a heavy dew. She was a "pusher"—that is, she was propelled by a great wheel in the stern. All these light draft boats of the West are of this type.

The next morning we were up betimes to see the wonders of this great river, and found most of our fellow

*See FOREST AND STREAM, Vol. XLV., No. 1 to No. 6, July 6 to Aug. 10, 1895.

passengers out. We were a very cosmopolitan crowd—miners, prospectors, capitalists, a minister and some lady tourists, a mining promoter and his two boys, who were enjoying the novelty of the trip into this wild Western country, and last but not least, the Yankee tourist. What a ride it was up this swift flowing stream! The river here comes down through the great ranges of the Rockies and the Selkirks, over which hang low great banks of clouds, while the bare and jagged peaks of the well-named Rockies rear their heads into the sky above us.

Twisting and turning through the rocks and the low-lying thickly wooded shores, the steamer struggles up the swift current. Now and again it seems as if all further progress is barred, but our skillful pilot gives the wheel a quick turn and we run into some little channel nearly hidden by the thick underbrush that grows to the water's edge. Then we come into quiet reaches, where the smooth water reflects back the mountains, clouds, trees and bush

LAKE AGNES.

in marvelous distinctness. Next we pass high straight cliffs of a peculiar formation that take the form of spires, monuments and pillars. The rolling table lands stretch away until they blend with the mountains beyond. On wide sand bars flocks of geese are seen, as we come quickly round some bend and go off with a great flapping of wings. Ducks are startled from their hiding places by the puffing steamer and sometimes fly along with her for some distance. A great trip for the sportsman would be to ship a boat or boats upon the steamer and then lazily drift down with the current. Large game can be found back in the mountains, and one or two points are pointed out as being the home of the white goat. As we get up the river, beautiful park-like expanses are seen, dotted here and there by clumps of pines and other timber. The evening shades are with us before we get into Columbia lakes, and we run on to a gravel bar, but by twisting, backing, turning and steaming ahead again, we work over.

At the mouth of the river proper we pass over the salmon beds. Here before the days of the net, the fish wheel and the canneries the salmon used to come in

VIEW FROM SADDLEBACK TRAIL.

schools and work the gravel up into ridges, where they would deposit their eggs. Here ended the great struggle of the game fish. For 1,200 or 1,300 miles this noble fish of the sea would fight its way up one falls, through rapids and whirlpools, through shallows and cascades, up, up, until worn, weary and spent it reached this haven of rest and after depositing its eggs, probably gave up its life. It literally gave its life that the species might live. These beds are yet plainly to be seen, though the countless numbers of fish are no more. So perish before the advance of civilization all wild things; as the old Indian said, "White man he comes, kill all the deer, catch all the fish, cut down all the trees and then wear plug hat."

A very short, concise way of expressing the ambition of the white man to make way with everything in his pursuit of wealth.

It is dark when the Duchess ties up alongside her dock at Windemere, the town of the Columbia lakes. But early the next day we are out sight-seeing. Here we are at the headwaters of the great Columbia, that is the main source. The real source, it is claimed, where the first water that starts the ball rolling, as it were, is a spring at the head of the lakes. Just above the Fiftieth Parallel lie the two Columbia lakes, and from these the river flows northward between the Selkirks and the Rockies, until it can get round the Selkirks; it then turns to the south, and with a sharp bend starts down between the Gold Range and the Selkirks. It comes back to the Forty-ninth Parallel and goes into the United States, and then down through Washington into Oregon and then westward into the Pacific. The first discovery of this river was in 1792, and it was first called the Origon or Oregon by the natives and old fur hunters. Captain Robert Gray, of Boston, was the first real discoverer, and he named it the Columbia, for his ship, the Columbia Rediviva. The river has only been navigated about 100 years. It is now navigated in spots, there being many falls and dalles which are insurmountable, and which make the river unnavigable through its entire length. The first stretch is from the lakes to Golden, 100 miles; then from Revelstoke to Northport, 200 miles. After the river gets into the United States there are other stretches of good water. It drains a great extent of territory, about 245,000 square miles, or, to make it plainer, a territory larger than New England, the Middle States, Maryland with Virginia and West Virginia thrown in. The lakes at Windemere are very beautiful, the immediate shore being a high rolling table land, and this runs back into the mountains. When the lakes are calm the reflections from the crystal-like surface are marvelous. The water is clear and remains so after it flows into the river, until some of the creeks that come down from the mountains join it.

A freak of nature is to be found in this part of British Columbia in the Columbia and Kootenay rivers. The Kootenay rises away up near Parallel Fifty-one and flows to the south. At the Columbia lakes it is only a mile away from them, and a canal has been cut through connecting the two bodies of water. But the Kootenay flows on to the south, entering the State of Montana. It then turns to the north and flows back into British Columbia, forming with other feeders what is known as the Kootenay Lake. From this lake the river flows westward, and 350 miles from where it passed the Columbia on its journey south it pours its flood into its mightier brother, so that man with his little pickaxe comes along and by cutting a ditch of a mile can save some of the water of the Kootenay a journey of 350 miles on its trip to join its brother.

FRANK F. FRISBIE.

The Sand Dunes of Long Island.

FOR miles and miles they stretch along the coast—those lonely sand dunes, cut off from the mainland by the broad waters of the Great South Bay. To the casual observer they have but one aspect, that of barren and drear monotony, but to him who observes closely and has withal a little imagination they present variety enough.

Rising in their highest part to not more than fifty or sixty feet, they run along generally in a single row, but sometimes in rows of two or three. Among these latter the wind makes a tremendous commotion—rushing and whirling and eddying—the result being that their outlines are constantly changing. After a severe storm you will often see one-half blown away, while its neighbors have grown perceptibly higher. For the most part they are covered with spear grass, thick in the more sheltered spots, but sparse and ragged in the exposed. On the inner side there is an occasional growth of bayberry bushes or other scrub, and more rarely a stunted cedar; beyond this wide sedgy marshes stretch down to the bay. On the outer side a shelving strand runs along, very smooth and clean, but with blackened timbers of ships sticking out of it at irregular intervals, gruesome reminders of the tragic fury of the ocean.

The best season in which to visit the dunes is the spring. Then there is a charm about them that is very potent. The grass has taken on its vernal tint, as have the contiguous marshes. Here and there, even amid the sand, little wild flowers bloom, or a marsh mallow puts forth its passionate emblem. The redwings and the wrens and the meadowlarks have returned and the air is musical with their chorusing. Old Ocean has changed his murky complexion for one of azure, and is now wreathed in smiles. And the south wind blows, laden with ozone, and happy he who can be there to taste of the exhilaration of it all.

The spring melts into summer and Old Sol takes complete possession of the scene. The grasses begin to droop and the sand grows white in the fervid heat. Redwing and wren and meadow lark have lapsed into silence and nothing is now audible but the drowsy murmur of the waves on the beach. Overhead the gulls hover more lazily than is their wont, and a ship on the horizon seems to stand still. The air is bathed in peace and sunshine and the long day is like a lotus eater's dream.

Then comes autumn with its mists and wailing winds, or its long spells of amber sunshine. The dunes and the marshes grow grayer day by day, hardly relieved by the flaming of a leaf or a weed here and there, and a melancholy atmosphere broods upon them. Instead of the songs of the spring visitants, now is heard the honk of the wild goose or the quack of the wild duck frequenting the waters of the bay. But the cricket lifts up its cheery voice and tries to dissipate the gathering gloom. In vain. The march of the season is inexorable. At length the cricket falls silent and then the tide takes a moaning note, full of fearpul presage of what is at hand.

Winter! Now indeed can it be said truly that the dunes present a picture of barren and drear monotony. But there is variety still. It is, however, in the way of a further accentuation of the chilling aspect of the scene. For when the blizzard has swept over it all is cold and somber desolation. Like great marble tombs the dunes stretch along, while the hungry ocean seems to be demanding of them to give up their dead—now in hoarse and sullen tones, and again in wild and thundering accents. No conception of the terror of this, especially at night, can be formed by one who has not been there to see and hear.

It will hardly excite wonder that around these dunes, so invested with solitude and an air of mystery, as it were, legends should have gathered by the score. Some of these date back to the aboriginal Indians, but for the most part they are connected with Capt. Kidd or other congenerous sea rovers. It is not so very long since the legends found a ready credence among the good people who inhabit the adjacent mainland, and indeed there are not a few there still, at least among the older generation, who have more than a lingering faith in the bizarre or uncanny legends. Let two or more graybeards be gathered together, with their pipes going and the weather at all suggestive, and the chances are ten to one that some allusion will be made to the traditional associations of the dunes. And at such times it is most interesting to note the lowering of the speaker's voice, or the manifestation of awe which steals over him.

Perhaps the legend which most appeals to the popular fancy is that of the old sea captain, the treasure seeker. This worthy, so the legend goes, was of the belief that the beach was a veritable gold mine, and despite years of fruitless search and keen disappointment he did not lose his faith. It does not appear that he placed any reliance on the mineral or sounding rod, an instrument held in such favor by others of his ilk. His method was to walk the beach after every storm, when, owing to the washing away or displacement of the sand, he hoped to discover some clue to the dear object of his search. At length fate relented in his regard, or perhaps it would be more correct to say seemed to relent.

It was in the fall of the year, and the first equinoctial storm had come up. The old captain, all excitement, lay awake through the night listening to the whistling of the wind and the booming of the surf on the distant beach, speculating the while on what the morrow would bring him. The morrow came at length and the captain lost no time in reaching his boat, and having trimmed his sail he shot across the bay. Arrived at the beach he shouldered his old flintlock (without which he never ventured thither, and, indeed, always carried a few silver bullets for special emergencies) and set out on his patrol. The storm had completely passed, and the sea, subsided to a long, even swell, was shimmering in the bright sunlight. Along the beach our gold seeker pursued his way, observing closely the base of the dunes, where the fury of the tide had left its greatest mark. Albeit so eager in his search, the captain had a way of falling into a revery anent what he should do after he had made his find, and he now fell to planning his ship and fitting her out for sea, that being his favorite scheme. So intent was he on this that he only half observed something bright or glistening which stuck out of the sand at a certain point, but he remembered it, and hadn't gone very far before he came to a halt and turning round said: "I b'lieve I'll go back and just see what that was." As he approached the object he could plainly see that it was part of a jar, and immediately his heart began to thump against his side at a fearful rate, while a feeling of superstitious dread took possession of him. For some moments he stood transfixed, gazing at the object and then up and down the beach. The supreme moment had come—he felt it—he knew it—and yet after all perhaps that piece of earthenware was only——. The doubt nerved him, and calling himself a "Darn old fool!" he stooped down and began to dig away the sand from the jar with a trowel which he had taken from his hip pocket. Suddenly he stopped, fearing he might be surprised, and pulling off his coat he threw it over the jar and rushed to the top of the dunes. Up and down the beach and then across the marshes and the bay he peered, but no human shape was visible. Drawing a sigh of relief he returned to his find. In a little while he had exposed the jar completely to view. It lay on its side and its opening appeared to be corked and sealed. Taking it up with trembling hands the captain found it was heavy—heavy as gold. Such was his agitation that he let it fall from his hands involuntarily. Once more fearing surprise he rushed to the top of the dunes, peered about as before, but finding the coast clear, returned to his work. Then sitting down he took the jar upon his knees and producing a jackknife proceeded to cut away the seal. But suddenly he stopped, and throwing the jar from him with an exclamation of fear, sprang to his feet. What if it contained a genie such as he had read about when a boy in "The Arabian Nights"! With eyes bulging from his head he gazed about him in a genuine panic of superstitious fear and awe. The day seemed to him unnaturally still and bright and this added to his panic. He was on the point of picking up his gun and taking to his heels when—his intense desire to have the wherewithal to build the ship sobered him. For the second time he apostrophized himself, only in somewhat more emphatic terms than before, and sitting down resumed his labor of opening the jar. The seal being cut away he attacked the cork, and in this attack his knife broke, which he took for a bad omen, and his panic was about to return. But conjuring up the vision of that ship he was able to resume his attack on the cork with all of the blade that remained. Presently the cork was cut away and the captain, putting his eye to the opening of the jar, saw something white, which for the moment he took to be smoke about to issue forth, preparatory to the appearance of the genie, and gave himself up for lost; but no smoke appeared, and the captain taking heart inserted his finger and found that the white substance was nothing more harmful than cotton. Seizing it between his fingers, he pulled it out, and then applying his eye again to the opening of the jar, lo! there was the glitter of gold! Oh, the ecstacy of that moment! Our old salt jumped up and danced and cut capers about the beach in such a manner as must have convinced any one observing him that he had gone stark mad. But in the middle of his antics he stopped short and flew back to the jar. Turning it upside down he shook it and out poured a stream of golden coins. They had an odd, foreign look, with strange inscriptions upon them, but what of that since they were gold? Gloatingly the captain took some of them up, one by one, and examined them. All he could make out was "Hispan-et-Ind," and this, of course, was Greek to him; but he concluded that the coins were Spanish doubloons, and he was right. From examining them singly he took to lifting a handful at a time and allowing it to fall back among the glittering heap—the jingle being to his ears the sweetest music he ever heard. While thus engaged the sun passed behind a cloud, casting a shadow over the captain. He started as if shot, and excitedly pulled his coat over the gold. Then observing the cause of his alarm, he dealt himself an uppercut with his clenched fist, while apostrophizing himself for the third time that day.

"But I'll take no more chances," he added. "This 'ere dust has got to be carted away, and that pretty quick!"

Suiting the action to the word, he proceeded feverishly to refill the jar, and this done he wrapped his coat about it, tucked it under his arm, and picking up his gun flew rather than ran for his boat. He reached home in safety and deposited his find under the floor of his cabin. In course of time the ship was built and then upon a day when the wind was fair the captain sailed proudly out of Fire Island Inlet—and never came back!

Such is a sample of the legends that have gathered about the dunes, and which lend them a romantic interest more fascinating perhaps than the splendor of a range of mountains. However this may be, it is sad to think that these famous little sand hills, which have so long offered to the voyager his first and last glimpse of America, may some day be a thing of the past, for the encroachments of the ocean upon them never cease, and it would seem but a question of time when the waves will roll over them and picturesque charm, legends and all will be forgotten.

F. MOONAN.

Some Boyhood Memories.

VII.—A First Visit to the Adirondacks

NOT long ago I read a very interesting letter from a middle-aged sportsman in which he said that his first visit to the wilds of Pennsylvania, made in his youth, left such a profound and lasting impression that every incident and detail was indelibly fixed in his memory. It could not have been more indelibly fixed upon his memory than is my own first visit to the Adirondacks fixed in mine, for at the time I had a vague idea that one incident of that visit was seared into my vitals. It was with me sleeping and with me waking, for nights and days after, and for weeks the rustling of the bushes in the wind or the snapping of a twig brought it to my mind's eye in a flash. My first visit was made to the Adirondacks when I had arrived at the mature age of twelve years, and I accompanied my father's superintendent to a lumber camp on the Cedar River, near the line which separates Hamilton from Essex county. There were no tourists in the woods in those days; no hotels worth mentioning; no roads nor bridges that were spoken about except with a big D to impress upon the hearer the fact that they were poor. Stage coaches and the modern buckboards would have been as much out of place on the roads and bridges as a Waterloo cup winner in a dog-churn. At Roots, now North River, where we entered the wilderness, a pair of heavy horses that were used in lumbering operations and consequently familiar with the roads, or the lack of them, were harnessed to a heavy wagon to take us into the camp or lumber shanty. I thought the drive from Roots to Indian River was the roughest pleasure jaunt of my short life, and this opinion held good until we left Indian River on a winter log road for the camp. A winter log road is not intended for summer travel, except as the gallant soldier of the story returned from the war. He went on horseback, and came on foot, back. The nature of my relation to the builder of the road from Indian to Cedar River made it impossible for me to find fault with it, even when both horses went through the first bridge we came to. The horses were used to that kind of sleddin' evidently, for they made no protest whatever, but remained as quiet as wooden horses until the harness was removed and they were fished out of the dry bed of the stream under the rotten bridge. By the way, these horses, young, powerful beasts, were broken to pile logs, and were used single, without bit or rein, and obeyed the command to "haw" or "gee" more quickly than well broken oxen, and they were named Buck and Bright. I had often heard of the exploits of these wonderful animals that "knew as much as a man" and were always kept "up in the wood," and I knew that my father valued them for their intelligence and training, and when they went down through another bridge I protested for them. The men said that my father never had seen his private road in summer, and I resolved that if I lived to get home he should have such an account of it as to cause him to appoint a committee of means to fix his ways.

My fondness for sport was developed some years before the time of which I write, for I was a precocious youth in this direction, and it led to my entering into a compact with my father that on my part I would not monkey with firearms until I arrived at a certain age, and that on his part he would buy me a rifle when I arrived at that fixed age. This compact was faithfully kept on both sides, but as I walked along ahead of the wagon during that eventful journey I sincerely wished that the time had arrived for me to have a gun, if only for personal protection. Darkness had fallen when we arrived at the camp, and I could see little of the lay of the land; but the next morning I found that it consisted of two log houses, built side by side, with several log barns and sheds for horses, cattle and forage, and storehouses for provisions and lumbering implements. The buildings were in a small clearing on the river bank, with the finest crop of tree stumps that I had seen up to that date. I wasted little time after breakfast in examining the place from a commercial point of view, for I had gone there to fish for trout, and the fishing demanded my chief attention. When my rod, reel, line, leader and flies were joined I asked Antoine Robbins, the camp keeper, to show me the way to the rapids in the river, which, during the previous evening and at breakfast, he had assured me were stiff with large, delicious trout. From the camp door he pointed out a path which led into the woods on the west of the clearing, only a pistol shot away, and told me that a continuance of it led straight to the rapids, which were about a quarter of a mile up stream. I walked along that patch and entered the woods with my rod over my shoulder, big with expectations of new and glorious sport that I had dreamed of for months previously. The path was none too conspicuous after I left the clearing, for in places the bushes on either side met in the middle, and I proceeded cautiously, that I might make no mistake. Suddenly, in front of me, I saw a huge black moving object, and quicker than thought it raised itself up into a bear, to the best of my judgment at the time, about 25 feet high and 15 feet wide, and shut off travel in that direction. As the bear elongated himself up into the tree tops his appearance and his solitary remark of "woof"—at least that is all I heard him say—paralyzed my limbs, froze my marrow and stopped my circulation, but only for the subdivision of a second of time, for before he was fairly done rearing up on his hinder legs I had turned and was sprinting for the clearing with my rod in my hand and my heart in my throat. Not once did I look back, but every instant I expected to feel the bear's claws fall upon my unprotected rear. Once in the clearing, I glanced over my shoulder without slacking speed, and to my intense relief found that I had escaped.

Sitting down on a log close to the shanty, I waited for my heart to stop beating like a pump out of repair, and for my viscera generally to settle back into its normal position. When my mouth got moist enough for me to talk intelligibly, and I had repaired some ravages in my tackle, I went to the shanty and took from the wall a sheath knife I had noticed hanging there, and secreted it upon my person, and then sought out Antoine and stormed at him for sending me off on a path that lost itself in the woods. I told him he must go with me, and stay with me, so I could be sure of getting back again. If any one thinks that I went into those woods again, Antoine ahead of me, without a desperate struggle with myself to face the music, even as a reserve, it is a mistake, for I did nothing of the sort. When we got to the place where I had met the bear Antoine discovered his tracks. I might have discovered them if I had been in advance, but I happened to be in the rear, so the glory of the discovery of the tracks was not mine. In places in the path water from a recent rain had stood, and finally soaked into the earth, leaving a glossy black deposit of mud. After an examination of the tracks for a little distance, Antoine announced to me that the bear had been walking along the path, and probably heard me and turned and ran at full speed on his back track, and that if I had not made a noise to frighten him I might have seen him. Seen him! Great Scott! I can see him to this day, and it is over thirty years since I met him. I am not entirely sure, but I think I laughed at Antoine's suggestion that I frightened the bear. I also made a mental note of the fact that it was the noise that I made that caused the bear to dig his claws so deeply into the muddy places as he performed his desperate retreat, and I resolved that in the future, in a bear country, I would be accompanied on my fishing excursions with a fife and drum, and carry a tin horn in my fish basket. As we walked on to the river I became very much interested in the natural history of certain animals and their relations to man, particularly the bear of the Adirondack region. I asked if it was not dangerous for Antoine, for instance, to go roaming around the woods unarmed, as I noticed that he was. He smiled at the idea, and said that the black bears of that precinct would run every time at the approach of man. I wished for data from personal experience on the subject, and I got all I asked for. Only once had Antoine met a bear that did not turn out promptly and give him all the path, and on that solitary occasion the time was evening and Antoine was loaded with a saddle of venison on his shoulders, returning to camp, and the bear was hungry for venison. I asked if bears were fond of fish—so fond that if a man with a full fish basket should meet a bear the man would feel called upon to divide the contents of the fish basket. Antoine thought not, but if such a thing should happen one had only to "shoo" the bear out of the path. While I was storing my mind with information about bears I was also fishing and trying to think of questions to put to my instructor that would keep him sitting on the bank. The fishing was good, the trout were plentiful and of good size, and little by little I worked away from my guardian, absorbed in my sport. Once I looked up and Antoine was gone—gone beyond the reach of my voice. I had some fine fish, and there were more to be had for the catching, but I was surfeited sooner than I had expected, and concluded to return to the shanty. To do this there were two ways open to me—one through the woods by a fairly good path, the other by wading, climbing, floundering down the bank through the water and over rocks and dead timber, and after duly considering both avenues I chose the latter, taking my sheath knife with me.

A. N. CHENEY.

Natural History.

Beaver in New Jersey.

Editor Forest and Stream:

Very few of the millions of people in and around New York city have any idea of the natural romantic beauty and varied fauna of many square miles of country which begins almost within sight of the tall sky-scrapers of the metropolis. Even among those classes of people who spend their summer vacation somewhere among the highlands of northern New Jersey, or whose love for shooting, fishing or wheeling has brought them within the boundaries of this bit of God's country, are very few who appreciate the grand and wild character of this region, and who have a correct knowledge of its fauna. Nor do many of the natives living within its borders. I refer to parts of the counties of Passaic, Morris and Sussex, especially in New Jersey, as well as Rockland and Orange counties in New York State.

If I should tell my readers that I can take them to places within twenty-five miles, in direct line, of Greater New York, and show them abundant wild deer signs; or that I have personally run across the fresh tracks of a full-grown black bear, while grouse shooting, within a few years, and this within 30 miles of Greater New York; and that some wildcats are being killed annually within the same distance from New York city, I am afraid that either my veracity or sanity would be questioned by a good many well meaning persons.

Of course, red and gray foxes, otters, raccoons, opossums and many of the other smaller mammals are more or less common and numerous throughout the region I speak of.

But it will be news and of interest to most of even those men who intimately know this whole wild mountain country, who have shot over much of it and who, like myself, have fished in many of the sixty or eighty mountain lakes, that the beaver (*Castor canadensis*) is thriving in a perfectly wild state within less than fifty miles from the New York City Hall. I, myself, was a doubting Thomas when I observed for the first time the strange tracks in the snow and heard one of the mountaineers describe some work which in his opinion could have been done only by big muskrats or otters.

Ever since I was a boy big enough to read Cooper's Leatherstockings and similar works of fiction or natural history, the beaver appealed to me as one of the most interesting animals in our whole fauna. As the great Audubon wrote, fifty years ago, the sagacity and instinct of the beaver have from time immemorial been the subject of admiration and wonder, and beaver stories have been part of every boy's education.

Judging by the general interest shown in the beaver exhibits at our late sportsmen's shows—and I believe no single exhibit was watched with keener appreciation—the general public, like myself, looked upon these few specimens as of a race of animals practically extinct within the limits of modern civilization, and certainly within many hundred miles of the city of New York. Yet I was mistaken, and I take pleasure in presenting to the readers of FOREST AND STREAM a few photos of some of the beaver workings taken by me on the spot. While the home of these animals is not on a property which I acquired last year by purchase, it is within a mile

TREES CUT BY BEAVER AND DROPPED INTO THE LAKE.

or two of it, and that some of their more venturesome spirits have ascended to my own waters, some 200 feet higher up, I have good proofs.

I had my first experience with my new friends about 1 o'clock one dark night last summer, when I had my brother-in-law waiting in a nearby field with a team, while I crawled on hands and knees through the underbrush along the edge of the pond by the light of an old lantern looking for an old boat to take the same to another pond where we intended to try the fishing in the morning. I was then repeatedly startled by a succession of sharp whistling sounds and the plunging into the water of some animal which, judging by the noise, sounded to me to be as big as a Newfoundland dog. At the time I put down the noise as the doings of some scared muskrats. Still, I had never heard rats make such a splash and commotion before.

This was right along a part of shore where there are now numerous old and fresh workings, where I also by

TREE CUT BY BEAVER WHICH FELL THE WRONG WAY.
Photo March 24, 1901.

chance found a beaver burrow and store house. This had a broad entrance under water and ran some dozen feet upon the bank. The frost was just leaving the ground and one of my companions noticing a small cave-in, put his foot through it and discovered the store room, nearly three feet in diameter, filled with a great mass of willow twigs, roots and pieces of split sticks from about 4 to 8 inches in length. As this was underground, it was impossible to take any photograph of it, which I regret, for it was very interesting.

I have never seen any of the animals themselves, and have no idea of their probable number. However, they are there, and I mean to have a look at them some time, in either moon or day light. There are hundreds of big sticks and trees up to a foot in diameter which have been cut. The biggest tree attacked is more than 12 inches in diameter, and was gnawed about 4 inches deep. It was marked at upper and lower limits and at the center, where it is to break. This was fresh work, and the white chips are deposited all around the tree.

The only house or hut which I found had evidently been partly destroyed by men on the ice last winter, but had

been patched up by the animals, as the photos show. No doubt there are others. As the ice was thoroughly soft and rotten and no boat could be brought near, it was dangerous work to get into position for a picture. I had to jump from partly frozen tussock to tussock, while a 10-foot pole could be put out of sight between them.

I also discovered the remnants of two beaver dams across the inlet brook. They, however, were made during the low state of water. One or both, I understand, were partly opened by a native, and the rush of water from recent rains has flooded and partly destroyed them.

Whether these beaver are any old original stock or where they came from I do not know, but they have evidently been here several seasons and are doing well, and I learn upon further inquiry that there are other places within a few miles in this same region where beaver are at home.

These highlands of northern New Jersey are easily reached by the Lackawanna and Susquehanna railroads and are about as good a natural upland game country as can be found anywhere in this part of the country. Ruffed grouse are quite numerous in many places. No better woodcock covers can be found, and while some of this country, much of which is between 1,000 and 2,000 feet above tide water, is rather rough and severe in winter for quail, these can be made to do better with a little artificial care. Sussex county holds the health record for the State, and it alone has nearly fifty lakes, and most of them teem with fish. The time will come when with proper game laws and their enforcement, and more preservation and propagation, this whole region will again be a paradise for the sportsman.

JUSTUS VON LENGERKE.

Experience with Wild Animals.

SCOTCH LAKE, N. B., March 29.—*Editor Forest and Stream:* In FOREST AND STREAM of Feb. 9 is an article on dangerous wild animals, by Wm. Wells, that is very interesting to me. I had always supposed that there were some dangerous wild animals in the West, but not dangerous to any great extent; but it seems by this article by Mr. Wells that there are none, and I don't doubt it in the least, as it is just my experience with big game in the East. The greater part of my time is spent in the wildest and most remote parts of the New Brunswick forest, and right in the home of the moose, caribou and black bear, and I have yet to see the first dangerous animal. If a little caution is used in approaching wounded animals, if they are not very badly wounded, they will, as in every case that I have seen, use all their strength to get away.

We hear a great many stories about dangerous bull moose, and are told of many hairbreadth escapes from them by getting up a tree in the nick of time, and being kept there for hours until nearly frozen; but I believe it to be "all rot." I have seen hundreds of bull moose at all times of the year and in all kinds of places, and never yet saw one that wanted to put up a fight.

About twenty-five years ago I was working in the lumber woods, and one of our party came in to camp on Saturday night with a wonderful story about a narrow escape from a bull moose that afternoon. He had been away alone cruising for lumber and had come on a bunch of moose—a bull, two cows and a calf. The bull had charged him on sight, and to escape he had crawled under

BEAVER HUT NO. 1.
Photo March 24, 1901.

a big windfall that lay up some two feet from the ground, and by doing a lot of dodging from one side to the other he had managed to escape with his life, after being kept in there for hours. This happened in December, and there was a good tracking snow. The next day, Sunday, I took my gun and started to investigate. I found where he had started the moose all right, and where he had crawled under the windfall, but I failed to find any tracks near the windfall to show that the moose had tried to get at him. The fact was that the tracks all pointed in the opposite direction, and that the bull was not the last one to go, also that they had lost no time in going.

Now this man was a good, reliable fellow, with more intelligence than the ordinary woodsman, and every man in the crew believed him, and I have no doubt that he believed himself that the moose was after him when he went under the log. But the snow the next day told the whole story and told the truth. I was alone that day, and what I saw I kept to myself, and there was not a man in that crew but believed it was a narrow escape, and that a bull moose was a dangerous animal to meet.

Again last December I stayed all night at a lumber camp far up on the headwaters of the Tobique River. About dark the foreman came in with his rifle and related some wonderful yarns about a big bull moose that chased every one who went out on a certain ridge, and had treed several men, but all had so far escaped with their lives. That day he had been out cruising in that locality, but had not dared to go without a rifle to protect himself. But I came to the conclusion that he had no license to hunt, as the law requires, but that there were some big moose tracks out there, and that he carried his rifle in hope of meeting the moose, and told these stories to justify himself in killing the moose without a license if he got a chance. All the men in that crew believed him, and so did a young fellow who was with me. I didn't contradict the story; why should I? Let them believe it if they wanted to, but the foreman never got the moose and it is not likely that he ever will.

These are two of the reasons why such stories are told—one from imagination and fear, the other from

TREE 14 INCHES IN DIAMETER IN PROCESS OF CUTTING BY BEAVER.
Photo March 24, 1901.

mercenary motives. I know of a great many such stories as told by others, but these two cases cover the ground pretty well.

On June 20, 1898, I was paddling through a shoal lake with one of my men in the bow of the canoe, and we saw a two-year-old cow moose feeding right ahead of us. I paddled directly toward it, facing the wind. It saw us when about eighty yards distant and stood still, facing us, while I paddled slowly directly toward it, until within about five yards, when the man in the bow seized a pole and shoved the canoe back, as he didn't want to get any closer. We did that three different times, and the moose never flinched. The last time the canoe was within ten feet. Then we went round it and left it standing there, and it was there when we went out of sight around a bend. Three different times since I have paddled up to a young moose till the bow of the canoe struck it, but it didn't want to fight, nor was it in the least dangerous; it was simply the curiosity of a young animal that had never seen a man before.

I see every summer many cow moose with their calves; they generally have two, and I have passed the calves with a canoe close enough to touch them with a canoe pole, and the cows always run away and leave them. I never even saw one make a bluff at showing fight, but as they run away they nearly always call their calves after them.

Last spring I was crossing a lake in a canoe with two friends four days after the ice went out. We saw a cow moose and calf swimming the lake, and when they got to the shore the calf was so chilled with the cold water that it could not get out on the bank. We helped it out, rubbed it dry and left it on a mossy knoll after taking some photographs of it. It could not have been more than one day old; its mother went slowly into the bushes when we were working with the calf, but returned as soon as we left it, and took it with her, yet she showed no signs whatever of being dangerous.

An old moose in the rutting season wants to know what he is running from before he starts, and his curiosity often gets him into trouble, but when he finds out that it is a man he does not wait to do any fighting. Caribou have a whole lot of curiosity, but it takes a lively imagination to consider them dangerous if a reasonable amount of care is taken in approaching a badly wounded animal.

My experience with the black bear is that he is the greatest coward of them all. Even when caught in a steel trap he will rarely show as much fight as a muskrat. I have killed a good many and some big ones, but have not met a dangerous one yet. I make a business of hunting and trapping bears, and I go into the wildest and most remote wilderness after them, right into the home and breeding ground of all kinds of Eastern big game, and I have never yet seen the need of carrying firearms for protection against dangerous wild animals.

Two years ago Charlie Cremin and I were trapping bears on the headwaters of Nepisiquit River. We went part way over our line of traps with a canoe, and walked part of it. We started Monday, May 29, by canoe down the river; we took five bears going down, and on Wednesday, as we were coming back up, we found a big one that had just got into a light but powerful trap. I proposed shooting him at once, but Charlie said, "No; let us see how much fight is in him," and as we were feeling pretty good over our success in taking six bears on one run, we agreed to see what this big fellow would do. So we cleared away the brush from round him to give him a chance to fight if he wanted to; but he didn't want to and didn't. The only thing he would do to try and defend himself was to catch the blows on the pad of muscle on top of his head. Trapping bears will seem cruel to most sportsmen, and it certainly is, but if they have seen caribou and moose torn by bears as I have and consider how very hard it is to get a chance to shoot the cowardly brutes, they will say there is some excuse for it.

We have no wolves in New Brunswick and no panthers, but we have the Canada lynx and the bay lynx, or bobcat. They kill deer and caribou and young moose, and sometimes they act very independent about getting out of a man's way; but they can't be called dangerous, though they are large enough to be so if they wanted to be.

There are comparatively few readers who will believe this, as their information has generally been got from the Sunday papers and from story tellers such as I have written about, and not from actual experience. Occasionally a writer for the daily papers will strike us old hunters for a story, but when it comes out in the paper we would scarcely know it for what we had told them, and if any experienced sportsman should happen to see it he would say, "That man is an awful liar," and they would be right if we had told the story as it is generally printed.

ADAM MOORE.

Heredity and Telegony.

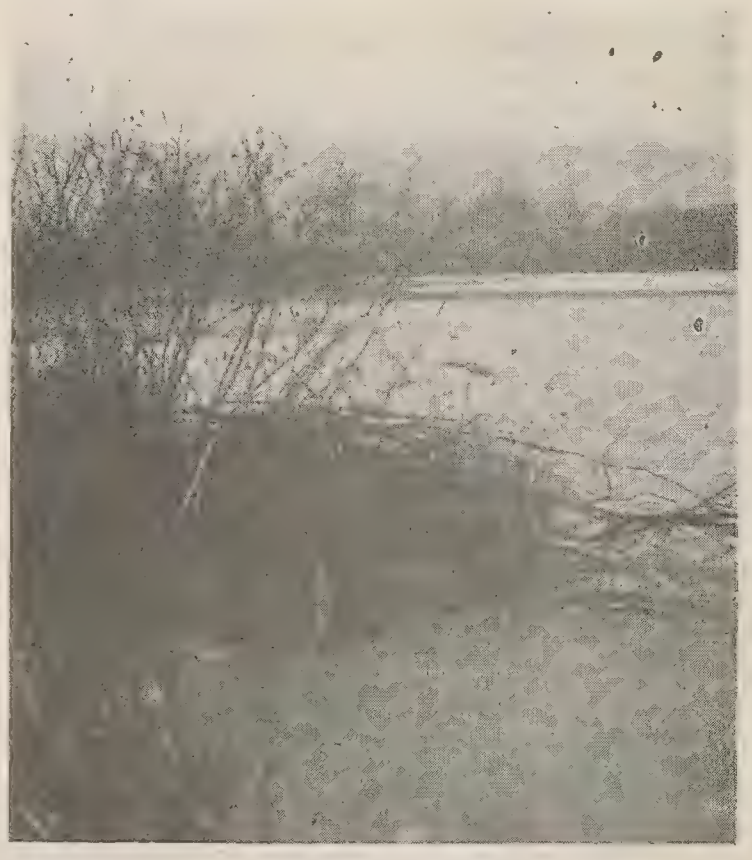
Editor Forest and Stream:

PERMIT me a few words in reply to Mr. W. Wade in your last number. I quote Mr. Wade as follows: "Telegony is dead in the face of heredity, as pestiferous rot as the idea is of its being an invariable result of mesalliances, that it does occur in rare cases seems well established."

The above sentence is somewhat obscure as to the meaning intended to be conveyed, but Mr. Wade makes his position clearer in his subsequent remarks, from which I gather that he sets up "rare cases" of "abnormalities" as grounds for overthrowing the palpable and all-prevailing course of normal transmission by heredity. Indeed, he overshoots his mark, and disproves his allegations by the examples cited, as, for instance, the potency for hereditary transmission of his "born tailless dog."

The interruption of the regular course of heredity by occasional but rare departures from the normal type of the parents, together with "freaks of nature" and deformities, may be attributed in many cases to atavism or "telegony," as Mr. Wade prefers to call it, which is in itself very strong proof of the persistence of heredity. Parents having light hair and blue eyes as a rule bear children of the same type, and when there is an occasional departure to black eyes and hair the persistent influence of a former ancestor asserts itself. Many of the more radical abnormalities may perhaps be attributable to "twists from embryology," as Mr. Wade suggests, which expression I interpret to mean the results of certain abnormal agencies, physical or psychological, exerted upon the sensitive embryo which may in their turn become sources of hereditary characteristics.

As to the Mexican hairless dog, I used him for the purpose of a general illustration, with very little specific knowledge of the creature. Having seen quite a number of them, however, and heard or read something more of them, I have the impression that the hairless dog of Mexico constitutes a type in which hairless parents usually give birth to hairless progeny by hereditary transmission, and that the type developed in response to the demands of environment. Certain it is that no thin



BEAVER HUT NO. 2.

haired dogs are to be found in the Arctic regions, and none with thick fur in the tropics. It is equally certain that Arctic furry animals produce furry offspring, and that the proximate cause of the furry characteristic of the offspring is its existence in the parents. The same principle controls in tropical types, and this we call heredity.

COAHOMA.

An Albino Hawk.

Editor Forest and Stream:

I recently saw a discussion in FOREST AND STREAM relating to albino hawks. Mr. Samuel Nixon, whose address is Eldora, W. Va., has now a very fine specimen of albino hawk in his possession. It is of the redtail species, and save for a few feathers is pure white. Its plumage is in good condition and would make any naturalist a fine specimen. I have no doubt that it could be procured of Mr. Nixon for a very reasonable sum. The bird was caught uninjured in a trap, and I should guess it to measure 4 feet from tip to tip of wings.

C. L. SHAVER.

Toads in the House.

THE toad spends the winter in the ground in a dormant condition. The warm days of April soon wake him up, and the first business of the year is attention to the eggs which are destined to maintain the supply of toads. For this purpose toads of a given vicinity betake themselves to the nearest pond. Though silent the rest of the year, their piping soon fills the air. It is thus when they come down to the water to lay their eggs that the mischievous boy "lays" for them and kills by dozens, often destroying together with the mother the thousands of eggs which are needed to keep up the number of the species. The eggs are laid in the water, and if the weather is warm they hatch out in a few days into tiny black tadpoles. When freshly laid, the eggs resemble strings of black beads embedded in a clean gelatinous matter. It is a fascinating study for a child to watch the transformations from egg to tadpole and from tadpole to toad. To arrange for this the eggs should be placed in a rather shallow dish of water two or three inches deep with mud from a pond sufficient to cover the bottom and come up to the surface of the water on one side. A little green slime and a few aquatic plants will afford the tadpoles their natural food and keep the water fresh if it is allowed to stand in a sunny window. These plants obviate the necessity of changing the water, and the only attention required is to keep it from drying up. In doing this, many children are apt to put in too many eggs and try to raise too many tadpoles. The result is that all are weak and half-starved and are soon killed by fungus or other diseases. Neglect to provide mud, plants and sunshine is also a frequent error which frustrates the experiment. Ten eggs are often enough for a dish six inches in diameter, and not more than three or four tadpoles should be allowed to grow up in it. The rest should be put back into their pond soon after they hatch. If plenty of aquatic plants are kept in the dish, the tadpoles will require no further feeding. Solid food left in the water kills the inhabitants of the receptacle. Their natural food at this stage is usually stated to be exclusively vegetable, and consists of the microscopical plants which form the slime on the stems and leaves of water weeds. The "tads" can easily be seen scraping this off with their little horny jaws. As this slime is swarming with microscopical animals, their food must contain considerable animal matter as well, and if water plants are not obtainable tadpoles may be fed on bits of bread, with now and then a piece of raw meat to suck at. All pieces of bread or meat should be carefully removed, however, before they become sour.—Springfield Republican.

New Game in America.

THE muskox of Greenland and the northeastern portion of this continent known as Ellesmere Land and Grinnell Land has been discovered to be a different animal from the muskox of the Barren Grounds, which is the form with which we are most familiar, if the average man can be said to be familiar with any form of muskox. In a recent publication of the American Museum of Natural History, Dr. J. A. Allen, curator of birds and mammals of that institution, describes at considerable length the differences between the Barren Grounds muskox and this new form, which he calls Peary's muskox, after the well-known explorer. It was this form which Peary found in northern Greenland, and which, many years ago, formed a portion of the food of the unfortunate Greely expedition.

From the far Southwest, in the Province of Chihuahua, Mexico, Dr. C. Hart Merriam, Chief of the Biological Survey, Washington, describes a new mountain sheep, or big-horn, under the name *Ovis mexicanus*. The species is based on specimens obtained by Mr. E. W. Nelson in the barren desert region about Lake Santa Maria. It is closely related to the Northern mountain sheep, but is somewhat paler, has the hoofs and molar teeth larger than in that species, while the ears are very large.

Dr. Merriam finds also that the mountain sheep of the bad land and prairie country east of the Rocky Mountains differs subspecifically from the type which came from the Rocky Mountains and Alberta. The chief differences are the great size of the molar teeth and the massiveness and depth of the lower jaw. The new form is called *Ovis canadensis auduboni*.

From the same region in Mexico which furnished the new mountain sheep, Mr. Nelson brought eleven pronghorned antelopes, differing from the antelope of the North, and called by Dr. Merriam *Antilocapra americana mexicana*. This form is characterized by paler color and some slight differences in the head markings.

A Lost Type.

Oh, for a glimpse of a natural boy—
A boy with freckled face,
With forehead white 'neath tangled hair
And limbs devoid of grace;

Whose feet toe in, while his elbows flare;
Whose knees are patched all ways;
Who turns as red as a lobster when
You give him a word of praise.

A boy who's born with an appetite;
Who seeks the pantry shelf
To eat his "piece" with resounding smack—
Who isn't gone on himself;

A "Robinson Crusoe" reading boy,
Whose pockets bulge with trash;
Who knows the use of rod and gun,
And where the brook trout splash.

It's true he'll sit in the easiest chair,
With his hat on his tousled head;
That his hands and feet are everywhere,
For youth must have room to spread.

But he doesn't dub his father "old man,"
Nor deny his mother's call,
Nor ridicule what his elders say,
Or think that he knows it all.

A rough and wholesome natural boy
Of a good old-fashioned clay;
God bless him, if he's still on earth,
For he'll make a man some day.

—Detroit Free Press.

[Why did the man who wrote that entitle it "A Lost Type"? The type is not lost. That boy is still on earth.]

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

Reminiscences and Things.

I HAVE an uncle who very much resembles the characteristic portrait of Uncle Sam. As a pioneer of eastern Indiana he was one of the hunters and was a fine shot and knew the habits of game. He had a brother-in-law of Pennsylvania descent, who likewise had ways of his own, as most men have; but the twain were companionable, and very successful, considering their facilities. They usually hunted together, the Pennsylvanian, whose name was Shaneyfelt, astride an old mare, and Cunningham, the taller of the two, afoot. Their larger and most destructive rifle was a walnut-stocked flintlock, running some twenty balls to the pound. This the man on horseback carried, leaving a lighter gun for the one on foot. Deer were plentiful. However, the custom of following the trail often led the hunters some miles from home. When deer were sighted the old flintlock was brought into action, and a click-fiz-z-z-z-bang! was followed by a commotion among the deer that usually were found in herds. One day while crossing a small prairie in the southern part of Adams county they saw two deer—a doe and a buck. The doe was standing broadside, while the buck was looking at the hunters over the doe's back. Shaneyfelt, who was on horseback and carrying the old flintlock, said, "Here, Bill, take my gun—she shoots furder as yours—and draw on the buck's head; if she don't carry up you'll hit the doe." Bill took the big bore and aiming at the buck's forehead pulled the trigger. Shaneyfelt sat on the old mare with his eyes riveted on the spot he had advised his companion to aim at. The old gun clicked, then fizzed, then roared, and the buck dropped in his tracks. The strain was too great for the Dutchman. As he saw the ball hit the mark he dug his heels into the old mare's sides, starting her at a gallop across the prairie and yelling at every breath, "She's down, Bill! She's down, Bill!" About half-way across the prairie the old mare stumbled and Shaneyfelt went rolling over her head on the ground. Quickly regaining his feet and paying no attention to the mishap, he went on as fast as his legs would carry him, shouting, "She's down, Bill! She's down, Bill!"

While camped at Witbeck, in the upper peninsula of Michigan in '92, I took a walk one Sabbath to the Michigamme River in company with Messrs. Bishop and Proper. After loitering a couple of hours among the rocks that line the stream, we started campward through the forest. We climbed a hill and were in the midst of a thick growth of sugar, the boys something like fifty yards to my right, when a large buck got up directly in front of me and ran by the boys. He had been lying there, probably watching my approach, and concluded that if he remained I would run over him, for he was just eight steps from me when he flushed. Of course he saw that I did not have a gun.

In the year '78 my father and I were footing it to the home of a friend at the southwest edge of the Cranberry Prairie, in Mercer county, Ohio. When within a couple of miles of our destination we saw where two deer had crossed the road going north. As we wished to go north of east, we followed their trail in that direction. I don't know how far we had gone, but it was woods everywhere—fine open woods, and some of the largest trees that grew in the middle West. "Look out, now! They have separated here and have lain down not far away," said father. There was a fallen elm about 200 yards away, and I think yet it was the pioneer of all the elms. It was east of us, and had fallen to the south. It lay about two feet off the ground, and when one of those deer sprang up between us and the log and taking a few preparatory bounds cleared the log like a bird, I stood in open-mouthed amazement. That was the first deer I had seen, and hoping for another glimpse I ran to the fallen tree, and stepping on a limb near the lower part of the trunk tried to see over, but my head did not come to a level with the top of the log, though I was a man in stature.

The next day while passing betweeen the reed-covered prairie and willow and prickly ash thickets, a terrible commotion among the snow-covered willows brought me to a sudden halt. I saw the bushes swaying for a few seconds, then the diminishing sounds of a fleeing animal told me that I was neither in danger nor likely to see any game to shoot.

Curiosity prompted me to investigate, and I found the fresh beds of a large buck under a thick growth of willows that had been bent over by an accumulation of snow until their tops almost touched the ground. The buck frightened at my approach had made tracks, and when I parted the torn and shredded willows and stepped the distance, I found he had cleared 21 feet the first jump. A railroad passes by where our host's house stood. A fine gravelled road crosses the outlet to the prairie. The prairie is a cornfield.

Six of us were camped by the side of a mud road in the southeast part of Paulding county, Ohio. We had a mule team and wagon, but no tent. We made a bark shelter by a large log with a log fire a few feet away. One morning I seated myself on the root of a large upturned tree near a ditch in the woods, where deer had a crossing. I had a muzzleloading rifle, and up to that day had had no opportunity to try it. I sat at my lookout from about 8 until 10 A. M., at which time I concluded to give it up. I walked to the crossing to see if any deer had used it in the night, then went on up the ditch some fifty yards and returned as I heard a shot at camp. I started to go back, when a dark object seemed to glide through the brush and stop behind a large tree. It seemed to me like a half-hour that I stood there with gun in left hand, my right grasping the grip, thumb on cock and finger on trigger, then a deer's nose was pushed past the tree and a deer's eye took in the situation.

Slowly I began to raise the gun, and had the breech nearly to my shoulder when one leap of the deer cleared the ditch and a second bound hid it from view behind the root on which I had spent the morning.

While twisting and winding between cedar and tamarack swamps last fall within a couple of miles of Witbeck Station, Mich., I heard a faint sound of man and saw. It was swamp and hill and hill and swamp, some of the swamp open and covered with a coarse grass, but mostly with dense cedar or tamarack. Finally I struck a wagon road that for crookedness would hold its own with any politician of the age. When I struck the chopped-out road I was west of the man and saw. After tramping awhile I was north of them, and presently I found myself east of them, so fearing that I had started toward the wrong end of the road, I left it and went up hill to a small chopping that shortly came to view. Here I found an old man, grizzled and feeble, trying to cut and split cordwood. Neither his strength nor his tools were able to accomplish much. He worked mostly while on his knees or on one knee, and seemed to be so stiff and sore as to be able to move only by a great physical effort. I trid to engage him in conversation, but he could not converse in English, so after satisfying myself that the old man was being offered as a sacrifice, without concluding a theory as to its being voluntary or not, I walked out into the clearing, which at best did not exceed one and a half acres. Before I crossed it I discovered that the ground was literally cut up with deer tracks. Then I stopped and looked back at the old man down on his knees sawing a black birch limb, and then my mind went 500 miles south and dwelt on books, notes, walls and things, where deer come not to cut up the earth, and I wondered if he knew. Yes, I wondered if the old man knew what a city man bred from a race of hunters found to enjoy in the woods.

What he would give to be allowed to remain in the woods an indefinite period!

To ignore business and wander about, figuring out the weight of the deer that made this track or that, noting the great Northern woodpecker as it drummed the stubs in search of worms or in answer to its mate, watching the saucy little squirrel make an evening meal from the kernels of a pine cone, or a partridge picking buds from the topmost branches of a hard maple. To-day the little clearing stands out in relief. I see the deer tracks, I hear the trickling and bubbling of the water among the cedar roots. The walk to camp is realistic. The greeting of comrades genuine.

It is not a dream—it's memory.

G. W. CUNNINGHAM.

After the Woodchuck.

THE hunting of the woodchuck furnishes the inveterate powder-burner with sport outside of game seasons, and so enables him to go shooting well nigh the year round. By the time the law ends his shotgun practice on duck and snipe in the spring, if he has been so unwise as to persecute them at that season, the woodchuck is abroad, foraging in the new grass of meadow and pasture and presenting a tempting target for the sportsman's rifle. The judicious shooter, however, looking to the chances of future sport, will no more kill the quadruped in the spring than the bird. He needs in his business the crop of young and reckless chucks now being produced. They will help out his scores later in the season, when the wary old ones hunt their holes at sight of the prowling marksman. Furthermore, a proper humanity will restrain him from killing the mother of the family while the chucklets are still too young to live on grass, as they are until pretty well through the spring. I have found them in the middle of May none too well able to dispense with their original nourishment. Unfortunately, about this date grass and weeds get so high as to hide the animals more or less and materially interfere with the shooting, and the best of it comes after haying.

So woodchuck hunting is essentially a summer sport, for the lazy creature, having got fat on the meadow's second growth, generally takes to his nest by the time the fall game shooting has fairly begun, thereby losing one or two of the months when, if he only knew it, it is best worth while to be above ground. Hunting gains as well as loses some charms by being done in the summer. The air, if not exhilarating, is balmy. The woodchuck hunter misses the stimulating hint of frost that goes with an autumn morning or evening, but he escapes the bleakness of the duck hunter's favorite days, and travels over grass rather than snow. He sees nature at her loveliest. No one knows better than he how the glory of the summer broods over our Northern hills, even before the calendar calls for it. He follows the cow paths to the springs and rests with the cattle in the shade of green trees. He walks among the daisies and sneaks through the rank corn to some advantageous firing point. He sniffs the new-mown hay and marks the billows that travel with the breeze across the oats. The crow and the meadowlark know him. The marsh hawk is out hunting with him, and the jolly jingle of the bobolink is in his ears. If he lifts his gaze from the little sand heap which he is momentarily expecting to see crowned with a woodchuck's head, he may watch the cottony clouds drifting across a blue sky and trailing their refreshing shadows over some near-by wheat fields or perhaps some great upland far away. It is not all of hunting woodchucks to hunt.

Yet there is good hunting needed if one is to score high on old chucks that have been hunted before, and this gives zest to the sport and makes it worthy of pursuit. One must often do some very respectable stalking to get a fair shot at a gray clover-fed veteran that knows what it means when the rifle snaps out yonder and the gravel jumps close beside him. Nor will it do to be shaky or careless in the shooting. The top of a woodchuck's head is a small mark, and to hit it at a fair distance is a trick worthy of the marksman's steel.

While the woodchuck is often stupid or foolhardy, he is sometimes wild as a hawk, and chases himself to his hole when his enemy is yet a long way off. His most fatal weakness is to underestimate the speed of bullets and to fancy he can get from the mouth to the bottom of his burrow any moment he pleases, and that he is therefore safe in looking out from his sand heap or "peek hole," no matter what he sees. Curiosity brings many a chuck to grief by luring him to his sally-port when he ought to have stayed down in his bomb-proof. Generally old woodchucks in a hunted region are pretty well able to take care of themselves. In my neighborhood some of

them live in the embankment under a railroad track, and they show their discrimination between a real though innocent looking danger and a harmless though threatening disturbance, by skipping, when the hunter appears, into their burrows, where every passing train must make a tremendous roar and jar.

Other things being equal, the ablest walker will get the most woodchucks. Yet this is a kind of hunting which a man can continue when too old or otherwise infirm for long tramps. In favorable grounds he may seat himself in a shady spot commanding a number of burrows, and the occasional appearance of a woodchuck, or even the chance of it, will sustain his interest for hours. Or he may drive slowly along the country roads, looking out for the crawling speck in the hillside pasture or the little brown pillar that suddenly rears itself amid the meadow grass. When this is spied there come the stalk, the shot and the return to the carriage, elate or disgusted, as the case may be. Hunters of this game have the same propensity as fishermen to forget the number of their victims, and it has been found necessary to lay down the rule that, in determining the results of a hunt, it is the tail, not the tale, that counts.

The woodchuck hunter from town has the satisfaction of being welcome on the farms where he operates, so long as he respects the crops and fences and minds where his bullets are going. The farmer does not care to preserve his woodchucks unless for his own hunting, and he is not usually a hunter. He begrudges the garden "sass" which the sassy chuck sometimes appropriates. He has better uses for grass than to pave woodchucks' runways with it or line their insides. He does not like to have four or five bushels of gravel thrown up here and there in a smooth meadow, necessitating a "balk" in mowing, or to have a horse step into a woodchuck hole, with the chance of a broken leg. So he speaks the gentlemanly hunter fairly, and merely asks him if the minister is coming. The hunter feels, or should feel, himself the more justified in killing woodchucks on account of their being troublesome vermin.

It is hardly necessary to say that they should be hunted only with the rifle. If they can be brought within range of a shotgun, the hitting with such a weapon is too easy for a man's sport, while the killing is too uncertain for the humane sportsman to attempt it. Much of the time the animal is only wounded, and often it can hardly be reached at all with the scatter gun when within fair rifle range. Shooting woodchucks with shot is the next thing to pinching their legs all night in a steel trap and pounding their heads with a club in the morning. They can be killed with any rifle, but the .22-caliber bullet has not the size to make sure work unless placed just right, which cannot be done infallibly. The .25 is usually quick death to them, but the larger calibers are still more certain, especially at the longer ranges. Many sportsmen find that their rifles throw round bullets, patched with linen or muslin, with great accuracy at woodchuck distances, and this style of loading avoids the bother of lubricating. The round bullet of .30 or larger is very killing as well as accurate within its range, and is all the better for use in settled places for having a comparatively light weight and short flight.

Almost any one who has lived or hunted on an Eastern farm can write, or at least tell, reminiscences under some such head as "Woodchucks I Have Met." There was the one that I saw feeding in clover several inches high and undertook to approach as nearly as possible in plain sight. While down on all fours, he could not see about him, and in those moments I walked straight toward him. When he had snipped off a mouthful of clover he would stand on his hind feet while chewing it, staring at me where I stood motionless, having stopped the instant he rose. This maneuver was repeated until, when he at last bolted for his hole, it was but fourteen steps to where he had stood. He showed no alarm at the mere sight of me, enlarged as I must have seemed after each advance. Perhaps he finally scented me. Some hunters think woodchucks have this power, and it certainly is likely enough. That would account for the failure of my first demonstrations against them. Near my home, when I was a boy, there were in a pasture some huge stone heaps, under which woodchucks lived. Seeing one now and then at some distance from his castle, I fancied I could steal quietly up at such a time on the opposite side of the stone pile and rush around quickly enough to cut him off from his burrow. But, no matter how slyly I approached, or how smartly I charged at last, when I got to where the woodchuck was, he never was there. If he did not see or hear me he may have scented me. I have carefully gone with the wind to the top of a knoll and found one missing, which was feeding but a moment before on the other side. Most wild animals are protected by their scenting power, and it would be only natural that woodchucks should have this gift. So far as I know, however, little or no attention is paid to it in hunting them.

The first of these animals that I killed were trapped, after the barbarous manner of boys. One of them was entirely black, and I afterward saw a black one with a brown face. The combination hoodooed me so that I missed him beautifully at close range. White ones are more rare, but two or three have been killed in my neighborhood. I remember well the first chuck I went for with my rifle on the home farm. He was dozing on a big stump fifty or sixty yards out in a meadow. The first shot did not even wake him up. At the next he went sailing off the stump, and I had no doubt of finding him dead where he landed. To my surprise, he was nowhere to be seen; but in due time the horse rake gathered in a dried-up woodchuck skin and skeleton just about there, and I credited myself with a hit. In the same meadow there lived one which I missed so many times in my early days of marksmanship that we called him the Invulnerable. In an evil day I bowled him over, at the eleventh shot, and had to look elsewhere for practice. In that field there was a smooth-topped stump that bore a V-shaped mark made by two bullets fired from different directions at a woodchuck that used to pose there. Close by was one of those stump fences which may still be seen in regions that have been timbered with pine. The stumps of these trees are so fortified against decay by their filling of turpentine that they outlast the farmers who dig them up. A row of them, somewhat trimmed and stood on edge, makes a formidable fence. It takes room, however, and harbors briers, weeds and vermin. It makes a veritable citadel for hunted woodchucks. Peering out among roots and briers they can see without being seen, and they find cover at any point of such a fence when scared out of the neighboring grass ground. I plotted in vain against the woodchucks that stuck to the stump fence. The present owner has burnt it up, reclaimed the ground from the brambles, and left the woodchucks to such shelter as they can find. Thus does life become a harder and harder grind for the more "feeble folk" that inhabit this world.

It was years after I began observing woodchucks that I first heard one use its voice, if it may be so called. At the edge of a bit of woods a shrill staccato whistle challenged me. It is a queer sound to come from a quadruped, but from descriptions I suspected what it was, and looked about upon the ground for the whistler. Under the edge of a big log sat an old and a young woodchuck, at the mouth of their burrow. The whistle seemed intended for the young one's benefit, as at each repetition it dodged down into the hole, only to reappear immediately and get another warning. It was a pretty glimpse of wild life, and I should not have felt like shooting if my rifle had been in hand.

In shooting at woodchucks the misses are disgusting at the time, but rather amusing to think of afterward. I remember crawling scientifically to the top of a knoll with one of my few remaining cartridges devoted to the certain death of a chuck known to be out on the other side. With a good elbow rest, that should have insured a perfect shot, I missed the intended victim, and was so rattled that with the other cartridges I could not so much as drive him into his burrow. He seemed to know my ammunition was gone, and took a very deliberate header only when I had walked up close to him. This recalls another time when the elbow rest failed me. Climbing part way up a railroad embankment, I saw a woodchuck in the field beyond. Not hoping to shoot well off-hand hanging on my my toenails, I planted my elbows in the ballast at the end of the ties and aimed just over the further rail. In the moment of pulling trigger one elbow settled a bit in its soft resting place, the barrel sagged a trifle, the bullet spread itself on the rail a few inches from the muzzle and the iron-clad woodchuck hunted his hole. With some such experiences, and having scratched my rifle barrel by resting it across a perfectly smooth-looking boulder, I concluded one season to shoot strictly off-hand, no matter what happened. This is a good rule if one wants to improve his marksmanship; but it takes considerable virtue to live up to it, and the entertainers of the traditional minister might remain "out of meat" if it depended on accurate shooting in this style. My resolution was sorely tried by a rapid series of five or six shots at a rather distant woodchuck, which only produced some frolicsome capers like those of a tenderfoot with a hilarious cowboy shooting at his toes.

But along with such reminiscences of failure the hunter of the meadows and pastures can usually recall shots to be proud of, to which the luckless animal could only respond with that languid motion of the tail with which a woodchuck waves a farewell to life. When the sportsman intends taking to the woods for a deer hunt, he will hardly find better practice in tramping, stalking or shooting than is afforded by woodchuck hunting, and the rifleman who cannot get beyond the farms has in this sport the best available substitute for an expedition after big game.

Bristol Hill.

CHICAGO AND THE WEST.

Western Snipe.

Chicago, Ill., April 13.—Six days ago, or on April 7, the first jacksnipe of the season were killed. Dr. C. W. Carson, of this city, got four birds, but they were extremely thin and very wild. There has been no word received from the better shooting grounds below here to the effect that any considerable amount of birds has appeared, but there is little doubt that during the coming week we shall hear of them in good numbers, for spring seems at last to have come to this region, and the appearance of the green grass and the breaking of the buds on the trees gives proof that winter is at last leaving us. The jacksnipe come in here just about the time the grass begins to spring up and show green across the marshes and meadows.

The name of Indiana causes every shooter in this vicinity this spring to thrill as with threat of sudden death. While the restrictions of the new Indiana law seem not to apply to jacksnipe as to ducks, there are very few who are including Indiana in their snipe shooting for the coming week, and nearly everybody is looking out for Illinois snipe shooting ground. Of the latter there seems to be a fair supply this spring, for the high water has left a good deal of wet ground all to the west and southwest of this city, which is just now drying out sufficiently to make good feeding grounds for the birds. I heard of some gentlemen who went in near Mineral, Ill., last spring and had very good luck with the jacksnipe. There is quite a bit of marsh of the spring bog sort on the high prairies back of that point, and some very good bags were made there last year. This would seem a good place to keep in mind for this spring.

Italian Joe says that he can put somebody on to some good jacksnipe shooting, and as he rarely hunts very far away from Summit, it is reasonable to suppose that his grounds are not very far from that point. In this time of very high water the big marshes are very apt to remain sour for some time, and I should rather suggest that one try the smaller sloughs and dryer uplands back in the hills away from the big marshes. This at least for the earlier part of the snipe shooting.

Italian Joe will hardly be able to do much at his favorite sport of plover shooting before the close of the season. He says that he has not heard of any birds yet, but they may come up with a rush if we get settled warm weather. It is all a guess at this writing.

Indiana Fish Law.

The Indiana fish law, whether through intent or through lack of wisdom, remains about as lax as the game law is strict. It is legal to go fishing in the lakes of Indiana as early as April 1, and a good many Chicago anglers are taking advantage of this fact this week. Mr. W. H. English leaves to-day for a trial trip to Cedar Lake, Ind., and he will be followed a week from to-day by several members of the Chicago Fly-Casting Club, who are in the habit of opening the season on that water, the earliest bass water situated anywhere near Chicago.

The Indiana fish law limits the daily catch of bass to twenty for each rod, or thirty-two to one boat, if there be two rods in the boat. This provision does not cut much figure one way or the other, as it is rarely that one crowds that limit very close nowadays.

I am afraid that Roll Organ and I may not be able to go bow and arrow shooting for carp this spring as we had intended. The new Indiana fish law says that one may not shoot at any sort of fish. It also forbids spearing, and I suppose that between the clauses forbidding spearing and shooting the bow and arrow would be included. It looks like a poor man has no chance in these times out here.

Wisconsin Law.

Our trout law begins April 15 in Wisconsin. The same provision which prohibits taking out of the State more than 20 pounds of game fish obtains under the new Wisconsin law. Wisconsin also retains her law prohibiting spring shooting of ducks, though goose shooting is still allowed in the spring. The deer season in Wisconsin will be Nov. 10 to Nov. 30, and each deer must be tagged as soon as shot. The daily bag on ducks is set at fifty, and only twenty-five partridges may be killed in a single day by any one man. The closed season on quail will be made to end at 1903, and not set for five years, as was originally embodied in the measure. I ought to say that these facts are a little in advance of the actual records of the Wisconsin Legislature, but they are taken from the bill which was reported for passage this week and which is considered sure to pass and to be signed by the Governor. In these days of rapidly shifting game laws, the only safe thing to do is to buy a copy of the *Woodcraft Magazine and Game Laws in Brief*.

In Minnesota.

The friends of the Minnesota National Park have scored what seems to be at least a good move in the passage by both houses of the Legislature of Minnesota of a legislative memorial to Congress asking that all the lands in the several Indian reservations of Minnesota which are unfit for agriculture be set apart for park, sanitarium and forest reservation purposes. The success of this memorial is due largely to the able efforts of Mrs. W. E. Bramhall, of the State Federation of Women's Clubs. Originally there was considerable opposition in the Minnesota Legislature to the idea of a national park, hence the passage of the memorial, as above indicated, would indicate a certain change of sentiment. The measure is made conditional on the favorable result of the investigation which has been ordered by Congress, and it will perhaps hasten or make surer the appointment by Congress of the proper commission. It was always the idea of all the earnest friends of the Minnesota park that if an unbiased committee from Congress could be gotten up into that country and could see the actual conditions which obtained, there would be little doubt of speedy action on the lines desired. At least it was decided that, if such a commission did not agree with the original proposition for the park, nothing more would ever be said of it. There was never any desire to dictate to Congress or urge any selfish claims, but only to have Congress learn the actual and unbiased facts.

Sand Hill Cranes on the Calumet.

Among the lucky bags made by Chicago shooters this spring may be classified that of Mr. R. C. Head, who at the Calumet Heights Club two weeks ago succeeded in killing an entire flock of three sand hill cranes which came in over his blind while he was out duck shooting. Mr. Head had drawn what is known as the Second Bend blind, the one behind the big black stump. He was sitting behind the stump when he heard a hoarse croaking sound and looking up saw the cranes coming to him. They passed his blind at long range, and he succeeded in breaking the wing of the leader. The other birds were confused, and as Mr. Head did his best to imitate their calls, one came close to him and he dropped it at 20 yards from the blind. The third bird seemed still more confused, and circled over the timber, coming to Mr. Head as he resumed his calling. He dropped this one on the hard ground back of the blind. The three birds when taken to the club house and stretched out on the piazza, end to end, measured a little over 16 feet. Another shooter at the same club was lucky enough to kill two Canada geese on one day, and several other decent bags of ducks have been made.

This spring has shown an unusual abundance of deep-water ducks in Lake Michigan, and the fly up from the big lake to the marshes southwest of Calumet Heights has been sometimes a very heavy one. On one evening the flight of birds coming in to Lake Michigan was almost continuous past a given point near the club house for an hour and a half. Every one is commenting on the unusual number of ducks which have come to this vicinity this spring.

Lake Michigan is not so slow as a sporting resort in itself these days, and there has been quite a lot of shooting done off the piers. A gentleman living in Evanston says that this week he saw a splendid flight of ducks off the Dempster street pier, and he believed that a bunch of decoys at that point would have been good for a hundred birds to the gun in a few hours. There was a tremendous body of birds, mostly bluebills, in the lake not very far off shore. The same is true all along the city front. Off Sixty-fourth street water works there has been pretty good shooting at different times this week, and as far south as Chicago. The numbers of ducks have been enough to attract the serious attention of all shooters.

Fox Lake Ducks.

A stiff flight of bluebills and redheads still continues at Fox Lake, but the birds are highly educated now and decline to work satisfactorily. In two more days the season will end for the spring shooting. It has been altogether the most remarkable spring for wildfowl seen here for the last ten or fifteen years. There have been thousands of ducks killed over the shooting grounds of Illinois and Indiana, just how many thousands no one

will ever know. The best of the big ducks in Chicago markets have brought at times not over $2.75 per dozen.

The Return of the Birds.

Master Clarke Washburne, a young sportsman of the mature age of twelve years, is good enough to send to FOREST AND STREAM his observations on the song birds and game birds of this locality. Master Washburne is growing up in the right way as a sportsman, and in the company of his father, Mr. Hempstead Washburne, has already attained considerable proficiency with the rod and gun.

The birds are returning from their long winter migration. Many varieties can be found any morning in the parks in this city, while in the country they are everywhere. I am glad to see that others have noticed the increase of the bluebirds this spring. I have seen several large flocks this spring, whereas in past years I saw only a few single ones. I have seen the following birds so far this spring: Bluebird, song sparraw, junco, fox sparrow, meadow lark, Bonaparte's gull, ringbill gull, crow, phœbe, robin, blackbird, bluejay, pintail duck, mallard, blue and green wing teal, chickadee, redwinged blackbird, white-bellied nuthatch, blackheads, bluebills and canvasbacks. That is about the order in which I saw them. I do not doubt that many other people have seen more birds than I have, as I have only been out looking for birds a few times so far.

The great flight of mallards, pintails and other early ducks is almost over, as they will soon be moving north in the warm weather. Soon we will have the blackheads, bluebills, canvasbacks, etc., here and I expect to go and meet them at the Swan Lake Shooting Club next week. I will attempt to give you a description of the shoot as soon as I get back from it.

I look forward to good times with rod and reel next summer and I hope that each and every reader of FOREST AND STREAM shall have a pleasant summer.

An Alarm for Safety.

The paradox of an alarming device for increasing the safety of the sportsman is sprung by Mr. W. T. Baggett, of San Francisco, who has devised an electric battery to be located in the stock of the rifle, which continually advises the hunter of the fact that his gun is cocked. This is accomplished, according to reports, by means of a small dry battery and buzzer located in the stock of the gun. Directly underneath the hammer on top of the grip a spring-controlled push-button is placed, the motion of the hammer when being cocked pressing the button downward until the electric circuit is closed, which starts the buzzer in the end of the stock. This little device keeps up a continual clicking, which may be felt rather than heard, if desired, the vibrations being plainly noticeable to any one carrying the gun. When it is desired to stop the vibrations, as when the gun is in action, the thumb of the shooter is pressed against a second spring button, which acts as an interrupter and breaks the current.

Learning the Diamond Hitch.

It will pain a great many friends of Capt. R. E. Bobo, of Bobo, Miss., to hear that the operation performed on his eye last fall proved unsuccessful so far as the future use of his eye was concerned. With a brave man's decision, Bobo determined that, rather than have an inefficient eye, more or less motionless in the socket and a source of considerable annoyance, he would have the entire eye taken out. Last week he came to Chicago and had this heroic operation performed, and at this time he is lying in a hospital, declaring that he is better in his mind again, can see much better out of his good eye, and that all he needs is a little exercise! The doctors say that Bobo is a wonderful man physically, and confidently express the belief that his head could be cut off and that it would grow out again in the course of a couple of weeks. It is pretty sad for the old bear hunter to lose his shooting eye, and it is sad for his friends to know of this fact, but it is a matter of very great congratulation that he is recovering so nicely from so serious a trial.

Pending his ultimate release from the hospital Bobo sits up and tells bear stories to his friends. Billy Hofer, who is still in town, has spent some time with him during the past week, and the two have been together studying the intriciacies of the "diamond hitch," which Billy has been endeavoring to explain to the bear hunter. Bobo declares now that he can throw the "diamond hitch" as well as anybody, and says that, when he goes home, he is going to get a pack saddle or so, and after this will hunt bears the same way they do in the Rock Mountains.

"I can put a little tent and a couple of weeks' grub on the back of a mule," said he, "and take one or two men and just go flying anwhere we want to, and we don't need bother about where we are going to stop. If we run out of corn or grub, I can send a man and a mule back with the pack saddle. I am just going to kill all the bears there are left in Mississippi this spring, and this is how I am going to do it."

I don't think there is much doubt that Bobo will wreak a horrible revenge on the bear family when he gets turned loose again in good shape.

Whether to Hunt or to Fish.

I presume every outdoor man has had occasion to answer more than once the question "Would you rather go hunting or go fishing?" and I presume he has often a difficulty in his own mind in regard to answering. This is how Mr. George K. Andrews, of St. Louis, figures it out:

"You are right about us spending our time after we are rich at fishing, instead of hunting. It is so much easier—so much more a philosopher's resource. Here I am just in from the duck club, I got up at 1:30 this A. M. rode 5 miles to take the train, slept 70 miles, and then staggered out with a lot of heavy ducks to another suburban train. Last night, up the "wet" prairie my pusher and I started to the club house, landing against a heavy swell and a head wind, he poling and I paddling and the water splashing in on us. It was a constant struggle for over an hour. The two hen tame decoys when we released them flew up into the boat, while the three mallard drakes swam alsongside, but the wind soon put them far astern, and the hens called lustily all the way down to guide them. Once one of the mallards flew into the boat and rested a few moments

"Then, too, when I go home after awhile I must pack ducks around to the neighbors. Hereafter I fish—unless the fever seizes me again—just once.

"I was wading in a water covered bottom where mallards were dropping in, and a fox squirrel came down her tree to drink at the unusual water lapping at the trunk. I barked at her, and she ran up the tree and sized me up, and presently began to bark back at me. I told her in bark talk what a fool she was to get water bound down there in the bottom, and oh but she swore at me. She told me I wasn't respectable; and she came down on the lowest limb, no thicker than your finger, and shook her tail over her head and used language I'm ashamed to repeat. And then another one, on a tree nearer to me than she was, came down and joined in. This one threatened to "jump" me. One was about fifteen feet from me and the other about six. Finally I abandoned squirrel talk and said in my own tongue, "You both know perfectly well you have a nest full of children up there, so what's the use of denying it?" Scampered.

E. HOUGH

HARTFORD BUILDING, Chicago, Ill.

Brant at Monomoy.

BOSTON, April 13.—There are reports of an abundance of brant at Monomoy. A gentleman came up from Chatham Wednesday and volunteers the information that the "bay is full of brant." He says that a couple of gunners, belonging to one of the Monomoy Brant Club shooting parties, came over to Chatham early in the week with over thirty brant. They reported that their party had over 100 brant in camp and ready to bring home. This naturally set the members of the "boys' party" that started for that shooting ground yesterday "wild with enthusiasm." They are to remain till the 20th. There are also great reports of duck shooting at several points along the coast, and those who indulge in spring shooting are reaping a harvest. A gunner came up Tuesday from Chatham, or thereabouts, with a big string of black ducks, which he probably landed in Faneuil Hall Market, since he was headed that way. He says that the continued dull weather and deep fogs have made the ducks and brant pause in their northward flight. The local gunners seem to be getting a good many, as mentioned in reports from several locations along the Cape. I learn from dealers that the markets here have received over a hundred Canada geese within a few days. They sell hard. The marketmen say that they are "good for nothing," being poor and thin. From 50 to 75 cents a pair is all they have brought. Even the marketmen say that it is a pity to shoot them in the spring. Massachusetts game laws do not protect geese at all, and brant are reckoned as geese. But ducks of all kinds are protected from April 15 to Sept. 1.

SPECIAL.

Spring Shooting.

Editor Forest and Stream:

I saw an article in my last FOREST AND STREAM (April 13) which rather surprised me. It said, "This winter a law has been passed stopping the sale of ducks; that would be all right if all the markets in all the States were closed. Now we raise and feed the young ones for some one else to kill and sell." This was signed by C. W. V., but I think the writer made a mistake when he said "for others to kill and sell." For this reason, as soon as the ducks learn that they are not going to be banged at and shot, and that they can come to a place and stay there in peace (ducks soon learn), they are going to come to that place, and, of course, when the law permits there will be good shooting in that place, so the good work will benefit the ones who protect the birds in spring and hurt those who do not follow a good example. Ducks are not going to stay in a place where they are shot to death every spring, week after week, providing they can find a place where they will not be harmed. So C. W. V. will benefit and have good sport, while others who have no law will lose. I think in course of time spring duck shooting will have to stop, because if the law does not stop it it will stop itself—there will be no more ducks.

C. K. W. BYRNE.

Ducks Breeding in Michigan.

HARTFORD, Mich., April 9.—*Editor Forest and Stream:* We are having very cold weather for this time of the year; but the robins and bluebirds came back from the sunny South, and we have not had as many bluebirds for twenty years as we have this spring, and they are a most welcome visitor.

As to ducks breeding here in Michigan, twenty years ago every cove or bayou on the river had its flock of young wood ducks or mallards or teal; every fall our stubble fields were visited every evening in September by hundreds of ducks. But with spring shooting we hardly ever see any ducks till the fall flight brings them down from the North. I was in hopes our Legislature would pass a gun license bill, and that would stop the irrepressible boy who bangs away at every bird he sees and does not know a duck from a mud hen. Every duck killed in March or April means ten or twelve less in September.

SULLIVAN COOK

An Adirondack Deer Snarer Convicted.

CANTON, N. Y., April 11.—*Editor Forest and Stream:* A lumber jobber named Bonno was convicted here yesterday of snaring deer and fined $100 and costs. The offense was committed in December, in the township of Clare, some fifteen miles from here, I believe. At the first trial the jury disagreed.

The April Woodcraft.

THE April number of the *Game Laws in Brief and Woodcraft Magazine* has been delayed by the great mass of tardy legislation in numerous States.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

ANGLING NOTES.

Suggestion for Fly-Books.

THIS is the season when anglers get out their fly-books, even though they live in the land of frost and snow and the time for rising trout is yet some distance off, while the fishing season, as provided by law, is close at hand. It may not be a general custom to get the fly-books out before the snelled hooks are examined or provided, but it was called to my attention one night late when I was going to bed very tired and very sleepy by noticing my tackle trunk in which I kept rods and things. This trunk, by the way, is upholstered and has a spring top to disguise it as a small couch, but as my eyes fell upon it I opened it and then forgot to go to bed, for in one of the top trays was a fly-book brought to me by a dear friend from London, and as I turned over its leaves sleep fled from my eyelids. When first it came to me I intended to write a note about it, or rather a feature of it, but it was not in the fishing season, and it passed from my mind until I was seated on the spring top of the box, held up by the fly-book on my way to bed.

Salmon anglers in speaking of killing salmon are prone to give the number of the hook of the fly on which some particular fish was killed, and this is because salmon anglers are given to knowing the size of their flies as they use them. Trout fishermen do this to a more limited extent because there are more trout than salmon fishermen, and as a rule it is not a matter of pride with them to know just the size of the fly they use, and often they cannot tell the size if asked the question, for they are not familiar enough with the sizes to carry them in their memory, and they have no other means of telling if the package in which the flies were received from the maker or dealer happen to be lost. My particular fly-book solved this difficulty. It is a book from Farlaws, and a parchment leaf is put in to protect the flies in the first leaf of pockets from injury by the pigskin cover. On this protecting leaf is stamped two rows of hooks with their numbers. There is a row of sneck bend hooks and a row of old Limerick or O'Shaughnessy hooks of sizes most affected by English fly-fishers. If the angler is in doubt as to the size of the fly he is about to mount on his cast and desires to know it, he has but to put the fly on the stamped row and find its counterpart in size and the number brushes away the doubt from his mind. This, of course, can be done just as well after the trout is killed and it is necessary to know whether the 2-pounder was killed on a No. 8 or No. 12 hook, for in telling the story to round it out the number of the hook must be given to the elect. Then, in addition, if one makes to order a particular size by number, the comparison is resorted to.

If this idea is to be carried out to its nicest point, I would advise American makers of fly-books to use two series of numbers, the old style and the new, or the Redditch or Pennell styles of numbering. Ever since Cholmondeley Pennell revolutionized the numbering of hooks there has been some confusion in ordering flies by number, as an old style No. 12 is a new style No. 3, and an old No. 1 is a new No. 14. They do not come together at any point, the nearest being that an old No. 8 is a new No. 7, and an old No. 7 is a new No. 8. In preparing a cut it will be an easy matter to give the old and new numbers, and in doing a thing of this kind it should be done to the limit.

Lampreys.

When the State of New York began some experiments ostensibly to destroy lake lampreys in Cayuga Lake, but at the same time to study their habits and the habits of other fishes that might be captured with them, it was not unusual to hear that the lamprey did no particular harm to so-called game fishes, and that it was the bullhead which suffered chiefly from the attacks of the lamprey. Admitting this to be true, the bullhead is one of our most valuable of the fresh-water fishes from a commercial standpoint, and if this excellent food fish was the only one to suffer it would be unnecessary to look for other reasons for destroying the lamprey. The argument is that the lamprey could attach itself only to sluggish fishes like the bullhead, and that the trout would be too active and the scales of the black bass would shield it from attack.

Mr. Dean Sage read the article on the lake lamprey in the fourth annual report of the Forest, Fish and Game Commission, and wrote me a letter, from which I make the following extract: "The article on the lamprey attracted me, as I have never seen anything on that subject approaching it in information. I caught, on a fly, in the Ristigouche River a few years ago, a fresh-run salmon with sea lice on him and a good-sized lamprey clinging to him just behind the right pectoral fin. I do not think the fish could have been out of salt water ten hours, and the lamprey looked just like one of the kind common to Cayuga Lake when I made my first acquaintance with the brutes when a boy." There are more than a dozen species of lampreys, from the great sea lamprey to the little brook lamprey, and very likely the lamprey which Mr. Sage found on his salmon was a sea lamprey, but it was a lamprey, and it was found on the king of game fishes, and about as active a fish as swims, and what one lamprey can do others may do, so it is not safe to say bullheads are the only fish which the lampreys attack and destroy.

Fish Rising at Night.

It is safe to say that a score of times each year I am asked how to lure fish of some kind that refuse all kinds of natural and artificial baits, and almost always I reply to try the fish at night. In the case of the brown trout

they require finer fishing, smaller flies and thinner leaders than our native brook trout at any time of the day, but some large brook trout and black bass that turn up their noses, figuratively, in scorn in the day, will take a fly at night as though they had been waiting all day for it to appear. A gentleman wrote to Mr. Archibald Mitchell in regard to several things of interest to anglers, and Mr. Mitchell sent me the letter and I quote a part of it now, leaving another part to be used later. The letter is dated in Connecticut: "At present what little fishing I can get is confined to the small-mouth black bass here in our little lake. This season" (the letter was written last fall) "has proven very poor indeed. I don't know why, unless the extreme lowness of the water has something to do with it. Even at the best of times they are very difficult to get here, although of splendid proportions when captured. On July 4 I landed my first and best, scaling exactly 6 pounds. Since then I have retained in all perhaps a dozen of 3 pounds and over. I invariably return all black bass under 2 pounds in weight to the water. Last Friday night I was tempted by the glorious moon to try a cast by moonlight, and got one of 4 pounds at 11:30 P. M. on a Parmachenee-belle. I never can get them to rise to a fly lure except at night. It may appear rather like poaching, but to me there is a certain glamour and attraction about the lake by moonlight, and playing a heavy bass in and out of shadow, steering him clear of pads and obstructions, is by long odds a more difficult task than to capture the same fish in the broad glare of day. Last year I landed my largest bass in this way. He weighed 6¼ pounds. I hooked him at 11:30, and slipped the landing net under him at 12, after a magnificent battle." I doubt if many will indorse the ethics of returning all black bass under 2 pounds to the water, commendable as it is, but let those who have not, try fly-fishing at night.

Talks to Boys.—XVI.

Trout Fishing.

(*Continued from page* 289.)

Now as we step down stream we find many things of interest, and we learn more and more about the habits of the beautiful fish that we are pursuing. We shall still adhere to the old-time, or conventional, methods of fishing for trout, and I shall only counsel you, as you gain confidence in your own casting, to go closer and closer with your fly up to the banks of the stream and along the black water which runs under the overhanging limbs or roots. The big trout are always hidden back under these recesses, and in order to get them you will have to go close in to them with the fly, for they are too shy to come out unless they can get something to eat with a very little run, or unless they think they will get a big piece of food without very much exertion. I must tell you of the way in which I have seen a few anglers fish, which has proved successful in their hands and which has certain merits to recommend it. These men claim that by slapping the fly down pretty hard on the water in front of the hiding place of the big trout, the fish is deceived into believing that there is a big insect near by quite worth his while to seize. Others think that the trout will rush out at this time because it is angry or annoyed or teased. I do not pretend to say, but I can only reiterate that I have seen many large trout taken in this way by men who were never able to take them by means of a long line and a lightly landed fly. There seem to be no universal rules in trout fishing, or at least no rules without their exceptions, and this is one of the most curious exceptions that I have ever noted in trout fishing.

As the sun grows brighter and warmer on the water you will perhaps notice that the trout do not leap so much for their food, and that you do not have so many strikes as you go down stream. Perhaps at the middle of the day the sport will nearly have stopped. We might then as well go out on the bank, find a nice place to rest up a little, eat a little luncheon and think things over. We can now change our flies, draw off our boots to rest our feet and make ourselves comfortable as we may until later in the afternoon. At 2 o'clock I shall want you to take the stream. At 4 o'clock the sport will be pretty good again, and just before evening, especially the evening of a warm day, when the flies are beginning to appear on the surface of the water in good numbers, we ought to have our best sport. If we have taken a dozen trout each during the day, we shall now be apt to take two dozen in the course of a comparatively short time in the evening. Should we get a couple of dozen nice trout in a day, we ought to feel satisfied. Certainly you will have spent a day among pleasant surroundings, and if you are as observant as I hope you are, you will have learned something which I hope you will never forget. A few days more of this and you will think that you have learned all there is about trout fishing. This is the wisdom of inexperience. Follow this art for five years, ten years, fifty years, and then you will find that you do not know all about trout fishing, but, on the other hand, know but very little. It is an art that is the embodiment of science and which does not adjust itself to any scientific restrictions or to any hard and fast rules. I can only advise that you go out as often as possible with some one who is skillful in trout fishing and that you follow his ideas in regard to tackle. You need not ruin yourself in the purchase of expensive material. Do not stock up with dozens of bright and gaudy flies. Take a few of each pattern, and when you find that a certain fly is useful, renew your stock as you need it. If you are fishing in a certain locality, you will be apt to find that half a dozen flies, and very much more likely two or three flies, cover all the range you need in pattern. Your reel in trout fishing is simple and inexpensive. Your greatest outlay should be for a rod. Trout fishing is not a delight unless you have the proper tools, and a good rod is an essential part of your equipment.

Much the same advice as above applies in case you are running a deep river in a boat. In this case as much depends upon your boatman as upon yourself. He must drop down stream quietly and be careful to keep you from getting spilled out into the cold and deep water. You use your line just as you do in wading, perhaps availing yourself rather more of the drift of the stream in carrying down your fly. Do not allow the belly of the line to precede the fly, and remember always to keep your fly in motion with that little tremulous twitching of the tip of the rod. When you strike a trout, do not be in a hurry. He will go out of the water and roll and tumble in his endeavors to free himself from the hook. Do not pay much attention to this, but keep your rod up, as I have before told you. If you are fishing with a small click reel, you cannot recover your line very rapidly. I use this sort of a reel, but I always handle the line with my left hand. When I am wading in the water and strike a fish, I play him with the rod held in my right hand and the line held in my left hand. Then if the fish wants to run away, I let him pull the line out through the guides and through the fingers of my left hand, always playing him carefully. If he starts to me very fast, I pull the line down through the rings and allow the bight to float down the water ahead of me. Some anglers call this method clumsy, and perhaps it is, but I have always found it effective. You may try it if you like, or you may try to play a fast trout with the use of the reel alone, if you prefer that sort of thing. Each angler has methods and peculiarities of his own, and if I should attempt to debar you from this privilege I should be shutting you out from one of the greatest joys of angling.

Now it may happen that in your trout fishing journeys you very often fall upon some stream where it is impossible to fish with the fly. Out of ten streams which you will find in the northern part of our angling country, you will scarcely find one where the proper use of the fly is possible. Yet the brushy streams, covered with interspaced boughs and filled with interlocked logs and brush heaps and piles of stone, are very often the homes of the best sort of trout. Then springs up the ancient question of whether it is ever correct to fish for trout with bait. I unhesitatingly say that it is sometimes permissible, though I should not ask you to depend upon bait-fishing or to practice it where you find fly-fishing a possible thing.

In bait-fishing you do not use your fly rod, but take a short, stiff rod, suitable almost for bass casting, but perhaps a trifle longer and a bit more flexible. Sometimes you will wish to drop your hook into a deep hollow which lies between some log jam or under some pile of driftwood or overhanging brush. You may, therefore, need a good heavy sinker to carry down your bait. You could not handle this sinker on a light and whippy fly-rod. Use a good-sized hook if you feel obliged to do bait-fishing, and on this hook string your bait or angleworms, for you will find angleworms about the best all-round bait that you can discover for the trout stream. When you come to some open water where you can let your line run out ahead of you, let it drop down stream under the banks and through the deep pools. Draw it as closely as you may to the roots of the overhanging trees, always remembering to keep your bait in motion and never making any more disturbance than you can help. In this way you will take large trout. You will not feel the same strike that you feel when the trout hits the artificial fly, for he knows that the worm is not so fast as the insect, and hence he is apt to strike at it a bit gingerly and delicately at first. As quick as you feel him run, strike him well and firmly, and then play him just as I told you before when speaking of the artificial fly. Do not get in a hurry. Never try to throw your fish out on the bank, and never crowd him too much. Just keep him firm and free from snags and let him run about in the middle of the stream all he can. Of course, if you are fishing through a log jam or some obstruction of that sort, you may have to lift your fish out bodily. This is not very much fun, though sometimes one takes trout in that way. I would not counsel you to go bait-fishing too often or too hard. A stream can be entirely depopulated by bait-fishing. Suppose that you find a wild stream where you cannot use the fly, but where bait is a most killing way of fishing. Suppose you can catch a hundred fish a day there if you like. By no means should you feel yourself justified in doing this. Content yourself with a dozen or a couple of dozen nice fish daily. Then when you come back there next year with your friends, you will still have some fish left to offer you sport. A trout stream is not a large water, and it is never populated by any overwhelming numbers of trout, so that it can, without a great deal of difficulty, be fished out. Trout streams which lie near railroads and which are much visited never offer very good fishing for more than one or two seasons unless they are continually stocked and carefully watched. By no means allow yourself to join that vast number of persons who go out to catch all they can and in any way they can. I should not care to waste my time in telling you about these things if I thought I were only turning out a fish butcher or a selfish person who had no regard for the rights of living creatures and no consideration for the claims of other men.

Sometimes you may discover that there are some large trout in a stream which you are unable to raise by any means, no matter how steadily and carefully you use the artificial fly. If you be on a preserved stream, one much fished or one where you do not absolutely need any fish, I should advise you to take these fish on the fly or not to take them at all. If you are in a wild country where you need something to eat and cannot take the trout in any other way, then you will very often find that a small minnow will very often raise a good-sized trout where nothing else will tempt him. You can hook your minnow through the lips or pass a hook through the gills and then under the back fin. Do not mutilate the bait any more than possible and allow it to swim down stream gently in as nearly the natural position as possible. Sometimes a very large trout will strike even a good minnow bait in a very delicate and gingerly way. Wait until you feel that you have something on the end of your line, and then strike hard and firm. You will be very apt to take the largest trout on minnow bait. As to the use of the spoon hook, I counsel you to avoid it absolutely. If you cannot take trout in any other way than by the use of the spoon, then let them alone. The spoon hook is legitimate for certain sorts of game fishes, but we have not enough trout in this country to warrant the employment of a device like this. There are certain things which seem fit and proper. I cannot classify the use of the spoon hook in trout fishing as a sportsmanlike thing, and I would advise you to keep free of it, and also free from those who resort to these devices. If it is a possible thing, stick to the fly. If the fly is impossible, use bait only to the extent of taking a reasonable amount of decent fish. Do not allow yourself to deceive yourself. Learn a bit of self-denial. It is the fault of the student and of the beginning, as well as of the selfish and improvident man, to want to use any kind of device to take the fish if he finds they are not coming easily to the fly. You will find that the really scientific fly-fishermen, the high class gentlemen anglers of the old country and of this country, will stick to the fly absolutely and will not use any other artifice. Now, if such a gentleman as this strikes a bad day, when the sun is too bright or the water too clear, the insects too stupid or any other condition obtaining which prevents the fish from rising, and if he passes the entire day without taking more than two or three fish, he will none the less go home contented and feel that he has had his share of pleasure, even though he did not outwit the trout. That sort of gentleman will go again the next day, and again the next day after that, and so keep on until he finds a bit of that sport which to him means everything in trout fishing. He knows, as I wish you would learn to feel also, that it is not a necessary thing that you take fish. It is not essential that you go home and hold up a large string of fish and boast to your friends that you have done thus and so. It is not necessary that you should take more fish than your neighbor did when he went fishing. Learn to set aside all this sort of thing, which is only the vulgar part of angling. Learn that the main result in fly-fishing for trout is not the taking of a lot of fish, but the learning of a great many pleasant and enjoyable things. I am called a sportsman, and I have all of the sportsman's eagerness to obtain some results when I go fishing. I do not ask you to take your sole pleasure either in looking at the sky or the forest. I want you to take some fish and to believe that that is why you are out fishing. Yet I do not want you to feel discouraged or cast down if you do not catch a great many fish. If you will read the stories of army campaigns, you will see that there is a great deal done in preparation, that there are many marches and counter marches before there are any great and decisive battles fought. Therefore, believe me when I tell you that in trout fishing you must expect many unsatisfactory days. You must make many marches and counter marches before you come to the day of battle when you can feel that you are entirely satisfied and victorious over the handsomest and most alert creature of the wilderness.

In fishing for the mountain trout of the Rocky Mountains, much the same advice applies as I have given you in regard to fishing for the brook trout of the more Eastern States. These mountain trout average larger, and the mountain streams are bolder and stronger than the brooks of the Eastern forests. The Dolly Varden trout, the rainbow trout, the Mount Shasta trout, the cutthroat trout are all species which are native to the Western States and which are not found in the East, except as they have been transplanted there. Each of these fishes, in its way, offers good sport, and any time after you have finished your apprenticeship among the brook trout of the East, I should advise you by all means to see some of the noble streams of the Rockies. Perhaps after that you may some time aspire to visit the grand angling streams of the Canadian Provinces, where you may take sea trout, and even the magnificent salmon. Do not be impatient, and remember that there is as much solid pleasure in catching a dozen 10-inch trout on an Eastern stream as there is in killing a brace of salmon in the best pool of Canada. Everything is relative, and everything depends upon yourself and upon your own view point. Angling is called by some a selfish art, since it is a solitary one. Others more justly call it the most unselfish of all sports. I have been giving you some advice, and this is the final advice which I wish to give you in regard to fly-fishing: Learn to be unselfish. That means to learn self-denial, and self-denial is the price of all success in this world, and quite as much of all success upon the trout stream.

W. G. De Groot.

The Maine Ice.

Boston, April 15.—The interest begins to increase among Boston sportsmen as to the time of the departure of the ice from the Maine trout and salmon lakes. Prospects are discussed in the tackle stores, as the rods are being brought in to be put in order. Somehow the impression is general that the season is to be an early one. Late reports from Sebago say that there has been a good deal of water on the ice which still binds that lake in the sleep of winter. This water soon works to the edges and under the ice, with the action of melting it more rapidly. Hence the clearing of the lake is expected to be early. The recent rain lasted for ten or twelve days with more or less severity all over Maine, raising the rivers to a tremendous pitch, and clearing them of ice. In the more northerly lake regions, however, the rain fell with the mercury anywhere from 32 to 36 degrees. This melted the snow but little, and only covered the ice with a deep slush. Elliot Russell, a well-known Rangeley guide of many years' experience, was in Boston Saturday, having left Rangeley the preceding day. He says that there is not a bit of bare ground there yet, with the snow quite deep on the lakes. His idea is that the slush of the late rain will take all the snow off the ice, leaving it exposed to the sun's rays, which will quickly melt the clear, blue ice that covers the lake. He claims that snow on top of the ice constitutes a covering that protects the solid ice from the rays of the sun. He expects an early clearing of the ice and an early season. Reports from Lake Auburn predict an early clearing of that lake, as well as the Winthrop and Monmouth lakes. Cobbosseecontee is expected to clear early. At Belgrade they are planning for the lakes to be clear of ice earlier than usual. All this early clearing is based, however, on the fact of the long continued rain having taken the snow off the ice and raised the ice up to high-water pitch.

Muskrat shooting has been the prevailing sport along the lines of the swollen rivers and smaller streams during the recent stormy weather. The water has evidently washed out the muskrat holes and set these animals to swimming for a living. Along the Concord River the gunners have had great sport shooting muskrats. Early in the week a couple of Boston gunners went up to a camp on the Concord and stayed over night. They found the

stream swollen to full banks and a good many muskrats swimming. There was a gun or two at the camp, and they were soon brought into requisition. One of the gunners—he may be called James, for short, since his name is not to be mentioned—thought he would go out in the canoe, while his friend John took the safer boat. He did not want John to get a ducking, and the canoe is very cranky. The gun had been loaded for some time, or at least the shells had. James saw a rat swimming in the dim twilight. Sitting in the canoe, for he could not stand in it, he shot crosswise. There was a tremendous explosion and a splash. John saw his shooting companion feet up and overboard. He started to fish him out with the boat, but James had seized the canoe and soon rolled the water out of it, after the method of the experts at the Boston Sportsmen's Show. He climbed into the canoe and pulled for the shore. The water was ice cold, but they soon had a good fire in the camp and James is now all right. The gun is in the bottom of the river, and no effort will be made to recover it till the water subsides. The muskrat was killed, and the pelt will ornament the camp in memory of the good ducking James got. He says that he shall not attempt to shoot from that canoe again with shells loaded for deer—about two years ago.

'Mid Reef and Rapid.—VIII.

BY F. R. WEBB.

"WELL, there's George with the kodak," remarked the Colonel, as we scrambled down the steep clay bank to the water's edge where our canoes lay, their painted canvas decks blistering in the burning rays of the sun, and scorching our fingers as we unbuttoned the aprons from over the well, readjusted our back rests and mattresses, preparatory to stepping aboard and rejoining George, who was observed approaching the river bank, where his canoe lay moored under the spreading branches of a gigantic oak tree a quarter of a mile away below the mouth of South River.

"Where's Lacy, I wonder?" I asked, as I picked up my paddle out of the bushes where it had lain concealed with the others while we were gone up into the village; gave the colored youth a dime for watching them, and stepped aboard my canoe.

"If you'll untie his canoe and make her fast to the stern ring in my boat I'll tow her down there; I expect he is not far behind George," I continued, as I settled myself comfortably in my seat, arranged the open hatch and apron in front of me and grasped my paddle preparatory to shoving out from the bank.

"No; there he comes now across the South River bridge," replied the Colonel as he settled himself in his own canoe.

We pushed out into the stream without waiting for Lacy, and paddled gently across the mouth of South river and into the Shenandoah, while George experimented on us at long range with the recovered kodak as we approached to ascertain if it was in good working order, the experiment appearing to prove satisfactory, as he said nothing to the contrary when we joined him a few minutes later to wait for Lacy; the Colonel improving the opportunity to load and light his perennial pipe.

As Lacy approached we re-embarked and joined him, turning our bows down stream and beginning the descent of the most beautiful Shenandoah, whose bright, sparkling waters stretched away before us invitingly the full length of the river, as with steadily moving paddles, their dripping blades flashing mirror-like in the sun as they rose and fell on alternate sides of the canoes, with the water falling in a spray of living diamonds at each stroke and furrowing away in snowy little ripples from our bows, we gladly and with light hearts responded to the invitation.

The landscape at the head of the Shenandoah is a lovely one. On the right, close at hand, tower the domes and walls of the Blue Ridge, clothed in living green to their summits. On the left the bluff-like banks rise steeply from the water, while behind them, and almost in our front, as the river winds a little to the left, the towering peak at the southern end of Massanutton, some six or seven miles away, rises in a grand, sweeping slope from the trees near the river to the sharply pointed summit a couple of thousand feet or so above; with the long, wall-like crest of the range sloping away behind the peak in a diminishing blue haze down the valley in a converging line with the wave-like slopes of the Blue Ridge, until the two ranges melt away in a faint blue haze and sink into the nearer tree tops before apparently uniting and closing the narrow valley into which our rippling stream boldly plunges.

We easily portaged the loose stone dam a mile and a half below Port Republic by lifting and sliding the canoes over its crest and down its sloping face into the swift water below.

We found a mile or two of splendid rapids between here and the Lewis dam, the entire distance being one more or less continuous down hill shoot, the river being quite narrow and the shoots down the steep and short gravelly pitches consequently deep, and the water strong, rough and rolling in spite of the unusually low stage; and shout after shout went up from the lungs and throats of the party as the canoes pitched over the verges and down the rough, foaming slopes of the successive shoots, testifying to the delightful and exhilarating character of the sport.

"Commodore, wasn't the battle of Port Republic fought along here somewhere?" asked Lacy as we landed on the broad, flat crest of the massive four foot log and stone dam above the Lewis mill, and, seeking a shady spot, sat down to enjoy a rest and a smoke before portaging the dam.

"Yes," I replied, as I applied a match to the end of my cigar and puffed it into a good light. "We are right opposite the battle field. The fight was thickest and hottest all along out there in the fields and over toward the mountains. The mill race below there was full of Federal soldiers at one time, and they made it very hot for Jackson's men. Lewiston, the old Lewis mansion over near the mountains, was in the very thick of the fight. A Federal battery of artillery was stationed in the dooryard and did deadly execution among Jackson's troops before it was finally captured and held after a desperate hand to hand struggle which followed a flank movement along the mountain side in which it was taken and retaken several times, being finally held by the Confederates, which terminated the battle, the Federal forces being utterly routed."

"It was a pretty hot little battle, I have always heard," the Colonel remarked, as, having finished his pipe, he, according to his usual custom, lit a cigar "to take the taste out of his mouth," Lacy always declared, as that pipe of the Colonel's was strong and rank to a degree that not the bravest and most inveterate smoker in our party—barring the Colonel—would have had the courage to tackle it.

"It was a hot fight," I replied. "It was not a great battle, like Gettysburg or Malvern Hill, with a hundred thousand men on a side. I think there were not more than twelve or fifteen thousand men on either side in this fight, but, considering its size, there was not a bloodier or more deadly battle in the entire war. General Jackson is said to have remarked at its close that the dead outnumbered the living."

"Jackson shut Fremont out by burning the bridge over North River at Pork Republic, didn't he?" asked George.

"Yes," I replied, as I lit a fresh cigar. "He had defeated Fremont at Cross Keys, a few miles away on the other side of the river, a day or so before, and then, withdrawing his army across North River, or to the Port Republic side, he burned the bridge and thus cut Fremont off from rallying and coming to the assistance of Shields."

"Couldn't they ford?" asked George.

"No; the river was high and could not be forded. I met a gentleman a few years ago who was in the fight

"AFTER SLIDING OUR CANOES OVER THE DAM."

with Jackson's army, and in speaking about it he told me a thrilling account of how he saw a young Confederate officer drowned right before his eyes in attempting to swim the river on his horse. In company with a few others, who remained on Fremont's side on some detail or other, he was cut off by the burning of the bridge, and to avoid capture he attempted to swim the river just below the bridge—you know how full of reefs that pool is. Well, his horse became entangled in the reefs in some manner, and both horse and rider were drowned."

"Couldn't anybody help them in any way, I wonder?" queried the Colonel.

"I suppose not," I answered. "My friend said there were no boats at hand, and no one dared ride or swim out into the river after him for fear of sharing the same fate."

"I can readily understand that," said George, "for in high water this is not a stream to take any liberties with."

"I should think not," I replied.

"How about the rest of the party? Were they also drowned?" George asked.

"He did not say," I replied, as I threw away my cigar stump and walked over toward my canoe, "but I suppose not. We might as well portage the dam and go on; its getting toward lunch time, and we want to make Walker's for lunch."

"Yes, I am getting hungry already," Lacy said. "How did Jackson's troops cross South River to reach the battle field, I wonder?" he added, as the others rose and followed me to the canoes. "There was no bridge over that stream at that time, and the battle field is this side of it, so they must have crossed it."

"Jackson extemporized a bridge by running wagons out across the stream, the water being a little over axle deep in that small stream. A plank was laid down across the running gear and a narrow little bridge thus formed, wide enough for one man at a time, and the troops hustled over in single file on the run."

"That must have been a tedious operation," said the Colonel.

"Yes, and it would have been a snap for Shields' troops if they had been at hand to receive them," said George.

"Yes, it would indeed," I replied, "but the battle was fought a couple of miles or so down the river, and there were no Union troops at hand to obstruct the crossing," as I pulled my canoe up out of the water, half her length on to the broad, flat, road-like crest of the dam, "and while it was tedious work, Jackson's men got there just the same."

[TO BE CONTINUED.]

A. C. A. Membership.

The following names have been proposed for membership to the Eastern Division of the A. C. A.: Edward Johnson, Willis E. Burkman and Fred E. Leathe, all of Woburn, Mass.

Yachting.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

SIR THOMAS LIPTON has cabled his American representative, Mr. David Barre, that Shamrock II. would be launched on Saturday, April 20, and that the boat would be christened by the Marchioness of Dufferin. The alterations that have been made on Shamrock I. have been completed, and the first race between the two boats is scheduled for May 4. Shamrock II. will continue to race in English waters until about the second week in June, sailing her last races during the Glasgow exhibition on June 8 and 9. She will then be dismantled and prepared for the ocean voyage. Shamrock II. will come across under the same rig that was used on Shamrock I. in 1899. It is expected that she will arrive in American waters early in July.

History of the Development of the Racing Yacht.

MR. THOMAS H. MACDONALD, of the Bridgeport Y. C., delivered the following lecture at the Yachtsmen's Club, 47 West Forty-third street, New York city, on Wednesday evening, April 3, 1901. The lecture was illustrated by stereopticon views:

The history of yachting is the history of the development of the racing yacht. Just as speed contests among horses have served to develop the thoroughbred, so have the rivalries engendered among boat owners contributed to improve the "going" qualities of racing yachts.

The origin of the sailing vessel is lost in the gloom of antiquity. Ages before the dawn of history, perchance, some primeval savage ferried himself across from shore to shore upon a simple log of wood. True to the same instinct that taught him to point his stone arrow, he sharpened one end of the log, and thus mayhap contrived the first vessel's bow. It may have been that the first sail was nothing more than the branch of a tree, held aloft, that favoring breezes might aid his short passage.

When this occurred we have no means of knowing. Certain it is that it was a period so remote that the mind falters in attempting to grasp the immense space of time that must have elapsed since then. Records of the Stone Age, as revealed in the Swiss débris and the Irish bogs, have preserved for us many types of the primitive boat. These were, for the most part, logs hollowed out. Many of them present evidences of no mean degree of skill on the part of our ancient brother mariners. This style of boat building exists even to the present day. In the National Museum in Washington is a boat of this description, and a remarkable craft she is; over 60ft. in length and of 8ft. beam, she was hewn by the natives of Noothan for Moquilla, one of their chiefs. The immense log was hollowed out, then filled with water. Bark fires were lit near the sides, sufficient to heat the log, but not to burn it. By this means was formed what experts have decided to be a well-modeled boat, and one whose lines are said to resemble those of the American Line steamer New York.

Probably the oldest type of sailing vessel in existence to-day is the Chinese junk. The Chinese, as a race, have practically stood still for 2,000 years. It is little wonder, therefore, that the Mongolian boat of to-day should differ scarcely at all from its prototype of twenty centuries agone. The Chinese vessels present the germ of many points of merit in design, but, like all things Chinese, they seemed to have been stopped in their development in some past age, and to never have progressed beyond that point. The Chinese junk is a fairly good sea boat, and in running with wind free makes fair speed, but in a thresh to windward is hardly to be considered with our fin-keelers of the present time.

About the most progressive, or at least aggressive, of the nations of Europe of 1,000 years ago were the Norsemen, or Vikings, of what is now Norway and Sweden. Those fierce sea rovers, half pirate and half trader, covered the bleak northern seas with their swift ships, and placed all contiguous countries under tribute.

A viking ship was exhibited in Chicago in the World's Fair of 1893. In many respects the lines of the hull of this vessel closely resemble those of the best modeled yachts of to-day. She was built in exact duplicate of the hull of a viking ship that was dug up in Norway a few years ago, and that had lain in its grave for over 1,000 years. The original was undoubtedly the property of some famous leader of those old freebooters, as it was the custom to inter the ship with the dead body of such as those who by unexampled bravery or ferocity had made their mark as leaders among their fellows.

Tradition says that the Dutch galliott was an evolution of the viking ship. This vessel has the high after deck so familiar in the ships of Columbus, models of which were seen in this country during the Chicago Fair.

They were for their time fairly good sea-going vessels, and when down wind or with sheets well started pretty fair sailers.

There is little or no evidence to be found, however, in the meager data at hand, that would lead us to believe that pleasure vessels were in use much before the beginning of the nineteenth century. It is true that the word "yacht" had entered into our language at a much earlier date, but it is also probable that it was used to designate merely a fast boat.

The word "yacht" means speed. It is a Dutch word and, literally translated, means "to hasten" or "to hurry." It found its way into the English language in 1660. In that year the Dutch East India Company presented Charles II. of England with a boat named Mary, and which they designated a "yacht," meaning thereby a fast vessel. Charles was pleased with the present, and in the following year designed for himself a vessel of 25 tons, which he also called a "yacht." The name was then taken up and has become a part of the language. Accounts state that Charles matched this vessel against one owned by the Duke of York for one hundred pounds.

The course was laid from Greenwich to Gravesend and return. Charles II. steered his own vessel and won the race—the first record of a match race between yachts, and also of an amateur helmsman.

The First Regularly Organized Yacht Club.

The first regularly organized yacht club was the Cork Harbor Water Club, now the Royal Cork Y. C., and which was organized in 1720 in Cork Harbor, Ireland. Available records tell us little of interest about the number, size or character of the boats of their fleet, and it is probable that they were for the most part simply rowboats.

The present Royal Yacht Squadron, the premier yachting organization of England, was organized in 1812 at Cowes, Isle of Wight. There were no boats of more than 35 tons enrolled; all were heavily built, and it is likely that they were, for the greater part, merely modified revenue cutters. It is with the organization of the Yacht Squadron, however, that the true yachting age begins. Prior to this time the interest had been but spasmodic, and there was no organized movement looking to the promotion of this truly royal sport.

About this time there had been developed—one in England and one in America—two distinctive types of one-masted vessels of comparatively small size. The English vessel was known as a "cutter," and the American type as the "sloop." The cutter derived its name from the work that it was principally used for, that is the cutting out of smugglers and other vessels engaged in unlawful traffic by the customs authorities of England. The cutter was a vessel that was obliged to go to sea at all times, and in all conditions of weather, and consequently a rig was devised that would admit of the greatest degree of safety at all times and still give a maximum of efficiency in speed, as a vessel that was not fast would be of little use in chasing the fleet smuggling craft that abounded in English waters in that day. The cutter rig consists of a mainsail, fore staysail, topsail, jib and flying jib. The peculiarities of the cutter rig consisted in the fact that the jib was set flying, and the bowsprit was so made that it could be "housed"—that is, taken inboard in heavy weather. This enabled them to reduce sail in a very complete and expeditious manner. The cutter rig is a very graceful and well proportioned sail plan.

In the sloop rig there were but two principal sails—the mainsail and the jib. The mainsail was an immense affair, laced to the boom; the jib was almost as big and was also laced to a boom. Sometimes a sloop carried a gaff topsail and sometimes a flying jib, but these sails were really auxiliary, and only used under favorable conditions. This rig was found to be all right for sailing in inland waters or in well-protected roads and waterways, but was not a very manageable one for outside, deep-water sailing, where heavier seas and winds were to be met with. The great amount of canvas, especially in the jib, rendered quick handling somewhat difficult.

As far as I have been able to discover, the first yacht designed for specific purpose, namely, that of defeating a rival who had been rather too successful, was the case of Pearl, designed by Philip Sainty for the Marquis of Angelsey, some time between the years 1820 and 1830. Capt. Kenealy, the yachting editor of Outing, states that Philip and his brother Robert were originally boat builders of Wivenhoe, England. Finding, however, that building and sailing smugglers was more remunerative, if more hazardous, than constructing and selling fishing smacks, they engaged in this illicit occupation. Philip's skill in designing and their combined skill in handling their boats soon made their name a terror to the revenue officers. Many a fine cargo of rum, silks, tobacco and other highly dutiable goods did these bold sea rovers run into some sheltered cove on the English coast. It is said that when very hard pressed they would seek some sure retreat with their vessel, and after disposing of the cargo would burn the boat for the purpose of obtaining the copper fastenings in her. Philip Sainty would then design another and faster craft, and with this new law evader they would continue their profitable smugglings. The longest lane must have a turning, however, and in the fullness of time these bold smugglers were caught and ignominiously jailed. King George, however, is said to have had a soft spot in his heart for smugglers, remembering the work they had done on the English ships in Napoleonic wars, and so the brothers Sainty were not submitted to any indignity in prison.

About this time Pearl, the Marquis of Angelsey's fine cutter yacht, was getting some unceremonious drubbings from the Duke of York's Phœbe. This was more than a hero of Waterloo could reasonably stand, especially as the Duke of York began to crow over his victories in a most provoking manner. The Marquis knew that the only man that could build a boat which would lower the colors of York was Philip Sainty, and he was in jail in Chelmsford Prison. The Marquis arranged for an interview with Sainty. He asked him if he would build him a boat that could beat the Duke of York's craft, provided he obtained a pardon. Sainty thought that he could, and is said to have replied that he would do so, provided that he could also get a gun brig to build at the same time. The Marquis obtained a pardon for the brothers and the new yacht was built. She was also named Pearl, and it is on record that she lowered the colors of the Duke's yacht in such a decisive manner that she soon found no competitor to race against.

The next time Pearl was heard of was in Bermuda Harbor in the first international race on record. In 1849 the old cutter put into Bermuda on a cruise. Brenda, an American schooner, flying the burgee of the New York Y. C., which was then just organized, happened to touch at the same point for stores. A match was arranged, and the American won the race by about 55 seconds, the length of the course not being stated. Pearl was the first yacht with the distinctive cutter rig. Her owner, the Marquis of Angelsea, may be said to be the father of British yachting, and all his descendants have been patrons of the sport in its best form

In this country the first yacht, in the modern sense, was one built for and owned by Capt. George W. Crowninshield, of Salem, Mass., in 1808. She was of 22 tons burden, and said to be very fast. In 1812 she was made a privateer, and is said to have captured three prizes. In her old days she became a Gloucester fishing boat. In 1816 was built in Salem Cleopatra's Barge for Benjamin W. Crowninshield, another of the famous family of Crowninshields, and direct ancestor of B. B. Crowninshield, the young Boston designer who is building Independence for Mr. Thomas W. Lawson. This vessel was magnificently fitted up, and is said to have cost $50,000. She was said to have been almost the exact dimensions of the sloop Mayflower, but, of course, very different in appearance and lines.

In 1839 came the centerboard schooner Sylph, Martin Van Buren, Gladiator, Petrel, Rapids, John C. Stevens, Mary Taylor, and finally, in 1846, Maria, of which more later, for here dawns the world-famous America, and with her advent rises the glorious sun of the golden age of yachting.

The New York Y. C. Organized.

The New York Y. C. was organized in 1844 on board the famous old schooner Gimcrack in New York Harbor.

Com. Stevens undertook the management of the helm of this newly born organization, and right well he cared for his trust. As in England, there were few yachts even in the cruising sense, and but one that could be called a racing yacht, that just mentioned, Maria, from the design of Robert Livingstone Stevens, and was built by William Capes, of Hoboken, in 1844. Maria was a scientific racing machine, and in many particulars may be said to have been the prototype of the modern racing yacht of to-day. She was 110ft. over all, 26ft. 8in. beam, with a draft of water 6in. under the forefoot, and increasing to 5ft. 3in. aft. Her bow was long, hollow and very sharp. She carried her great beam well aft, and tapered but moderately to the stern. Her boom was 100ft. long and built hollow. She carried outside and bolted to her bottom about 20 tons of lead ballast, and was provided with two centerboards, the forward one lowering about 20ft. She was provided with the ordinary sloop rig of that day—that is, the jib and mainsail. The foot of the mainsail was 98ft., and that of the jib 70ft. Maria's speed is said to have been marvelous. Authentic records state that she logged 17 nautical miles per hour in a smooth sea and a strong wind. She was beaten but twice, once by the schooner Coquette and once by the far-famed America. Both races were sailed outside in strong winds and a jump of a sea, conditions under which Maria was at her worst.

About this time there was in the city of New York a shipbuilder named William H. Brown, who had made a national and, in fact, an international reputation on account of the advanced, scientific work turned out by his shipyard at the foot of Twelfth street, New York. In the year 1850 had taken place what was then and would be now a most remarkable event. This was the triple launch of three ocean-going steamers, in one of which all of the machinery was set up and steam made in the boilers so that the vessel started immediately on her trial trip under her own steam. Her paddle wheels began to revolve the instant she touched the water. This occasion was graced by a number of the most distinguished names in the history of this country. Among those who sat down to a banquet in the moulding loft immediately succeeding the triple launch were Daniel Webster, Horace Greeley, Cornelius Vanderbilt, William K. Collins, James T. Brady and many others. Daniel Webster made the first address, and in concluding said:

"Among the names that were not born to die there will be none in the history of America more entitled to honorable mention than that of William H. Brown. He is worthy of his noble Scotch ancestors. He has impressed this age in finance and mechanics, as they shook their own hills by their eloquence and their works more than a century agone. I greet you, sir, as a worthy successor of Hamilton and Cobden—giants of genius, who have made the world better for their lives—and I am proud to have the honor of proposing your health."

A Remarkable Prophecy.

Mr. Brown in his reply, among other things, said:

"I came to this city twenty-five years ago on a visit to my Uncle Noah, then engaged in shipbuilding. He launched a vessel or two every year, and persons came miles to see the event. After a time I felt interested in his work. I walked along the wharves and noticed the vessels as they arrived from foreign ports. I got the idea that ships to sail well ought to be sharp enough to cut the water easily, and those that I saw would go either way. You could hardly tell the bow from the stern. I asked my Uncle Noah to let me make a model. He laughed at my first attempt, and nothing I could say would convince him that such a boat as I favored would sail at all or be seaworthy. After that I got tired of being ridiculed, and worked along for three years without any encouragement for my ideas of the proper shape for a vessel. One day I branched out for myself. It was hard pushing, but I was determined, and though unknown, I would not give up. I shall never forget those years. First I built a sloop, then a schooner, then a brig, and last a ship. All this in three years. My black days were over and success had crowned my efforts.

"My vessels sailed well and were popular. I made one rule from which I never deviated; that was to use the best timber to be had without regard to the cost, and always to combine strength with speed. I have done that by using hollow lines. I have altered all models gradually, just a fraction, these twenty years, but never to sacrifice strength. Some of my first vessels are as good to-day as when first launched. Greater speed can only be gotten now by increasing the size of the ship, not the shape of the model.

"The Arctic, just launched, will cross the water in nine days. I will guarantee to build a steamer of 6,000 tons to go over in seven.

"I have built to date over 300 vessels, and not one has yet been condemned or rejected.

"Gentlemen, the day of wooden ships is nearly over for the present. Iron will take its place. The paddle must give way to the screw propeller for ocean traffic, as the screw will yield more profit, but not comfort.

"We are living in a wonderful age. In less than fifty years, before this century closes, we shall astonish the world, and then if we don't lead the age we shall drop away from the spirit of it.

"I have a few thoughts to offer: First, we must have our canals worked by steam or we may lose our preeminence through our trade being diverted by railroads in years to come.

"Next, we must have a railroad across the continent to California, to bring China to our doors. You can promote both of these enterprises, and who is more capable of doing it than the gentlemen of Wall street that I see before me to-day?

"We need and will have an ocean telegraph. In this I can aid you. I shall lay the keels to-morrow for three steamers for my own use. If you, gentlemen, will form a company and make the wire, I will put in one of those vessels, to be done when you are ready to lay it in the ocean, and we will have a telegraph in one year. I ask your serious thought to this matter. We can breakfast with the morning news from London just as well as wait ten days for it, and what a gain that will be for the world and for yourselves! I would like to join you in other enterprises, and would take some stock in steam canal boats, but my hands are now nearly full.

"The steamers I am now building are the pioneers of a line that will go around the world. They shall be vessels that for speed, safety and comfort shall make our people proud. My route is to Aspinwall, rail across the Isthmus, Panama to San Francisco, thence across the Pacific to the Sandwich Islands, Hong Kong, Calcutta, Bombay, Suez—we will rail or cut a canal across here—Marseilles, Liverpool and then home. My steamers will run to Liverpool in five days. They will be finally 1,200ft. long, 120ft. beam and will make 25 miles per hour. You look surprised, gentlemen, but there's no trouble about doing it. My steamers are braced diagonally, and the larger they are to a certain point, with proper depth, the better sea boats they are; the more waves they can cut, and the faster they will go. The plan is entirely feasible, but it will take me ten or fifteen years to get around as far as Liverpool, and by that time I expect Mr. Collins to join me, that the two lines may not conflict. You see, gentlemen, that this will prevent me from taking very prominent part in other enterprises."

What a remarkable series of prophecies! Remember that all this was said over fifty-one years ago! The telegraph was then just six years old. At that time only the most progressive regarded steam ocean-going vessels as little more than an experiment. Over fifteen years later, when a number of California capitalists proposed to build the very road prophesied by Mr. Brown, they were ridiculed the length and breadth of the country as impossible dreamers. Many of my hearers are familiar with the reception of the proposition to build the first ocean telegraph cable met with in this country and England. Here we have the prediction of the five-day steamer to Liverpool, a prophesy that has been practically realized to-day. Mr. Brown stated the length of the steamer would be 1,200ft.—we have reached two-thirds of that already. He noted the passing of wooden ships, the substitution of the screw propeller for the paddle wheel, the building of the Suez Canal and the 25-mile an hour steamer. Truly, a wonderful series of prophesies.

There is one statement in Mr. Brown's remarkable series to which I wish to call particular attention, as it is of peculiar interest from the yachting standpoint, and that is where he says he obtained the normal lines by abolishing the bluff-bowed vessels and substituting the hollow lines that were afterward made so famous in America.

That Mr. Brown built America in his yard on East River, New York, of course cannot be doubted, and from a careful examination of such data as I have been able to obtain, I am forced to the belief that to Mr. W. H. Brown should also go much of the credit for the design of this truly wonderful and epoch-making boat.

Who but a man that knew exactly what he proposed to do would write such a letter as this?:

Dated in 1850, the same year that the prophecies I have cited were made, every expression it contains shows the confidence of the man in what he proposed to do:

New York, Nov. 15, 1850.—George L. Schuyler, Esq. Dear Sir: I propose to build for you a yacht of not less than 140 tons custom house measurement on the following terms:

The yacht to be built in the best manner, coppered, rigged, equipped with joiner's work, cabin and kitchen furniture, table furniture, water closets, etc., ready for sea.

You are to designate the plan of the interior of the vessel and select the furniture.

The model, plan and rig of the vessel to be entirely at my discretion, it being understood, however, that she is to be a strong, sea-going vessel and rigged for ocean sailing.

For this vessel complete and ready for sea you are to pay me $30,000 upon the following conditions:

When the vessel is ready, she is to be placed at the disposal of Hamilton Wilkes, Esq., as umpire, who, after making such trials as are satisfactory to him for the space of twenty days, shall decide whether or not she is faster than any vessel in the United States brought to compete with her.

The expense of these trials to be borne by you.

If it is decided by the umpire that she is not faster than every vessel brought against her, it shall not be binding upon you to accept her and pay for her at all.

In addition to this, if the umpire decides that she is faster than any vessel in the United States, you are to have the right instead of accepting her at that time to send her to England, match her against anything of her size built there, and if beaten, still to reject her altogether.

The expense of the voyage out and home to be borne by you. The test of speed in England to be decided by any mode acceptable to you and consented to by you in writing. Respectfully yours,

W. H. Brown.

How many builders to-day would undertake such a task? How many even of our best naval architects would care to design and build a boat under such a guarantee?

English Press Comments on America.

In the issue of the Illustrated London News of March 15, 1851, appeared this description in the news columns of the paper:

"The yacht, of which we have engraved a sketch, is now building at New York to compete with the English yachts next summer at Cowes.

"The builder, Mr. William H. Brown, is to receive about one-third more than her value (say 24 pounds a ton) if she succeeds in outsailing any competitors of the same tonnage in England. Her construction is on a novel principle. Drawing 10ft. of water aft, she tapers away forward to but half that draft, and is totally without any gripe.

"Aft, her keel is about 30in. deep, diminishing in depth forward and gradually ascending in a graceful curve into cut-water and stem. Her tonnage is to be 175; length over all, 94ft.; extreme breadth, 23ft. 6in., and depth of hold, 9ft. Her timbers are spaced a foot apart, and filled in on both sides with 18 pigs, or bars, of iron, which weigh 1,200lbs. each and have small projections or shoulders which let into the timbers and prevent any contact with outside planking.

"In addition, 18 pigs of 1,200lbs. each are placed on the main keel, fitting exactly between the timbers. She has, therefore, upward of 21 tons of ballast, built and tightly wedged into her sides. As she only requires about as much more ballast, it is easily calculated that she will be able to stow it and leave plenty of room inside.

"She is cross-braced inside with long iron bands, well secured to the timbers.

"The intelligent foreman, Mr. Steers, as well as the American gentlemen who are to own her if she succeeds, are very sanguine of success.

"This is an original and spirited undertaking, and will, if successful, completely alter the present system of yacht architecture.

"We do not, however, think she can compete with the sharp and deep English yachts.

"Whatever the result may be, it cannot fail of being extremely interesting and valuable for both countries.

"As a model she is artistic, though rather of a departure from old-established ideas of naval architecture."

In this account there are two or three things that are of great interest at this time as bearing on the real originators of this famous craft. You will note that the first paragraph states that her builder is Mr. William H. Brown. In another paragraph Mr. Steers is spoken of as the foreman of the yard. And again mention is made of the "American gentlemen who are to own her if she succeeds," leaving the inference that if she is not a success they are not to accept her.

I am aware that most of the yachting authorities of to-day give to Mr. George Steers the entire credit of the design and construction of the America. And I am also aware that the journal I have just quoted, the Illustated London News, in a later article, says that America was designed and constructed solely by George Steers and his brother Henry.

It seems to me that there can be little doubt as to where the vessel was built. That this credit should go to Mr. Brown, I cannot question. That he was the sole author of her lines, I, of course, cannot say. Mr. Arthur Brown, late of Fairfield, Conn., a son of Mr. W. H. Brown, states in a letter signed by him that Mr. Steers was a foreman in the moulding loft, and that he cut the model of America after Mr. W. H. Brown's immediate direction.

In any event, America was completed in the spring of 1851. She was tried out in a couple of races in New York harbor, against the Maria, in one of which she was beaten by the sloop, and the other of which she won. The latter was outside the Hook and in a jump of a sea.

She was then fittted up for the ocean voyage and sent across the Atlantic to Havre, where she shipped her racing rig, and, taking her owner, Com. J. C. Stevens, aboard, she sailed for Cowes, then as now the yachting center of Britain.

The English yachtsmen hardly knew how to take her. Her rig was somewhat of a surprise, the absence of a jib-boom and a foretopmast being comparatively noticeable. Then, too, her hull was such as they had never seen before.

The London News said of her as she lay just outside Cowes: "Accustomed as we have been to witness the symmetrical models of our own yachts, we confess our opinion falters when a model of an entirely different construction, so contrary in every respect, both in build and rig, is presented to us. In our former remarks we termed America to be a departure from established ideas of naval architecture, which all must candidly confess to be the case. In lieu of straight lines we have curved and hollow lines; instead of spars loaded with rigging, top hamper and numberless small sails, we have stately masts with scarcely a rope to support them; the propelling power being in substance rather than in sum. In fact we have before us, instead of 'the phantom ship,' a 'rakish, piratical-looking craft, whose appearance in bygone days would have struck terror into the soul of many a 'homeward-bounder.'"

America carried on this occasion a crew of seven men before the mast, and thirteen all told. A lucky number.

The fast new English cutter Laverock had come out of Cowes to America's anchorage to courteously show her up and incidentally have a scrub race with her and get an inkling of her quality, as far as speed was concerned. Capt. Kenealy says that the racing fever was hot in Com. Stevens' veins. As soon as he saw Laverock tack and lie to with her jib sheets to windward he could not, for the life of him, resist having a brush with the Britisher. Quoting here from Com. Stevens' own words as reported on his return:

"The news had spread like wildfire that the Yankee clipper had arrived and that the Laverock had gone down to show her the way up. The yachts and vessels in the harbor, the wharves and even the windows of houses were filled with spectators watching with eager eyes the eventful trial. They saw we could not escape, for the Laverock stuck to us, sometimes lying to and then tacking around us, evidently showing she had no intention of quitting us. We were loaded with extra sails and with beef and pork enough for an East India voyage, and were 4 or 5in. too deep in the water. We got up sail with heavy hearts; the wind had increased to a six-knot breeze, and after letting Laverock go for about 200yds., we were ashamed to wait longer, and started in her wake.

"I have seen and have been engaged in many exciting trials on sea and shore. I made the match with the horse Eclipse against Sir Henry, and had heavy sums both for myself and friends on the result. I saw Eclipse lose the first heat, and four-fifths of the second without feeling one-hundredth part of the responsibility or trepidation I felt at the thought of being beaten in this eventful trial by Laverock. During the first five minutes not a sound was heard, save, perhaps, the beating of our anxious hearts or the ripple of the waters upon her sword-like stem. The captain was crouched down upon the floor of the cockpit, one hand upon the tiller and his stern, unaltering gaze upon the vessel ahead. The men were motionless as statues, with their eager eyes fastened upon Laverock with a fixity almost supernatural. Over us swelled the beautiful curves of her sails. It could not and it did not last long. Slowly but surely we crept upon her. Inch by inch we moved to windward of her wake, and in a few tacks fairly weathered her. The agony was over, and we came to anchor fully a quarter of a mile ahead of her."

This little scrub race is said to have destroyed all the plans which Com. Stevens and his friends had in view. None of the English yachts seemed particularly anxious to try conclusions with the speedy Yankee.

After many offers to sail a match race with any schooner in the English fleet, and then with any cutter, Com. Stevens found it practically impossible to make a match. He then determined to enter his boat in the regatta for a $500 cup arranged by the Royal Yacht Squadron, to be sailed on Aug. 20, round the Isle of Wight, and without time allowance. From the yachting point of view, this was the most momentous decision ever made by a yachtsman. For that comparatively insignificant cup, costing less than an ordinary 21ft. catboat, that piece of metal, neither particularly well designed nor executed, has become the most famous and most coveted sporting trophy the world has ever known, the blue ribbon of the seas, the America Cup.

America's First Race in England.

To-day this one-time humble trophy stands at the head of everything yachting; won in a most unusual and unexpected manner, and successfully defended against every and all challengers for a full fifty years. A record to be proud of for all our days.

The interest shown in the race was something enormous. It was unprecedented in quiet, rather stolid England. Again quoting from the Illustrated London News:

The race of Friday furnished our yachtsmen with an opportunity of 'realizing,' as our transatlantic cousins would say, what those same dwellers beyond the sea can do when afloat and in competition with ourselves. None doubted that America was a very fast sailer, but her prowess had not been measured heretofore.

When it became known that she was entered for Friday's contest for the Cup, the most intense interest was developed by all classes, and even Her Majesty and the court felt the influence of the universal curiosity to see how the stranger, of whom such wonderful things were said, would acquit herself.

Eighteen vessels were scheduled to start, ranging from Brilliant, a three-masted schooner of 392 tons, down to Volante, a cutter of 48 tons. Fifteen actually started. The preparatory gun was fired at 9:55 and the starting gun at 10 o'clock.

America had provided herself with a new jib topsail and spread it to the breeze for the first time. A thing of life and beauty she was as she moved off in the great procession.

The beauty of the cut and set of her sails attracted universal attention. She seemed in no disposition to hurry, however. Gypsy Queen, which had the full strength of the tide, took the lead and kept it for some time, with Beatrice, Volante, Constance and Arrow hunting her in the order named.

The smallness of America's rig, as compared with the others, also attracted attention. Her gaff topsail, for instance, hoisted to the short and slender main topmast, looked insignificant indeed. The flying jib, hoisted to the foremast head (she had no fore topmast), seemed neither of use nor ornament.

Steamers, shore boats, yachts and craft of all descriptions buzzed along each side of the course and stretched away for miles over the sea.

It was a sight such as the Adriatic never beheld in all the pride of Venice. Such a sight as, beaten though we were, no country on earth else could offer, and confessedly was never seen here before. America gradually forged ahead, and at No Man's Land buoy was fifth boat. Here a fresher breeze struck her, and careening gracefully to it, she soon began to drop one after another of the leaders, till within a half hour she had the entire fleet behind her. From this point to the finish it was simply a procession, with America a sure winner, barring accidents. There was a time in the race when she was fully six miles ahead of the nearest boat. After she rounded St. Catherine's Point she had only Aurora in sight behind her, and as the weather grew thick shortly afterward she too was lost to view.

At the Needles America passed and saluted the royal yacht Victoria and Albert, with the Queen and Prince Consort on board. The Queen waited till Aurora reached the Needles and then put back to Osborne, passing America in the Solent. At 6 o'clock Aurora, still the second boat, was six miles astern. As victory was now assured to America, all the excursion vessels returned to Cowes.

Thousands of people fringed the southern shore from West Cowes to the castle, eagerly awaiting the result, in spite of the gathering gloom and the threatening rain clouds that loomed up black along the northern shore of the strait. Just as darkness was settling down over the sea the well-known rig of the Yankee schooner was observed, and a few minutes later the boom of a gun from the flagship announced that the race was over, that the pride of the English yachts had been laid low, that the Cup was lost and won, and that the name of America had taken its place among the immortals.

Aurora was the second boat in, her time being 8:58. It appears that while America was bucking the tide near the finish and almost becalmed, Aurora got a lucky streak of wind and came in a comparatively good second.

There were three points in the race that Mr. George Schuyler thought were worthy of attention; they were:

First. That starting with a light westerly wind at 10 o'clock, the yachts turned No Man's Land buoy about 11:30, and while beating to the westward the wind freshened to a good six-knot breeze for a short time, at the end of which America's position was two miles to the windward of the nearest yacht. The wind then died away and the yachts beat slowly against a head tide, America constantly widening the distance. At 3 o'clock the wind again freshened, and when America rounded the Needles Aurora, the nearest yacht, was, by all English account, fully eight miles astern, and the rest of the squadron were not to be seen.

Second. That the wind again becoming light, the tide being ahead, America anchored winner of the Cup at 8:34 and Aurora at 8:58. Had there been an allowance for time, according to Acker's scale, in use at that time, America would still have been a winner by two minutes.

Third. That the owner of Brilliant sent in a protest the next day against awarding the Cup to America on account of her turning one buoy from the wrong side. As the instructions, however, were not explicit on this point, the protest was not allowed.

The day after the race America sailed for Osborne, as the Queen had expressed a desire to see her. Her Majesty, with the Prince Consort and suite, spent over half an hour on board, and had a thoroughly good look at the vessel, whose praises were being sung by all the papers.

The Race for the Queen's Cup.

On the following Monday a race took place at Ryde for a cup presented by the Queen, in the expectation that America would start. As there wasn't a six-knot breeze America would not start, but as the Illustrated London News said the next day: "Just before the vessels got in the rakish looking America was seen making her way round the Nab Light, and with a most extraordinary movement, made one reach from the light to Stroke Bay, and by another tack rounded Brilliant in grand style. To accomplish the same task that America had just performed, Alarm took ten tacks and Volante at least twenty. She had started one hour and five minutes after the fleet and finished but twenty minutes behind the winner. She thus gained forty-five minutes on the entire fleet. Had she started in the race the same fortunate result would have greeted her as at Cowes."

There were three important features in America which account for her success. In my opinion the first and most important of these was her sail plan. Her sails were made in Port Jefferson by a Mr. Wilson, the father of the Adrian Wilson who is the senior member of the well-known sailmakers of Boston at the present time. Her sails were laced to the boom, and they were flat. Not flat like a piece of board, but flat as it is understood to-day by the best yachtsmen. There was draft in the sails near the luff, but the after part was very flat. Another feature of the sails that, in my opinion, influenced her windward work very materially, was the exceedingly long luff in each sail. They were very long on the mast. This is a very important feature in windward work.

The second was the marvelously well-moulded midship section. So well was this designed that to-day, in Columbia, admittedly the fastest yacht yet afloat, the same outlines are practically preserved.

The third was the handling of the yacht in the race. The sailing master, Old Dick Brown, a well-known Sandy Hook pilot, was one of the best sailors of his day in this style of craft, and there is no doubt that his magic touch upon the tiller was a very important factor in the final result.

The subsequent history of America is very interesting. She was sold in England by her owners to Lord Blaquire, who finally took her on a long cruise to the Mediterranean, and there sold her to Lord Templeton. He cruised in her one summer and then laid her up at Cowes, where she remained some time. She was then sold to Mr. Pitcher, a boat builder of Northfleet, who practically rebuilt her. The lines were, however, carefully preserved, and when she left the yard she was in practically the same condition as when launched.

In 1860 she was again sold to a Mr. Decie and taken to the West Indies. She was rechristened Camilla. Just before starting on her cruise she defeated the schooners Wildfire and Galatea in a race arranged by the Royal Western Y. C., of Plymouth.

She returned from the West Indies in 1861 and in that year she sailed a few races with indifferent success, which is not to be wondered at, as she was then over ten years old and was in anything but good condition for racing.

Mr. Decie then changed the name back to America, and in the following year sailed for Mobile, Ala., with her. Here she became a blockade runner in the War of the Rebellion, having been sold by Mr. Decie to a gentleman who for good reasons preferred to remain unknown.

In April of 1861 she arrived off Savannah, Ga., as the blockade runner Memphis, her name again being changed. She was chased by the U. S. gunboat Wabash, and to avoid capture was scuttled and sunk in the St. John's River, Fla.

She now rested quietly in her watery bed for nearly five years. After the war the Government raised her, as she was an obstruction to navigation. She was found to be sound and seaworthy, and instead of breaking her up, as might have been done with a less famous vessel, the Government repaired her and fitted her out for a practice ship for the naval cadets at Annapolis.

[TO BE CONTINUED.]

A contract for a cabin launch has been awarded to the Gas Engine Co. and Charles L. Seabury Co. by Mr. Frank Bement, of Toms River, N. J. She will be 60ft. long 10ft. beam, 32in. draft. There will be cabins fore and aft with deck space all around the houses. Between the two the deck will be flush, and at the after end of the forward house the wheel will be fitted. In the stern of the boat there will be a roomy cockpit. The machinery will consist of a 25 horse-power motor, which will be placed in the center of the boat. A stack will be placed over the engine room so as to give the launch the appearance of being driven by steam. The funnel will be used for ventilating the engine room. She will be named Franeda.

* * *

Former Com. Henry C. Rouse, of the Seawanhaka Y. C., has chartered through Messrs. Tams, Lemoine & Crane of this city the English built steam yacht Lady Godiva. She is an auxiliary screw schooner, and was built by the Laird Brothers at Birkenhead in 1890 from designs by Mr. St. Clare Byrne. She is 150ft. long and 23ft. beam.

Our Boston Letter.

BOSTON, April 13.—Everything now points to the coming yachting season being the greatest in the history of the sport in Massachusetts. All of the clubs are making great efforts in the racing line, and those who are looking for this kind of sport will have no occasion at the end of the season to find fault with the inducements offered by the regatta committees of the different clubs. Nearly all of the clubs of any prominence have made up their list of racing dates and from a glance at the total, when it shall have been compiled, it will be seen that all of the clubs are alive to the occasion and realize that this is the year for Massachusetts, when it is possible to create a lasting interest in the sport, much greater than has ever been shown in this State, which has always been noted for its aquatic sports.

On the North Shore, at Annisquam, Gloucester and Newburyport, an unusually successful season is expected. The Annisquam Y. C. has already been heard from, and news of the racing dates of the American Y. C. is expected every day. It is known that this club is making great efforts and that it will present more than its usual number of open events. This, of course, will mean that the interest in local yachting, in the events which are confined to club members, will increase accordingly. For a yacht club is most favorably known by its races. The social conditions of a club may attract a few, but the majority of the men who become members of yacht clubs always keep in mind the distinct purpose for which these clubs were founded.

The East Gloucester Y. C. is one of the North Shore clubs which is preparing for a great season. In fact yachting generally around Cape Ann is taking a sudden impetus which bids fair to become permanent. The East Gloucester Y. C. is now well housed, and is attracting a large membership. There are now about 250 members enrolled, and it has a fleet of more than fifty yachts. This may not seem a great number to some of the clubs that have a great membership, those which are wealthy and have fleets of yachts accordingly. But when it is considered that many of the members of this club are from the summer colony, the membership seems to be very creditable.

For a number of seasons past the club has made a feature of evening races, which have become very popular. The courses for these are not very long, but there is an element of danger connectd with a race in the dark which becomes exhilarating without the uncertainty of dire results. It makes a good school for the yachtsman, too, for it teaches him to sail by bearings and to find marks which he cannot see, even when close to them. The first of these evening races will be sailed on June 5 and every succeeding Wednesday evening they will be continued up to and including Aug. 7. There will be a club championship in every class, the prizes, as in previous years, being pennants. The fixtures for the other races are as follows:

May 30—Opening club race.
June 17—Club race.
July 4—Open race for all Cape Ann boats.
Aug. 7 and 8—Y. R. A. open races.
Aug. 31—Club race.

Club cruise will be called at the option of the Commodore. The principal event in this line will be sailed immediately after the race on Aug. 31. The fleet will proceed to Marblehead and Nahant, to participate in the Lynn Y. C.'s Y. R. A. open race, and afterward will sail across the bay to witness the races of the big yachts and fishing vessels for the Lawson cups.

On the South Shore the clubs are no less active. The Duxbury is probably the most active of any of these clubs, and has laid out a good season's racing. This club, like many of those on the North Shore, is made up principally of members of the summer colony. Great interest is manifested in the 18ft. knockabouts by members of this club, so great, in fact, that they were called last year the "Duxbury 18-footers." Commencing June 22, there will be races every Saturday for these boats until the close of the season. The schedule of the other races is as follows:

June 17, Monday—Club race.
July 4, Thursday—Club race.
July 20, Saturday—Club race.
Aug. 3, Saturday—Club race.
Aug. 31, Saturday—Y. R. A. open.
Sept. 2, Monday—Ladies' day.

The great interest which has been aroused in yachting in New England is not confined, by any means, to the Massachusetts coast. At Bar Harbor there is growing up a fine, healthy fleet of yachts, and Islesboro and vicinity bids fair to become one of the greatest Eastern yachting centers. The Maine coast has long been known as a summer resort, but within the past few years its popularity has grown wonderfully. With the coming of greater numbers of summer visitors, it is not to be wondered that yachting should become the principal sport. At Bar Harbor there is a fine fleet of 25-footers, which have furnished sport for the past three seasons. It started with a one-design class which was organized by a Boston man, and the fleet has grown steadily since. The interest in yachting is not confined to Bar Harbor, but has extended all along the Maine coast.

The House Committee of the Hull-Massachusetts Y. C. has adopted a novel manner of placing interesting club matters before its members. A little paper called the Log has recently been issued which gives a prospectus of the coming season's features and calls upon its members to send in any interesting news of the club for publication. It is suspected that the editor-in-chief of the little paper is John L. Amory, but he, being a modest man, will probably deny it. At all events the enterprise is a good one for the club, and is a credit to its organizers. The column in which the news notes will be printed will go by the inspiring title of "Slivers."

It is announced that the club house at Hull will be informally opened on April 19. The landing stages will be put in place there on that date and also at the town house on Rowe's Wharf and at the Dorchester club house at Commercial Point. The Hull club house will be opened for the season on June 8, and the Dorchester house will be opened April 18. The dormitories at the Hull club house have been thoroughly renovated and improvements have been made in the bathing department.

Hanley has started on the Canada cup defender Cadillac, which is being built for a syndicate of Chicago yachtsmen headed by Mr. John C. Shaw. During the past week the moulds have been put up and from now on the work of construction will be rushed. It is Mr. Hanley's intention to have her all ready soon after the middle of next month. As might have been expected, Cadillac will be an improved Genesee. As Hanley has had great experience and much success in building certerboard boats of her size, there is every reason to expect that she will give a good account of herself in the trial races.

At a meeting of the Executive Committee of the Yacht Racing Association of Massachusetts a rule was framed that every yacht competing in an Association race shall carry a racing flag at the peak of the mainsail, which shall be hauled down immediately after the race. The flag will be 18in. square, having a blue ground with a white star in the center, the size of the star to be one-third of the length of the flag. This rule will commend itself readily to any yachtsman who has been deceived by yachts carrying the racing numbers throughout the entire season, which have hung around the starting line with no intention of racing. The official measurer was instructed in case of protest to measure the protested yacht immediately, if possible, and, if not possible at the time, to inspect the yacht and take a complete inventory of everything on board and to measure as soon afterward as possible. The fact that sails are wet shall be no reason for not measuring. This is sort of legislation that has been awaited from the Association, and it will do much to strengthen its cause among yachtsmen.

The readers of FOREST AND STREAM are probably by this time familiar with the details of Independence's sail plan, which is a very large one indeed. Several yachtsmen have expressed the opinion that it is too large and will be a drawback to the boat, but this is a thing that can only be proved in practice. But the giving out of the sail plan, so that Herreshoff and Watson, who are already familiar with the lines and construction, can put the two together and draw comparisons, seems to be rather indiscreet, to say the least. It does not seem reasonable that the designer of the Boston boat can give all of his powder to the two greatest yacht designers living and not have them beat him. A certain amount of publicity makes a yacht popular, but there is a limit to all things. In this case it is the opinion of many yachtsmen here that Crowninshield has made the mistake of his life.

Illinois, which has had several trials, has not proved the success which first reports would lead people to believe. It has been found that she carries a strong lee helm, which is not as it should be if the yacht is to have any great success. Many changes were made, but all to no avail. It has been finally decided to give her a new mainsail and to shift the center of effort aft. This will be done by shortening the jib and giving greater area to the mainsail. About 200lbs. of lead have been cut from the fin. It is expected that she will be put on the flat car and shipped West Monday.

The work on Independence is progressing smoothly. Her deck is nearly all laid and many of the plates for the steel mast have been turned out. The sternpost rudder is now being plated.

Fred Lawley has an order for a centerboard 18-footer, which will be built by Shiverick, of Kingston. He is also hard at work on a 15ft. racer, which he hopes to have ready to enter in the opening race May 30.

McIntyre, of Neponset, has three of the 18-footers of Starling Burgess design well along, and a fourth has been started.

MacConnell Bros. have made the following sales: Knockabout Agnes to P. S. Estes, of Harvard College; J. and M. Praline to F. W. Bird, of Wnithrop; cutter Tomboy to Joseph Battles, of Lawrence; sloop Nokomis to Dr. W. B. Osgood, of Boston, and the cutter Ouida to a member of the Boston Y. C.

Embree, of Quincy Point, has launched the 25ft. rating yawl, designed by Starling Burgess for his uncle, Vice-Com. Walter Burgess, of the Boston Y. C. She will take her maiden sail Wednesday.

Smith, of Quincy Point, has the 25-footer for Oscar B. Webber, of New York, and the 25-footer for W. D. Turner, of the Boston Y. C., ready for launching. They will go into the water next week.

At Lawley's the Sloane 85ft. schooner is all planked. The Parsons 46-footer and the Gibson 25-footer are about ready to go overboard. The Douglas 18-footer has been painted and her deck has been caulked. The deck is being laid on the Binney 70ft. steamer, and the house is being finished up on the 86ft. steamer of the same design. The Hurter 35-footer and the Lowell 25-footer are all planked. In the west shop the plating is going on the Eno 120ft. steamer, and the frames are out for the Crane 70ft. steamer.

JOHN B. KILLEEN.

Senta.

THE English-built cutter Senta arrived safely at Greenport, L. I., on the morning of April 10. Senta crossed the Atlantic in the worst season of the year and met with head winds and severe gales throughout the entire trip. She was the lightest built boat in her class in England and was constructed solely for racing, and it is really remarkable that she made an ocean passage with less injury to herself and those on board than large schooners have met with of twice her size that have been built for cruising.

Senta was purchased by Mr. A. Howard Hinkle, of New York city, last December. Soon after she was bought work was begun on her to prepare the boat for the trip to America. Misfortune followed Senta from the beginning; first she went ashore in the Solent, and then put back for repairs. After being hauled out and surveyed she was found to be uninjured. On Feb. 1 she again started for Bermuda, and for forty-two days nothing was heard from her, and it was feared that she had been lost, but on March 16 she reached Hamilton, Bermuda, after encountering revolving winds and heavy seas nearly all the way, and being struck in mid-ocean by a hurricane. The boat behaved admirably, but the great strain was too much for her main rigging, and it parted. Temporary gear was rigged to save the mast from going over the side. A steamer nearly ran them down one morning about 4 o'clock. In spite of the signals from the yacht the steamer did not change her course until she was almost aboard the yacht. The steamer was painted a drab color, and in the dim light of the early morning it was impossible to read her name.

After spending several days at Bermuda getting the yacht in shape for the balance of the trip, Senta left for Greenport on March 19, but she ran into heavy weather and was obliged to put back, starting again the following day, March 20. She had been out from Bermuda a week before the first of the gales was met. Nothing but the smallest bit of a square sail could be used to keep the yacht from broaching to. For three days she rode in this way, and was blown 254 miles to the south southeast. In spite of the oil bags heavy seas broke over the yacht. The starboard shrouds parted and the sail came down on the run at the same time. Temporary stays were used. About 250 miles from Montauk Point another gale was struck, and she was again driven off her course. Before she left England a temporary bulwark of planks heavily braced and fastened was built up around the sides of the yacht to protect the crew and support the life lines. One of the seas stove in this bulwark on the starboard quarter. Capt Esson's mate left him at Bermuda, owing to a misunderstanding. All of the crew were made up of deep-water sailors, and all agreed with Capt. Esson that it was the worst weather they had ever encountered.

At the City Island Yards.

THE bad weather that has prevailed up to last week has greatly delayed the work of fitting out yachts everywhere. In all the yachts at City Island rapid progress is now being made on nearly all of the boats laid up there. Hawkins' yard looks rather empty now that Columbia has been launched. She is lying in the stream getting her spars and rigging in place; her mast was stepped with the aid of a large wrecking tug. Carmita is also lying at an anchorage; she is fully rigged, and her crew is aboard awaiting orders. Some work has been done on the 70-footer Rainbow; her bottom is in much better condition than last year. The 70-footer Mineola has not been touched as yet. Work has begun on Emerald and Colonia.

At the Jacob yard the schooner Amorita has been put overboard, and is lying in the basin; during the winter her lead has been lowered and a metal centerboard substituted for the wooden one. The handsome cutter Queen Mab has been painted white, but the change is hardly an improvement. The cutter Hester will receive a new mast. The sloop design by Messrs. Gardner & Cox for Mr. Otto Lohrke is practically finished, and has been run out of the shop ready for launching; she is a good looking boat with very fair accommodation in her cabin and a large cockpit. Mr. John Hyslop's keel yawl is nearing completion; her cabin work is being put in place. She has a large amount of room below and a small cockpit. Her narrow cabin house gives ample deck room. The launch that was designed by Messrs. A. Cary Smith & Barbey for Mr. E. Wetherbee is planked and the deck beams are in place. The centerboard knockabout, also designed by the same firm for Mr. Wetherbee, is ready for launching.

At Wood's yard the 43-footer designed by Messrs. Gardner & Cox is being planked; she is an extremely handsome boat in every particular. Her frames and floors all through the center of the boat are of steel, as are her deck beams, while the frames and deck beams in the ends are of wood; she is double planked. Wood has done remarkably fine work on her throughout. This boat bids fair to surpass in good looks any boat yet turned out by Messrs. Gardner & Cox. The Fife cutter Jessica is ready for launching. The raceabout designed by Mr. Clinton H. Crane, of the firm of Messrs. Tams, Lemoine & Crane, has been launched and is now anchored in the harbor. This boat is built of mahogany and looks very well as she lies at her mooring.

At Byle's yard the centerboard sloop Wacondah is undergoing a number of changes, and a gasoline engine is being installed.

Yacht Club Notes.

The annual meeting and election of officers of the Southern Y. C., New Orleans, La., took place Thursday, April 4. The following officers were elected for the season of 1901-2: Com., A. Baldwin; Vice-Com., Theo. Grunewald: Rear Com., A. M. Cooke; Sec'y, L. D. Sampsell; Treas., James Buckley. Governing Committee, Charles Janvier, Thomas Sully, Fritz Jancke, J. B. Campbell, P. S. Schneidau. House Committee, H. A. Hamilton, C. W. Smith, T. G. Stehle, W. M. Stout, Dudley Selph. Regatta Committee, Emile J. O'Brien, H. L. Burton, A. M. Aucoin. Fleet Surgeon, Dr. R. L. Riley; Meas., Holmes Harrison.

* * *

The New Rochelle Y. C. met April 12 at the Yachtsmen's Club and decided to lease Harrison's Island in Echo Bay for club purposes. The island is owned by Adrian Iselin, Jr. Com. Edward Kelly presided, and after the meeting entertained the members at supper.

* * *

The Columbia Y. C. on the Hudson river will have a new house at the opening of the season. It has been erected on the site of the former club house at the foot of West Eighty-sixth street, and contains a number of fine rooms, including a club room, dining room and ladies' room. A spacious balcony skirts the front of the house, from which an excellent view of the Hudson is afforded.

* * *

Mr. Irving Cox will deliver the last lecture of the series at the Yachtsmen's Club, 47 West Forty-third street, New York city, on April 24. "The Steam Yacht, Its History, Design and Development," will be the subject.

The Spaulding St. Lawrence Boat Co., of Ogdensburg, N. Y., has recently issued a handsome catalogue which contains descriptions, illustrations and prices of alco-vapor, naphtha, gas, gasoline and electric launches in all sizes from 16ft. upwards. This firm will gladly forward to any address this catalogue on the receipt of application.

Fifteen Years' Development of the 90ft. Racing Yacht.

IN pursuance of their commendable policy of satisfying the very natural and perfectly proper public curiosity as to what manner of yachts are being put afloat for the defense of the America Cup this year, Messrs. Lawson and Crowninshield, the owner and the designer of Independence, have furnished the Scientific American with the sail plan of Independence, which is herewith reproduced from the original blue-prints. At the same time, by the courtesy of J. Beaver Webb, the designer of the famous old Genesta and Galatea, we are enabled to present the sail, sheer and deck plans and midship section of the latter yacht, these plans being also reproduced from the original working drawings.

It will be fifteen years ago this summer since the 90ft. cutter Galatea (her actual waterline length was 87ft., but she classes with the 90ft. Independence) came across the Atlantic to make the second attempt on the part of the typical English cutter to secure the America Cup. She and her sister, Genesta, may be said to have opened the latest period of the Cup contests, a period which has been far the most brilliant in the history of this memorable and long-drawn-out struggle. Although her genial owner, Lieut. Henn, one of the most thorough English yachtsmen that ever crossed the water, sailed Galatea, not merely in the Cup races, but throughout the yachting season of the following year, she did little to add to the prestige of her predecessor, Genesta, whose performance stands to-day as the most creditable among the many English yachts that have competed for the Cup. We have chosen Galatea, however, for this comparison, because on the basis of waterline length, by which the modern racing yacht is classed, she lends herself admirably to comparison with the 90ft. Independence of 1901. In our drawing the cutter of 1886 is thrown in shadow upon the cutter-sloop of 1901, and the two drawings being exactly to the same scale, they tell the story of the development which has been taking place during the past decade and a half better than would a whole volume of verbal description.

Speaking in a general way, it may be said that among the many conditions surrounding the Cup contests there is only one, at least as regards the dimensions of the yachts, that is strictly negative, and this is the rule that neither yacht must exceed 90ft. in length on the waterline. They may be as deep, as broad, as long on deck, as their respective designers may care to make them, but in length, while they may be many feet less than they must not be a fraction of an inch over 90ft. Subject to this restriction, then, the problem is to design a yacht which shall carry a maximum amount of sail upon a hull that shall have the smallest possible displacement and wetted surface, and shall present the easiest form to drive through the water. At the time of Galatea-Mayflower races, the American and English yachts were widely different in form, the English cutter being of narrow beam and considerable depth of body, the American sloop being of shallow draft and great beam, and depending upon the movable centerboard to give her the proper lateral plane when sailing by the wind. The initial stability of the sloop was large, the center of buoyancy moving out rapidly to leeward as the vessel heeled, and thus automatically, as it were, maintaining the margin of stability. In the narrow cutter, the initial stability was small, the center of buoyancy moving to leeward but little as she listed, although the righting moment increased rapidly with every increase in the angle of heel. On equal displacements, the greater initial stability of the sloop enabled her to carry a considerably larger sail plan, and hence in light winds she was invariably faster than the cutter. At higher speeds, however, the finer form of the cutter showed to advantage against the bluffer lines of the sloop; there was less wave-making resistance, and hence in the second race between Genesta and Puritan, which was sailed in a piping breeze, the cutter was practically a match for her shallower-bodied competitor.

The narrow beam of the cutter was due to an English rule of measurement which put a heavy tax upon beam, but none upon draft. As soon as this was removed, and a rule of measurement based on waterline length and sail area substituted, the English designers reverted to the more generous breadth of the original cutter type, Thistle having a beam of 20ft. 3in. to a length of 86ft. 6in., as against Galatea's beam of 15ft. on a length of 87ft. Valkyrie II. of 1893, which, with her sister, Britannia, may justly be termed the type from which the modern racing craft has sprung, showed on a waterline length of 85ft. a beam of 22ft. 6in., and a depth of 17ft. 6in. Simultaneously with this lowering of the lead and widening of the beam, the forefoot was cut away, the sternpost and rudder brought well forward of the after end of the waterline, with the result that the wetted surface and, therefore, the frictional resistance of the yacht was considerably reduced.

On the American side, development had been in the direction of deeper draft and a lowering of the center of gravity, until in Vigilant, the competitor of Valkyrie, we see a boat with the enormous beam of 26ft. and the deep draft, for a sloop, of 13ft. 6in. With such a draft it was evident that the days of the centerboard were over, and in the next yacht, Defender, Herreshoff produced a keel boat of similar contour to Valkyrie, but with even 2ft. greater draft than that yacht. It was at the time of the Valkyrie-Vigilant races that the forward and after overhangs of the racing yacht began to be carried out far beyond the load waterline, and so great has been the development in this direction that in Independence we have a forward overhang of 27ft. 5½in. and an after overhang of 23ft. 5in. These exaggerated overhangs have the advantage of compensating for the increase in beam (compare the deck plans of Galatea and Independence) by permitting the fore and aft lines to be practically as fair and easy as those of the old cutter type.

It will be seen in the comparison of the midship sections that the modern yacht embodies two points of excellence of the cutter and sloop, for it has the low center of gravity of the one and the high center of buoyancy of the other. The bottom of the lead of Independence is 6ft. 6in. lower than that of Galatea, and her beam is 8ft. 5in. greater. Thanks to her great length, her lines are at least as easy, and by carrying the flat floor of the hull well out into the overhangs, Mr. Crowninshield has secured the unmistakable advantage that when the yacht is heeled, even in a moderate sailing breeze, she lengthens her waterline from 90 to 105ft. The cutter, on the other hand, lengthens but little; as will be seen by comparing the listed waterline of both yachts. The comparison is not made on the same degree of inclination, for the reason that the relative tenderness of the cutter would cause her to heel about 30 degrees in a breeze which would only incline the cutter-sloop by 20 degrees. With her straight stem the cutter, of course, gains nothing when heeled forward and her gain aft, at the given inclination, is not more than a couple of feet.

In considering the form of Independence, as shown from the midship section, we must bear in mind not only that she possesses all the initial stability of the sloop type due, as we have seen, to great beam and shallow body, but that the height of the center of buoyancy, when the yacht is heeled, is increased by the great lengthening of the waterline and consequent submersion of the full ends of the yacht, as shown in the plan of the listed load waterline. Under 20 degrees of heel, the center of buoyancy of the submerged portion of the hull moves out to leeward until it is 2.75ft. from the vertical axis of the boat and only 2.83ft. below the normal waterline. Compared even with Columbia, she shows in this respect a remarkable gain; and it is probable, moreover, that the center of gravity of the boat is lower than that of the last Cup defender. That this is the case is suggested by the fact that Independence will spread 1,476 sq. ft., or 11 per cent., more sail than Columbia, although the displacement of the latter vessel is greater.

The increased power of the cutter-sloop over the cutter is not, however, to be all attributed to form and disposition of weights; for a corresponding gain has been made both in the materials and methods of construction. Looking at the hulls of the two boats, as shown in outline and in shadow, it is seen that although her displacement is less, in bulk or cubical capacity Independence is enormously larger than Galatea. She is 39ft. longer on the deck, 8½ft. greater in beam, her deck area alone being two and one-quarter times as great as that of Galatea. Although nominally in the same class by virtue of her waterline length, Independence, measured by her actual superficial area, is a vastly bigger boat. The same disparity is present in the spars and sails. Nevertheless, as will be seen from our comparative table of dimensions, the total weight of the hull, spars, rigging, sails, etc., of the bigger boat is less than that of the cutter by 8.9 tons, or 11 per cent.—a structural paradox which tells more eloquently than words the story of the advance which has been made during the past fifteen years, not merely in the quality of the materials themselves, but in their scientific adaptation to the problem in hand. Doubtless Galatea, as designed by Webb, embodied the latest ideas in the way of lightness of construction known at that date to the naval architect. Her hull was of steel, but the deck was wood planked, and the spars were solid throughout. Although she was lightly constructed, as things went in those days, nothing was sacrificed to the determination to make her a perfectly staunch and seaworthy vessel, and doubtless today she could snug down and thrash her way, without starting a rivet or loosening a spar, through a gale that would send Independence or, in fact, any of this year's 90-footers to the bottom. Still, the America Cup contests are not supposed to be, or, at any rate, have had the luck never as yet to be, sailed in a gale of wind. Therefore Independence is a perfectly proper and legitimate craft for the work she is called upon to do. Allowing then that staunchness has been somewhat sacrificed to lightness, as compared with the cutter, we may still attribute the remarkable lightness of Independence, both in hull, spars and sails, to the far greater strength per unit of weight of her materials of construction, and to the great care which has been exercised to dispose this material to the best structural advantage. To particularize, we may mention the substitution of nickel-steel framing and Tobin bronze plating for the mild steel frames and plating of Galatea; the substitution of steel and aluminium plating for the heavy wood deck, and the use of plow steel, having a strength that runs pretty close to 100 tons to the square inch, for the standing rigging, and the substitution of hollow steel and hollow wooden spars for the solid pine sticks which were used on the earlier boat.

It must be confessed that the sail plan of Independence is very impressive. We were prepared for an increase over that of the last contestants, but not for such an increase as this. The ring or cap of the mainmast is 108ft. and the topmast is 150ft. above the deck, while the head of the topsail will be 172ft. 7in. above the same level. What these dimensions are can best be realized when it is stated that were Independence to range alongside the center of the Brooklyn Bridge, the topmast would be level with the passenger foot walk, while the peak of the club topsail would tower 20ft. above the top of the chord of the trusses. Compared with Shamrock and Columbia, it will be noticed that the gain in sail area has been in the direction of greater height. The base line from end of bowsprit to end of boom is only 3½ft. greater than that of Columbia, and is, indeed, 4ft. less than that of Shamrock. In height, however, there is a gain of 11ft. over Columbia and not less than 17½ft. over Shamrock. The English yachting journals are crediting Shamrock II. with a base line of 185ft., which is exactly that of Independence, and a mast measurement of 148ft. It is not stated whether this measurement is over all or whether it is from the deck. Shamrock's boom is given as 112ft., or 3½ft. longer than that of Independence, but as the measurement from the forward side of the mast to end of bowsprit of Shamrock is said to be 71ft., as against 74.5ft. in Independence, it is evident that the mast of Shamrock is to be placed several feet further forward and that she will probably show a larger area in her mainsail.—Scientific American.

Lysistrata.

JAMES GORDON BENNETT'S new steam yacht Lysistrata, designed by George L. Watson, and built by W. Denny & Bros., has just completed her trials, and is said to have given great satisfaction to her owner, designer and builders. Over an 80-knot course on the Clyde Lysistrata showed a mean speed of 19½ knots, and without forced draft 16½ knots. The yacht handles admirably, has twin screws and 6,500 horse-power. In her high speed trial the machinery acted faultlessly. There was no heating or complication of any kind, and so cool were the bearings at the end of the trial that the chief engineer said he was prepared to drive her another 300 miles at the same speed without fear of the results.

Lysistrata is of 2,800 tons, has a perfectly straight stem, has a storm deck fore and aft, a single huge funnel, with one mast abaft it, and one square yard for signaling purposes. The interior arrangements are novel, and, generally speaking, she is unlike any yacht built. She has no bowsprit, but features at the stern and bow are large owls, with electric eyes, amid a scroll work of mistletoe. More striking than all else in the yacht are the anchors, which are stockless, like those used on board warships, the shaft being drawn into the side of the ship. The hull has the appearance of being made out of a solid piece of metal, so highly is it polished and finished.

Harbinger.

THE catboat Harbinger, owned by Mr. William W. Genet, was destroyed by fire at 1 o'clock on the morning of April 9. She was hauled out on the grounds of the Knickerbocker Athletic Club at Bayonne City, N. J. All that remains of the once famous Harbinger, built in 1889 by Hanley, at Monument Beach, is a charred keel with stumps of frames sticking up and stem and part of her transom and deadwood. Her entire cabin, planking, deck

HARBINGER after the fire.

and frame were so completely consumed that the ashes were carried away by the strong northwest wind that was blowing at the time. Her iron work is intact, and bolts and galvanized nails strew the ground. The brass screws of her planking must have melted. The galvanized rods that ran through her centerboard stand out all twisted. Her rudder was burned off, but the quadrant of her steering gear was saved. Her iron traveler lies on the sand on the beach. She was blocked up on the cradle of a small set of marine railways; this cradle was burned and the heat caused the rails of the track to bulge badly. Another catboat owned by Mr. Thomas J. Parker, called Tiche, was also completely gutted and her stern burned off. The fire is thought to be of incendiary origin. Harbinger was valued at $1,500 and Tiche at $1,000.

YACHTING NEWS NOTES.

The boat being built by Capt. Fearnside for the Canada cup trial races is from a design made by Father O'Brion, of St. Johns, Newfoundland.

The yawl Ailsa, owned by Mr. H. S. Redmond, N. Y. Y. C., sailed from Southampton for New York on April 5. The 65ft. cutter Eelin, owned by Mr. P. T. Dodge, has also left England for America.

The steam yacht Neckan which was burned last fall while in winter quarters at Rockland, Maine, has been rebuilt and now measures about 125ft. over all; her original length was 109 feet. She is owned by Mr. H. C. Baxter, of Brunswick, Maine.

Manning's yacht agency has sold for Mr. Edward S. Renwick his steam yacht Giralda to Mr. Charles G. Conn., of Elkhart, Ind.

The 70-footer Virginia, owned by Mr. W. K. Vanderbilt, Jr., is being strengthened at Burlee's yard, Staten Island, under the direction of Tams, Lemoine & Crane. Yankee and Rainbow were practically rebuilt at the Hereshoffs'.

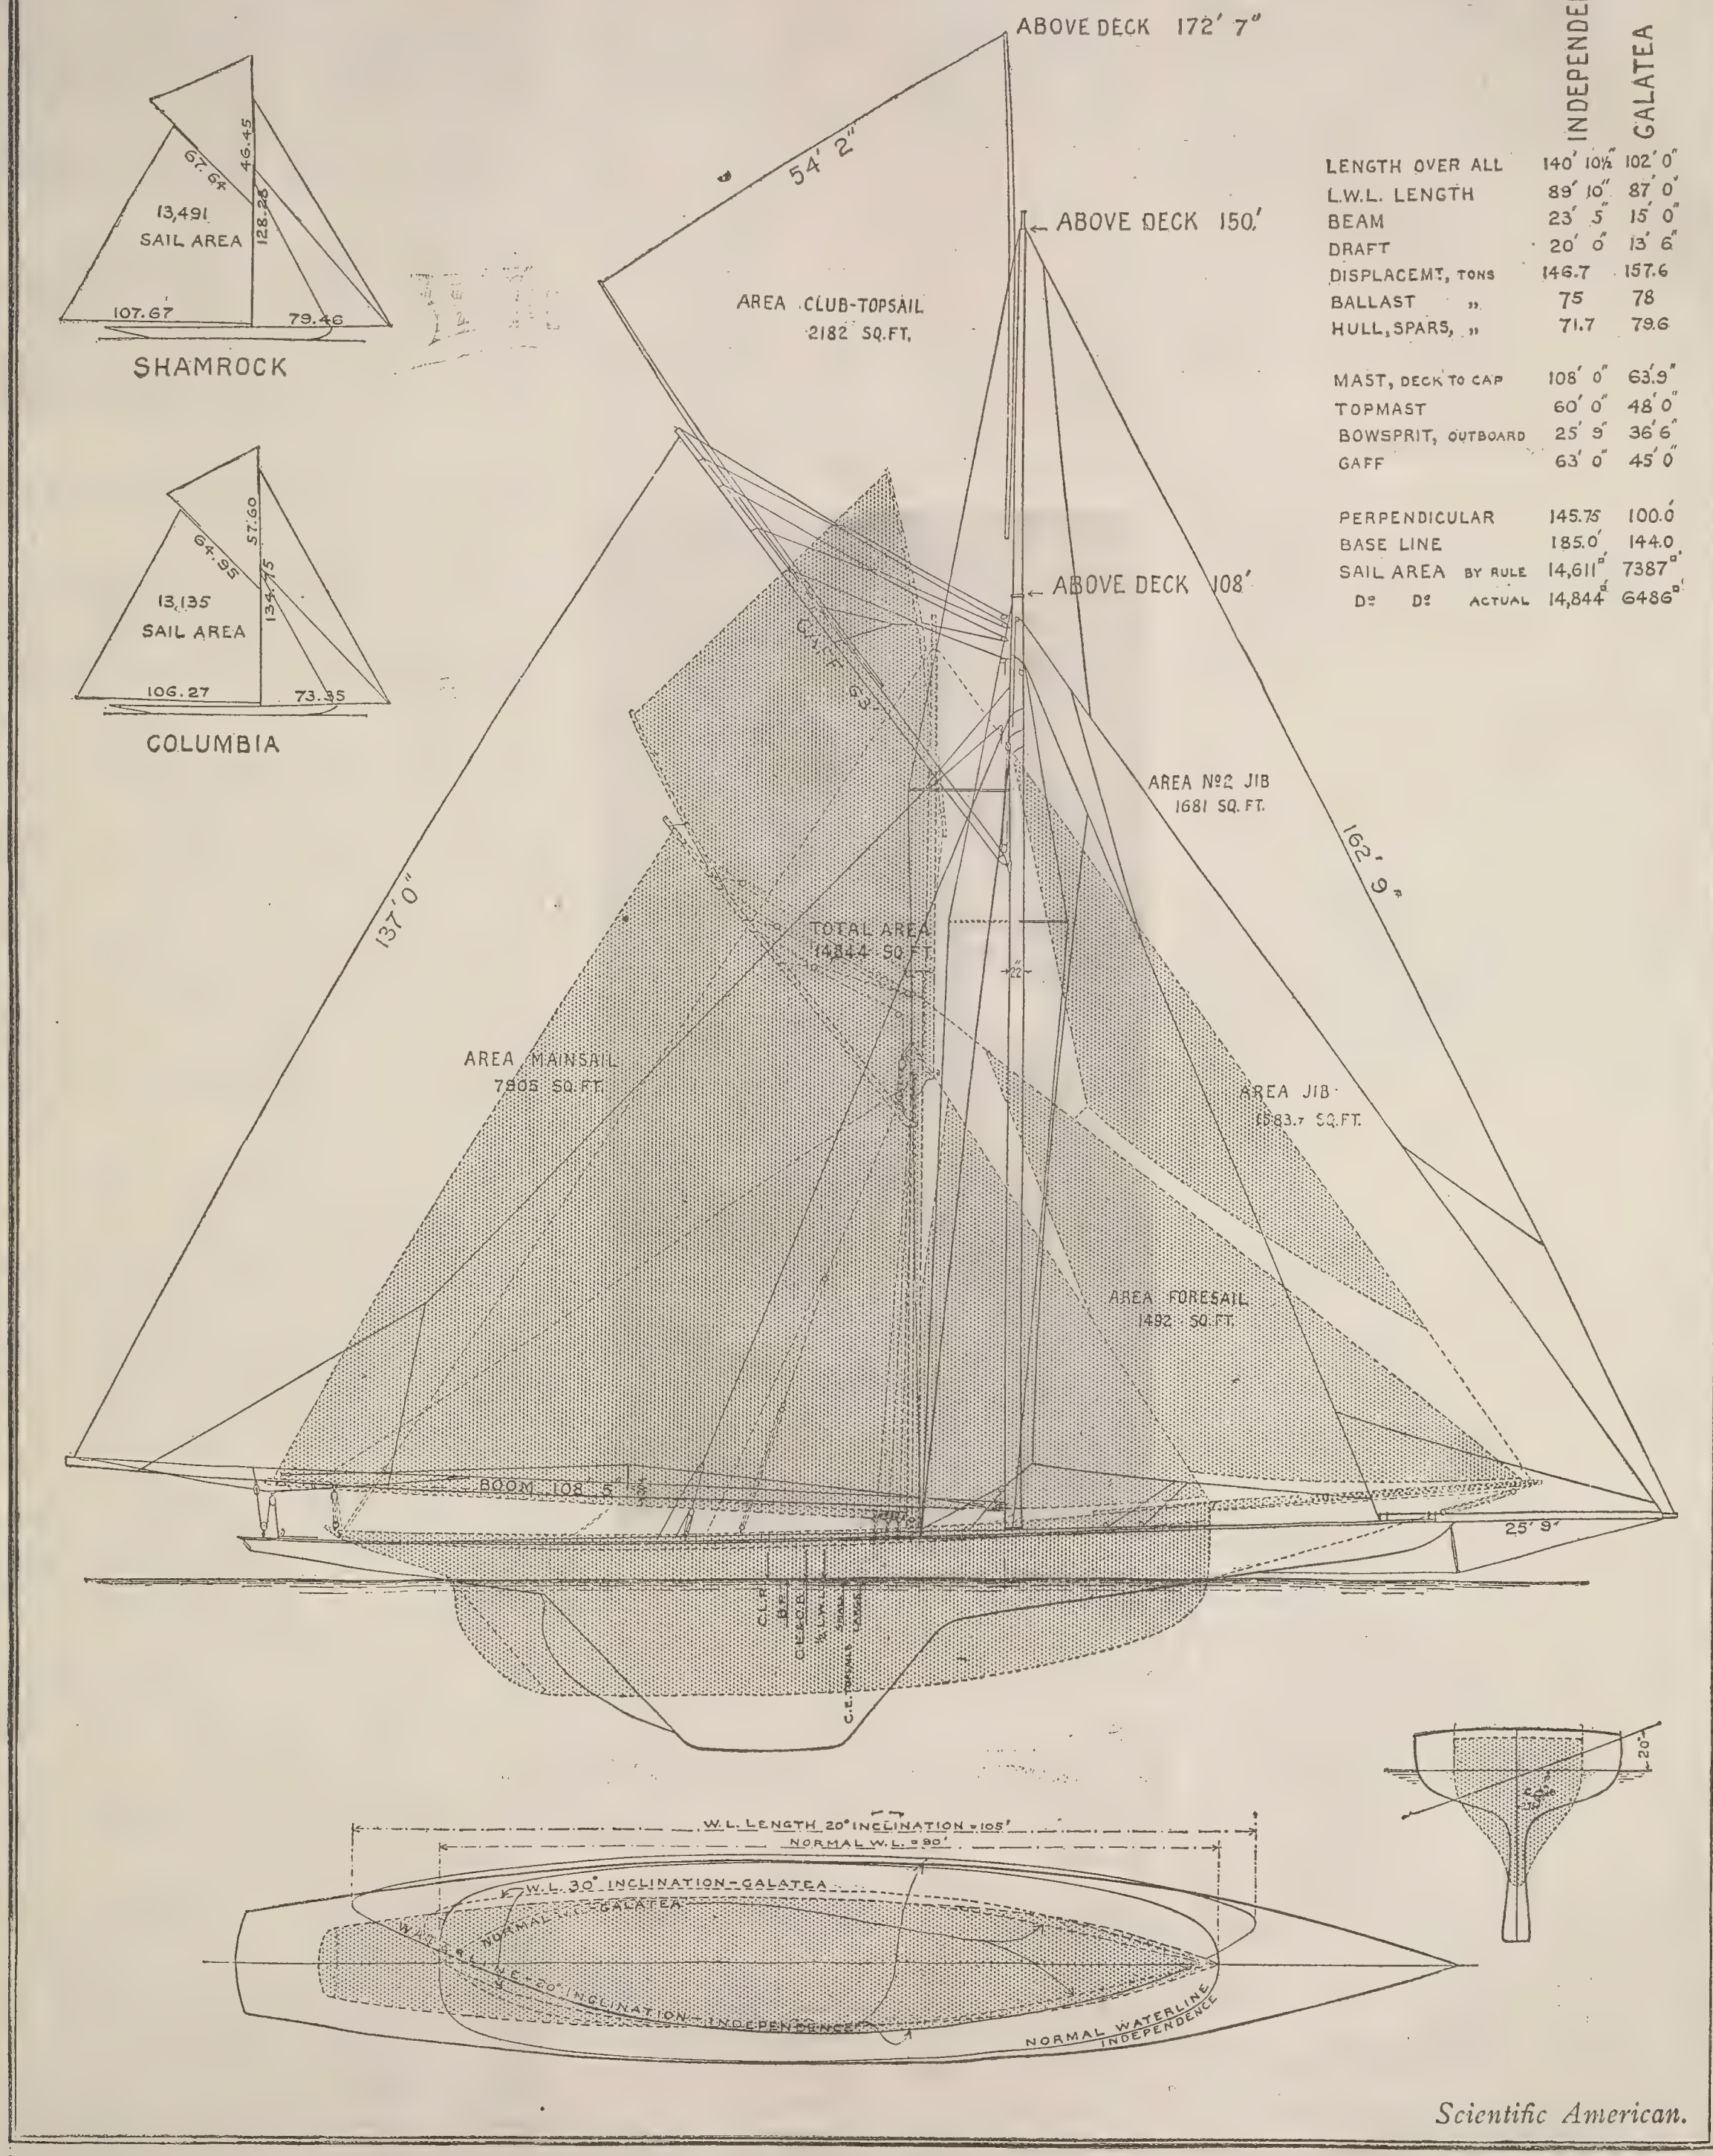
The schooner yacht Clarette which was reported off Highland Light in distress on April 1, was towed to Boston by the fishing schooner Tecumseh. Capt. Coomey, of the fishing schooner Tecumseh, received $300 from the owner of the yacht.

Com. Robert L. Stilson, of the Bergen Beach Y. C., is having a 38ft. naphtha launch built at College Point, L. I. She will be completed about May 1.

The steam yacht Radha has been chartered by Messrs. Tams, Lemoine & Crane to Mr. W. L. Bull for the coming season.

The steam yacht building at Lawley's for Mr. W. P. Eno, N. Y. Y. C., from designs by Messrs. Tams, Lemoine & Crane, will be named Aquilo.

The following sales have been made through the agency of Huntington & Seaman: Seawanhaka Senta sold to R. C. Mitchell, Sachem's Head Y. C.; Sewanhaka Ruby sold to George E. Edwards, of New Rochelle; Sewanhaka Vagrant sold to Messrs. Brown & Low, of Brooklyn; Marine Field Club Sweetheart sold to Stephen H. P. Pell, of New York; knockabout Wideawake sold to R. I. Carter, of Baltimore, Md.; sloop Adelaide sold to W. C. Sutherland, of Pittston, Pa.; yawl Dulwich sold to George C. Kirkpatrick, of Philadelphia, Pa.; auxiliary yawl Ontiora sold to J. Murray Watts, of Philadelphia, Pa.; alco-vapor hunting launch Zolfo sold to F. B. Van Doon, of Brooklyn.



FIFTEEN YEARS DEVELOPMENT OF THE 90 FOOT RACING YACHT.

As shown by a comparison of "Galatea" (cutter, 1886) and "Independence" (cutter-sloop, 1901).

(Reproduced by the courtesy of the designers, J Beavor Webb and B. B. Crowninshield, from the original working drawings.)

Rifle Range and Gallery.

Fixtures.

May 30.—Pohlmann's Pavilion, Jersey City Heights.—Tournament of Our Own Shooting Society.

July 14-23.—San Francisco, Cal.—National Schuetzenbund of North America's annual tournament in Shell Mound Park. Offhand, 200yds.

Aug. 6-7.—Taftsville, Conn.—South New England Schuetzenbund's annual festival and prize shoot.

The Gastinne—Renette Medal.

THE great revolver tournament of the Metropolitan Revolver Club, at Conlin's gallery, New York, was concluded at midnight of April 11. It was a very close competition, and excited a great deal of interest. The winner was the oft-victorious Police Sergeant W. E. Petty, who captured the Gastine-Renette medal, the trophy, with a score of 179 at 15yds., and 180 at 20yds., making a grand total of 359 out of a possible 360.

J. W. Christiansen was second with 358. J. A. Dietz, Jr., was third with 356, and A. L. A. Himmelwright fourth, 347; Dr. J. A. Hicks fifth, 329, and J. C. Summers sixth, 252.

Mr. Thomas Anderton, of Boston, Mass., April 13, at Walnut Hill, with a Colt's new service target revolver, made 915 at 50yds., the previous amateur record being 903, also held by Mr. Anderton.

Trapshooting.

Fixtures.

April 16-18.—Leavenworth, Kan.—Annual tournament of the Kansas Sportsmen's Association. W. H. Koehler, Sec'y.

April 16-18.—Pella, Ia.—Jim Sheehy's amateur target shoot.

May 21-23.—Henderson, Ky.—Amateur tournament given by the Peters Cartridge Company; two days targets; one day live birds. John H. Mackie, Mgr.

DRIVERS AND TWISTERS.

Pigeons for shooting. Private matches a specialty. Antwerps for breeding.—L. M. Gilbert, 1128 Palmer St., Philadelphia, Pa.—*Adv.*

The programme of the Peters Cartridge Company's amateur tournament at Chattanooga, April 23 and 24, under the auspices of the Chattanooga Trapshooters' League, can be obtained of the Peters Cartridge Company, Cincinnati; Dr. R. S. Henry, Chattanooga, or J. H. Mackie, Cincinnati. Targets will be thrown at 2 cents apiece. The Rose system will govern. The Peters Cartridge Company will give a handsome gold trophy for the highest average of the two days. The profits of the shoot will be placed in an extra event at the close of the second day. Manufacturers' agents may shoot for p. o. t. o. Lunch served on the grounds. Shooting begins at 9 o'clock. Reduced rates on railroads. Headquarters, Read House. The programme is alike for each day—

THE ROBIN HOOD TROPHY.
Emblematic of International Team Championship.

six at 15, three at 20 and one event at 25 targets, entrance based on 10 cents per target, and $5, $10 and $15 being added to the events in the order mentioned. The Peters Cartridge Company's tournament, at Olathe, Kan., April 23 and 24, T. F. Norton, manager, has a similar programme.

Our Own Shooting Society, whose headquarters are at 110 Grand street, Hoboken, N. J., announces the following: "Cash prize tournaments for cash prizes is the event now being arranged for by the popular Our Own Shooting Society, of Hoboken. The tournaments will be held at Pohlmann's Pavilion, Jersey City Heights, Thursday, May 30, Decoration Day, from 10 A. M. on. The shooting conditions and programme are as follows: Tickets 35 cents; three for $1. Two best tickets to count. Any .22cal. short cartridges and rifles allowed. Prizes: $18, $12, $10, $8, $6, $4, $3, $3, $2, $2, $2. The bowling rules and programme are subjoined: Tickets 25 cents; three best to count. Prizes $18, $12, $10, $8, $7, $6, $5, $4, $3, $3, $2, $2. There are premiums on both the shooting and bowling of $5, $3 and $2, which will go to the marksmen and bowlers turning out the five best tickets in the several tournaments."

Mr. L. H. Schortemeier, captain of the New York team, 201 Pearl street, New York, writes us as follows: "The return match between New Jersey and New York teams will be held on the East Side Gun Club grounds, Foundry and Ferry streets, Newark, on the last day of the New Jersey State tournament, Friday, May 10. Conditions ten to fifteen men on a team; 25 live birds per man. This should be a corking race, as New York won by only 1 bird in the first race, the score being New York 303, New Jersey 302."

Under date of April 13 Mr. F. Lebohner, of Dexter Park, Brooklyn, L. I., writes us as follows: "On Tuesday, May 14, at Dexter Park, a naphtha launch will be offered as a prize to be shot for, under my management. Seventeen entries to fill. Conditions: Ten live birds, $10 entrance, birds extra; handicap rises; surplus divided among winning scores; launch to be shot for miss-and-out as to ties. Winner of launch not entitled to division of surplus."

The programme of the third annual tournament of the Newell Gun Club, May 1, 2 and 3, Newell, Ia., provides open and amateur events each day, the first two days at targets, the third at live birds. Targets 2 cents; live birds 15 cents. There is $2.50 added for high average each day, $3 for general high average, and $1 for second general high average. Magautrap rules. Moneys divided, 40, 30, 20 and 10 per cent. Mr. H. G. Hall is the secretary.

Mr. H. W. Brown, Binghamton, N. Y., writes us as follows: "Every indication points to our having one of the largest tournaments of the season.. We are well equipped to handle ours. We have a set of expert traps and a magautrap. Scores are covered. It appears in our programme that the tournament was to be held at Exposition Park, but the high water prevents. We shall use the Chenango street grounds, reached by street car every fifteen minutes."

In our columns elsewhere is presented a cut of the Robin Hood Powder Company's trophy, emblematic of the international team championship at inanimate targets, which was won July 5, 1900, at Swanton, Vt., by the Union Gun Club, and is subject to challenge. Mr. Geo. B. Watson is the secretary.

Mr. Oswald Von Lengerke, of Von Lengerke & Antoine, Chicago, left for his home on Thursday of last week, after a pleasant visit with old friends. Mr. Von Lengerke was of the number who killed 24 in the Grand American Handicap in the first week of the month.

Mr. John H. Mackie, of the Peters Cartridge Company, writes as that the Peters Cartridge Company will give an amateur tournament at Henderson, Ky., on May 21, 22, and 23, two days at targets, one day at live birds. Mr. Mackie will manage it.

The match between John H. Welbrock and Charles Meyer, at 100 live birds, at Interstate Park on Friday of last week, resulted in a victory for the latter. At the end of the seventieth round the score was 64 to 51, and Welbrock then withdrew.

Mr. F. T. Sherwood, secretary-treasurer, informs us that the Trapshooters' League of Indiana on April 10 granted to the Peru Gun Club sanction for a tournament on May 7, 8 and 9. Mr. Chas. Bruck is the secretary.

The Zanesville Gun Club, of Zanesville, O., will hold its spring tournament May 15 and 16. Mr. D. D. Gross, of Urbana, O., will manage it. The club has adopted the equitable system for the division of the moneys.

Mr. Franklin Stearns, of Richmond, Va., now holds the medals emblematic of the championship of the State of Virginia and the City of Richmond. His shooting of the season has been of a very high order of merit.

In our account of the shoot-off of the ties in the report of the G. A. H. last week it was erroneously stated that Mr. Morrison's "gun failed to extract properly once." The cause of the incident was a misfire.

The Trenton Shooting Association and the Freehold Gun Club have fixed on Wednesday of this week for the third and last contest of the series of team races.

Mr. Edward Banks will be present at the Interstate shoot at Jacksonville, Fla., this week. He started last Sunday for the land of the cypress and myrtle.

Mr. Elmer E. Shaner and wife made a short stay in New York last Saturday while en route to Jacksonville, Fla., where Mr. Shaner manages an Interstate shoot.

The match between the South Side Gun Club, of Newark, and the Boiling Springs Gun Club, of Rutherford, N. J., has been postponed to April 27.

The opening shoot of the Massachusetts Amateur Shooting Association will be held at Springfield, Mass., on April 19.

BERNARD WATERS.

Richmond Pigeon Club.

RICHMOND, Va., April 10.—The Richmond Pigeon Club finished the first season of its existence this afternoon with a very successful shoot. The scores must not be taken as a criterion of the shooting, as Lynham, as usual, had got together a clipping lot of birds, which, with the aid of a gale of wind dead in the shooters' teeth, gave a whole lot of trouble. Many birds that under normal conditions would have been scored to the shooter were whirled over the dead line and had to be marked with an asterisk, while others simply corkscrewed out of everything. To-day's shoot decided the ownership of the club medal, given to the shooter making the highest aggregate score for the season, and this, like the State and city championship medals, now rests in the possession of Mr. Franklin Stearns. Messrs. Hammond and Wood were respectively second and third. Scores:

Wood, 29	12111202221102202*—16
Colquitt, 30	202*022022*022011202—11
F Stearns, 30	22222222*2222222222*—18
Boyd, 28	00212*1020002*12112*—11
T F Stearns, 28	0000202222020201220—10
Harrison, 28	2*02020120021221211—14
Vaughan, 29	20222012201222212*2—16
Hammond, 30	22*0022222222202222—15
Buckner, 28	2*222220*02202022*1—13
J C Tignor, 28	22y*0202*12211111112—15
Greene, 29	2022202222202220020—14
Johnston, 28	1222022201201*2*2112—14
Wood, 29	2*021*1122122211012—16
Ellyson, 30	0101021*1210012222212—14

A sweep at 10 birds was afterward shot off at 30yds. rise, $2 entrance, but the rapidly waning light made the shooting very erratic. Scores:

Ellyson	2221221012—9	Harrison	1011210102—7
Stearns	202222*120—7	Johnston	1222222101—8
Hammond	1222002*12—7	Wood	000*1w
Buckner	2221012220—8	Anderson	0*102w

R. F. BANKS.

Trap at Dupont Park.

ST. LOUIS, Mo.—The Dupont Park medal shoot April 7 had a fair day. Birds mixed. No wind. Baggerman won shoot-off on the eleventh round. The scores:

C Fresch, 30	2111111212—10	N Crosby, 30	01111112*1— 8

Trap at Philadelphia.

PHILADELPHIA, Pa., April 13.—The Athletic Gun Club, of Philadelphia, and the Florists' Gun Club shot a team contest at Essington to-day, twelve men on a side, 50 targets per man. The Florists won by 436 to 375. The scores:

Florists' Gun Club—Dorp 39, Haywood 26, Parsons 43, Massey 42, Hause 18, Burton 42, Hallowell 46, Bell 36, Anderson 45, Westcott 33, Whitaker 33, Pechin 33; total 436.

A. C. of P. Gun Club—Perrine 36, Muller 28, Barrett 33, McKaraher 32, Carlisle 33, Sheeler 29, Eisenlohr 30, Edson 20, Dare 22, Suttle 30, Purviance 40, Edwards 42; total 375.

ON LONG ISLAND.

Sheepshead Bay Rod and Gun Club.

Sheepshead Bay, L. I., May 21.—The main event to-day was won by Robert Smith.

Shepard	15	15	..	..	22	Dr Miller	..	..	..	16	23
Wright	17	17	16	19	25	Chambers	..	..	..	8	.
Osterhout	20	..	..	20	25						

No. 5 was at 15 singles and 10 pairs.

IN NEW JERSEY.

Cannibal Gun Club.

Trenton, N. J., April 4.—Nos. 1 and 2, 10 targets, practice; No. 3, 15 targets, club gold and silver medals, for members only; No. 4, 15 targets, for gold medal; No. 5, 15 targets, shoot-off of tie; No. 6, 15 targets, for silver medal; No. 7, 5 targets, tie for silver medal; No. 8, 25 targets, for Bechtel medal, handicap, three prizes; medal and first money to high gun, second for next highest; three ties; No. 9, 10 targets, shoot-off of tie; Nos. 10 and 11, 5 pairs, cash sweep; No. 12, 25 targets, special match race.

Owing to the inclemency of the weather but few shooters turned out at the regular monthly shoot of the Cannibal Gun Club. But what was lacking in numbers was made up in enthusiasm. We had Dr. Thomas, of the Trenton Shooting Association, as a visitor. You will see by the Doctor's scores that he had his eyes on the targets.

It is very likely that the Cannibals will organize a team of seven men for a team shoot with the Trenton Shooting Association in the near future:

MINCH.

New Jersey State Sportsmen's Association.

THE New Jersey State Sportsmen's Association has issued the following circular letter:

"It is the desire of the N. J. S. S. Association to secure a ten or fifteen men team from New Jersey to shoot against a similar team from New York State and wipe out the defeat we suffered by the narrow margin of one bird.

"For this purpose the Association has decided to set the last day of the tournament which is to be held May 7-10, at Smith Brothers' grounds, corner Ferry and Foundry streets, Newark, N. J.

"It is not the intention to select a team at the present time, but to draw the men present at the tournament.

"A very attractive programme has been prepared, but not as yet ready for distribution. Several medals and cups for team races and individual championships, also high averages at clay and live birds, will be contested for.

"You are earnestly requested to be present.

"New Jersey State Sportsmen's Association."

South Side Gun Club.

Newark, N. J., April 13.—Nos. 1 to 7 were at 10 targets; Nos. 8 to 12 were at 25 targets. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12

C Miller	2222021111— 9		

Boston Gun Club.

BOSTON, April 10.—The closing weeks of the Boston Gun Club's spring serial prize shoots do not seem to be on the good books of the weather clerk, if Wednesday, April 10, is any criterion. The last three weeks have all been very poor days for trapshooting, and improving scores has been out of the question. The shooting to-day was extremely difficult, caused by the fact of our magautrap being on the sick list for about an hour. It is the first real illness it has encountered since its arrival here two years ago, so we can easily forgive it. The shooting for the first hour was over a single expert trap, which was keyed up to a good strong target, and accounts for not a few of the misses which found their way into the scores. After shooting on that for a while and then going back to the magautrap made another change, and taken all in all the conditions were too much of a handicap. In the prize match Howe secured first place with 24, G. W. second with 20, and Spencer third with 19. Scores as follows:

Events:	1	2	3	4	5	6	7	8	9	10
Howe, 19	9	8	7	6	7	8	7	9	10	8
G W, 17	5	6	3	3	7	7	5	8	..	..
Abbott, 17	7	6	6	6	4	8	5	6	4	..
Spencer, 18	6	5	3	7	8	5	8	6	8	7
Williams, 16	..	..	..	..	..	..	3	..	9	..
Horace, 18	..	..	..	..	..	..	..	3	..	..
Frederick, 14	..	..	..	..	..	..	..	..	4	..
Henry, 16	..	..	..	..	..	..	..	..	2	..

Match score, 30 bluerocks, unknown angles:

T Howe	1100111111001111101111111110111—24
G W	1011011101111011000011111111100—20

Abbott	0111011010000001111O
Williams	0000110100111011111

SECRETARY.

St. Louis Shooting Association.

ST. LOUIS, April 13.—A great many trapshooters have written to the secretary of this Association asking for programmes, which indicates at this early day a decidedly strong interest.

We are going to give a good shoot, and if we have fine weather the twenty-fourth annual tournament will go down in history as a record-breaker.

A synopsis of the programme is about like this: On Monday, May, 27, will be a preliminary practice day, to give the amateurs the opportunity of shooting over the live-bird traps and getting the range. The target traps will be in operation all day long, so that those who prefer bluerocks can take their measure.

Dave Elliott has made Dupont Park more attractive than ever before. The regular weekly shoots which are held there are so large that his force of trappers, pullers and live-bird boys are trained perfectly. This competent help will add greatly to the enjoyment of the sportsmen. In the box office Mr. Whitney, who is the best that ever was, will probably officiate.

To the gentlemen of the press we can only say that we will treat you as well as last year in the matter of scores, and will give E. Hough, Frank Riehl and Fred Pride, and any other that comes this way, a glad hand.

The magautraps will run all the time. Something will be doing ing with the State Association team shoot.

On the second day the Republic cup will be the attraction. This cup is a $1,000 guaranteed purse. It is a bona fide championship with no strings, and we place it in this prominent position so that everybody can enter and shoot for it.

The magautrap will run all the time. Something will be doing at the targets, either in the regular events or practice.

A few words about the target events: They are short, 15 and 20 bird races. Most of them carry liberal added money, and those that don't will have a string of prizes, like a eucher party. Every article will be of value to a shooter. They have been donated to the St. Louis Association, and we can afford to be liberal. The prizes range in value from a shotgun down to a pair of suspenders. A case of Mumm's extra dry has been offered through Mr. Henry Griesedieck.

Blake Collins and Frank Orvis have sold stocks and bonds in order to make money for the shoot.

George Rawlings, as chairman of the prize committee, has written to the manufacturers delightful letters, which no doubt they were glad to receive, as most of them have sent their contribution, realizing that the Missouri State shoot is of such importance that they will derive material benefit.

Our president, Dr. Starkloff, is the champion of Carondelet. He will take care of your health when you come to St. Louis, and at the present time is looking after the interests of the tournament in a careful manner.

To our squad captains we wish to say that there will be special prizes of a substantial nature for you, and we want you one and all to help make this tournament a greater success than ever before.

HERBERT TAYLOR, Sec'y.

Auburn Gun Club.

THE annual meeting of the Auburn Gun Club was held March 30, and the following officers were elected: President, O. L. Barker; Vice-President, H. A. Fletcher; Treasurer, C. E. Conner; Secretary, L. A. Barker; Assistant Secretary, H. L. Snow. The club is in a good financial condition, with a membership of about fifty, and everything looks favorable for a prosperous year. The club has good grounds, with a set of five expert traps, a magautrap and a fine two-story club house. They will shoot every Saturday afternoon, beginning the first Saturday in May and ending the last Saturday in September.

There will be a programme of four events every Saturday, consisting of 10 known angles, 25 known, 10 unknown and 25 unknown, over the magautrap, making 70 targets in all. The 25 known will be the club championship for a handsome gold badge, and in this event the same handicap will be used as in the past two years, namely, 90 per cent. men on the scratch, 85 per cent. men one dead bird, 80 per cent. men, two dead birds, and so on down to 60 per cent. The score is kept by points, 25 counting 10 points; 24, 9 points, and so on. The system has been very successfull, as shown last year, when four men scored as follows: 140, 139, 138, 137, with a dozen men close up. The 25-target, unknown angle, event will be for four fine prizes, and will be shot under a distance handicap from 16 to 21yds., with handicap revised every four shoots, same as other events.

The club has made a contract with one of the stables in town and will have a buckboard run to the grounds from Post Office square, Auburn, once an hour every Saturday, commencing at 2 o'clock. This will enable shooters to ride direct to the grounds for 10 cents, any time from 2 P. M. until 5 P. M.

The Auburn Gun Club boasts of some of the best shots in the State. Among them are G. R. Hunnewell, who won the individual championship of Maine last summer, and L. M. Norton, who held the championship in 1899. In 1898 the club held the team championship of the State, having won it from the Waterville Club, the team consisting of Hunnewell, Norton, Conner, Colb, and Berry. Mr. O. L. Barker won the gold badge presented by the Club last year, it being won in 1899 by G. R. Hunnewell, in 1898 by L. A. Barker, and in 1897, the first year of the club's organization, by Mr. O. L. Barker. Then they shot over one trap and had five members. To-day the club is one of the most prosperous gun clubs in the State, with the best of fitted up grounds and house. The members take a lively interest in the welfare of the club, and visitors are always welcome. Aug. 21 and 22 there will be an Interstate tournament held at the Auburn Gun Club grounds, under the management of Elmer E. Shaner. This will give people an opportunity of seeing many of the professionals shoot, among whom will be some of the crack trap shots of the United States. The club also will hold an annual tournament on Decoration Day.

L. B.

Ossining Gun Club.

OSSINING, N. Y., April 13.—The scores made at the regular weekly shoot of the Ossining Gun Club, Saturday, April 13, were as follows. All events at 10 singles except No. 6, which was at 5 pairs:

Events:	1	2	3	4	5	6	7	8	9	10	11	12
E Garnsey	5	8	8	8	6	6	5	5	..	..	..	..

C. G. B., Capt. O. G. Club.

Pigeon Shooting at the Traps.

The Selling of Newspapers.

FOR a few weeks before the recent Grand American Handicap the class of newspapers of New York city which are commonly known as the "yellow journals" devoted much space to setting forth the cruelties of pigeon shooting at the traps. Furthermore, in the week of April 1, coincident with the commencement, continuance and conclusion of the Grand American Handicap, America's greatest shooting event, the press, yellow and otherwise, of New York city abounded with editorials, special articles and letters from contributors in which pigeon shooting at the traps was denounced, not for its unlawfulness, but for its cruelty.

The newspapers catering to class sentiment set forth the cruel features as they were assumed or imagined to be; the event as a whole was classed as a slaughter; but the letters from correspondents were consequent to the false information which was published.

Much of what was written against the contest was from the standpoint of the demagogue, the professional notoriety seeker, and the men who endeavor to manufacture highly sensational literature to the end that a market may be secured for it.

There was no fairness in the discussion. The question was begged in its parts and as a whole. Everything advanced as data was assumed to be proven. To all who had a personal knowledge of it, exaggeration, perversion of fact, and ex parte purpose were evident in every line. To all others, the recountals portrayed cruelty indeed, as the following, which is presented as a fair sample of what was published, will show:

"MANY BIRDS SLAUGHTERED.

"Over Three Thousand Pigeons Shot at the Interstate Park Traps.

"WOMEN WATCH THE BUTCHERY.

"Maimed Winged Targets Allowed to Suffer in Full View of Sportsmen and Spectators at Queens.

"Pigeon slaughter—and maiming—was continued yesterday at the trapshooting tournament at Interstate Park, Long Island, and there was no official action taken to mitigate the sufferings of the birds. Agents of the Society for the Prevention of Cruelty to Animals were on the grounds; so were uniformed policemen. The spectators and crack shots numbered 400. More women viewed the butchery than on Monday. Conditions were about the same as on the first day. A show of gathering in the 'cripples' outside the 50yd. boundaries of the four sets of traps was made several times in the day. At the best, it was perfunctory, as maimed birds were allowed to suffer in several places during the entire day, especially near the house at the road entrance to the park. The lads in the pits were more merciful as a rule to the pigeons they gathered within the boundaries, as they wrung their necks before casting them into the pits under the traps."

So much for the picture of the wounded birds. Now for a picture of the shooter and doings. The same journal stated that "The pigeon that furnishes a living target finds itself, just before its sacrifice, in a small box 90ft. from a deadly arm loaded with nitro powder and No. 7 shot. At a signal the winged prisoner finds itself in naked liberty through a contrivance in the trap box, which exposes it free to fly. Before this chance for life—one in thirty on an average—is given it the shooter has announced himself as ready to shoot. He has also leveled his gun in the direction of the line of trap boxes, so that in many instances his sight along its rib is in the line of the released bird, an advantage in favor of the man not had in wild birds' haunts, where the game may spring in the air from any point of the grass or brush, and the bird target is exposed when he cries 'Pull.' In the majority of 'kills' the bird falls dead, a bag of riddled skin and broken bones, or mortally stricken before it has flown—the man with the gun must not shoot until the target has begun to fly—15ft. from where, to its amazement, it found itself unencompassed by prison walls."

The wise reader will note that the writer of the foregoing had imagined plenty of crippled birds to show that the sport was cruel, but when it came to dealing with the shooter, in an effort to show the absence of skill in the sport, and that it was a mere slaughter, the bird 90ft. away from a deadly arm has on an average, as per above, only one chance in thirty for its life. That would be but three and one-third wounded and lost birds in a hundred, a small margin for cruelty indeed. In other words, the writer of the foregoing imagined plenty of crippled birds to prove cruelty on the one hand, and, on the other, to belittle the prowess of the shooters, he imagined the odds were so great against the birds that practically none could get away.

The Law.

The law on the subject was quoted and discussed in the daily press, and it was conceded that pigeon shooting was entirely legal under Section 1, Chapter 107, Laws of 1875, as follows: "None of the provisions of law heretofore enacted for the prevention of cruelty to animals within this State shall be construed to prohibit or interfere with the shooting, by members of sportsmen's clubs or incorporated societies, of pigeons; Provided, That in each case, as soon as they can be captured or taken after being shot, such pigeons, if living, shall be immediately killed."

Thus the law provides that a man may shoot pigeons if he wishes to do so, but it does not say that he must shoot them if he does not want to. Under the law, the man who feels that he should not shoot is free to follow his inclination. No one need visit a shoot if he or she does not want to.

The Facts.

Let us now consider the facts. Each set of traps was attended by four boys, three at the traps and one at the score. After each shooter had shot, his bird was promptly gathered if it fell within the boundary or near the boundary without. The wounded birds were killed promptly as gathered. A pigeon would now and then fall far away, dead or wounded. Most of the wounded died in a few moments. A few birds escaped untouched. A relatively trifling percentage of the wounded went beyond bounds. The Grand American Handicap in this respect did not differ materially from other similar events except as to size and importance.

The management entirely prohibited any irregular shooting; also the referees were instructed to prohibit it. Several hundred ladies and gentlemen were present about the Casino, and therefore it was neither the time nor place to permit shooting at wounded birds which had lodged on the buildings, nor any other irregular shooting whatever. Nor did any one deem that the law was being violated by the management when it did not require any of its employees to jeopardize life or limb in climbing to risky places for wounded birds. The letter and spirit of the law require that due diligence concerning it shall be observed; but it does not require the observance of the frivolous, the freakish or the impossible.

The contestants as a body were men of wealth, culture, and high standing in the social and business world. The Grand American Handicap has had lawyers, doctors, millionaires, business men, and even clergymen among its contestants.

As pigeon shooting is an expensive sport, it is patronized mostly by men of means. Their knowledge of practical humanity is as much better than that of the speculative professional humanitarian or mushroom sensationalist as their general knowledge of life and affairs exceeds that of the isolated theorist or him of intolerant or narrow mentality.

The facts of the sport as they really exist are commonplace and harmless as compared with the exaggerations of the press. This might suggest a consideration of the wrong of studied falsification.

The usefulness of the sport to the participants, its benefits to society, its honesty, its freedom from all harm to any one, were all ignored by the press.

If such a policy of opposition is admitted as being good, then there is no institution, dear to the human heart or useful to mankind, but what, on similar lines, can be proved to be baneful and fit only to be abolished.

But there are classes of classes If the professional and amateur humanitarian sanctions the killing of animals, pigeons included, but opposes only the manner of their death, there is a class again which opposes the killing of any animals at all, and the eating of their flesh. Thus, following out the humanitarian extremist's theory to its logical conclusion, the humanitarian might find himself living on an exclusive vegetable diet.

The anarchist opposes all established law; the social crank opposes dancing, bicycling, etc.; the moneyless class opposes capital, etc.; the sympathetic oppose capital punishment; in short, the speculative reformer or grumbler is zealous ever in destroying or obstructing what the labor and genius of the other fellow has created. Fortunately, however, the law of the land, which represents the mature conviction and will of the people as to what confers the greatest good to the greatest number, bars the way of

the iconoclast. If it were not so, chaos would quickly supervene. The weakly sentimental, the unscrupulous selk-seeker, and the egotistically emotional would take the place of the men who maintain the reasonable and the necessary. Not that all sentiment is bad, but that much of it, visionary, intolerant and arrogant, represents only the personal idiosyncrasy or idea and is unfit for the rule of action of all.

The same daily press which bestowed so many tearful words over the cruelty of pigeon shooting did not, and does not, hesitate to publish columns of matter giving the revolting details of prize fights. More yet, on large bulletin boards on the outer walls of the buildings of those papers were marked, on occasion, telegraphic reports of the fights during their progress from their beginning in the evening till their end near the midnight hour, all to pander to the morbid appetite of the thousands of their readers and onlookers. And yet prize fighting in New York was stopped, not for its cruelty, but for its dishonesty.

It is a penitentiary offense to crop a dog's ears or to dock his tail; it is a penitentiary offense to dock a horse's tail; it is unlawful to kill the song birds and the beautiful birds of the land, and it is accessory to their killing to wear their plumage; yet cropped dogs, docked horses and bird skins are numerous. In fact, so great is the destruction of birds that they are in danger of extermination.

Even the birds of the ocean had no immunity, till laws were passed for their protection. How much these laws protect may be learned by inspecting the stock of any fashionable millinery store.

Concerning the docking of horses, the cropping of dogs, and the destruction of the song birds, all of which is done to satisfy a vain taste, and all of which is unlawful, the professional humanitarian observes an apathetic silent attitude. Concerning pigeon shooting, which is lawful, which adds to the food supply, but which affords the reformers more opportunities for stagy, spectacular effects, there are accordingly more opportunities for notoriety, and an increase of permanency of stipend.

There is nothing in the foregoing which proves that pigeon shooting is right. There is no need to prove that it is right, for that is already proven—the law of the land sanctions it.

The foregoing, however, is presented to show that its detractors indulge in a widespread straining at gnats and swallowing of camels.

The Nature of Mankind.

By nature man is a hunter. Primitive man became a shepherd as game became scarcer, or his incumbrances checked his nomadic habits. As population increased he was forced to adapt himself to the changed conditions therewith, so he added agriculture to his means of livelihood. However, he reverts easily to his primitive instincts and pleasures.

The man with the hoe has been on earth many centuries, but he drops the hoe easily and intelligently when he sallies forth to settle a new country, or to repel an invading army, or to squelch the Indian, or to take some wholesome recreation. He then takes up the rifle and shotgun.

Man has carnivorous instincts. To denounce him for them is to rebuke the omnipotence which created him. They are a part of his being and a necessity of it. The man of courage, of agressiveness, of physical power and mental strength is he who best succeeds in the struggle for existence. But his powers of mind and body, offensive and defensive, must be developed and schooled by practice.

The play of carnivorous or herbi-carnivorous animals is a close imitation of battle, of attack and defense. The boy delights to wrestle, to box, and if need be to fight. The calf and the lamb delight to frolic about merely to exercise their muscles. They are not carnivorous.

The play of the dog is almost entirely made up of attack, defense and strategic warfare.

The bow and arrow or blow gun or pistol is the small boy's delight. Little birds, frogs, etc., are his prey. As he reaches the years of maturity, reason tempers his actions in respect to killing, but his instincts remain unchanged. However, the schooling of the boy serves to the full development of the man.

The life of man is a continuance of unceasing competitive struggle. Whether in social life or political life or business life incessant effort is a necessity. If a man is weak in body or mind, or lacking in physical and mental schooling, his success is impaired accordingly. His best development is according to the needs of nature and nature's laws, and to this end he must engage in contests.

All normal men are fond of sport, as it is their nature to be. It may have different forms of expression, according to personal inclination or the accident of environment. Some may hunt the grizzly, the tiger, the lion, the wolf; course rabbits, stick pigs, shoot quail, etc., while others delight in the sport of rod and reel. To deny man these things is to cramp his nature, and his best development. To find fault with his nature is to rebuke Him who gave man dominion over all the animals of the earth. The dominant nations are those whose men are sportsmen.

Man is a social animal. He needs to be able to protect himself and to join forces with his fellows to protect his people. He must needs know how to defend as well as how to attack. A good soldier is not the product of an idle moment. He must be a good marksman to be valiant.

To be proficient in the knowledge and use of guns a man must be accustomed to them, during a long time, preferably from boyhood. A nation of marksmen is a most formidable people to attack. Witness the doings in the Revolutionary War, our Civil War, or the war in South Africa.

While individuals may differ greatly in their preference for sport, there is generally some one form of sport which predominates and which therefore may be termed national. England has its fox hunters and pigeon shooters, and America has much the same.

However, whatever may be the manner of its expression, the craving for something which is in accord with man's combative nature is a race characteristic. It may be replied that in civilized life the primitive instincts are unnecessary and harmful. This cannot be maintained in argument. The standing armies of the world; the passing away of the weaker and more defenseless nations, and the ascendency of the stronger ones; the necessity of courage and strength in the individual, and the permanency of the race instinct, even though not exercised for generations, are all against a mere idea of a bloodless world.

In the older civilizations, where the eccentricities of Coxey armies, blue glass craze and sporadic moralists are not so much in evidence, pigeon shooting is and has been from time immemorial recognized as a gentleman's sport. It is therein on account of its cost chiefly confined to a class of wealth and refinement. In the United States most of the pigeon shooters are also men of liberal means and refinement. It is an expensive sport, therefore a fair source or revenue is necessary to participate in it.

In New York and other large cities the pressure of business and the matter of environment prohibit most men from the sport of field and stream. Much of the surrounding country is preserved, and much more of it has been stripped of its game supply years ago. Yet, as becomes his nature, the man of proper instinct craves to test his skill against the birds of the air. Being in the highest degree human, he eschews bull fights, etc., and engages in a sport which has received the sanction of the most humane and conservative peoples of the world, the English, German, French, and American, all of whom have an instinct for sport dating from the time of the creation.

As a Recreation.

There are thousands of business men in the great cities who need relaxation. Any recreation which is beneficial to a large class of people as a wholesome recreation is beneficial to a whole people. The good of the individual as a unit of society is a benefit to mankind.

There is a large and ever increasing class of brain workers who become worn and weary with office work. The professional man may have neither the time nor the opportunity to hunt or fish. A day or a half day at the traps is much in its effects like an outing afield. It brings a feeling of rest, of rejuvenation, of reawakened interest and ability in the affairs of life, a reinvigorating of bodily and mental powers.

As a recreation and test of skill, pigeon shooting is a most merciful sport. Civilized man refines his methods so that the element of skill is dominant. The bean pole and clothes line of the small boy will jerk the fish out of the water with quickness and certainty, but the element of skill in such method is absent. The sportsman, however, uses the lightest of tackle, and his method of casting for the fish, and playing it when caught, is admirably scientific and artful. The fish has much freedom of play for its life, and it may fight minutes or hours, according to its kind, size and endurance, for the pleasure of the sportsman. When it is at length brought to hand he kills it mercifully.

A 4-bore or an 8-bore would kill a bird more surely than a 28-bore, yet the sportsman of refinement stanchly advocates the use of the smaller arms for the field, and the shooting of birds only when on the wing. He who shoots birds on the ground or with a weapon which is unseemly as to size is denounced as a pot-hunter. Yet as a mere question of painless and certain capture the net would catch the bird or fish quickly and certainly. It is, however, an incongruity in sport. Therein it has no place. The law prohibits it and all true sportsmen denounce it. Yet pigeon shooting, while a test of skill, provides a painless and instantaneous death to all but the most insignificant percentage of its victims. The welfare and needs of mankind far outweigh the insignificant ideas of inhumanity.

Pigeon shoots are held in retired places. They are for those who wish to attend them. Those who do not wish to see them need not do so.

Its Benelicence to Mankind.

Anything which adds to the material comfort and prosperity of a people is a material beneficence. Pigeon shooting adds to the food supply, one of the most essential sources of the comfort and prosperity of a people. It stimulates the production of pigeons and enlarges immeasurably the market for pigeon growers. It increases the profit of the grower and cheapens the price to the consumer. How? Let us assume, by way of illustration, that the grower is paid 10 cents for a pigeon. The profits of middlemen, cost of transportation, etc., have raised the price to 25 or 30 cents when it is finally trapped for the sportsman to shoot at. It is next sold to the marketman for 5 or 10 cents, all the intermediate charges having been paid by the sportsman who used it as a test of skill.

All the thousands of dollars distributed to the farmer and the farmer's boy throughout the broad land contribute materially to the general welfare. It therefore enables more people to buy and to sell. All the pigeons which are killed add just so much more to the supply of good and wholesome food.

In relation to the pigeon's progress from the egg to the dinner pot the intervention of the sportsman is a most beneficent incident to all concerned, and harmless to society at large. The factories which make guns, and powder, and shot, and sportsmen's goods and their thousands of workmen are also dependent upon the money of the sportsman. The improvements in firearms and gunpowders owe much to the practical trapshooter.

As to the Slaughter.

There were 17,500 pigeons killed during the week of the Grand American Handicap. The term selected to designate the killing is immaterial. What of it? Call it slaughter, killing or anything else; it is all one. The true significance is that 17,500 meals were added to the food supply of the market, and that the growers and middlemen were paid accordingly by sportsmen.

The mawkish sentiment promulgated in favor of the pigeon many times displays an ignorance of the fact that the pigeon is foredoomed to death for the benefit of man. It is an article of food, as are chickens, ducks, geese, hogs, sheep, cattle, game, etc. Shooting it at the traps is a mere incident of the general purpose.

The pigeons are raised for the market, and have their value as a commodity, as have the other animals hereinbefore enumerated. The fact that they have beautiful coloring, beautiful forms, and that they are considered as typifying emblems of peace in no wise disturbs this statement. Beauty of form and color is possessed by all animals, but the necessities of man permit of no distinctions concerning them in his obtaining of a food supply. Therefore, we repeat, the killing of the 17,500 pigeons as a test of skill was a mere incident in their journey toward potpie. Their death as a whole was merciful and instantaneous.

Similarly, all the pigeons killed at the traps throughout the country are a public benefit, for money and an abundance of food are essential to the happiness and prosperity of a people.

As to the Cruelty.

As aforementioned, the pigeon is foredoomed to death. It is raised for food. The manner in which it is killed is of no consequence, as it concerns the ultimate purpose, so that death occurs as quickly and painlessly as possible. If it offends the sensibilities of any one to see a pigeon's neck wrung by the cook, such an one need not be present at the wringing. Similarly in respect to shooting the bird or killing the innocent sheep or the fatted calf, etc. If slaughter is offensive, one need not visit a slaughter house, nor a trap shoot; yet that is no reason why great packing houses and trap shoots should be abolished.

That the Grand American Handicap was solely a test of skill is borne out by every word in the programme and the manner in which the great contest was conducted. In it there was nothing mentioned as a sport, but there were conditions and prizes for the contestants. Those who at any stage of it had missed 5 birds were subject to withdrawal from it. Had the purpose been sport as commonly understood—that is to say, killing in mere wantonness—there then would not have been any reason to retire any one.

Of the 200 contestants in the Grand American Handicap, 148 shot at 25 birds, the full number of the event. The remainder of the contestants either withdrew voluntarily or were retired by the manager. Therefore the 148 contestants shot at 3,700 pigeons. They missed 268, about 7 per cent., and of these a large part were only technically missed—that is to say, they were killed, but died outside of the 50yd. boundary.

Why were the contestants who missed 2, 3, 4 and 5 barred from further competition? Simply because they had not shown sufficient skill to win in that competition.

The term "sport" has a technical meaning and a common meaning. As it relates to trapshooting, the unfortunate misunderstanding of the term on the part of the general public, no doubt, is largely responsible for a false belief as to the purposes of trapshooting competition and its cruelty. In respect to this term Webster presents seven different meanings. The fifth is as follows: Diversions of the field, as fowling, hunting, fishing, racing, games and the like, especially when money is staked."

As used at the traps, sport signifies a contest of skill, and therefore has an entirely different significance from that given to it by the public at large.

There cannot be any cruelty where there is good intention, useful training, and the absence of torment and pain. Instead of weak birds which can be easily killed, the pigeon shooter wants only the best. His abhorrence is birds which cannot fly fast and strong, for the weak birds furnish no standards of skill. Therefore the birds, to be up to requirements, need to be extra well fed, watered and cared for. If the shooter had a craving for mere slaughter the matter of skill would not then enter into the question, and any bird would do.

A reputation for fast, strong birds adds to the good fame of a shooting ground; on the contrary, poor birds detract from its fame and its patronage. If the mere killing constituted the pleasure and purpose much greater degrees of killing could be witnessed at any of the great abattoirs of the country, and at an incomparably cheaper rate.

Trapshooting and Field Shooting.

In the essentials of the sport, trapshooting does not differ from field shooting. But, says the humanitarian, pigeon shooting is distinctly unlike field shooting, since in the former instance the bird is domesticated and already in possession, while in the latter instance it is not; and therefore to shoot the pigeon for sport is inhuman, as it is not essential that they be so killed for food. The position abounds with fallacy. Why is it inhuman to shoot the pigeon for sport, and not inhuman to shoot the quail, the duck, the ruffed grouse, the deer, etc., for sport?

Wherein lies the nice distinction? The humanitarian answers that the pigeon is already in possession, and that, though it is to be killed for food, he objects to all useful advantages being derived from the killing. It must be killed in the family kitchen or cellar, and thereby imbrue more hands in its blood in the aggregate than could possibly be at a trap shoot. On the other hand, he declares that to get possession of the game birds it is necessary to shoot them with a gun, and that the wounding of a few, more or less, is an unavoidable incident, to be excused accordingly. What gross fallacy! What unprejudiced man will have patience with such argument? It then is a question of stomach. The gun is not at all essential to the getting possession of the wild game, though it is essential to man's best sport. By common consent, it is the approved means. The net will catch quail, a whole bevy at a time, without wounding a single one or alarming them much. The snare will strangle the partridge so surely and quickly that, after it is caught, death is but a matter of a few moments. The net again will make a clean sweep of all the fish within its area of action. But such and similar methods are justly and necessarily prohibited by law, and are the detestation of all true sportsmen. There is no test of skill in the capture of game under such circumstances. Furthermore, if such methods were allowed the extermination of game fish and game birds would soon follow. But to shoot wild game properly, one must have had a fair preliminary training; otherwise much of it will be wounded and crippled.

In field shooting the test of skill is between the man and the game bird. In trapshooting the test of skill is among the competitive contestants. Much the same ability with the shotgun, however, is essential in either instance. The ethics of each branch are appropriate to it. As applied to trapshooting the reader will again note that the term sport designates a competitive test of skill.

But, further says the humanitarian, the pigeons are domestic birds, and therefore do not afford a test of skill. A man stands with a gun, heavily loaded and trained from his shoulder on the traps, and then when the trap is sprung there is no chance for the bird to get away. Indeed! The purpose of the contest is not to determine how many birds can get away, but to determine how many the shooter can kill. Likewise so in the field. The shooter does not go about to determine how many birds can escape from his aim.

In the field many birds rise 2 or 3 yards from the shooter, and oftentimes he finds it necessary to root them out of the grass with his foot. What chance has a quail or prairie chicken at such a rise? With a skillful shooter a wild bird in the open has but an extremely remote chance for its life. But with the gun, the shooter's killing is limited. Many birds will reach cover or safety where he cannot find them or reach them, and enough are left to breed. The trapshooter always gives a stated rise to the birds, generally from 25 to 33yds., a much better chance than prairie chickens have. If the trapshooter kills the entire lot there is no question as to leaving enough to breed. They are domestic birds, and there will be enough left to insure a further supply as certainly as there are enough chickens or sheep left to breed for the ensuing year.

Though it is the purpose of the shooter to kill the bird, it sometimes escapes nevertheless, in spite of gun, heavy load and all, as the scores in the Grand American Handicap or any other pigeon shoot will show.

Novice vs. Expert.

However, let a novice stand at the score and attempt to shoot birds liberated from the traps, and he will soon learn that it has its special difficulties, as has any other specialty which requires training and skill. The killing of a pigeon may look like an easy feat when done by a skillful shooter at the traps, but it looks quite as easy for a skilled violinist to draw music from a violin. Nevertheless, either one requires knowledge and skill.

It has also been objected that the pigeon shooter fires his second barrel into the bird as it lies on the ground, and further thereby detracts from the event as a test of skill. The field shooter fires at the bird again in the air, if he wounds it with his first barrel. The pigeon shooter often fires the second barrel to kill the wounded bird instantly. Pigeon shooters do not enter a contest to inflict pain or kill for fun. Being quite as humane as other classes of the best men, they guard against inflicting pain which can be avoided.

As an abstract proposition it probably is all one to the pigeon whether it is shot as a test of skill or has its neck wrung as a prelude to a potpie, if die it must.

Gunshot Wounds.

The scientific investigation of the effect of gunshot wounds has a bearing on this question. The average man or woman knows of the commonplace injuries and of the pain they cause. The sight of blood is hence associated with suffering. Greater injuries, if blood flows therewith, are supposed to have correspondingly greater painfulness. As a matter of fact, the records concerning the wounded in battles go to show that oftentimes the man is entirely unconscious that he is hit at all. The wound causes no pain till inflammation sets in several hours after its infliction.

Pigeons not infrequently, after being hit, walk about picking up food from the ground, without any show of pain or knowledge of being injured. There is a shock to the part which so benumbs it that no pain is possible. When the bird is hit squarely death is instantaneous.

Target and Pigeon Shooting.

Target shooting does not afford the test of skill that pigeon shooting does. More yet, it does not test the shooter's nerve as does the latter. Many a trapshooter and rifleman can perform well at targets, and yet lose their nerve when it comes to a test of shooting at live animals.

At targets there are in a general way only three angles—to the right, to the left, and straightaway. At any of these angles the target may fly high or low. At pigeons the flight may be anything which the mind may imagine. There are five traps, which very nearly fill the full angle of vision, and out of any one of them a bird may be sprung which will tax the skill of the most accomplished shooter on earth. If a shooter succeeds in killing them all it does not follow as a consequence that his task was easy, but rather that he was a man of phenomenal skill and nerve, who accomplished a feat that but few of his fellows could.

To shoot pigeons well requires a degree of skill, alertness and quick execution that few men possess, yet the skill and discipline of nerve are those which serve well to the people as a whole when they join issue at such places as Santiago, Manila, Pekin, etc., and which will be equally serviceable when occasion arises for it in the future.

Some Precedents.

The following will give some of the judicial light which is considered good precedent and good law on the matter in question. It will be noted, however, that the trial was under a general law in respect to cruelty, and that in respect to it there was no special law legalizing trapshooting, such as now exists in the State of New York. We quote:

"There has been more or less agitation in the matter of cruelty in pigeon shooting, chiefly by members of prevention of cruelty societies, and in view of this the following decisions, rendered by able jurists, may be of interest and value to those who suffer from the mistaken zeal of such men as imagine that their personal whims and vagaries are true standards of what is cruel and what is not.

"The first case is from the records of the Quarter Sessions Court of Allegheny county, Pa., 1892, and was quite an important one, being the Commonwealth vs. Denny et al. The defendants were acquitted. The judge's charge was as follows:

"'Gentlemen: Each of these defendants is separately indicted for cruelty to animals, in that he did unlawfully and wantonly shoot, wound, abuse, and ill-treat one pigeon each, belonging to said J. O'H. Denny and E. H. McWhorter. This was on the 21st day of April last. The pigeon shooting was out in the Eighteenth or Nineteenth Ward of this city, in the rural part of the city. The case is founded on the Act of Assembly passed in 1869, which I do not think very greatly differs from the one of 1860, that "Any person who shall within this commonwealth wantonly or cruelly ill-treat, overload, beat or otherwise abuse any animal, shall be guilty of a misdemeanor." It is a statute law providing against evils that are supposed to exist. A rule in the interpretation of statutes, and an old one, well established, is that in order to determine what a statute means you must know what the law was prior to the passage of the statute, and then see what evil was to be cured. Our common law is modified by the statute law very largely. There is a common law in regard to animals and their treatment by man that is very old, and it is of record in one of the oldest books that we have, and one of the best law books that we have. It was promulgated at the Garden of Eden to Adam and Eve.

"'"God blessed them, and God said unto them, Be fruitful and multiply and replenish the earth, and subdue it, and have dominion over the fish of the sea, over the fowl of the air, and over every living thing that moves upon the earth."

"'There are passages of the same general import that have been governing mankind ever since. The fish of the sea and the fowl of the air and the beasts of the earth are for man, rather than man for the beasts. They are to be used for his sustenance, to aid him, for his comfort and his pleasure. Now in using them he must not unnecessarily cruelly treat them. The Act of Assembly is intended to prevent brutal men and women from unnecessarily and wantonly causing pain where it is not necessary, in the using of animals for legitimate purposes.

"'These defendants are sportsmen, belonging, as I understand, to an association; and at this particular time they were shooting, as a test of skill, to see who could kill the most birds, each having 50 shots at 50 birds. That was a legitimate, lawful use of the birds. The pigeons were put in a trap one at a time, and let out, and they would shoot them on the wing. If there were need of an authority—and I do not think it ought even to have required one—the Supreme Court has decided that that is a legitimate use of pigeons; that it is not cruel to shoot them for sport or as a test of skill. The Commonwealth concedes that the defendants'

cannot be convicted simply because they shot the pigeons in this way for this purpose, but alleges that they were guilty of cruelty in this case because certain birds, or a bird shot by each of these defendants separately, did not fall before it got beyond the limits of their bounds of 50 or 60yds. away, and that it was cruelty not to have it brought in at once and killed. The defendants allege, on the other hand, that was done, and that every reasonable arrangement was made for getting the wounded birds and killing them; and they even killed some birds that they could not tell whether they were wounded or not, to a certainty. The birds were brought in and were intended to be used for food. But assuming for the purposes of this case that Mr. O'Brien's inferences were all correct, that there was no such provision as the defendants testified to, I am disposed to think, and so instruct you, that it is not the cruelty that is intended in the act of Assembly, for them to neglect to kill these birds that had escaped. I know that a great many humanitarians, and especially professional humanitarians, regard it as their duty to kill a wounded animal at once. If a horse gets a leg broken, it is to have no chance of being cured, but must be shot; and if a bird is wounded it must be killed immediately! I have never yet heard any well-authenticated case of a man or association having communication with horses or pigeons or chickens to know whether or not they desire to be shot at once; and I find myself often wondering when I see accounts of these summary proceedings, and the manner in which, as a matter of humanity, animals are put out of the way when injured, whether the horse could not sit in judgment over a wounded or crippled man, or an old man that has become infirm and incapacitated from doing anything and taking care of himself, and decide that he should be killed! I am rather inclined to think that, when a bird has gotten away a reasonable distance, it is not necessary to assume that it will, as a matter of course, die, and it is a great relief to it and a great advantage to it and a piece of humanity to at once put it out of its pain. We do not know whether a wounded bird wants to be put out of its pain and existence or not. I do not think it does, but I do not know; neither do these gentlemen know. The matter depends a great deal on sentimentality, on whim, on education, and on what we have been accustomed to.

"'I instruct you, gentlemen, that your verdict in each of these cases should be for the defendants. It is a misdemeanor, and you have the right to say who shall pay the costs. It is your duty to say who shall pay the costs, and you will determine whether the county, the prosecutor or the defendants shall pay them, or the prosecutor and defendants, and in what proportion. I might suggest this to you in this case, which has been brought as a test case, I have no doubt the prosecutor and those around him, and those whom he represents, honestly think that this is cruelty. I do not. I do not think you would if I were to submit the matter to you; but it was brought as a test case, and upon good motives, and I suggest to you that the costs should not be put on the prosecutor; and I do not think they ought to be put on the defendants, because they have not been guilty of anything that was unusual or anything that has been declared a crime, and I suggest that in this case you put the costs upon the county. It is able to bear them.'

"The following is a reprint from FOREST AND STREAM of Feb. 26, 1891, and as the matter will show, it deals with a case of special importance and significance, as follows:

"'In 1887, at which time A. Nelson Lewis, a member of the Philadelphia Gun Club, was indicted before the Bucks County Court under the act of March 29, 1869, which makes it a misdemeanor to wantonly or cruelly kill or ill-treat, overload, beat or otherwise abuse any animal.

"'On Dec. 14, 1887, the Philadelphia Gun Club held a pigeon shooting match at their grounds on the "Old Brinkley Homestead," Andalusia, the other contestants being the Tuxedo Gun Club, the Westminster Kennel Club, and the Riverton Gun Club. The club members and their friends went to the grounds by way of the Pennsylvania Railroad. Upon the same train from Broad Street Station were two uniformed officers of the Woman's Branch of the Society for the Prevention of Cruelty to Animals, who openly avowed their intention of making arrests if the match should take place.

"'The grounds were filled with people, the contest became very exciting, and a large amount was staked on the result. Shortly after the shooting began the officers of the woman's society approached the gate and were met by members of the club, who stated that they had intended to meet the issue, and would allow an arrest to be made. They did not raise any question as to the right of the officers to enter the grounds, because it would not be agreeable had any of the visitors or members of the club been arrested. In that case, as far as all present were concerned, the day would have ended in disappointment.

"'Then came the question of who would allow himself to be arrested. None cared to come up to the scratch, although several were approached. Finally General Grubb, the president of the club, expressed his determination to throw himself into the breach if no one else could be found courageous enough to do so. This, for several reasons, was undesirable, and A. Nelson Lewis was appealed to. Without a moment's hesitation he gave his consent, resolving to be sacrificed in friendship to his club members, and that the purpose and pleasure of the guests might not be marred.

"'Mr. Lewis was then technically arrested and taken before a justice of the peace. He was defended by General Dechert. Subsequently the club presented him with a resolution of thanks, highly extolling him for the way in which he had stood up for the interests of the club.

"The late Lewis C. Cassidy was to have defended Mr. Lewis, but died before the case came to trial. On the trial the jury returned a special verdict, in which they found that it was the custom of the Association to hold matches for skill in marksmanship, that Mr. Lewis participated in the match in December, 1887, and "for the purpose aforesaid fired with a gun upon certain pigeons, liberated from a trap, killing one and wounding another. The bird so wounded alighted upon a tree, and as soon as its wounded condition was discovered it was killed by a member of said club, for and on behalf of said defendant, according to the custom of said club in regard to wounded birds. The bird so killed was immediately sold for food, according to the rule and custom of said club."

"'Judgment was entered in favor of the Commonwealth and a fine of $5 imposed on Mr. Lewis. From this came the present appeal.

"'Judge Paxton, as Chief Justice, delivered the opinion of the Supreme Court, which is as follows: "The specific charge in the indictment was that the defendant did unlawfully, wantonly and cruelly shoot, wound, torture, abuse and ill-treat a certain pigeon,' etc. The jury found a special verdict, upon which the court below entered judgment for the Commonwealth. We are, therefore, limited to the facts as found. From the verdict we learn "that the defendant was a member of the association called the Philadelphia Gun Club; that on Dec. 14, 1887, he attended a pigeon shooting match and fired with a gun upon certain pigeons liberated from a trap, killing one and wounding another. The bird so wounded alighted upon a tree, and as soon as its wounded condition was discovered it was killed by a member of said club for and on behalf of said defendant, according to the custom of said club in regard to wounded birds. The birds so killed were immediately sold for food, according to the rule and custom of said club.'

"'"We have thus the finding of the jury that the object of this Association was to test the skill of its members in marksmanship. In other words, it was a training school for sportsmen, in which they could acquire skill in shooting on the wing. This being the object of the association, the jury further found that the defendant attended for the purposes aforesaid. It was conceded that had he killed his bird he would not have been liable under the act of 1869. But having merely wounded it, he was guilty of cruelty under said act. So that the crime consisted, not in the fact of the shooting, but in wounding instead of instantly killing it. From the facts found by the jury, the defendant has merely been punished for want of skill.

"'"It is doubtless true that much pain and suffering is often caused to different kinds of game by this unskillfulness of sportsmen. A squirrel badly wounded may yet crawl to its hole and suffer for many hours and days, and die. It was not pretended that the act applied to such cases. The sportsman in the woods is not responsible for the accuracy of his aim under the act of 1869. At the same time, it is manifest that much suffering would be spared wild game if sportsmen were better trained. Skill in shooting upon the wing can only be gained by practice. It is not so with inanimate objects. There accuracy of aim can be acquired by shooting at a mark. It is conceded that the sportsman in the woods may test his skill by shooting at wild birds. Why, then, may he not do the same with a bird confined in a cage, and let out for that purpose? Is the bird in the cage any better or has it any higher rights than the bird in the woods? Both were placed here by the Almighty for the use of man. They were not given to him to be needlessly and cruelly tortured, and were there anything in the finding of the jury to show that the object of this Association was to torture pigeons we would not hesitate to sustain the judgment of the court below. But no such purpose appears, nor is there any finding that the defendant was guilty of needless and wanton cruelty. The bird was immediately killed as soon as its condition was discovered.

"'"A distinction was pressed upon the argument between the case of a captive bird and one at large in the woods. In the latter instance there is a necessity to shoot it in order to capture it for food or other lawful purpose; and if wounding results, it is an unavoidable incident, while in the case of a captive bird, no necessity exists for putting it to death in this way. Some force may be conceded to this as an abstract proposition, but we do not see its application to the facts in this case. The right to kill the pigeon was and must be conceded, and there is no finding of the jury that its suffering was greater because of the manner of its death than if it had been killed in some other way. This is a scientific question which I do not feel myself competent to pass upon. Nor do I think the average juryman is any better qualified to do so. It may be that science in the future will discover the method of killing a pigeon with the least possible pain. So far as other animals are concerned, it is, perhaps, an open question, and the attempt of well-meaning humanitarians in a sister State to reduce the sufferings of condemned criminals by putting them to death by electricity instead of by hanging has produced a long controversy which can be hardly regarded as settled. An attempt has been made, so far unsuccessfully, to show it is unconstitutional because of its cruelty.

"'"We do not say there might not be a violation of the act of 1869 at a shooting match, but in our view the facts found by the jury do not bring this case within it. The judgment is reversed."'"

In 1875 the cruelty of pigeon shooting was an issue between the sportsmen and the humanitarians, the latter represented by Mr. Bergh. On very good authority it is stated that if he succeeded in making pigeon shooting illegal, his next step would be to make field shooting illegal also. They are so closely allied that one is a complement of the other on the issue as raised. The bill, now before the Legislature of New York, was introduced at the request of a resident of Boston. It is hardly to be assumed that the people of New York need to import advice on questions of humanity. The bill offered for New York's humanity is as follows:

"An act to prevent the shooting of live pigeons, fowl or other birds for amusement or as a test of skill in marksmanship.

"The people of the State of New York, represented in Senate and Assembly, do enact as follows:

"Section 1. Any person who keeps or uses a live pigeon, fowl or other bird for the purpose of a target, or to be shot at either for amusement or as a test of skill in marksmanship, or shoots at a bird kept or used as aforesaid, or is a party to such shooting, or leases any building, room, field or premises, or knowingly permits the use thereof, for the purpose of such shooting, shall be guilty of a misdemeanor, and shall be liable to a penalty of $60 for each violation of this act, and to an additional penalty of $25 for each pigeon, fowl or other bird shot at or killed in violation thereof. Nothing in this act shall apply to the shooting of wild game.

"Sec 2. Chapter 107 of the laws of 1875, entitled 'An act in relation to the treatment of animals,' is hereby repealed.

"Sec. 3. This act shall take effect immediately."

To sum up, the training at the trans and in the field qualifies a man to defend the home when it is in danger, the community in time of riot and turbulence, the nation in time of war. It gives him discipline in skill and nerve, and recuperation of mind and body. It is in accord with his nature, which has been the nature of all men from the dawn of creation, when he was told that he had dominion over all the earth's creatures.

In Furtherance of Handicapping.

BOSTON, Mass., April 13.—*Editor Forest and Stream:* Having recently attended an inanimate target tournament on the grounds of one of Boston's best-known gun clubs, it was my great pleasure to see congregated there shooters of all degrees of skill, varying from the amateur of 50 per cent. to the expert of 95 per cent., all shooting side by side, and evidently being put on an equality, and each and every shooter seemingly enjoying himself, as all trapshooters should do, to the top notch.

The tournament in question was one of the most enjoyable that has graced the grounds of any club in this vicinity for a long time, and in no small way was it due to the matter of handicapping. The handicap used was by distance, which has been in use on their grounds for over twelve years, and which, now that the Interstate Association has seen fit to give it a well deserved trial, is sure to work its way up to its proper place in handicaps.

While it was plainly evident that the club was doing its level best to place each shooter on his proper mark, it seemed that it should have been afforded a little help and support from the various trapshooting clubs near by. It was the regret of the club officials that they had no standard to go by, and simply had to judge the best they could, aided not a little by the outside help of one or two of the secretaries of some of the clubs attending.

After noting how nicely the events were run off where the 16yd. shooter was holding his own with the 21yd. man, though not making the latter get a possible each time, it occurred to me why was it that all the trapshooting clubs of near by should not combine to try this handicap at their own shoots and see if it did not do just what the originators claim for it?

At first it looked as though it would be necessary to form an association with headquarters where all scores should be tabulated and kept track of, and periodical handicap sheets be given out to each club, but as this would necessitate quite a little outlay and expense for the clubs who were members, it did not seem quite feasible.

A better plan to my thinking would be for each club to contribute toward a fund to cover the expenses of some individual, to be known as official handicapper; he to tabulate all scores forwarded to him by the secretaries of the clubs and keep each club posted on all shooters, so that when an out of town shooter attended a tournament other than on his own grounds he could be placed on a proper mark with the surety of it being done on a proper basis. The amount necessary for such a project would be very slight, as all the outlay would be for stationery and postage expenses, and a small compensation for his time spent on such work.

It seems to the writer that there are a lot of shooters who are only too willing to help a good cause along, and by their efforts it would be possible to still further advance the art of trapshooting as a leading pastime.

I hope that this may be the means of hearing other shooters' opinions on this subject, and trust that each one interested will be only too pleased to give his views.

SECRETARY.

Trap Shooting and War.

SWANTON, Vt., April 12.—*Editor Forest and Stream:* It is an undeniable fact that the marksmanship of those capable to bear arms has much to do with the military strength of a country, though it is not by any means the truth that the winner on the rifle range is the most deadly soldier on the battlefield, as shooting in a cool, deliberate manner at a stationary inanimate target is totally different from shooting amid the roar and tumult of a battle at a moving target that can and is shooting back with deadly effect. With the exception of work on the skirmish time, shooting during a battle is what may be rightly called snap shooting, without deliberate aim.

The correct training for this kind of work is not taught on the rifle range, but is learned at trapshooting, where the gunner is taught to become an accurate off-hand snap shot at a quick-flying target. His eye, trigger finger and extended arm that supports the gun are trained to act in sympathy with each other. Wherever he looks he has a sure aim. The thought flashes through his mind to the right, to the left, over or under, as the occasion may require, and his shot seldom fails to strike its target.

Combine this training with enough work on the rifle range to enable him to become familiar with his rifle, also to judge distances, so as to allow for the trajectory and the drift of the bullet by the wind, and you have a soldier that, even in the intense excitement of a battle, will place his bullets among the enemy with the accuracy of a machine gun.

There are trap shots who, with a magazine rifle, can fire ten shots inside of the same number of seconds on a 300yds. range, and place the greater percentage of the bullets near enough the center of the target to knock a man out of action. A good snap shot requires no changing of sights for elevation. A quick glance gives him an estimate of the distance, and the elevation to aim to allow for the trajectory; then he will proceed to drop in his shots with a rapidity and accuracy that will have a demoralizing effect upon his opponents.

Every military rifle range should have either a set of traps or a magazine trap for throwing targets, and every encouragement possible should be given to have gun clubs formed in every town throughout our country. Government patronage should be given through prizes and trophies to be competed for under conditions favorable to the development of this work.

Trapshooting as a pastime is a very fascinating sport, and is justly becoming popular among the ladies, as well as gentlemen, and we expect to soon see in every town one or more well equipped gun club grounds.

N. P. LEACH.

Humanitarianism as a "Graft."

NEW YORK, April 13.—*Editor Forest and Stream:* The cause of humanity is worthy of the most profound consideration of all mankind. But do all who assume the cloak of humanity do so for humanity's sake? I believe not.

At Interstate Park, in the week of the Grand American Handicap, there were three officers of the S. P. C. A. present each day. It is notorious that, although the society receives large subscriptions and permanent revenue from the city in the form of licenses of dogs, etc., it performs the duties it assumes to fill most inefficiently and inadequately. Large areas of the great city of New York are left uncovered, so far as humanity is concerned, and overloaded horses, crippled and galled horses are so common on Broadway, under the society's nose, as it were, that, from the society's standpoint of inhumanity, inhumanity is the rule rather than the exception. With so many important duties to engage the attention of its officers, why were three of them at Interstate Park? If any were needed at all, one was quite sufficient, for three could do no more than one. They admitted that the shoot was perfectly legal. As for stopping it on account of wounded birds, they could not do so, for the management arranged for the gathering of the wounded and dead birds as soon as they were shot. As to a display of force, three officers as a force were no more than a handful of chaff in a gale of wind. There was a squad of regular police officers who were there to enforce the laws of the State and city, not the furtherance of a graft.

About the graft. One would think that there was the most strained relations between the humane officers and the management and the shooters. There was not. The officers accepted free refreshment in the barroom, free dinners, free entrance, free privileges everywhere with the most benign expression of countenance and accurate crook of elbow. They were assiduous in swallowing things. The graft was so good that the wonder is that not more than three were present. There was so much that was good in the way of free graft that it was too bad to see the pigeon shooters pay for what they took themselves, when it could be obtained for nothing in the sacred cause of humanity.

Next the professional humanitarian from Boston appeared on the scene. His graft was of the mind more than of the body, for he held an office which professed to be in the cause of humanity, and he wrote books from which the public could learn many good things, if it had the price of the books, for, strange to say, the humanitarian with a graft can see cruelty with one eye and the almighty dollar with the other. No doubt the gentleman from Boston had entirely eliminated all cruelty from his bailiwick. No doubt the New York S. P. C. A. was incompetent in the management of its affairs in its own territory, and that the gentleman with the Bostonian graft would set them right in a trice. But if it were not so, books nevertheless need advertising, and the Bostonese graft secured it in large quantities.

The New York S. P. C. A. has never been tolerant of competition in the cause of humanity, if there was danger of encroachment upon its revenues. Notwithstanding the widespread cruelty to animals in the way of overloaded cart horses, crippled draught animals, docked horses, cropped dogs, etc., a sum total of aggregate cruelty which exceeds every day the sum total of the pain at the traps in ten years, the mere attendance to routine and necessary duty does not afford the sensational advertising which accrues from an attack on a national institution.

The S. P. C. A. is ensconced in a costly marble building, which may be termed a palace. One would think that the funds would be devoted to the active purposes of the society in the cause of humanity rather than as an investment in real estate.

FAIR PLAY.

Modern Traps.

DURING the recent G. A. H. shooting and accompanying events I was gradually inmpressed with the perfect workings of the Fulford traps and the system involved that saves time, labor and expense. From the old shooter's standpoint, the celerity with which these traps were served, causing no waits at the score, was marvelous.

I figured the time taken to prepare these traps for the "next man at score" as against the old system, a saving of fully 33 1-3 per cent. The retrieving is quickly accomplished, being done by the boys, who are in the pit, and therefore nearer the dead birds than by the old system. In watching the fine operation of these traps I wondered how many of the younger generation of shooters appreciated them.

As compared with the old methods of handling, trapping and retrieving, there is no argument.

The Fulford traps and system are simply an advance with the times, in line with the modern hammerless and its smokeless powder load. Mr. Fulford deserves the thanks and patronage of sportsmen.

DICK SWIVELLER.

Guelph Trap and Game Club.

GUELPH, Ont., April 9.—Herewith is an account of our Good Friday shoot, also list of officers elected at the annual meeting of the Guelph Trap and Gun Club, held last Monday evening, as follows: Hon. President, Judge Chadwick; President, Mr. R. Cunningham; First Vice-President, Mr. R. S. Cull; Second Vice-President, E. C. O'Brien; Executive Committee, L. H. Coolingridge, Jas. Johnson, A. L. Hamilton; Auditors, Harry Cull, Jas. Johnson; G. Frank, Secretary; W. G. Mitchell, Treasurer.

Three valuable trophies were put up. Class A was won by H. Cull, Class B by R. S. Cull, and Class C by H. Hanwell. In Class A, C. Quinn and H. Cull tied. In Class B, A. L. Hamilton, W. G. Mitchell and R. S. Cull tied, and in Class C, H. Hanwell was high man alone. This was one of the most successful shoots the club has ever held. The interest was kept up from 10 o'clock in the morning until 6 in the afternoon, and only one event was not finished. The club's electric magautrap worked well, and over 2,500 bluerocks were trapped, which could not have been accomplished under the old system of spring traps.

President Cunningham and staff were out in full force, and made it pleasant for visitors and shooters. After the shooting was finished the president presented the trophies in the club house to the successful competitors.

R. S. Cull acted as referee; H. Johns, scorer; G. Frank, puller, and R. Grant, cashier.

G. FRANK, Sec'y.

Aquidneck Gun Club.

NEWPORT, R. I., April 10.—The Aquidneck Gun Club held its weekly shoot to-day in typical April weather. Rain squalls, interspersed with attempts at sunshine, made shooting conditions anything but the best. This shoot was the first in the first series for the Hughes medal, presented by Mr. Wm. M. Hughes, a member of the club. Eight shoots will be held for it, participation in six to qualify. The highest average for the series to win and three wins to determine possession. Three events were shot, 20 and 15 known, and 15 unknown.

Event 1, 30 targets: Dring 14, Coggeshall 5, Griffin 13, Plumer 8, Gosling 11, Mason 4.

Event 2, 15 targets: Dring 8, Coggeshall 6, Griffin 9, Plumer 9, Gosling 9, Mason 5.

Event 3, 15 targets: Dring 11, Coggeshall 8, Griffin 6, Plumer 5, Gosling 6, Mason 7.

J. S. COGGESHALL, 2D, Sec'y.

Frankford Gun Club.

PHILADELPHIA, April 13.—At Summerdale Station, on its grounds, the Frankford Gun Club held its shoot to-day for a hammerless gun. A large number of contestants participated. Nine men were tied for first honors, namely, Fischer, King, Miles, Meckle, Taines, Smith, George, Reid and Wostercroft. In shooting off the tie the men were divided into two squads, shooting at 10 targets. Ridge was the only one to break clean in the first squad, while King did the same in the next. On the shoot-off between the two both killed straight until the last target was thrown. King was the first up for the last round, and took a quick aim and pulled the trigger. The shot, however, was too high. Ridge soon settled all doubt as to who was the winner by cracking the target into smithereens, incidentally capturing the gun after one of the best shoots that has been decided on the Frankforders' grounds.

The Baltimore Tournament.

THE tournament of the Baltimore Shooting Association took place on April 9 to 12, on its grounds, on Pimlico road. Shooters were hapdicapped by distance, 14, 16 and 18yds., in the target events. There were four 15-target events, entrance $1.50, and seven 20-target events, entrance $2; $100 added.

Tuesday, April 9, First Day.

There was a very high wind, which made target shooting difficult. There were forty-three contestants who participated. Of the local shooters, Mr. J. R. Malone was high with 167, while high average for the day was won by Mr. Fred Gilbert with 175 out of a possible 200. The total number of targets in the programme was 200. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	
Targets:	15	20	20	15	20	20	20	15	20	20	15	Broke.

Wednesday, April 10, Second Day.

The programme was a repetition of that of the first day. The wind again blew strong and steady. Messrs. Fred Gilbert and C. Nauman, of Spirit Lake, Ia., and San Francisco respectively, tied on 166 for the day's highest average. Hood was next with 160.

The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	
Targets:	15	20	20	15	20	20	20	15	20	20	15	Broke.

Thursday, April 11, Third Day.

There were three live-bird events on the programme for this day—the Baltimore Introductory, the Suburban Sweepstakes, and the Pimlico Handicap.

There was a stiff wind, which greatly aided the birds in their flight. The birds were of excellent quality.

The first event was the Baltimore Introductory, 7 birds, $5, birds included, 30yds., high guns, 50, 30 and 20 per cent. No. 2 was the Suburban Sweepstakes, 10 birds, $7, birds included, 30yds., high guns, 50, 30 and 20 per cent. The scores:

	No. 1.	No. 2.

Tydings, 25	2211112122201001—12

Friday, April 12, Fourth Day.

The main event of the tournament was reserved for the last day. This was the Maryland Handicap, at 25 live birds, $25 entrance, birds included; handicaps 25 to 32yds.; class shooting; three moneys, 50, 30 and 20 per cent. The trophy was a handsome gold medal. Four hundred dollars was guaranteed, and all surplus was added. Mr. B. Leroy Woodard proved to be the winner. He and Fred Gilbert killed straight, and in the shoot-off Leroy won in the eighth round. Gilbert, however, was shooting from the 32yd. mark. Fox was ill and shooting badly in consequence. The scores:

Seitz, 26	2222002222122222022012210—20
Malone, 30	2222201222211020111212 0w
Burham, 27	2211121220212221202122222—23

WESTERN TRAPS.

International Team Race.

CHICAGO, Ill., April 13.—Nothing but extreme satisfaction is expressed by Western shooters over the announcement that the international target race between American and English teams is now to be called an assured fact. There is little doubt that the challenge of the Americans will be accepted by the Middlesex Club men, and if this be the case the rest is a matter of detail. It still remains a singular fact that this team of American shooters might more properly be called a Western team than an American one. Every man of the team—Heikes, Parmelee, Gilbert, Budd, Crosby, Powers, Elliott, Fanning and Merrill—is a Western man, although Fanning claims Jersey City now as his home. Even the substitutes—E. E. Tripp, of Indianapolis; O. Von Lengerke, of Chicago, and Clarence Nauman, of San Francisco—are Western men. Moreover, the enterprise was originated and has been carried to a success by a Western man, Paul North, of Cleveland. Tom Marshall, captain of the team, is strictly a Western man. There will be a large bunch of Western money go behind this Western outfit when they meet the English shooters. On the whole, the Mississippi Valley may feel that she has a pretty fair representation in this matter.

Garden City.

Garden City Gun Club holds its regular shoot this afternoon, and the bright weather is taking out quite a number of the boys. This is the pleasantest Saturday we have had here for a long time.

Spirit Lake Shoot.

The Klein and Burmeister shoot at Spirit Lake, Ia., promises to be a good one. There is $150 added. Fred Whitney, of Des Moines, manages, and from the way the consignments of shells and letters of inquiry are coming in this week at Spirit Lake there seems to be a great deal of interest taken by the boys and a determination to be on hand in full force. E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Chicago Gun Club.

Chicago, Ill., April 6.—The scores of the Chicago Gun Club's opening shoot are given below. The weather being bad, there were only fourteen entries in the main event, but those that did come out had a good time. In No. 2, the handicap event, four went straight. The third tie was a toss-up, Dr. Morton winning Among the visitors were Boa, Brown, Pollard and O'Neil. Boa Broke 97 out of a possible 100. If John keeps up that clip long we will have to send him out on the road with the Indians. Dr. Carson won the monthly handicap rise trophy, at the 18yd. mark, 14 straight.

This club shoots every Saturday afternoon on their grounds at Seventy-night street and Vincennes avenue. All are sure of a good time if they visit the Chicagos. Shells for sale on the grounds.

Event 1, at 10 targets, resulted as follows: Steck 6, Mrs. Carson 5, Jones 5, Lovell 4, Borroff 6, Dr. Carson 10, Balmer 8, Sprague 8, Boa 10, Pollard 7, Brown 6, A. W. Morton 8, Dr. Morton 7, O'Neil 7.

No 2 is a trophy event at 25 targets, handicap allowance. The scores:

Steck, 3	0111110111101111111111111111	—25
Mrs Carson, 10	0111101101011111111110000010100011 0	—21

Peters Cartridge Co's. Tournament at Olathe.

OLATHE Kan., April 10.—Inclosed please find programme of the Peters Cartridge Company's tournament at Olathe, April 23 and 24. This tournament occurs at a time when Kansas is at its best. The prairie and meadows are getting the first bright green of spring. The cherry and plum trees are masses of snow white blossoms, and the red bud and peach trees are bursting into bloom, and the whole air is laden with the heavy perfume of plum blossoms.

A visit to Kansas at this time of the year will pay any lover of nature. The shoot will be a good one, and it will form a very nice little Western circuit, which is as follows: Leavenworth, Kan., April 16 to 18; Olathe, April 23 and 24; Lincoln, Neb., May 7 to 10, and two or three smaller shoots to fill in. These shoots will all be good ones, and we anticipate an entry close to one hundred.

FRANK HODGES.

PUBLISHERS' DEPARTMENT.

To Washington.

THREE-DAY PERSONALLY CONDUCTED TOUR VIA PENNSYLVANIA RAILROAD.

On April 25 the Pennsylvania Railroad Company will run the sixth tour of the season to Washington. Tourist Agent and Chaperon will accompany the party.

Round-trip rate, covering railroad transportation for the round trip, hotel accommodations, and transfer in Washington, station to hotel, $14.50 from New York, $13 from Trenton, and $11.50 from Philadelphia. These rates include accommodations for two days at the Arlington, Normandie, Riggs, or Ebbitt House. For accommodations at Willard's, Regent, Metropolitan, or National Hotel, $2.50 less. Side trips to Mount Vernon, Richmond, Old Point Comfort, and Norfolk at greatly reduced rates.

All tickets good for ten days, with special hotel rates after expiration of hotel coupons.

For itineraries and full information apply to ticket agents; Tourist Agent, 1196 Broadway, New York; 4 Court street, Brooklyn; or address Geo. W. Boyd, Assistant General Passenger Agent, Broad Street Station, Philadelphia.—*Adv.*

Shotgun shells used in the Grand American Handicap were of the following makes: U. M. C., 114; Winchester Repeating Arms Co., 64; U. M. C. & Winchester R. A. Co., 13; Peters Cartridge Co., 5; U. S. Cartridge Co., 2; Robin Hood, 2.—Sporting Life.—*Adv.*

The Burlington Basket Co., of Burlington, Ia., makes a refrigerator basket by which one can bring home his fish from any distance as fresh as the day they were caught, or can keep his lunch cool no matter how warm the day. Some of our very best sportsmen need them, and one of them says of it, "It is genuine and genuinely useful."—*Adv.*

A very beautiful and interesting catalogue is that of W. H. Mullins, the Salem, O., boat builder, which is just out. The splendid half-tone pictures alone in catalogue No. 6 are most interesting to whoever likes shooting or fishing.—*Adv.*

The advertisement of The Fair, which appears in the FOREST AND STREAM this week, calls attention to standard goods, not the original hit or miss department store stocks of years ago. These goods are good goods, and this house is going to build up a big sporting department.—*Adv.*

The Savage rifle is well known to all big-game hunters, and reports of its efficiency are frequently heard. The Savage company has issued a new, beautiful and instructive catalogue, which they are glad to forward to all applicants. It may be imagined that they will have many calls for it.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1901, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, APRIL 27, 1901.

VOL. LVI.—No. 17. No. 346 BROADWAY, NEW YORK

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

Wherefore, Sire, methinks that the best knowledge which one can have (after the fear of God) is to keep us and each man his neighbor in cheerfulness by the practice of honorable pastimes, among which I have found none nobler or more to be commended than the art of venery.—Jaques du Fouilloux (1561) to King Charles IX.

The Forest and Stream's Platform Plank.

"The sale of game should be prohibited at all seasons."

NAILS DRIVEN IN 1901.—No. V.

MINNESOTA.

Chap. 35, Laws 1901 —The sale of any quail, ruffled or sharp-tailed grouse, prairie chicken, or ruffled grouse, sometimes known as partridge, or pheasant, wild duck of any variety, or any variety of wild goose, brant, any variety of aquatic fowl whatever, is hereby prohibited and made unlawful.

Chap. 229, Laws 1901.—No buck, doe, deer or fawn shall be offered for sale or sold at any time.

THE ROYAL BUCKHOUNDS.

THE Royal Buckhounds have been an institution of British sport for nearly a century, having been established in the year 1812, when the Goodwood fox hounds were presented to the Prince Royal. An antiquity yet more extended has been claimed for them, and undoubtedly there were royal packs long before this one; for, as every one knows, stag hunting has been a chosen form of the diversion of kings from time immemorial.

The royal pack, which during the life of Queen Victoria was maintained at Windsor, consisted of forty couples of hounds, and the hunts were chases after a carted stag—that is a tame stag which was carried out in a cart and turned loose for the hounds to follow. Because of this mode of hunting the royal pack has long been an object of opposition to the Humanitarian League, which based its attacks upon the ground of cruelty to the stag. By those who defended the hunting, it was contended, on the other hand, that the stag enjoyed the run as much as did the hounds and the huntsmen, and stories are told of one experienced deer named Volunteer, which, on occasion, when inadvertently he was liberated from the cart near a pea field, would obstinately refuse to do his stunt until he had devastated the pea patch, for all the world like one of those crop-raiding Vermont deer the Blue Mountain farmers complain of. After the stag and hounds and huntsmen had had their run, and the stag had taken to water, it was the practice to capture the stag, put him in his cart and haul him back home to his paddock. The meets of the Royal Buckhounds being open to the public were participated in by a heterogenous company, who followed on horseback across country and along the roads in chaises and in various styles of vehicles after the manner of earlier times, as told in this little story of a hunt in the year 1728:

Between Ten and Eleven in the Morning, their Majesties, together with his Royal Highness the Duke, and their Royal Highnesses the Princesses, came to New Park by Richmond, from Hampton Court, and diverted themselves with hunting a Stag, which ran from Eleven to One, when he took to the great Pond, and defended himself for about half an Hour, when being kill'd, and brought out by the Help of a Boat, the Huntsmen sounded the French Horns. The Skin was taken off, and the Carcass given to the Dogs. His Majesty, the Duke, and the Princess Royal hunted on Horseback; her Majesty and the Princess Amelia hunted in a Four-wheel'd Chaise; and the Princess Carolina in a Two-wheel'd Chaise; and the Pricesses Mary and Louisa were in a coach. Several of the Nobility attended, and among them Sir Robert Walpole, clothed in green, as Ranger. When the Diversion was over, their Majesties, the Duke, and the Princesses, refreshed themselves on the Spot with a Cold Collation (as did the nobility at some Distance of Time after), and soon after Two in the Afternoon return'd for Hampton Court.

But the Royal Buckhounds are now to be spoken of only as in the past, for among the changes which have come with the succession of Edward VII. is the abolition of the pack. The committee on the King's civil list has recommended that the pack, with the Master of the Buckhounds and other functionaries connected therewith, shall be dispensed with, and the £6,200, or $31,000, hitherto appropriated to their support shall be devoted to other purposes.

ALASKA SALMON.

WITHIN the last few years attention has frequently been called to the wanton and wasteful destruction of salmon in Alaska, and to the fact that in many localities the canners now have to be satisfied with putting up only a portion of the capacity of their factories, because a full supply of fish cannot be secured. On the other hand, at times when there is an unusual run of fish, vastly more are taken than can be used, and no matter how hard the canners may work, a part of the catch turns soft and must be thrown away. We have been told that in the summer of 1900 a cannery on Prince William's Sound on one occasion threw overboard 60,000 fish, and at another time 10,000 fish.

The report of the Special Agent of the Treasury on the Salmon Fisheries of Alaska, which has just appeared, indicates that the evils so long recognized still prevail. The Government professes to protect the salmon fisheries of Alaska, but its care of them is purely perfunctory. Officials make journeys over considerable portions of the fishing grounds and report on what they see, but they have no power to do anything more than report, and it is inevitable that weeks and more often months or a year elapse before these reports are received or can be acted on. By that time the damage for the season is done, the offenders against the laws have scattered and gone no one knows where, and any legal remedy against them is impossible.

It is, of course, a pleasant thing for the agents of the Treasury Department to make a summer cruise on a Government vessel through Alaska waters—under pay—but until the legislative and the executive departments of the Government reach a point where they will do something, instead of talking about doing something, the short-sighted and wasteful methods now practiced will not change and the salmon fisheries will continue to grow less valuable.

It is illegal to obstruct the rivers of Alaska by dams, traps or other barricades, yet this is constantly done. The people who make money by catching the fish wish to secure the fish as easily and quickly as possible. Washington and the Government are a long way off. The law is something vague and intangible, and above all has never been enforced. Very naturally the lawbreakers believe that it never will be enforced. If the fair weather agents of the Treasury Department had authority to remove the obstructions which they find and to arrest persons violating the law, and were provided with a force of men to do this work, the Alaska canners and others would very speedily learn that the laws with regard to the fishing were not mere abstractions, and would govern themselves accordingly.

As if the methods pursued on the free streams of Alaska were not bad enough, the whites have practically taken possession of the Island of Afognak—a Government reservation—and fish its streams in the calmest defiance of the Executive order which provides that no fishing shall be done on the island except by the natives for their own food. The Executive order forbidding fishing is thus an object of ridicule and contempt, and such feeble efforts as may be made by Government officials to enforce it are derided. From time to time we are told that the fishing on this Government reservation has been stopped, but such statements are untrue. Eye witnesses who spent some time on Afognak Island in the summer of 1900 declare that during the season the canneries took fish from the island for their pack.

The truth is that as yet there is little or no law in Alaska, and it is due more to the good common sense of the American settler than to the efforts of the Government that conditions there are not much worse than they are. There is an old nearly forgotten saying to the effect that "There's neither a law of God nor man runs north of fifty-four," and practically that is true to-day.

The remedy for the wrong and wasteful practices which prevail in the Alaska salmon fisheries is to be found in Government control of the fishing and in a systematic replacement by artificial propagation of the annual loss due to the commercial fisheries.

Practically every stream in Alaska that is six inches deep is a salmon river, and nowhere can salmon be propagated so cheaply and easily as here. In due time this work will no doubt be undertaken on a large scale, preferably under the auspices of the United States Fish Commission, which should have general charge not only of the public hatcheries, but also of those which will undoubtedly be established by private individuals or concerns. The great value of the salmon pack of Alaska emphasizes the importance of prompt and efficient action by the Government to end the abuses which prevail there.

SNAP SHOTS.

Governor Crane of Massachusetts has vetoed two measures designed to reduce the lawful length of lobsters that might be taken, and to permit the mutilation of lobsters, which is resorted to in order to conceal the actual length. The perpetually recurring discussion of the lobster law affords an interesting and instructive illustration of the characteristic short-sightedness of the fisherman. The perpetuation of the lobster depends upon its having such protection as to insure the possibility of its reproducing its kind. This is the whole purpose of the law, and the lobster fisherman should be of all men the one most ready to observe the conditions essential to preserving the stock. As a matter of fact, he resents control, and if unrestrained would speedily destroy the lobster supply and his own livelihood along with it.

Investigation by the United States Fish Commission in the waters of New England has established beyond question certain facts concerning the life history of the lobster. Among the ascertained data are these: That the female lobtser attains maturity when from eight to twelve inches in length; that comparatively few lobsters under nine inches in length lay eggs (of one thousand egg-bearing lobsters collected at Woods Holl, less than two per cent. were under nine inches), and that by the time they have reached a length of ten and one-half inches most lobsters will have produced eggs. This length then it is concluded should be the minimum size permitted in the markets.

Based upon these well-established facts of lobster life, the lawful limit of those which may be caught has been made in Massachusetts ten and one-half inches; in other words, the statute declares that no lobster may be caught until it shall have had a chance to breed. The lobster fishermen have rebelled against this restriction of their industry; they have claimed persistently that everything should be fish that came into their traps, and it has been only by the exercise of vigilance on the part of the authorities that the destruction of short lobsters has been in any degree prevented. As the stock has become less and less, the fishermen have demanded the right to take lobsters of smaller size, and their representatives in Boston this year put through a bill to reduce the lawful length to nine and one-half inches. The measure was most unwise, and the Governor has done a public service in vetoing it. He could not well have taken any other course. Chairman Collins of the Fish Commission and the members of the Massachusetts Association deserve great credit for the intelligent and vigorous opposition with which they have fought the measure.

Mr. N. M. George, of Danbury, Conn., has made a Florida tarpon record which goes beyond Mr. Edward vom Hofe's 210-pound fish, by the capture of a specimen weighing 213 pounds. The fish was taken at Bahea Honda, one of the keys lying south of Cape Sable. That tarpon fishing has a lasting attraction for those who follow it is demonstrated by the fact that the same names are found year after year on the lists of Florida fishermen.

The Cuvier Club of Cincinnati has promoted a very successful competition in bird study among the pupils of the public schools of the city. Prizes were given by the club for essays on the three subjects: Birds in the Cuvier Club's collection; Why should our song, insectivorous and game birds be protected? and the life study of our common native birds. Widespread interest was taken in the competition, and no less than 312 essays were submitted to the club's committee, the prize papers being published in the daily press.

The Sportsman Tourist.

The Old West.

Editor Forest and Stream:

Thirty-five years ago the great plains west of the Missouri River were spread out as they lie to-day. Thirty-five years ago the grand mountains of the main range stood firm and unchangeable, watching and waiting, as we see them now. Yet in those thirty-five years an absolute transformation has taken place in the Western country. Then, wherever he journeyed, the traveler saw nature and nothing else. The rolling prairie swarmed with brown buffalo or was dotted by groups of red and white antelope, while along ravines and river valleys fed herds of elk and deer, and not far from the broken buttes that rose here and there above the land grazed the mountain sheep ready at an instant's warning to take refuge on the heights above. The conical lodges of Indian camps were seen by the streams, their hunting parties pursued the buffalo, and little companies of fierce warriors made war journeys against the camps of other tribes or swooped down without warning on little parties of the white invaders. The fine thin line of iron was pushing its way east and west across the continent, the first of the many lines that now gridiron it in all directions, and along this line here and there stood a white canvas tent, or a little sod house, pathetic in its loneliness.

Thirty-five years ago there were scattered over this Western country, from the Missouri River to the Pacific coast and from Mexico to the furthest North, a thousand unconscious heroes who had pushed out into the wilderness far in advance of civilization, and here were living their lives, supporting themselves, loving their wives and their children, and passing to and fro over the land; each one of them as worthy a subject for song and story as our heroes, Daniel Boone and David Crockett.

Thirty-five years have gone, and with the passing of each year the number of these early pioneers has grown smaller. Long since their sun has set, their day ended; there is no longer a place for them in the civilization of the West. The few that the years have left have hidden themselves in little valleys in the mountains, far from the towns and the railroads, trying to escape the new conditions which are so strange to them, and so painful.

In the newspapers the other day I saw a statement that John Baker was dead at the Wyoming General Hospital in Cheyenne, and the item called up to my mind a hundred memories of the early West, for it was more than thirty years ago that, with a friend, as beardless boy I camped for a time with John Baker and his friends on Henry's Fork of the Green River.

It was my first introduction to the West, and certainly never was boy set down amid new surroundings which more strongly appealed to his imagination. There, near the beautiful stream, shaded by cottonwoods, now turning paler and slowly dropping their frondage, stood the yellow skin lodges of the little camp. Near by was a light corral made of crooked cottonwood poles; saddles and parfleches lay about the camp or hung on low branches of the trees; a few hides were pegged out drying on the ground; in the shade of the bushes hung circular beaver skins drying on their frames. The Indian women worked and the little children played about the camp, while the men, John Baker, Ike Edwards, Phil Maas and Dick Sun, provided for their wants. Each man had a good bunch of horses. There were a few cows feeding in the valley, little regarded except for their milk—which, I remember well, always tasted strongly of the sage brush.

In his way each of the four men was a type. John Baker was short and sturdy, and although he had only one leg, was absolutely at home on a horse. Instead of a stirrup on the side of his wooden leg, there was a block with a socket to hold its point. He was a wonderful rifle shot, and a most skillful trapper, so that he had earned the name "Beaver" from his success in their pursuit.

Ike Edwards—a descendant of the great divine—was very different physically. Several inches over 6 feet in height, slim and straight as an Indian, with a keen, shrewd New England face, made longer by the goatee which he wore, he seemed to me the handsomest—and physically the most perfect—man I had ever seen. When astride his Indian pony of ordinary size, his long legs hung down until they swept the tops of the sage brush.

Philip Maas was as tall as Edwards, but much broader. He was a Mexican, black-haired and bearded, but his English was marred by only the slightest of accent.

Dick Sun was much younger than the other men, more jolly and far less dignified. He was entirely willing to talk to the open-mouthed guests of the wonders of the Rocky Mountain country, and of the things that he had seen. The other men were of more old-fashioned type. They would answer a direct question, but as a rule were silent and did not discourse freely on general topics.

Each morning soon after the sun was up the men went out to visit their traps, and I usually accompanied John or Ike, and then first saw beaver and beaver trapping. Not a few fine furs were brought in to the camp while I stayed there. It was here, too, that I saw my first wild beaver in daylight. Sitting on the bank of a little stream in the bright autumn sunshine, I was pondering this wild life and its delights, when a wave in the water drew my attention, and a beaver was seen swimming just beneath the surface only a few feet from me. A quick shot through the head brought the little animal to the surface, for it was a kitten weighing hardly 20 pounds. Here, too, for the first time I slept in a lodge, wrapped in warm buffalo robes, and dreamily watched the fire die down and the lodge grow dark, until the only points of light to be seen were the stars that peeped in at the smoke hole. Here I learned to skin a beaver, and for the first time ate beaver tail. Here, too, I received from my Indian hostesses the unvarying kindness and hospitality that the guest always received in an Indian camp.

The days went by, and the time for my leaving drew near. In all the mental struggles of my life I can recall none so severe as to decide whether I should give up the East, where I was born and had been reared, and where all my connections were, and settle down as a Western trapper, or should do what I felt was my duty and return to my home. Reluctantly I tore myself away, and from that day to this have seen none of those men; yet in a rough way I have kept in touch with them for many years, and even to the present time.

A few years after my visit, Ike Edwards was lost in a winter storm. His dog came in, but his horse and he were never seen again. No doubt together their bones bleached in some little ravine whose waters poured into the Green River, and ere now have returned to Mother Earth. Now John Baker, too, is dead.

Many years ago Dick Sun married Baker's daughter, whom I remember as a little girl twelve or fourteen years old, taking care of her younger sister in the camp. It was a love match and an elopment, so they said, and Dick took advantage of John's absence to load up a pack horse or two and start with the girl down Henry's Fork to go and get married. John had no objection to Dick as a son-in-law, but he thought his daughter too young to marry, and had said so with great positiveness. When he learned that the couple had fled, he saddled a fresh horse and set out to overtake them and bring back his daughter. The fleeing pair, encumbered by pack horses, could not travel rapidly, and at length, just as they were passing out of one of the beautiful parks in the valley of Henry's Fork, John emerged from the timber at the other end. Dick told the girl to hurry on with the pack horses, while he returned to argue the point with his prospective father-in-law. The park made a beautiful arena, and they circled about each other with all the grace and skill of perfect horsemanship. John was positive on one side, and Dick on the other, and the older man took the first shot, but before the revolvers were empty, a ball had passed through John's arm, luckily not breaking the bone, and he acknowledged the force of Dick's logic and returned to camp, while the young couple went on their way and no doubt at last reached a parson. Such was the story of the elopement that came to us here in the East.

Later the differences of opinion between his father-in-law and Dick were healed, and for many years they have lived together on Snake River, Colo., where Dick is said now to be a prosperous cattleman.

Philip Maas still lives, I believe, in this little settlement on Snake River, where two years ago old Jim Baker died.

As I recall it, though I cannot feel sure about it, John Baker came to the mountains about 1839 or '40 with a party of trappers sent out by one of the early fur companies. With him were his brother Jim, James Bridger, Kit Carson, Jack Robinson and others, the party numbering eight in all. They camped on Henry's Fork of the Green River, and it was not until some time after their arrival that old Fort Bridger was established. Uncle Jack Robinson, who died a great many years ago, was, as he has often told me, the man who found Friday—named for the day on which he was found—the Arapahoe baby, who was reared by the whites, sent back East, educated for a minister, and then returned to his tribe to civilize them. The process of civilization did not go very far.

It was about Friday and the late Professor Marsh, of Yale, that a rather amusing story was told, which was printed some years ago in FOREST AND STREAM. I cut it out and offer it here:

"To his intimates the late Professor Marsh was known not only as a scientific man of great ability and world-wide reputation, but also as a delightful companion, quick and witty, with a keen appreciation of humor, and a narrator of capital stories. One of these, which he used to tell of himself with great effect, dealt with a small adventure had many years ago in the Rocky Mountains.

"The first month or two of the trip had been spent on the plains of Nebraska and Wyoming, at that time the hunting ground of Sioux and Cheyennes, who were bitterly hostile, and signs of whose presence near the command were often seen. The whole party realized that they were in a dangerous country, and all hands were constantly on the watch for enemies and were careful not to wander far from the command; or, if two or three fossil gatherers did go off from the main body, they took with them a number of soldiers to stand guard while they worked. After leaving this dangerous region the expedition moved on to the bad lands near Fort Bridger, where there were but few Indians, and those friendly ones, and the work of gathering fossils went on.

"One day Professor Marsh was hard at work on his knees in the bottom of the narrow ravine, digging away the soil from a bone which stuck out of the bank. He was entirely absorbed in his task, and noticed nothing of what was going on about him, until the brilliant sunlight which poured down on him was cut off by a dark shadow, and he looked up to see standing above him a great grim Indian warrior, holding his rifle at a ready. The Professor's heart leaped into his throat. He forgot where he was. He strove to utter a propitiatory 'How,' but his dry lips refused to form the word, and he could only swallow trying to get rid of the lump in his throat. Suddenly the savage bent toward him and spoke: 'Have I the honor of addressing Professor Othneil Charles Marsh, the eminent paleontologist of Yale College?' he inquired. The revulsion of feeling was almost too much for the Professor, who was now even less able to speak than he had been before.

"It developed that the Indian, as a small boy, had been sent East, Christianized, educated, taught the elements of theology, and sent back to the West to civilize his tribe; but he had not carried the civilization very far."

I could ramble on, sir, through a number of your columns, telling a story which would have neither beginning, end nor middle; just a lot of recollections of those old times, which I call good; but let this suffice.

Yo.

Sailing Amid the Peaks and Clouds of British Columbia.

In Two Parts.—Part II.

IF one does not want to return to Golden, a nice trip can be taken from Windemere to Fort Steele, and then to Fort Steele Junction on the Crow's Nest Pass division of the C. P. R. This takes one through a beautiful country and one where the chances for sport are excellent. However, we did not want to leave the Duchess, so elected to return down the river. The morning we left Windemere we were up betimes, and a beautiful sight rewarded us. The sun was just showing his fiery face over the crests of the Rocky Mountains, driving before him the light fleecy clouds that had hung low on the mountain tops, and causing the mists to rise from the valley.

On the surface of the crystal lake was reflected the mountains, clouds and trees in such a manner that it was like gazing at another original, only softened and beautified. Darting rays of light flew across the lake and touched with a golden gleam the distant shore. The camera made a vain attempt to catch some of these fleeting beauties, but, alas, the attempt was but that.

The return trip was very enjoyable, as it enabled us to see what we had missed in the darkness. A camp of two or three weeks at Windemere would give one an opportunity to see more of this mountain paradise, and there are some very fine mineral (hot water) springs where nature cures "many ills that flesh is heir to."

From Golden and our trip through the peaks and clouds of this section we pass on into the Selkirks. Again we must refer the reader to the back files for a description of this ever memorable ride. We will only say it is just as grand and satisfying as ever, if not more so. It really seems to improve on acquaintance.

At Revelstoke we find that great improvements have been made in six years, and the one that appealed to us most was the new hotel of the C. P. R., very near the depot, and managed in a way that makes one feel content to remain a while in Revelstoke.

We are now ready for another sail, but instead of taking the steamer right at Revelstoke, as in the past, we take the train down to Arrowhead, twenty-eight miles, and here we board a fine new boat, the Rossland. A change had also been made here since our last visit. At that time the steamers were run by an outside company. Now they are part of the great C. P. R. system. The boats now running down the Columbia and through the Arrow Lakes are as fine steamers as one would wish for; they are large, with every modern convenience, electric lights, steam heat and in fact all that makes travel a luxury. Another new feature was the fine hotel at the Halcyon Hot Springs, one hour's sail from Arrowhead. Here on the mountain side, overlooking Upper Arrow Lake, is a fine sanitarium, where many go to be treated for rheumatic and other pains. The quantity of lithium in these waters is very large and exceeds many much advertised foreign resorts. This is a beautiful spot to visit, and there are a good many advantages for the sportsman. Back of the Halcyon in the mountains, round Trout Lake and from Lardeau, has been a good country for goats and some caribou. It is a very rough country, and we would not advise any very delicate person to attempt to explore it. But any invalid able to travel at all can reach the Halcyon.

Two hours after leaving Halcyon, and after a charming sail through the cloud-covered mountains—which in the distance look soft and hazy, but when we near them, as we do often, rise like palisades from the water's edge, and we find they are of the most rugged description—we arrive at Nakusp, where six years before we came down from Revelstoke. Our steamer towed a barge, on which were some passenger cars for the new railroad then being built into the Slocan county. We now have the pleasure of riding in one of these cars, and in it climb up from Arrow Lake* to the divide, on the other side of which lies the Slocan country. As we wind slowly along up the steep ascent, we get into the same mist and clouds that we saw from the lower level, and now we look down on them and see stretching away into the distance the great Columbia until it is lost like a silver thread among the dark green mountains to the south.

It is only twenty-eight miles from Nakusp to Rosebery, about half up and half down, and part of the way along the shores of Summit Lake and brawling mountain streams, that make one want to get out and try for a trout; and they are there, too, for the brakeman gave us some "pointers." We run a short distance along the upper end of Slocan Lake, before we reach Rosebery, where the steamer lands. We arrived first and saw the Slocan City come puffing up the lake out of the mist. Slocan Lake is one of the most beautiful bodies of water in British Columbia, and "their name is legion." Here at an altitude of 1,850 feet is a lake about thirty miles long, surrounded by high mountains on every side, of the roughest and wildest description. Dense timber covers the mountains to the summits. The country in many places is practically unexplored, as it is nearly impossible to travel over some of it. Within a reasonable distance of water transportation the miner and prospector has been over the territory, but very little has been yet done to open up the immense wealth stored in these mountains. When the steamer came in we found another of the C. P. R.'s fine boats, with everything that one could wish, and it seemed very strange here in the midst of one of the roughest and wildest countries in the world, and which a few years ago was a wilderness, that no human being had ventured into, to find the luxuries of civilization. It is a strange experience for any one who traveled west in early days to find such rapid and marked changes.

The sail down to Slocan City is one that can never be forgotten. The steamer skirts the mountain sides, covered this day and often by misty clouds, that rise from the water's edge until their tops are hidden by the vapor laden masses. To the eye the effect is magical, and more than beautiful, but when we try to catch some of the fleeting effects with the camera we are doomed to disappointment, for a camera will not take all that the eye sees.

At the lower end of the lake lies Slocan City, the metropolis of the Slocan country, a typical mountain mining town. There is a fairly good hotel, and we remain a day. The Slocan River flows from the lake and runs south into the Kootenay. There is good trout fishing here.

The mining interests are all in all to this country, as there is not enough level ground for a good garden. From Slocan City it is only thirty-two miles to the Kootenay River at Clocan Junction, and then we follow the Kootenay thirteen miles to Nelson, the metropolis of all this section, which really takes in the entire eastern part of British Columbia.

Nelson is beautifully situated on the Kootenay River just below where the lake narrows into the river, and it is a fine little town. It has good hotels, stores and everything needed to make a visit pleasant—electric lights, good water works and other city improvements. Nelson has a gun club, and we went out to see them "kill clay pigeons." One of the best shots in the club was a young boy about fourteen or fifteen, who could "down his bird with the best."

Every one goes fishing in Nelson, and Saturday and Sunday afternoons you will see every fellow with "his best girl" with rods and nets on the way to the boat houses.

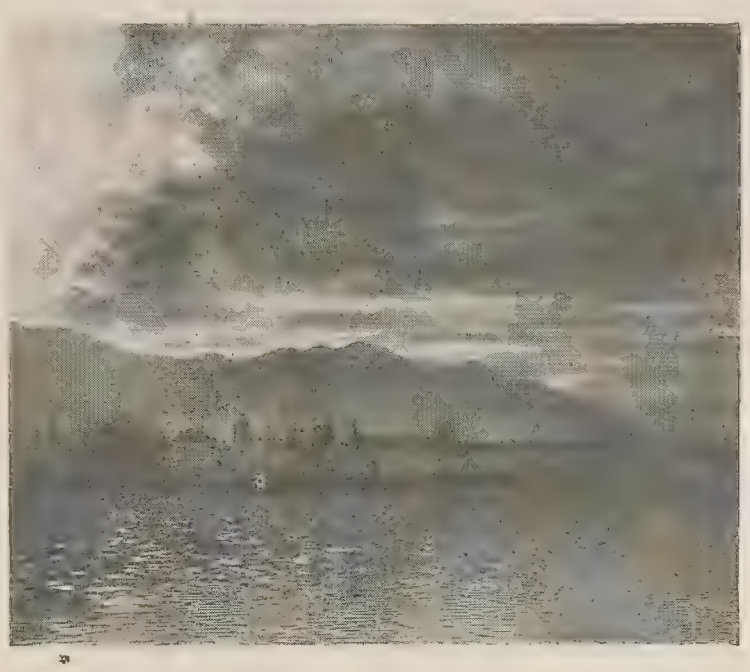
The Kootenay has long been famous for its fine trout fishing, and if one wants to go fishing where it is "easy" let him go to Nelson.

The trout are mostly of the beautiful rainbow variety. While down on the dock one day we saw one of the railroad men, who had a moment to spare, take a hand line with a brown hackle fly on it and cast in out into the stream. In a moment he had a pound and a half fish fighting for life. A boat was passing with two anglers in it. They rowed up, loaned their landing net, and we netted the trout. That's easy trout fishing.

A day or two in Nelson and we were ready for another sail "'mid clouds and peaks." So we took the C. P. R. steamer Kokawee for the Upper Kootenay Lake. We thought Slocan Lake beautiful—and it is—but after all we think it must in a way yield the palm to Kootenay. It may be the mountains do not rise as high right from the lake shore, but there are more deep indentations, more islands and rocky points, that lend picturesqueness. The upper end of the lake is a great hunting country for goats and bears. The C. P. R. have had built a number of house-boats for the use of the sportsmen tourist, and which can be leased for long or short periods; and they will tow them to any point on the lake or river that is desired, at a charge of only "four bits," as Capt. Gore expressed it, per mile. The boat itself costs $5 per day. Man in charge, $2. Cook, $2. Each boat is furnished with good linen, bedding and table service. The saloon is furnished, as well as the kitchen, which has a good range and all the necessary cooking appliances. You buy your own supplies, and can have anything you wish, as Nelson has excellent markets. There are two sizes of these boats. One has four staterooms, with two berths each, accommodating eight people (or at a pinch a few more). A baggage room, two toilet rooms, store room, pantry, kitchen, combined dining room and saloon. On the roof is a promenade deck. What more could any one ask? and just think of the joys of a trip on a floating cabin of this kind. You can have your boat towed to any desirable hunting or fishing place you wish, and then with all the comforts and some of the luxuries of a good hotel, be in the wilderness of this great Western land. And as to many cost is a great obstacle to their going where they want, think of how cheap a party of ten can have a month's sport and an outing such as falls to the lot of few mortals. Taking it for granted that they do not go over 100 miles from Nelson, and this would take them to the upper end of Kootenay Lake, thirty days could be put in for $500, or $50 each, or less than the usual cost of a second-class summer resort. Of course in figuring on this basis, there is no account taken of wines or fancy living, as the individual who wants such things can generally do as he likes without counting cost. We are only figuring for the plain everyday sportsman, who loves to be out of doors and loves sport of nature's kind; not some of mankind's notion of sport.

Up above Kasto, forty-five miles from Nelson, the scenery on Kootenay Lake is very fine, and north of Lardo is a good game country, but very rough.

On the lower end of Kootenay Lake are marshes where in season the duck shooting is fine. The house-boat can be towed, if one wishes, up the Kootenay River to



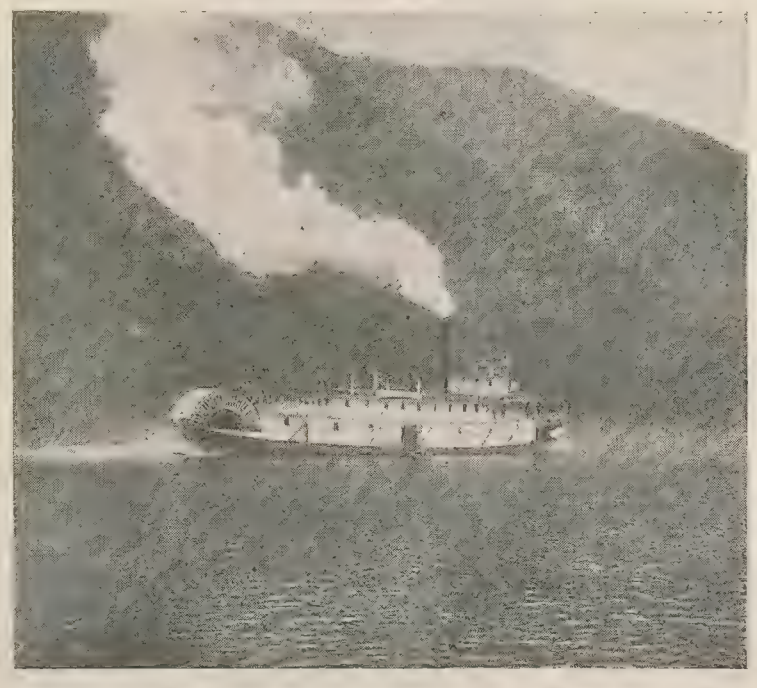
SUNRISE ON THE ROCKIES AT COLUMBIA LAKE.

Idaho. The service on the steamers which the C. P. Ry. run on these mountain lakes and rivers is so good that we cannot forbear mentioning it. Of course he who goes into the mountains to "rough it" doesn't care if he to do it, but it is a very agreeable surprise to find accommodations that are equal if not superior to those he finds in the effete East.

No one need stay at home now and fail to see the grandeur of the wild West because, forsooth, they might have to rough it.

We won't tell about all the great mining country north of Nelson, nor how "Yankee prospectors" have flocked into this land and opened up nature's store houses of wealth, for their British cousins to come in and reap a benefit, but they have, and as the Irishman says, "More power to 'em."

Back at Nelson, and a day or two is spent knocking about the hills and at the park, etc., and then we take the train for Rossland, that wonderful mining camp that



WE TAKE THE KOKAWEE FOR THE UPPER KOOTENAY LAKE.

sprang, as magic cities were supposed to in olden time, into existence in a day. The road follows the Kootenay River down to the Columbia, passing the falls, where great turbines are at work generating power, which is turned into electricity and sent speeding over mountain and valley to light the streets of Nelson and far away Trail and Rossland. Many parties of anglers drop off the train at various points, for here is some of the best fishing water in the world.

At Robson we cross the river on an old friend, the steamer Lytton, that took us down the Columbia from Revelstoke six years ago. The advent of finer boats has turned the old craft into a ferry. From Robson we climb back from the river into the mountains, and winding back and forth get higher and higher, until we reach Rossland, thirty-three miles way. Here is one of the wonders of the West, and if the West was not a land of wonders it would be accounted more wonderful than it is. A city perched upon the mountain tops, with fine hotels, electric lights and other conveniences, and all this came into being in two years. Six years before, when we passed through this country a few prospectors were digging "gopher holes" in the mountain sides. At Trail was one frame building just being erected. Now immense smelters and a town are there.

Back to Robson and then up the Columbia by rail, where six years before we had to go in a rowboat (see back files), on past our old camp at Deer Park, climbing along the mountain side, looking down upon the great view hundreds of feet below us, our minds reverted back to the day when, in our little boat laden deep with camp equipage, we braved the storm of lower Arrow Lake and looked up at the rough and jagged rocks above us as we sped by on the crests of the white capped waves, little thinking that six years later we would be riding in a fine car along the face of these stupendous cliffs—crossing the deep canons on spindle-like trestles and crossing ravines that seemed at that time to be impossible for anything that did not possess wings.

This ride along the Columbia is a very fine one. As the train twists and turns along the mountain side, ever getting higher and higher, one catches glimpses of the great river, here widened into the lower Arrow Lake, as it loses itself in the great mountains beyond. And you look across at the opposite shore, which from the great height you look down upon, and there spread out before you is a panorama of forest and mountain stretching away into the blue distance, until one range joins the other and the Slocan Mountains rise dim and misty upon the horizon. At Deer Park, our old camping ground, the railroad turns to the westward, and we climb up the divide toward the Kettle River country, passing over the summit and down to Christina Lake. We are now in what was only a few years ago one of the finest game countries of British Columbia, and where yet the sportsman can get good shooting. Right across the lake from the railroad deer still roam in abundance.

From Christina Lake the road follows the Kettle River through a beautiful country to Grand Forks. In all the water courses we see plenty of ducks which have not yet gone south. The pine forests through this section are fine, and a good wagon trail follows the river. Westward to Greenwood, which was at this time (August, 1900) the terminus of the C. P. Ry., we travel. This is called the "Boundary Country," as the mining region here is adjacent to the United States line. Greenwood, built up by the miners in this section, had been booming, but was rather quiet when we arrived, but a very good hotel made up for any lack of excitement, and our wait was a pleasant one. A trip from Greenwood up through the Kettle River country would take the sportsman through a beautiful rolling country, and one well stocked with grouse, but from which the game is fast disappearing. When the prospectors first go into a country they usually find game; when the miner follows, game begins to become scarce, and when rancher and miner both get into a country, game soon becomes a thing of the past. The ranchers have begun to settle in the Kettle River country, and it will not be long before another great game section will be missing.

It is the intention of the C. P. Ry. to build on up to Penticton at the foot of Okanogan Lake,* and then to the coast, thus opening up to easy excess another fine game country. The trouble is, however, that as soon as the country becomes easy to get into, then there is no object in going into it, from the sportsman's standpoint. However, the country is a beautiful one, game or no game, and well worth seeing.

From Greenwood we return to Nelson and take a trip down into the United States to Spokane Falls and note the rapid strides civilization has made in the six years since we rode over this section. On the train out from Nelson in the morning we had the society of a number of anglers who were going up into the mountains and on to Salmon River for a day's sport, and as it was Sept. 1 there were a number of shooters going out for a try at the grouse. Nelson has a large number of Englishmen in its population, and they have brought their love of sport from home into the new country. As was noted before, Nelson is a good point for the sportsman. Spokane, with its surroundings, was written of before, and suffice it to say that there has been no loss of prestige in this live city.

As we had been over all of the C. P. Ry. excepting the new "Crow's Nest Pass" route, we determined to go home that way. So we return to Nelson and take the steamer to Kootenay Landing, which takes us to the lower end of the lake and gives us another "sail wind, clouds and peaks." The distance is only 55 miles, but the C. P. Ry. prefers to run steamers and tranship cars to building the connecting link of railroad through these rugged mountains. So one can imagine that the scenery is not "tame." Of course the railway is bound to come, and when completed through it will be a fine winter route, as there is not as much snow in this section as on the main line north.

From Kootenay Landing eastward through a fine timbered country we climb upward toward the Rockies. There is much fine scenery, but it must be confessed that the main line is superior. At Goat River, just as the sun gilds the crests of the distant peaks, the train pauses long enough for the passengers to walk out on the platform and gaze down into the depths of Goat River Cañon. Way down below us in a deep and terrible gorge, with vertical walls and pine crested sides, flows Goat River, a dashing, turbulent stream, foaming over rocks and whirling its spray high into the air. It is one of the sights of the road, and the complaint of all is that one does not have time enough to enjoy the wonderful sight.

Winding in and out among the jack pines, crossing huge trestles, and skirting great deep cañons, we pass little mountain lakes, and at Moyie a larger body of water called Moyie Lake, which is skirted by the railroad for some distance. At Fort Steele Junction we again approach the Kootenay River, which we left at Nelson, and later cross it as it flows southerly on its way down into the United States. We came cross lots, the river has to go round. When we get to Fernie we are in the Rockies again, and the scenery is fine and of a more rugged character than we had been traveling through. The peaks rise high and bare, their sharp outlines marked distinctly against the blue sky.

We are now nearing the pass, and the range stretches away on all sides. It seems at times as if we were in a cul-de-sac, and that the huge mountain in front barred our passage, and much speculation was indulged in as to which way the road would turn to reach the plains below. At last we turn, and through a narrow valley catch a

*The Arrow Lakes, Upper and Lower, are widenings of the Columbia River which have been dignified by name into lakes.

*See back numbers.

glimpse of the foothills beyond the rocky walls, and then to our left rises the high bare peaks of Crow's Nest Mountain, for which the pass is named. Now our train rolls through grass covered foothills and detached masses of rocks, and just before getting out from the rocks it pauses a moment for us to view another freak of nature. Here out of a cave in the face of the massive rock of the mountain side gushes a living spring of great volume, that falls in a small waterfall on to the rocks below. and forming a dashing stream, goes dancing merrily down the mountain side. This spring is the main source of the Old Man River.

It would hardly be fitting to omit saying a few words in regard to the great coal industry which the building of this branch of the C. P. Ry. has opened up in the mountains we have just traveled through. The Lethbridge coal fields are wonderful in their extent, and the quality of coal for steam purposes and for coking it is claimed cannot be excelled, if equaled, anywhere in the world. Near Fernie, mentioned above, is the center of this carboniferous district. We have reached an elevation of 4,427 feet in passing from British Columbia into Alberta, a very low pass and an easy one in a way.

The Crow's Nest Mountain, ten miles away from us, seems just at hand, with its pillar-like peaks, and we look back at it as we wind in and out through rocky glens and stunted tree covered hills into the plains with deep coulees and grassy knolls, following the St. Mary's River into the plain and crossing a trestle 80 feet high. Winding along the breaks, marked with old buffalo rails, we glide on to the east. Looking back, the sharp and jagged peaks of the Rockies stand forth in startling distinctness against the evening sky, and the setting sun gilds their tops, clothing them in a halo of gold, as we catch farewell glimpses of these mighty monarchs of the ages that have passed.

Oh, ye mighty kings of earth,
With jagged peaks and summits high,
With rough and riven sides,
That rise so far into the azure sky,
On thee we gaze with pure delight;
With thee we fain would linger more,
To thee we cannot say farwell,
But whisper gently, "Au revoir."

The evening shades gather round us as we enter upon the great plains and leave the Rockies behind, and darkness closes the view, but we sit at the window still and gaze out upon the fleeting landscape and once more live the life of the past, where we first knew the great plains of the West. Visions of the herds of buffalo and antelope that once were as numerous as the sands on the seashore are with us, and the whoop of the red man, now fast going the way of all the inhabitants of these boundless wastes, is in our ears. No—it is the shriek of the steam whistle and the roaring of the train that rouses us from our reverie, and instead of the cry of "grub pile" we hear "Dinner is now ready in the diner." There may be more luxury, more style, and in a way more comfort crossing the plains to-day, but as the small boy says, "There ain't haf the fun."

The opening of the Crow's Nest Pass route has made it possible for the sportsman to reach new fields easily, and to-day there is probably no better country for deer and antelope. South from Medicine Hat and east there are yet great bands of antelope, and in conclusion I will quote from a letter just received from a cowboy friend with whom we spent some days this summer. He says in part:

"I received the photos a few days since, and they are all right. Thank you ever so much, I shall always keep them as a memento of our pleasant sojourn in the Rockies. I hope you enjoyed your trip further West. I would have given anything to have had you with the camera here a couple of days ago. My partner and a neighbor went out on a deer hunt one morning and jumped up five deer about three miles from home, and they killed the lot. We had them hung up behind the cabin. They would have made a fine picture. My partner is a fine shot and hunter; he has killed six deer this season, and never has been out more than half a day at a time. We did not get home early enough to go on an antelope hunt this fall, but we saw lots when riding the ranges. A couple of 'Breeds' went out two weeks ago about 50 miles east of here and got over 20 deer and antelope down in the country I was telling you about. We had some bad weather the last part of the month and it drove big bands of antelope down from the north. The trains killed a lot of them. They hung up along the railroad. The passenger train went through Crane Lake with one on the cow catcher the other day."

From the above we can say there is still some game left on the plains.

The plains have great attractions for me, and I always feel a sense of freedom from care—a don't-care-ativeness that is indescribable. Let him who does not believe this go away to the great West and he will then sing with the cowboy and the hunter of the plains:

Wild and free, wild and free,
Like the billows of the deep green sea,
The plains are stretching far and wide,
As over their boundless space I ride.

Not a care have I as I urge along
My half-tamed steed, so true and strong;
What care we for grief or sorrow—
We live to-day, with no thought of the morrow.

For us all day the sun shines bright,
And when he is gone the moon gives light;
For us, when the shadows of night draw nigh,
Our home is the greensward, our roof the sky.

Oh, boundless and great are the plains of the West,
And here with my steed I safely can rest.
What care we for grief or sorrow—
We live to-day, with no thought of the morrow.

FRANK F. FRISBIE.

"In winter time, when it's cold," said Bobbie, "I wish I was a polar bear with a white robe growin' all over me; but in summer, when the baseball season's on, bein' a giraffe 'd suit me."

"Why a giraffe, Bobbie?"

"He kin see over the fence," said Bobbie.—Harper's Bazar.

Frank Forester.

SINCE my remarks on this subject in your issue of March 23, 1901, I have gathered more material which will be of interest to admirers of this true sportsman.

Another oil portrait of Herbert has turned up, and I am very much indebted to its proud owner, Mr. R. W. Mathews, of St. Paul, Minn., for the little history connected with it. Mr. Mathews writes me that it is an original life-size portrait and that good judges pronounce it finely executed. It was presented to Mr. Mathews some eighteen years ago by the Hon. C. D. O'Brien, the prominent attorney of St. Paul, who in turn had received it from the artist himself. The name of this artist cannot now be recalled. He went to Minnesota on account of poor health and became acquainted with Herbert, who taught him how to shoot. Mr. Mathews writes that the late Gen. H. H. Sibley, one of the first settlers in Minnesota, who knew Herbert well and often hunted with him in New Jersey, stated that this portrait was an excellent likeness.

Gen. Sibley, who wrote in early days for Porter's Spirit of the Times, under the pseudonym of "Hal a Dacotah," used to relate a little story at the expense of his friend Herbert. After the General moved to Minnesota he used to meet Herbert often while on his trips to Newark, N. J., and tell him about the good shooting in his State. Herbert declared that Sibley was mistaken in regard to his getting canvasbacks in Minnesota, and they had many arguments in regard to it. On one of the General's trips to New York he took with him three brace of canvasbacks, and on his arrival carried them over to Herbert's office, but finding him out left them on his desk. A little later on they met at lunch at the Astor House and the first remark Herbert made was, "Now, General, after lunch if you will come around to my office I will show you some canvasbacks that some one has left there for me," probably inferring that Sibley was not acquainted with that species of duck.

Under the portrait of Herbert, Mr. Mathews has framed an autograph letter presented to him by his friend, Chas. Hallock, and of which he has kindly made for me the following copy:

"New York, April 4, 1841.

"Dear Sir: Though long delayed, I write at length to redeem my promise by sending you a little piece of poetry for the Nation. How the sentiments may agree with yours, I hardly know, but I suppose poetry is privileged. The only request I have to make is that if published it may be without any comment. If not, that you will return me the MS. at your earliest convenience. I have transcribed it carefully, and do not imagine that there will be any difficulty about the printers deciphering it. May I, however, beg you to be very careful about the connecting of the punctuation, as the whole point of the lines depends upon their running and reading fluently. I remain faithfully yours.

"Henry Wm. Herbert,
"65 Murray Street.

"Geo. Roberts, Esq., Boston."

Mr. Chas Hallock has recently sent for my inspection a photograph, cabinet size, representing Herbert in shooting costume on the woodcock grounds at Warwick, N. Y. It is an extremely odd though very interesting picture. It was presented to him forty-one years ago by the late Genio C. Scott, the famous angler. Mr. Fred E. Pond informs me that this photograph is a copy from a painting. If it is still in existence perhaps some of your readers may locate it for us. RUTHVEN DEANE.

Natural History.

Intelligence of the Wild Things.

BY HERMIT.

The Red Squirrel.

[*Continued from page 504.*]

THE red squirrel, or chickaree, leads all the wild things in the woodlands of Cape Ann for intelligence and the ability to maintain an existence under adverse circumstances.

His life during the spring and summer months is a grand hurrah, but in the fall he sobers down and plods and toils in his harvest fields like a thrifty farmer.

Right or wrong, it is a fact that the red squirrel bears a disreputable character. He is called a thief because he takes the farmers' corn, and a bloodthirsty wretch for robbing birds' nests. From my experience with the chickaree I am led to believe that he is not so black as painted. I used to think that he spared neither eggs nor young, but savagely robbed every bird's nest which he chanced to find. I certainly got this idea from books, for I cannot recall an instance where a bird's nest was robbed by a red squirrel. For years I thought a squirrel was seeking food when he chased the birds in my dooryard. Now my eyes are open, and I am heartily ashamed of myself. I awoke from my trance to find that the red squirrel was simply chasing the birds out of the dooryard and away from the food, which he claimed as his own.

Twice last summer I saw a red squirrel pounce on a young towhee bunting, but both times he let the bird go without the loss of a feather. It was evident that he did not intend to injure the bird, but merely desired to frighten it away. The intention was so evident that I could not ignore it, and it led me to do a lot of thinking.

I carefully examined my notes for proof of the squirrel's guilt, and found no record against him. The guilty ones were the hawk, the owl, the snake, the stoat, the crow, the cat, the irrepressible boy and the white footed mouse. For fifteen years birds have nested around my cabin unmolested by the red squirrel.

It was always a mystery to me why the birds were not afraid of the red squirrel. Let a hawk, an owl, a weazel, a cat, a snake or any of the animals known to prey on birds, enter my dooryard while birds were rearing their young, and the wildest alarm would prevail so long as the intruder was in sight. The red squirrel can come and go without a protest, which proves that the birds do not regard him as an enemy.

Whenever I have detected a squirrel investigating a bird's nest it has turned out that curiosity was the motive.

A pair of chickadees nested in a box that I had placed in an oak tree, and a squirrel that spent the most of his time in the dooryard made it a duty to investigate the nest several times a day. He did not harm the young birds, and the old birds did not fear him.

While I was watching a red eyed viero's nest last season, I saw a red squirrel run out to the nest, stretch his full length on the limb (it was a very warm day) and look down on to the young birds that were squirming about in their confined quarters. I counted ninety-six before he left, and I did not begin at first. I think he was on the limb fully two minutes. These young vireos were not molested, for I saw them leave the nest when full fledged.

I have a record of an oven bird that nested at the foot of a pine tree which contained a red squirrel's nest. Four young squirrels were reared in a leafy nest in the top of the pine, and three young oven birds in a domed nest on the ground.

My experience with the red squirrel has caused me to change my mind, and hereafter I shall hold him innocent until he is proved guilty.

The red squirrel in this locality is about seven and a half inches in length, measuring from the nose to the base of the tail. The tail is about six and a half inches in length, and is carried in a number of ways to suit the convenience of its owner. As to color, it seems as if there are two species, but it is only the difference between the young and the very old. Young squirrels are bright red on the back and sides, with the under parts usually a pure white. Old squirrels are red along the back bone, gray on the sides and a dirty white below. Some specimens are shot that are nearly all gray. Gunners claim that such squirrels are a cross between the red and the gray, but they are simply old red squirrels.

Dame Nature has been unusually kind to the red squirrel. She has provided him with powerful weapons of offense and defense. She has set in his muscular jaws long cruel teeth, which are whet to a keen edge on the hard shelled nuts. She has conferred upon him claws sharp as needles, and a muscular system which seemingly is controlled by an electric current. There is a wicked wild fire in his bright eye that stamps him the bravest wild thing of the forest. He will fight to the death. He whips his great cousin, the gray squirrel, without effort, and is a match for the large stoat.

When pursued by a dog he makes a dash for the nearest tree, which he mounts, calling out "chickaree" as soon as he is out of danger. He does not, like the gray squirrel, seek a hiding place in the top of the tree. No, he is far too bold to hide from a dog. He stops on a low limb, just out of reach, and fairly boils over with rage and fury. He barks, spits and sputters; he makes furious rushes as if he intended to come right down the tree and "whip that dog." He violently jerks his tail and pounds the limb with his hind feet, a picture of impudent, fiery energy.

Every movement of this little squirrel is accomplished without apparent muscular energy. He seems to float up a tree. If you are near enough you may hear the pricking of his claws on the bark, but you cannot detect a muscular effort. He flashes along the limbs in some mysterious way, never stopping, like the gray squirrel, to measure distances before a leap. If he misses and falls, he usually catches by a claw to some twig, thus saving himself. If he falls to the ground, it does not harm or disconcert him. He is up the tree in a jiffy, spitefully saying things that sound to the listener very much like swearing.

From the middle of April to the first of September the male squirrel leads a jolly, rollicking life. He is as restless and noisy as a schoolboy and as full of fun. He will hang head down, holding on by his hind claws, just for the fun of the thing. In the tree tops he is king. He rules the bluejays and crows, and races them out of the pine trees whenever he feels disposed. He hazes the gray squirrel, but does not unsex him as alleged. This silly tale is on a par with snakes' stingers and hoop snakes. Any one that has had the opportunity to observe squirrels the year round, knows that chipmunks, red squirrels and gray squirrels show the same appearance of being unsexed, except in the molting season.

The gray is no match for the red in a tree top in a trial of speed. He usually keeps to the ground, where his long leaps give him the advantage over his firy little foe. Many a sprinting match of this kind takes place in my dooryard. If a red surprises a gray squirrel stealing food, he sounds his war cry, and in a mad rush is on to the gray before he can make off with the bit of food which he has appropriated. The gray, finding that he is hard pressed, runs around the cabin with the red hot at his heels. Round and round they go, the gray silent, the red yelling like a little demon. When the gray has had several narrow escapes he drops the food and retreats unmolested. The red picks up the food and takes it to a favorite limb where he devours it, talking to himself, meanwhile, about "that gray thief."

In all my years of observation, once only have I known a gray squirrel to fight a red. I think it was hunger and desperation that induces the gray to fight. The gray was an old male, certainly three times as large as the red. The latter was an old male and had held the dooryard for several years against all comers. He was a sagacious, grizzled old warrior, and I named him Bismarck. The fight took place in my dooryard. It was a bloody battle for bread on a cold, drizzly day in mid-winter. The gray was whipped inside of three minutes. The snow was crimsoned with his blood, and when he fled he left a bloody trail behind. At no time was there a ghost of a chance for him to win. The muscular energy of the red was astounding. His movements were too quick for the eye. While the fight lasted all I could see was a bounding mass of red and gray. The red squirrel did not appear to be severely wounded, any way he remained out in the cold and rain to lick his wounds. Perhaps it was squirrel surgery to prefer the cold to a warm nest.

From my observations I find that the reds seldom chase the grays, unless the latter enter territory which the reds claim the right to hold and protect.

Four-footed wild animals, with a few exceptions, own farms, gardens or house-lots. That is, they hold exclusive control over a limited area around their nesting sites. You seldom see two woodchuck holes near each other, or two rabbit burrows. The red squirrel runs a fruit farm. He owns and controls trees that bear nuts or cones, and other reds respect his rights, and do not invade his territory unless there is a famine. A red squirrel will fight savagely for his home and property, and usually drives all intruders from his domain.

Young squirrels remain with their parents through the first winter, but in April the female turns the family over to the male, and makes another nest of moss, leaves and dry grass in the top of a tall pine or hemlock tree. While she is engaged by new duties, the male looks after the young squirrels that are now full grown. He finishes their education and locates the young males on territory which they ever after hold. The young females, later on, are mated and remove to the locality inhabited by their mates. Whether the parents have anything to do in selecting son-in-laws is beyond my knowledge. I have known an old male to fly into a passion when a smart young red tried to flirt with his daughter. The flirtation was cut short by the angry father, who run the young dandy off his territory. Kicked him out of doors, so to speak. Another young red that courted the daughter was tolerated, if not welcomed, by the father. He was the choice of the old fellow beyond doubt, but I do not know how the young lady decided the matter. Perhaps she eloped with the smart young red.

Bismarck, the grizzled old warrior, held my dooryard for several years. One winter, when there was a famine in the land because the nut crop had failed, a muscular young red thought he could drive Bismarck away. A fierce battle was the consequence, and Bismarck killed his antagonist, but was disfigured for life by the loss of the end of his tail.

While Bismarck reigned, the only squirrel that gained a foothold in the dooryard without his consent was his wife. He chased her away time after time, but like some human wives, she persisted and won the day. Bismarck gave in when, instead of running away, his wife adopted the plan of running spirally up and down the tree trunks. Mrs. Bismarck's favorite tree was a large hemlock, which was about eighteen inches in diameter. The trunk of the tree was very short, not over eight feet in length from the ground to the lower limbs. The squirrels made two turns in either going up or down the tree, and their speed was too swift for the human eye. A brown band seemed for a moment wound about the tree, shifting as the squirrels ascended or descended. It was two weeks before Bismarck would allow his mate to remain in the dooryard. When peace was declared the two would eat side by side, but with Bismarck always scolding and growling, while his wife discreetly remained silent.

Bismarck was my schoolmaster. He taught me that squirrels think, plan and reason just as human beings do. Every time I threw to him a nut or bit of bread, I would see him do the thinking act. He would take the food to a boulder, where he would stop, hold up one foot ready to start again, and think out a good hiding place. When he had thought out a spot, he would run directly to it and conceal the food under leaves or pine needles and return to the dooryard for more. No two nuts or bits of bread were concealed in the same place. Several times I experimented to find out how many trips Bismarck would make. The greatest number was fifty-one. While the experiment was going on I noted each hiding place, as well as I could, and afterwards saw the squirrel go to many. He certainly remembered each spot, and his keen scent did the rest.

Bismarck was a thrifty squirrel. He did not disturb his hidden store while the food held out in the dooryard. He would call around early in the morning, and if he found me eating breakfast under the trees, he would run to a limb just over my head and look down in a cute way that meant "breakfast for two." If I did not respond he would probably say to himself, "the hermit don't mean to feed me to-day. I must fall back on the food that I hid away yesterday. Let me see, that first nut is under the edge of a boulder just back of the cabin." Off he goes straight to the spot. He noses out the nut, which he eats on the limb over my head, scattering the bits of shell onto the breakfast table. He is very sociable while eating, for he stops now and then to say something to me. I do not understand his exact language, but I know by the tone that he means to be friendly.

[TO BE CONTINUED.]

Heredity and Telegony.

Editor Forest and Stream:

I confess that my statement about telegony (in your 13th) was obscure. Please let me recast it. "While it is utterly incorrect that telegony is an *invariable* following of a mesalliance, still it seems well proven that there are occurrences of it, although such are very rare, and a case of telegony will probably upset all theories of heredity that may be drawn from it, because the telegonous influence may be unknown."

But I am puzzled by Coahoma's statement—ativism, or "telegony," as Mr. Wade prefers to call it. Does not Coahoma know that the two subjects are totally unconnected? Ativism is reversion to an actual, legitimate ancestor, what we commonly call "throwing back"; telegony is where one sire fixes the character of the skin and hair, and a subsequent sire fixes all other characteristics; what we commonly call "the influence of a preceding sire." The ovum is impregnated only partially by the first sire, and the succeeding, and life-giving, sire determines its actual form and life.

The dog, born of full tailed parents, who was tailless himself, and who never begot full tailed progeny, does not support the tight theory of heredity, for he *departed* from all heredity, his begetting pups, like himself, came from individual potency, and not from heredity, and every experienced breeder knows how individual potency often upsets the general rule that "like begets like." As Coahoma's misunderstanding of the broad difference between ativism and telegony leaves me in doubt of just what he meant in his communication, I cannot follow him further at present. Yours truly,

W. WADE.

OAKMONT, Pa., April 20.

Skunks and Hydrophobia.

ARIZONA has somewhat of an unsavory reputation in the way of Gila monsters, rattlesnakes, and tarantulas, but no word has been said of the hydrophobia skunk. This pestiferous little wretch causes more trouble and more deaths result from its bite than from all other causes of like character combined. But for the Pasteur Institute, in Chicago, the death rate from skunk bites would be appallingly large. The little brute is generally distributed from one end of the Territory to the other. On the great desert plains it has no home, but it more than makes up for any shortcoming in that direction by being extra plentiful elsewhere. It can safely be said that it is the only animal in the Territory affected by rabies. Dogs, wolves and coyotes go mad and bite everything within reach, but so far as known no serious results have ever followed. Under the personal knowledge of the writer animals have repeatedly been bitten by dogs having every indication of suffering with rabies without being similarly affected. When such animal runs mad much excitement is created, but as nothing more is heard of it the excitement soon dies away. Dr. George Martin, of Tucson, once told the writer that during the early occupation of old Fort Yuma a "mad" coyote ran amuck on the Arizona side of the Colorado, then swam the river, entered the post and bit some eight or ten people before it could be killed. As the Americans were comparatively new comers to the country, the most dreadful consequences were anticipated and feared, but in no one instance did they materialize. With Mr. Skunk, however, it is different, as a bite from him means either an expensive trip to the Pasteur Institute or an even less desirable one to the graveyard. Numerous cases could be shown to that end and the following may be taken as a fair illustration.

March 23, 1899, Mrs. C. M. Clay, of Tucson, died from the effects of such bite. About six weeks previously, when outing with her husband in the Santa Rita Mountains, near Greaterville, a skunk entered the tent one night where they were sleeping and bit her on the nose. The wound soon healed, and as they did not understand the nature of the case no further attention was paid to it. Later she was taken with a severe cold and returned to Tucson for treatment. Poison symptoms then developed and several physicians were called to attend the case. Some relief was had, and she did not appear to suffer greatly until a few days before her death, when violent paroxysms of pain and convulsions set in. When so suffering she had to be forcibly held by her attendants, whom she strove to bite. Death finally came in the midst of her sufferings. She was a most estimable lady, and her death was greatly regretted.

Last February a man by the name of D. C. Gregory, a miner working on Cave Creek, about forty miles north of Phoenix, was bitten on the toe of one foot. To avoid such visitors his tent had been tightly pegged down, but the skunk had dug its way under, and not satisfied with one bite it jumped on the bed and for fully five minutes tried to get at the man, who had secreted himself under the covers. The noise aroused the occupant of an adjoining tent, who went in and killed it. The next day Gregory went to Phœnix, and on the morning following left for the Pasteur Institute, at Chicago. Although he could not well bear the expense of the trip and treatment, he was, as he said, "too young and healthy a man to sit still and die of skunk bite." He returned in about a month thoroughly cured.

Silas Carson, a cowboy, living in the Sulphur Springs Valley, was bitten in the face on the night of July 25, 1900, while asleep in his camp. As the bite was not a severe on, and being accustomed to a rough life he thought but little of the occurrence for several weeks, when he was taken ill and showed symptoms of hydrophobia. He went at once to Wilcox and was taken by Dr. Alton to the Sisters Hospital in El Paso, Texas. Several of the leading physicians of that city were called in for consultation, but their efforts were of no avail, and he died after enduring horrible convulsions. His body was shipped to Blanco City for burial. PIMA.

YUMA, Ariz.

Fannin's Blue Heron.

IN a recent paper, published in the Bulletin of the American Museum of Natural History, Mr. Frank N. Chapman describes a new subspecies of the widely distributed great blue heron, under the name *Ardea herodias fannini*. This form was first brought to the author's attention by Mr. John Fannin, well known as the Curator of the Provincial Museum at Victoria, V. I., who in 1900 presented the American Museum with an adult great blue heron from Vancouver Island. Other material has since been received from Queen Charlotte's Island, and the whole shows that the great blue heron of the northwest coast from Vancouver Island northward is entitled to a sub specific name. The subspecies is well named after the most enthusiastic ornithologist of the northwest coast.

The bird has a shorter tarsus, has the plumage throughout much darker, the upper parts being bluish slate black instead of bluish gray. The tibiæ are more feathered.

In the same paper Mr. Chapman expresses the opinion, based on a considerable amount of material, that the great blue heron of Florida known as *Ardea wardi* is not entitled to specific rank. He regards it as a southern race of the typical blue heron with which it intergrades. Its range extends west at least as far as Corpus Christi, Texas.

"I once had a cat which always sat up to the dinner table with me and had his napkin round his neck and his plate and some fish. He used his paw, of course; but he was very particular, and behaved with extraordinary decorum. When he had finished his fish I sometimes gave him a piece of mine. One day he was not to be found when the dinner bell rang. Just as the plates were being put around for the entree, puss came rushing upstairs and sprang into his chair, with two mice in his mouth. Before he could be stopped he dropped a mouse onto his own plate and then one onto mine. He divided his dinner with me as I divided mine with him."—St. James Gazette.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

CHICAGO AND THE WEST.

Mix Up of Game Laws.

CHICAGO, Ill., April 20.—The Indiana Game law continues to cut its wide swath of discontent and desolation among the Chicago shooters. Just now it is about the jacksnipe clause. The duck season is over, and everybody knows that, and everybody knows that it costs $25 to shoot ducks in Indiana and that you are mighty apt to get arrested if you don't dig out the $25. Under the peculiar wording of the law, however, jacksnipe, cottontail rabbits and two or three other things which might perhaps be flying or running targets, are not specified, unless both jacksnipe and cottontail rabbit are included under the head of "water fowl," which is not altogether clearly to be allowed in the case of either the jacksnipe or the rabbit. Now if the jacksnipe be not included under the name wildfowl, it does not come within the scope of the clause, which states that a license must be taken out for any of the above-mentioned birds or animals. Hence if one does not need a license nor a closing date on jacksnipe, it would seem he could go afield with his gun on the Indiana marshes, after all, with a certain amount of his erstwhile independence. There has been no practical way of deciding this question, and the matter has been discussed very warmly in Chicago all through this week. It is reported that Mr. Howe has word from the Secretary of State of Indiana that jacksnipe are not considered wildfowl and that no one will be bothered for hunting them. A local wise man says that there is a decision in the Indiana Supreme Court, jacksnipe to be wildfowl. I do not recollect ever hearing of such a decision. The same question was what was once mooted in this State, where jacksnipe were intentionally excepted from the intention of the law.

Under the circumstances, since it is practically sure thata these Indiana wardens will arrest a man on sight or suspicion, and since they have a right to do this in spite of the dictum of the Attorney-General or Secretary of State, and to take a case to the courts where only it can be determined, the safest thing would seem to be to let the jacksnipe of Indiana alone this spring. Wait till we have a test case. If this test case when taken to the courts shows that any one can hunt jacksnipe at any time and without a license in Indiana, then it is pretty plain that the loophole has at last been found, without which no Western game law is entitled to move in good society. It was the evident intention of our good Indiana friends to wipe Chicago off the shooting map, but next year it may appear that she has not yet quite done so.

The effect of this Indiana law on sporting goods trade of Chicago has been very apparent, and has indeed cut off a week or so of the shooting trade. Most of our snipe shooters used to go to Indiana, and not many of them know good grounds in Illinois.

The jacks are in now at Fox Lake, Ill., in some numbers. One bag, which I much misdoubt to be apocryphal, is reported of sixty-five snipe early this week near Fox Lake. Oswald Von Lergerke starts to-day for the marsh near Momence, Ill. Mr. Phil Woodford and Mr. W. L. Wells are figuring on the Skokie marsh, north of Chicago, for next Tuesday. No very good jacksnipe shooting is reported, though no doubt there are a great many birds in on the lower marshes.

No New Illinois Warden.

On April 17, Governor Yates, in reply to an inquiry, stated that there had been no change made in the office of State Game Commissioner. This would seem to quiet rumors to the effect that present incumbent, Mr. H. W. Loveday, has been removed.

Visitors.

Mr. George A. Clarke and Mr. F. W. Willard, both of Topeka, Kan., are in town to-day buying fishing tackle. These gentlemen belong to the Lake View Fishing and Hunting Club, whose lake lies between Topeka and Lawrenee. They have very god fly-fishing for bass on Lawrence. They have very good fly-fishing for bass on favorite Kansas waters, the Cottonwood and the little Ninnescah, are both splendid bass waters to-day, notably the Ninnescah, along its lower reaches, where are little bayous and pockets making back from the stream. I used to have very good bass fishing out in Kansas more than a dozen years ago.

Mr. Clarke has spent many years rambling over the Western States, and has fished for trout all over Colorado and Wyoming. He says that the prettiest trout stream he ever tackled is the Tongue River, of Wyoming, which is best reached via Ranchester, on the Burlington road. Thence one goes overland to Dayton, near the foot of the mountains. There is a tie camp in the mountains up the Tongue, and it is only due to this tie camp that one is able to get up to the best fishing waters. The lumbermen have built a long flume, some six or eight miles long, which is trestled up along the face of the cliffs, sometimes 90 feet sheer above the ground. One has to climb up the flume, for it is impossible to ascend the cañon of the Tongue River otherwise. Once in the cañon, one fishes down stream, and there is a fall of water 3 to 4 feet broken up into pools 30 to 60 feet in extent and 4 to 12 feet in depth. Mr. Clarke says that he has sometimes looked down from the high trestle of the flume above such a pool and seen it almost packed with trout running in weight from ¾ pound to 3½ pounds.

Mr. Arthur Goshorn, editor and owner of the Winterset News, of Winterset, Ia., paid this office a visit during the week. Mr. Goshorn was one of my classmates in college, seventy or eighty years ago, and I have not seen him since we bore our collegiate honors thick upon us. He has turned out to be not only a newspaper man, but a famous hunter and fisherman, so there is little doubt that he is entitled to be called a successful man. He is expecting some good snipe shooting near his city

this spring, and after that he will go into the Rocky Mountains for a fishing trip. I find that he hunts elk and deer out near Kalispel, Mont., where he has a brother living, and they go out with a guide who has killed eighty-seven grizzlies along what is known as Coal Creek, which I think runs up toward the Blackfoot reservation on the west coast of the Rockies.

Mr. W. H. Cornwell, one of the directors of the Chicago Gun Club, is about this week looking pretty badly, but better than he was some months ago. On Feb. 9, while Mr. Cornwell was experimenting with some flash light powders, an explosion took place which blew his right hand to pieces. The best the doctors could do was to leave him the little finger and the next finger, the first two fingers and the thumb being entirely removed. The hand is at last healing, and Mr. Cornwell begins to figure how he is going to do his shooting. He is hopeful and cheerful, and willing to begin all over again, and learn to shoot from his left shoulder if that be necessary. For the consolation of Mr. Cornwell and others who may thus unfortunately be deprived of the use of the right hand, it may be stated that scientists declare that the use of the left hand in any special function is much more quickly gained than one would suppose. The education of one hand unconsciously educates the other. Thus a man experimenting for a term of weeks in lifting weights with his right arm, found that while his left arm had not increased in strength so much as the right, it still was very much stronger than before the right arm was used in this way. It takes a long while to learn to write with the right hand, but after one has learned to use the right hand in that way he can learn to write with his left hand very much more quickly. There are a great many shooters who have changed late in life to shooting from the left shoulder. Thus our friend Bobo, who has lost his left eye, is going to shift and learn how to shoot from his right shoulder, he being formerly a left-handed shooter. By the way, Bobo goes home to-day, as well as one could be after so sad a misfortune as his.

Sighting a Rifle.

Billy Hofer and I have this week been doing some work in sighting a couple or rifles, and our experiments may have a certain interest for others who buy rifles out of stock. In the first place, I wanted to get a high power gun, with the deliberate intention of mussing up my grizzly bear as badly as possible when we came to shake hands out in the mountain this spring. Pop Hirth, over at Spalding's, had a second-hand .30-40 which was as good as new, but which the owner was willing to alienate for a consideration. We spent three days in trying to get a group with this rifle, and we never did it. We found that the original factory sights had been taken from this gun, and that an ivory bead Lyman had been put on. We could not do much with this sight and the hind sight, which had been put on the rifle, hence we put on a new hind sight and the original factory fore sight. Still we could not get the group we wanted. Then we filed down the rear sight and put on a still higher fore sight. Result, instead of shooting 6 inches high, as had been the case, the gun shot about 8 inches low at 75 yards. As we still could not get a decent group, Billy and I gave it up, and concluded we did not want this gun at all. It probablw has a bit of rust or lead in it. Then, as I expected to leave town in a few days, we got Pop Hirth to wire the Winchester factory to send out a brand new .30-40 with shotgun butt, ivory fore sight and with a platinum line Winchester express sight, which has a flat top and three leaves. This was the sight which Billy Hofer says he had on his rifle, and which he said was very satisfactory. We also wired the factory to test this rifle with a point blank of 100 yards. The rifle came promptly and in time, and with it a target of seven shots, all in the 6-inch bullseye at 100 yards, one of them plumb center, and only two wild ones. "This begins to look like a gun," said Billy, and we immediately took it out to try it. This time we found we had our gun. The only difficulty is that owing to the rapid taper of the .30-40 barrel this express sight sits almost too low to enable one to draw a real fine sight. We cannot tell whether our tests at the factory were with the 50-yard leaf or the 100-yard leaf. When we drew down as fine as we could see the front bead with the 50-yard leaf we got a splendid group, but it was just below the edge of the bullseye. With this fine draw we found that there was a little glimmer from the middle part of the band which goes across the breech of the barrel.

"We will take some salt and water," said Billy, "and we'll kill that little glare off the bluing. Then we'll have a gun that will cut the head of a grouse or the heart of a bear at any distance you want, from nothing up to 200 yards. I have tried my gun with those sights and I never monkey with the last sight at all, but just turn her loose, and I always get what I want."

I don't think any man can shoot a given rifle perfectly until he has gotten a little bit used to it. My .30-30 I found a very sweet shooting gun, and I am loath to give it up for the .30-40, which I do not believe is as accurate an arm in any specimen of the breed as is it as accurate an arm in any specimen of the breed as the .30-30; yet I want something which will work havoc and devastation. The Winchester people sent out at Billy's suggestion some of their hollow-pointed .30-40 bullets. These I do not believe are on the market regularly, but Billy says he saw them tried by some of the gentlemen of the firm on elk (Mr. Hooper and Mr. Winchester Bennett) last fall, and they smashed the back bone of an elk plumb in two. We confidently believe that we have got a bear gun this time.

Now for the gentler member of the party it was necessary to get a .22, and we took a Marlin out of stock. It has a rear sight of the pronghorn, stair step pattern, which used to be common on all our rifles, along with the very coarse metal fore sight. We tried these sights and found that the little gun put the bullets in one place, but too high. Hence we took a hammer and a chisel and smashed all the sights off of this gun also. We put on the same platinum line express sights for the rear sight and picked out a little low ivory bead front sight. Then we went to work on a 1-inch bullseye at a distance of 20 or 30 feet. We thought we were missing the whole target, but when we came to check up we found we were getting in the black practically all the time. We quit monkeying with that gun then.

Billy Hofer tells me that the reason rifles are sent out sighted as they are is that the factory is unable to hit upon any one sight which will please everybody. Hence they send out a good, fair working sight and let every fellow do his own tinkering afterward. The result of such amateur tinkering in the case of a .30-40 or .30-30 is nearly always disastrous, and I have heard of many fellows who changed their fore sight and then wondered why they could not get a good pattern with these high-power rifles. I went through this sort of thing with my .30-30, and at last went back to the factory sights, which pleased me better in that gun than anything I have ever found in my experiments. Personally, I like to have a sight which I can draw very fine, and I have a front sight on my .30-30 which permits this. When I want to go up in the 200 yards business, I just draw it a little fuller, and it gets in among the proper spots without any further bother. As to the extension rear sight, I do not see what earthly use there is for one on one of these small-bore rifles, and I would just as soon have a plain flat bar, close to the barrel, with a small notch in it, as a $14 sight with pink frills.

Indeed I believe the very perfection in rifle sighting was that which used to be put on the old squirrel rifles. My father told me it took him many days to sight his squirrel rifle, and I imagine it might surprise a good many to learn how he cut the notch in the rear sight. He did not use any file or saw, but went down in the notch little by little, simply wearing away the soft steel by the diligent use of a soft-pointed pin, such as is ordinarily found on a lady's dressing table. Thus, hair by hair, he got the rear sight just deep enough, until eventually the old rifle would put five shots at 80 yards into almost the same hole, showing only a little ragged edge which could almost be covered by a silver dime. I still have this old gun, and I must say that I would not part with it for all the other rifles I know of or have ever owned. But that is the way to sight a rifle. Take time and do not take chances. I wish I had these squirrel sights on all my high-power rifles. They are good enough.

The repeater notion did a great deal toward killing accurate sighting and accurate shooting among riflemen of America. Too many of us are willing to blaze away at a bunch of hair, forgetting the sage counsel of Joe Kipp, who says he would rather have a weak rifle which would shoot just where he wanted to, than a bigger gun in which he had no confidence. Bobo, when consulted, snorted at the idea that I needed any better bun than my .45-70, with which I blew a big hole through a black bear in his country. But Bobo's idea of a rifle is one that will stand hard knocks and never needs cleaning.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

J. E. Overton to Be Reinstated.

THE removal of State Fish and Game Protector John E. Overton, of Port Jefferson, and the appointment of Capt. Selah T. Clock (who formerly held the position) to be his successor, has created a great deal of comment in the newspapers and considerable activity among the friends of Mr. Overton, and indeed among those who hitherto have not always been looked upon as his friends. There was a general feeling that Mr. Overton was a good official and had done more than any of his predecessors to secure enforcement of the laws relating to fisheries and game. The only charge against him was that he had gone to Albany to appear against the McKeown bill, which was detrimental to the interests of the baymen and net fishermen of the county. He angered some of the members of the Fish, Forest and Game Commission who favored the bill, but considered that he was doing right in fighting it as the people of Suffolk county were practically a unit against it.

When Overton was summarily removed Senator McKinney named Mr. Clock as his successor, but took no part in the fight against Mr. Overton. The latter at once appealed to the Civil Service Commission and retained counsel to fight the matter in the courts. He secured the backing of some of the most influental men in Suffolk county, who considered the move ill advised and likely to stir up factional feeling which had been allayed.

The News is just in receipt of a telegram from Albany announcing upon the authority of Lieut.-Gov. Woodruff, President of the State Fish, Forest and Game Commission, that the charges against Mr. Overton will be dismissed and that he will be reinstated.—Suffolk County News, Sayville, N. Y., April 19.

The Hunting License.

Editor Forest and Stream:

I have read in your columns about hunting licenses. I think it is all right to tax non-resident hunters $25, and citizens of the State $5, and of the county $1. But my idea is that this will not last long. I think the next move will be from $5 to $25 and that will bar the poor man out, and some day it may be that the highest bidder takes the earth, as they have in some places across the pond. Who is doing all the slaughter of game? It is not the poor man. I see all the best duck marshes and shooting grounds are owned or leased by some club, so the slaughter must be in such places. If there are any vacations for hunters, it will surely be in the shooting season, and they will spend their time at their shooting ground if club members and will not stop shooting when they have enough for their table, but will take all they can get. I don't say they will all do this, but nine out of every ten will. I have seen enough in eighteen years when shooting was good, but never took more than I could carry; but I have seen some who would ship what they couldn't carry.

Speaking about saving our game, the only way is to prohibit the sale of game at all times, and to stop shooting over a dog, say for about two years; that will multiply game. It is only the rich man that can afford to buy a dog for about $150, and it is not so hard to get game when you have a high-bred dog trained by a professional to point the birds for you. This is one way. The other way is, if the rich man wants it all, to put a $50 license for hunting, and you will surely have it all. Don't worry; we can't go hunting next fall on account of not working full time this winter; that is how we have to do. On the other hand, the rich man owns all the best duck marshes, high-grade guns, the dog, has the money and the time, and can hire men to push him around the lake or as a guide for big game. What more do they want? If there is not enough game around for them, let them leave the dog home for two years and they will have all they want.

The $5 license is a good move and ought to be pushed along, for the reason that it will keep the boy hunter from killing song birds. If the license requirement includes farmers, who do quite a little hunting, we will see that we will have a hard time getting permission to hunt, for the license farmers will want the game themselves, and will not let you hunt on their grounds.

WM. HORN.

A Spring Swan.

A LARGE trumpeter swan, on exhibition at The Sportsman, is attracting much attention. The bird was shot on the Chemung River by Ralph Sartor.—Gazette.

Why was the "bird" shot? We do not know; but we make the following conjecture: Chiefly because it was a stranger and was alive. Possibly it may be eaten. Probably not. Perhaps some taxidermist may make a more or less satisfactory "stuffing" of the fowl, and then being "set up" it will add another object to some home for some housekeeper to "dust" and move about and wish a thousand times it were out of her way. But this is an aside from the theme that held my mind and led me to put pen to paper. My thought was of spring shooting. I am informed that recently some of the generous-minded sportsmen of this county (I hope none of them are "spring shooters") have at considerable cost purchased and released in various parts of the county a quantity of quail. This I am very glad to learn. But how sad it would be if just at this mating and nest-building season the desire to "kill something" should lead some impulsive young man to destroy these quail. Every death of bird or fowl in the spring cuts off the hope of increase in the autumn and is a step toward the extermination of our feathered friends. The spring migration toward breeding grounds and nests should be sacredly protected by a public sentiment which should frown upon and even punish the use of firearms against any migrant.

The successful shot at that swan cuts off the hope of how many well-grown young cygnets for next November? Says Rowland Robinson, than whom no truer sportsman ever lived: "Farmers do not kill their breeding ewes in March nor butcher cows that are to calve in a month; it does not pay. Why should sportsmen be less provident of the stock they prize so dearly; stock that has so few care-takers, so many enemies? Certainly it does not pay in the long run." May the day soon come when the tired swan, or goose, or duck, stopping a moment in its long flight to bathe its tired wings in the cool water of the river; to drink and perchance to nibble a little at some early springing greenness, shall be left in peace, to be admired in the gracefulness of its alive, alert, personality, and wished a hearty godspeed when it lifts itself again for the long flight to its boreal nesting place.—T. A. W. in Elmira (N. Y.) Advertiser, March 29.

"Little Bat."

MORGANTOWN, W. Va.—*Editor Forest and Stream:* Announcement was made in your colums of the shooting of "Little Bat" at Crawford, Neb., in December, by Haguewood.

The trial of Haguewood has just taken place, and he has been acquitted.

Discussion as to the justice or injustice of the case would be out of place here, but there is at least some righteous indignation at the result.

Although a Sioux Indian "Bat" was a true friend of the white man, being actively employed in the service of the Government ever since he was "old enough to eat beans," to use the expression of one of his army friends.

He had served many years as chief of scouts, in which capacity he had rendered invaluable service to the Government.

He was held in high esteem by Generals Miles, Crook, Brooke and many others who personally knew him and his achievements. He was among the few who were left of the "old boys" of Indian fame, and to think of his being "wiped out" in such an ignominious way, after facing so many perils, seems hard. Possibly few men living to-day have as interesting a history as he, when we refer to frontier life and adventure. When I saw him and hunted with him in 1893 he had a record of eighty-four bears, all of the big Rocky Mountain type, and he told me he hoped to round up his hundred before he went "over the range." He was of medium stature, but very heavily built, weighing perhaps 180 pounds. His feats with the rifle among game and of trailing were wonderful. Although killed in a saloon row, he was buried with all the honors of a military officer.

EMERSON CARNEY.

The Plank and the Press.

From the Cumberland (British Columbia) News.

THE various game associations in the Province, and sportsmen generally, are awakening to the fact that our game must have better protection if there is to be any sport for the future. Various remedies are suggested, and one issue is the taxing of all guns, the money thus collected to be applied in paying some wardens in different sections. There is a diversity of opinion regarding the wisdom of this step, as it is urged that certain people, such as prospectors and others who may have to depend on the gun at times for a meal, would be unjustly taxed. However, this perhaps could be arranged. The News some time ago advised the prohibiting the sale of all game. Gallinaceous game birds should certainly have this protection. The Victoria Times and other papers reprinted some of our articles and commended our suggestions. Our neighbors in the United States, and especially in the East, have long since

awakened to the fact that market hunters are responsible for the rapid depletion of their fields and forests of game birds, and have in most States formed very strong and influential bodies for the better protection of the birds, and their standard is "Stop the sale of game." The Forest and Stream, the leading paper on sport in America, has long advocated the non sale of game, and has been largely instrumental in bringing about this change of sentiment from the old one of "Kill all and by any means." The great plank in that paper's platform to-day is "Stop the sale of game." If there is to be an amendment to the act, let that clause be inserted. Residents of Hornby and Denman islands are complaining bitterly of the destruction of the blue grouse on those islands by pot-hunters for sale. The respectable class all say, "Stop the sale of game."

Where Is the Long Island Protector?

Long Island, N. Y., April 17.—*Editor Forest and Stream:* A few days ago I happened to get hold of one of your papers, and I found in it some of the best reading matter or sporting events that I have ever read, and was also surprised to hear of so much agitation and discussions on spring shooting. Now I live on a meadow in Jamaica Bay, and if there is a place in this world that needs the game laws enforced more than this bay does, then I will give it up. I have killed about 100 black ducks and geese this past season, all shot according to law; and I safely predict that if the three evils of dusking ducks, jacking geese and spring shooting were abolished there would be no trouble to get a mess of birds most any day. It seems to me that there are no game wardens in this bay, because the violators of the game laws are constantly dusking ducks and jacking geese.

It would be no trouble to catch these men, and I would like to have your paper give the matter a little consideration, as I, for one, even though a bay man, would like to continue gunning in a legitimate way, but if things continue, I suppose I will have to get in line and violate too in order to get a bird or so.

One week last fall three men went jacking geese twice a night, and got 23 for the week's shooting, and then the birds disappeared and did not show up again until this spring.

Now I will go further and name the places where the men can be caught. Jacking geese is done all along the meadow shore, principally West bay, Grassy bay, narrow bays and head of bay. Dusking ducks is done on Springfield meadows by about 20 men each night, and on the other meadows of the bay by about three or four men on each. It would be a happy evening for me in the fall if I could go to bed knowing that on the morrow I would have a chance at the geese and ducks as of old. Hoping I have made no enemies. A Bayman.

Ducks in Massachusetts.

Brookline, Mass., April 19.—*Editor Forest and Stream:* I was much surprised in reading Special's article, dated April 13, at the statement "ducks of all kinds are protected from April 15 to September 1," and I would like to call attention to the fact that in the State of Massachusetts black ducks, wood ducks and teal are protected from *March* 1 to September 1.

This is a new law, and I fear many people are in ignorance of it, and many more people, I grieve to say, do not care.

A great many black ducks have been killed on Cape Cod since the first of March this year, and yet I have heard of no one being called to account. Laws that are not enforced are precious little good, and game wardens (if there are any on Cape Cod) seem to have the same pleasing characteristic. Whistler.

That Court Document.

St. Augustine, Fla.—*Editor Forest and Stream:* The "court document" concerning the case of the Marlin Arms Co. versus G. O. Shields, ex-game and plume bird exterminator par excellence of the South and West, fell somehow into my hands a few days ago, and as a sample of ingenious bamboozling and hoodwinking by the party of the second part, I found it as amusing as one of David Harum's horse trades. No one is likely to swear that the letter from Washington, D. C., and that by "Coyote" from Montana were written for a special purpose by Mr. Shields, but no one can be debarred the privilege of *thinking,* and I think that a man with one eye can see through the little game even in the dark, though he may not know a Marlin rifle from a marlinspike.

Didymus.

New Bern, N. C., Notes.

The house boat Nirohda, which has been lying in port here for the last three months, has left in tow of the tug Virginia. The owner of the house boat is Col. Sheffield Phelps, son of Ex-Minister Phelps. Col. Phelps came here a month ago and has entertained a number of New Bern friends on his boat. The craft is bound for its summer quarters at Englewood, N. J.

Visiting sportsmen have had great luck with ducks, snipe and quail during the season just closed. Snipe have been abundant all winter, but are scarce now. The hook and line fishermen are beginning their spring campaign, while the shad supply has fallen off. Cold weather has retarded but not injured the truck. J. L. K.

Buckshot and Bullet.

Harrisburg, Pa., April 16.—*Editor Forest and Stream:* The bill introduced in the Legislature provides that it shall be unlawful to hunt or destroy any buck, doe or fawn at any time "with any weapon containing or loaded with more than one bullet shot or missile for each load intended to be fired."

There is little hope that it will pass, for it is opposed by the selfish clique who assume to regulate and make all our game laws. This bill was created by J. G. Dillin, of Radnor, Pa., who has given almost his entire life to the study of forest and game conditions. About 75 per cent. of the Pennsylvania hunters use buckshot in deer hunting, which means three cripples to one kill.

Bullet.

The Horse Accounted For.

Prince Bay, N. Y., April 12.—*Editor Forest and Stream:* In this week's issue of your paper under heading of "Sportsman Tourist" I read "Lost," and when I read his story in "Lost," found a horse was in the scrape. I have just enough Yankee curiosity left in me to want to know what became of that horse; he must have been lost and really forgotten. H. L. Allen.

Bangor, April 15.—Your favor in hand. Open ridges are called in Maine "horse backs." Your typesetter made a mistake. The word preceding horse back in my manuscript is or should be *or*, reading thus: "Traveling for a while on an open ridge or horse back." We discovered the mistake ourselves and were sorry. Hoping that this will relieve the anxiety of H. L. Allen, I remain, yours, J. A. Thompson.

P. S.—Unfortunately by the premature discharge of a gun years ago, my writing is awful, so I depend on others to copy my stories.

American Quails for Sweden.

Under date of March 14, 1901, Consul Nelson, of Bergen, reports to the State Department that the import of American quails into Sweden by Count Claës Lewenhaupt, of Fosstorjo, has awakened lively interest. More than 5,000 quails, representing a sum of about $3,500, have been ordered for the spring, and still more orders are expected. The birds will be sent in cages—fifty in each cage—constructed especially for this purpose, and the best hopes are entertained as to successful transportation. The small lot of American quails which were set free in Count Lewenhaupt's estate at Claëstorp last spring have endured the winter very well, and it appears that Sweden has good prospects of an increase in its game birds.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in Forest and Stream.

Notice.

All communications intended for Forest and Stream should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

Any Old Fly.

Editor Forest and Stream:

There appeared on the editorial page of your issue of April 6th a quotation which has since continued to disturb my usual serenity. And at the risk of making a nuisance of myself, I venture to register a mild protest.

The quotation itself I first noticed some years ago in a fishing tackle catalogue, where it served to enhance the value of a list of flies which surrounded it, and where were other quotations of a sentimental nature, equally well calculated to precipitate an estrangement between a fool and his money.

I take the liberty to repeat the portion of your quotation which has troubled me:

"A well-made fly is a beautiful object, an ill-made one an eyesore and annoyance; and it is a great satisfaction both to exhibit and examine a well-filled book of handsomely tied flies. R. B. Roosevelt."

Admirable as is this sentiment and true as it undoubtedly is as a generol proposition, one portion of it seems quite objectionable if it is to be taken without qualification. With the assertion "a well-made fly is a beautiful object" no one can quarrel, but would it be fair to say that under all circumstances an ill-made one is an eyesore and annoyance?

Well-made bass flies are expensive, costing from $2 to $4 a dozen. After the first bass has toyed with one a short time it is often difficult to determine whether the fly was originally a beautiful object or an eyesore. And under such circumstances "a well-filled book of handsomely tied flies" is a luxury and often beyond the reach of the man to whom the struggle for his life and for the life of others is no dream.

Now, any one, with a few instructions and a little practice, can tie his own bass flies at an expense of not to exceed 25 cents a dozen. Ill-tied and ungainly they may be, yet as effective as the best, and the better attempts are a source of justifiable pride. What if the product falls upon the water like a geological specimen, rather than a native of flydom. Noise is as apt to pass for merit among fish as among men.

Even in my limited experience I have known several honest flybooks to be filled with the home-made article, to the mutual satisfaction to the makers and the fish. And who would have the heart to call them eyesores and annoyances, knowing that they represent the best efforts of a good fellow with a love of angling in his heart, and one to whom these products of his clumsy fingers are treasures no less dear than are the finest works of the most skillful workmen to his more prosperous brethern.

Besides, who will have the assurance to deny that this very thing is a necessary step in the universal evolution? And will any one willingly, by discouraging this intermediate development, prevent or delay the final appearance of the perfect fly—nay, even the perfect fly fisherman?

Yes, a well-made fly is a beautiful object, and by all means let each one keep in stock as many as he can possibly afford, and a few more, but let us not allow a sentimental fancy to cause us to belittle the respectable, if humble, relative. Let due allowance be made for its heredity and environment. No fly (artificial) should be condemned as an eyesore and annoyance if it has made the very best of its opportunities.

So far as clothes go to make the man, so far feathers go to make the fly; no further. Self-sacrifice can transform and beautify a shabby garment. Why not an untidy hackle? Under its magic any old fly becomes to me a "beautiful object." Hence these tears. F. A. C.

Tackle for Keuka Lake.

Landlocked Salmon.—We would suggest the same tackle for these waters as we have found to be the best for Maine waters.

Flies for Casting—Silver-doctor and Jock-Scott (regular salmon flies of No. 20 or 30 hooks), brown-hackle, cowdung, Montreal and Parmachenee-belle on No. 10 hooks.

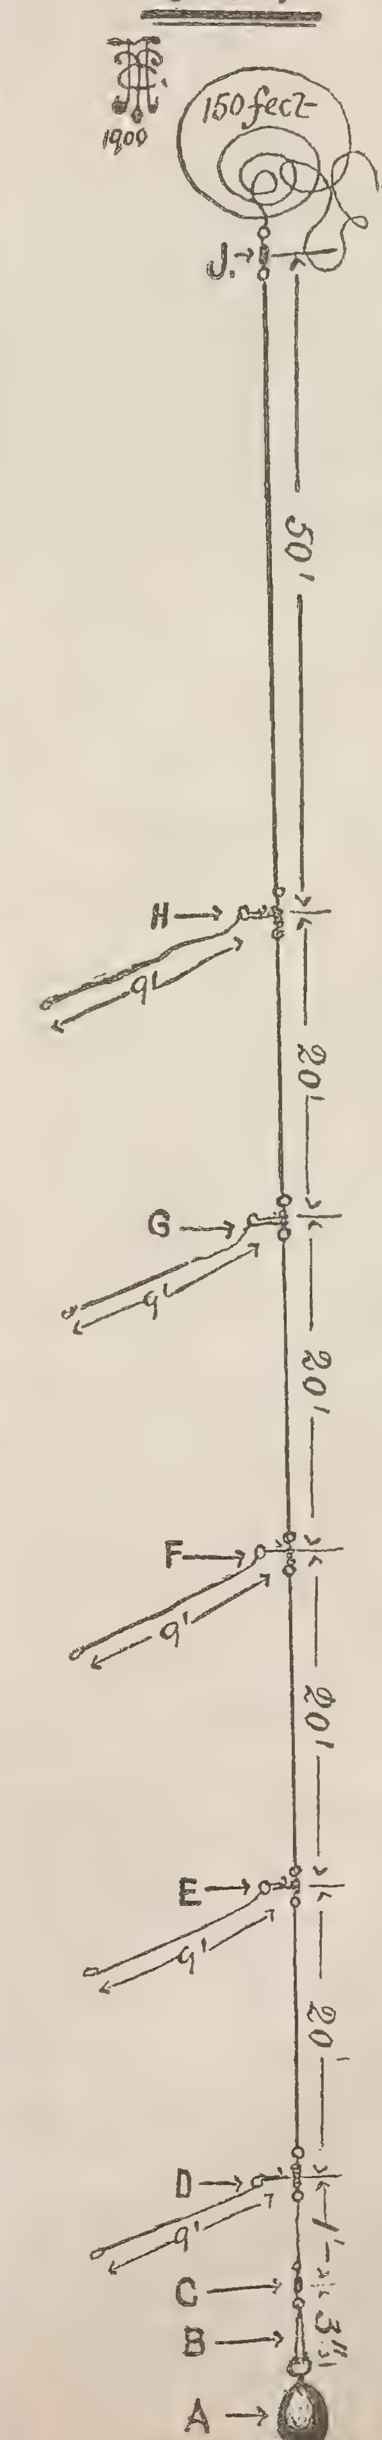
Trolling Rigs—Delaware-belle (both light and dark), live minnows and small minnows with Skinner's No. 2 silver casting spoon.

Great Lake Trout.—Owing to the great depth of water in Lake Keuka and the uncertainty of what depth the fish are feeding, also the variety of trout and salmon (all of which prefer different depths and temperatures), the most successful and only satisfactory way of fishing for them is with a hand line (hereafter described), using minnows on gangs and spoons.

Nothing can be done with live minnows on single hooks and rod and reel in this deep water, where 250 feet of line is only an ordinary length to have out. The weight of this line will counterbalance the strike of the fish, so that a bite will not be felt, and if felt the fish cannot be struck, as the bait will have been torn from the hook before the line can be drawn tight enough to strike the fish and embed the hook.

Local fishermen use the ordinary Seth Green gang and succeed in hooking about 30 per cent. of the fish that strike; we use a gang of our own pattern, and hook about 90 per cent. of the fish that strike. We give cuts and explanations of the two gangs later on. The ordinary spinning spoon with a gang of hooks is also useless; the only one of value is a wobbler, which we also give a cut of toward the end of this article.

CUT. 1.



Rainbow Trout.—Rainbow trout are taken on bass baits and tackle, also on the lake trout rigs.

Black Bass.—Use regular flies for casting. For trolling, Delaware-belles (light and dark). Live baits, minnows, chickets, worms, grasshoppers and above all, helgramites—the last mentioned is out and out the best live bait for Keuka.

Pickerel.—Troll with Skinner's No. 2 casting spoons (silver and brass), put a piece of the white belly of another fish on the hook for bait. Live bait, minnows.

Perch.—Same as for bass, given above.

How to Make a Trolling Line for Lake Keuka or Any Other Deep Water.

Commence at the bottom with a loop 3 inches long (B, cut 1), on which is to be fastened swivel sinker (A); both ends of the line forming this loop should be securely fastened in the lower eye of swivel C. Between swivel C and whippletree D should be a piece of line about a foot long—between each whippletree D, E, F, G and H a piece of line 20 feet long, thus making the upper whippletree H about 80 feet above the bottom. Between whippletree H and swivel J another piece of line 50 feet long; above swivel J a piece of line 150 feet long.

For minnow fishing the best line to use is G silk enameled from swivel J down to loop B, and E silk enameled line above swivel J.

Leaders for Minnows—Single gut 9 feet long—swivel on one end and loop on the other.

For spoon fishing a line two sizes larger is best—E below swivel J and F above. Leaders for spoons should be made of E line, 9 feet long, having a good sized loop at one end, to which the spoon is fastened and a swivel at the other to fasten to the whippletree.

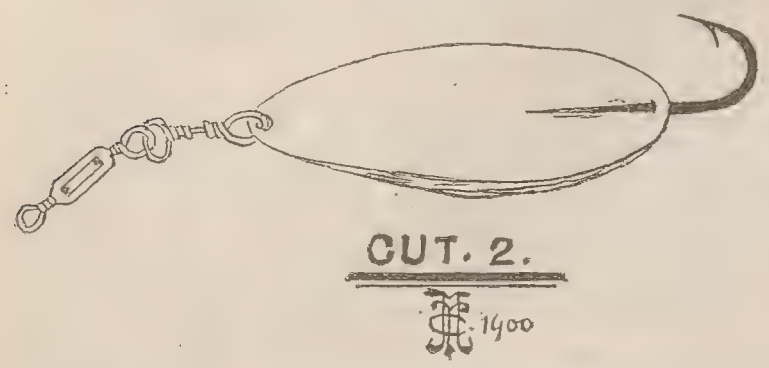
Spoons.—The only good spoons for Keuka's deep trolling is a silver wobbler, which is shown in cut 2. As will be seen, it has a single hook only, which is inserted through the end and then soldered to the inside of the spoon.

Gangs.—In fishing very deep water where lines of 250 to 300 feet are out, we found that we seldom hooked more than one fish out of four or five that struck on the ordinary Seth Green gang. Upon comparing our experience with other anglers, we found their experience to be the same as ours. Invariably the minnow was taken. After reasoning over the matter we came to the conclusion that lake trout generally strike the minnow crosswise, and also on the out-

side of the bend (which is put on for trolling). Without this curvature the minnow would be simply dragged through the water without any semblance of life; with it the minnow swerves and lunges about just like a maimed fish. Also the hooks used on the Seth Green gang were far too coarse.

CUT 3.—A is the ordinary Seth Green gang, B is one of our own design, C the minnow curved on a Seth Green gang, D the minnow curved on our own gang, E (in dotted lines) is the mouth of a lake trout seizing a minnow on a Seth Green gang without touching a hook. F is the same fish seizing a minnow on our gang and getting hooks G into its mouth. Our experience has been a little tug, scarcely perceptible, on a Seth Green gang and the minnow and fish are gone; on ours, the same little tug and the fish is securely hooked.

Hook G should always be fastened into the dorsal fin of the minnow; it is then pretty sure to be taken well



CUT. 2.

1900

into the fish's mouth. Seventy-five per cent. of the lake trout we catch get this hook into their mouth somewhere; fully 60 per cent. this hook and no other. We very much doubt whether the other hooks of our gang could not be advantageously discarded. Certainly the center one on the other gut could. We would be willing to put up a wager that if the dorsal fin hook only were used and the minnow bent with a piece of silk thread, more fish would be taken on this hook than on a Seth Green gang fully equipped.

As there is no possible chance of striking a fish on 300 feet of line, only the finest of hooks should be used. We make our gangs of Nos. 8, 10 and 12 hooks. No. 10 we fancy are the best; with these sharp, fine hooks the fish easily hooks itself.

THE WHIPPLETREE.—This is also a device of our own—there are many others, but all have their disadvantages. What is required is a device where the fastening is absolutely secure and yet at the same time a leader can be taken off or put on it in a second. The advantage of a whippletree is that if a fish works around the main line the leader turns the whippletree, thus preventing the fish from winding the leader around the line.

The necessity of being able to take off a leader quickly is: You hook a fish on one of the lower leaders and work your fish gradually in until you come to a leader; if this leader is taken into the boat and remains attached to the main line, and the fish makes a run on you, you have either to let go of the line altogether or run the chance of getting a gang of hooks into your hand (as we have often done before designing our whippletree).

The long, deep trolling line of Keuka is only an exaggerated Paternoster which was in vogue as far back as the immortal Walton, and was used commonly in his time for perch fishing.

Instead of simply illustrating this whippletree, we give a series of cuts and sections showing how any one who can hold a pair of pliers in his hand can make one. The necessary tools are three pairs of pliers (flat and round nosed), cutters and a file. The material, one piece of 14-gauge hard brass wire, 8 or 10 inches long (this is the bar on which the device is made), three pieces of merchant brass wire, 18-gauge, 6 inches long each. Merchant wire is not so hard and brittle as regular spring wire, and not so soft as to not have any spring in it.

CUT 4.—Section 1. A is a piece of 14-gauge wire; B is one of the pieces of 18-gauge wire wound around A from right to left half a dozen times; C is another piece of 18-gauge wire wound around A in an opposite direction to B.

Section 2. Draw B and C close together on the bar A, then make two or three twists around themselves, as shown in D, leaving two ends E and F.

Section 3. Turn end E (in section 2) up at right angles to bar A; then cut it off about ⅜ of an inch from the twist. With a pair of round-nosed pliers turn the loop F—straighten out end F (in section 2) and then about ⅝ of an inch from the twist turn the eye G—cut off the end of the wire ⅛ of an inch beyond the loop F and turn the extreme point up, as shown in H.

Now take the whippletree off of bar A, cut off the two ends B2 and C2 and with a file smooth off all ragged edges and points, also the points of F and H.

Section 4. Turn an eye K in the third piece of 18-gauge wire, winding the end around the bar two or three times L.

Section 5. On the wire of section 4 string a glass beam M, then follow it with whippletree BB, finish off with turning an eye K2 on the top similar to the eye K1 on the bottom. The device is now ready for use. To attach a leader, pass the eye of swivel N (section 5) over the point H and down into the eye G, as shown in section 3; then spring down the arm under the loop F. If properly made, this light device will stand a strain of 30 to 35 pounds.

O (in section 5) is a 9-foot single gut leader with gang P attached ready for a minnow.

The following swivel sinkers should be carried for this line: 2-ounce, 4-ounce, 6-ounce and 8-ounce. The heavy ones are required for very deep water or where two lines are being used.

CUT 5.—With two lines, weighted with two sinkers, say 3 ounces and 6 ounces, two anglers can fish from the same boat, for the set of leaders on line A will be from 20 to 40 feet behind the leaders on line B, so that they will not get tangled, but should the long line A get a fish on it, the short one B should be taken in, otherwise occasionally the fish will run around the short line when nearing the boat.

On account of the number of breaks, whippletrees, swivels, etc., on this line, a special reel is necessary for it. We give a cut herewith of the one we use. They are simple and easily made.

CUT 6.—The Reel. AA are two pieces of plain pine wood, 14 inches long, 2 inches wide and ⅜ of an inch thick, shaped as shown in cut. BB are two round smooth bars of wood an inch in diameter, fastened at each end with a couple of screws. CC are two pieces of brass wire 1 inch from bars BB and fastened at the end with nuts or turned into the wood. The upper end of the line should be securely fastened to this bar in case the line has to be thrown overboard temporarily for any purpose. The reel acts as a buoy to mark the line.

JAMES CHURCHWARD.

NEW YORK CITY.

Fishing in Lake Keuka.

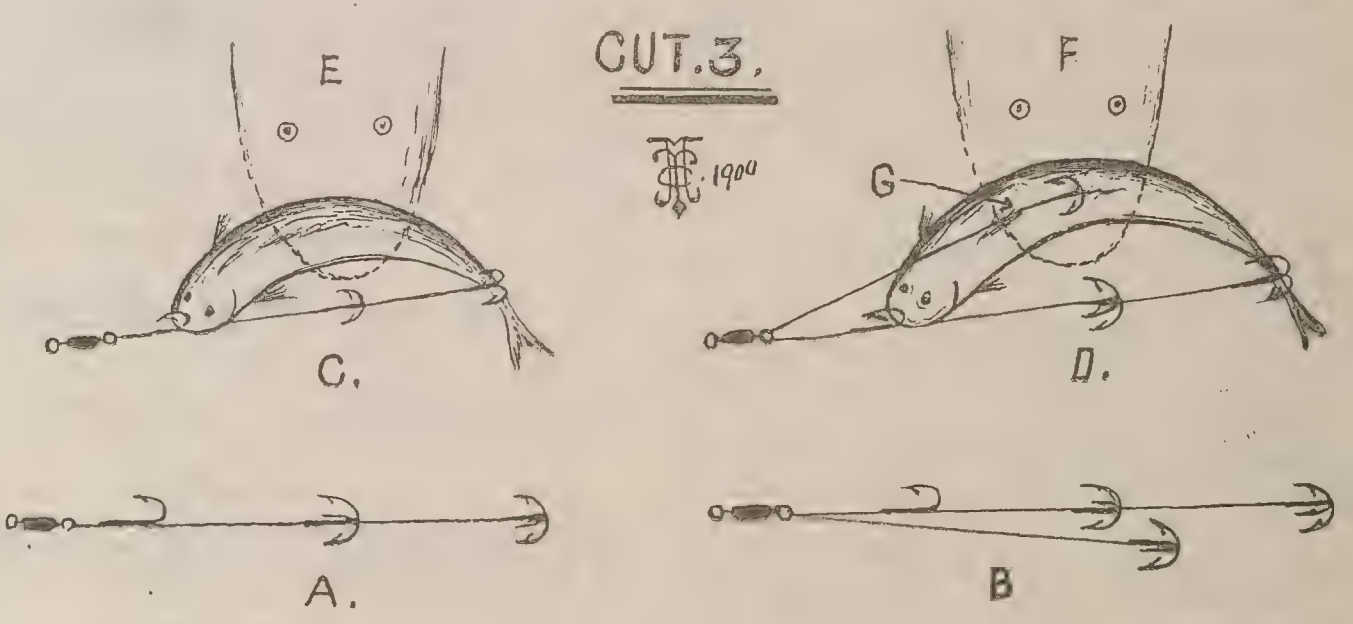
LAKE KEUKA is one of the liquid gems that adorn the map of central New York, and is one of the most pleasing and beautiful lakes in the State. Its form is Y-shaped; the upper end lies in Steuben county and the two arms in Yates county. The level of the lake is about 800 feet above the sea; its length from Hammondsport through the East Branch to Penn Yan is 22 miles, and from Hammondsport through the West Branch to Branchport 18 miles. The country surrounding this lake is the champagne district of America; here, as in no other part of the United States, does grape growing and wine making engross the entire population. It is also a region rich in Indian traditions. Red Jacket's summer and winter resorts are pointed out to the tourist and stranger sojourning in this delightful spot. Tradition says that here Red Jacket rested, fished and hunted, but that no heartrending, resounding war-whoops echoed o'er this happy scene, for here he laid aside his tomahawk and other weapons of war; here now, as of old, is peace and repose. But we are diverging from our subject, which is:

Owing principally to the late Seth Green, Lake Keuka is one of the best stocked open fishing waters on this continent. The public, generally, know but little about the grand, exceptional fishing to be found in this lake.

The question has often been put to us by hotelkeepers and residents along the lake, "Why is not the lake more frequented by New Yorkers and fishermen from the eastern part of the State?" We have carefully studied the question, and from conversations we have had with anglers and pleasure seekers, get but one answer, "It is an out-of-the-way place and takes a week to get there." This is correct, although two of our leading trunk roads run within half a dozen miles of the lake. Although it is only 300 miles distant from New York, it takes almost half as long again to reach it as it does to get to Chautauqua, which is nearly 450 miles from New York.

The Delaware, Lackawanna & Western R. R. runs first-class, fast trains to Bath—the transfer station to the lake. Here the traveler takes the Bath & Hammondsport R. R. to the shores of Keuka Lake—eight miles distant by rail. The connections are such that the traveler has to wait anywhere from half an hour to four hours before he can get out of Bath again; when he does eventually reach the lake, he has to wait another hour before the steamboat starts. This hour's wait is in a dirty, ill-kept depot or on a dock bestrewn with rubbish. It takes nearly half as long to get from Bath to Gibson's or Keuka on the lake, a distance of 20 miles only, as it does from New York to Bath, a distance of 300 miles.

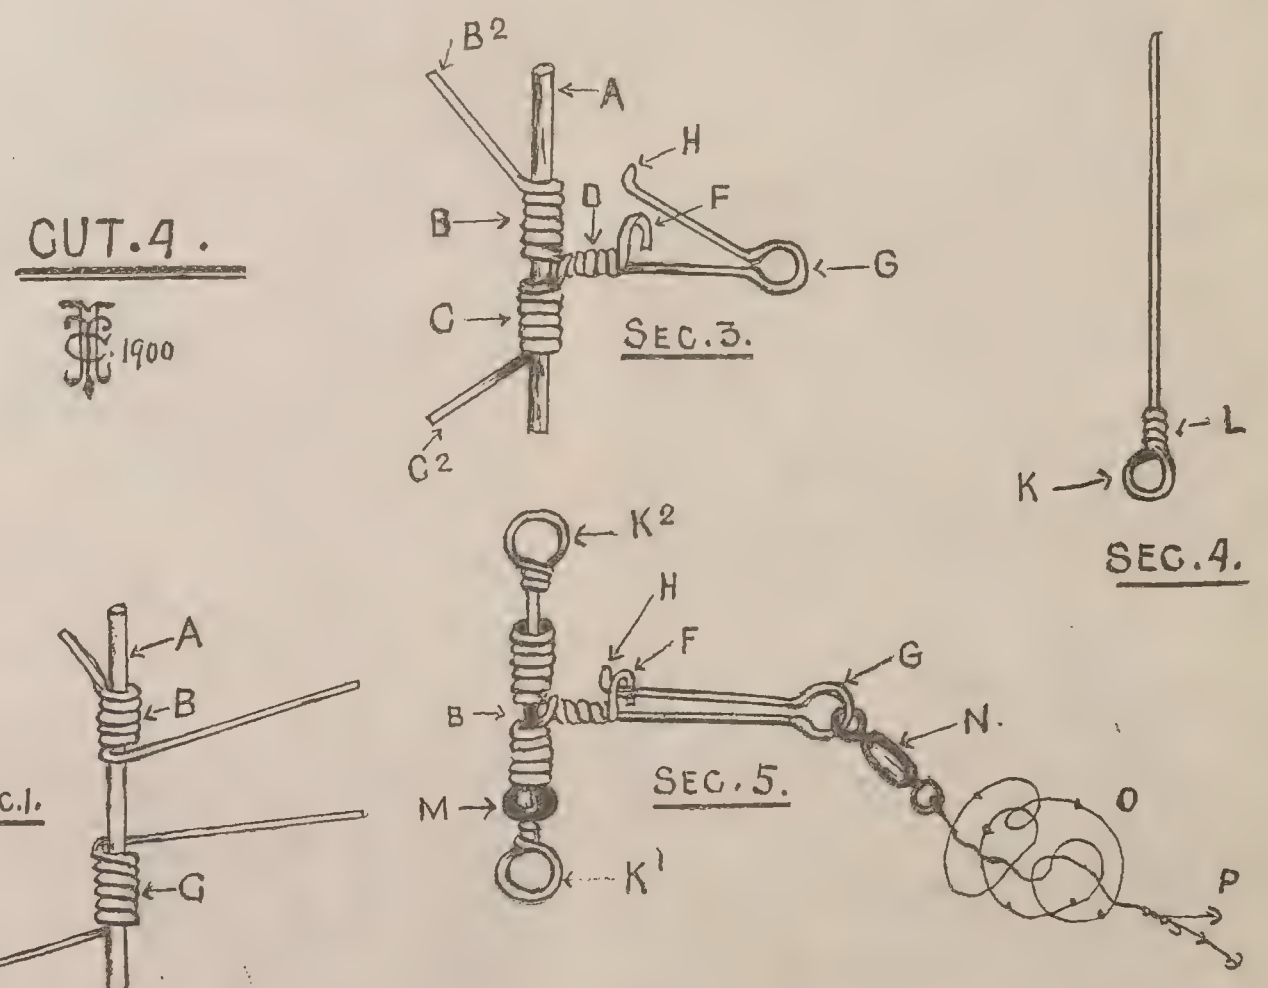
It is no wonder that the traveler or fisherman becomes disgusted and will neither pay this water a second visit nor advise any of his friends to undergo the same impositions. If those in control of these local connections—the Bath & Hammondsport R. R. and the Keuka Navigation Company—tried to devise a plan whereby they could keep the public away from this lake, they could do nothing better than follow their present methods of taking care of through passengers from the trunk lines.



The lake nevertheless abounds in game fishes, and it well repays the angler who can afford the extra time that is required to get there to pay it a visit.

Lake Keuka contains landlocked salmon or ouananiche, great lake trout or togue, California or rainbow trout, small-mouth black bass, wall-eyed pike, pickerel (Eastern pond), yellow perch, etc., etc., muscallonge (recently planted.)

We herewith give a birdseye view of Lake Keuka, which we have drawn especially for the readers of FOREST AND STREAM, marking what we have found to be exceptionally good spots. No doubt there are many others equally as good, but we have never fished them, as we could always catch all the fish we wanted on the grounds which we have marked.



Grounds marked thus, - - - - - - - - -, are where we fish for landlocked salmon, great lake trout, rainbow trout and wall-eyed pike.

Markings thus, x x x x x x x, are bass, pickerel and perch waters.

We will now give a little information pertaining to these marked waters.

Landlocked Salmon.

The best grounds for this fish are yet unknown, only two specimens having been recorded—both taken during the summer of 1900. One was taken in Hammondsport Bay and weighed 4 pounds; the other, the first one, was taken half way between Gibsons and the Bluff—just above the center of the mouth of the West Branch—

this one scaled 7½ pounds and was taken July 18, 1900. This fish was taken in 150 feet of water on a silver spoon and 60 feet below the surface. From its shape and markings one would say it was quite an old fish. The one taken at Hammondsport was a much younger looking fish. As both were in fine condition and well grown, and assuredly of different ages, it stands to reason that they have been successfully breeding in Lake Keuka, and that the lake is well stocked with this king of game fishes.

We noticed several times during our last trip fish rising in water 150 feet deep, in which we were catching lake trout at the same spot within a foot or two from the bottom. Asking our guide what these rising fish were, his answer was "Trout." They certainly were not lake trout, as lake trout at that time were close to bottom. We never took a lake trout on a fly, and have never heard of one being taken in this manner; the fish we saw were rising to flies or bugs of some sort. We therefore came to the conclusion that they were landlocked salmon, and regretted that we had not the proper tackle wherewith to tempt them.

Great Lake Trout.

During the early part of the season, just after the ice has gone out, two exceptionally good spots for lake trout are Branchport Bay, off the mouth of the inlet in 100 feet of water, and Hammondsport Bay, off the mouth of Pleasant Valley Brook in 60 feet of water. But during this season of the year the fish are near the surface, say from 6 to 30 feet below the surface only. During the latter part of July and through August our favorite spot is the Flat in 70 feet of water. The Flat is about two miles long and about one mile wide, and is bounded on the west by the Bluff, on the east by Keuka village, on the south by the Bar, and on the north by the points jutting out into the lake below Keuka. In other words, the Flat commences at the mouth of the East Branch and extends up into the Branch for a distance of two miles. The bottom of the Flat is composed of streaks of sand and mud, with here and there a few small boulders. The Bar, above mentioned, is composed of a sand bank in about 75 feet of water, and runs from the Bluff to the point above Keuka. From the Bar the water drops to 100 to 200 feet—this deep water extends from the Bar to a point a little above the Grove Springs Hotel and about a mile up into the West Branch.

This deep water is an exceptionally good piece of ground, and when the trout are not biting on the Flat the angler can often come here and make a good catch. If we were going to fish exclusively for landlocked salmon we should select this deep water and run our baits pretty near the surface.

Rainbow Trout.

These trout during 1900 were taken all over the lake, sometimes on the Flat and again in some water 30 or 40 feet deep near the shore. They appear to be on the increase both as regards numbers and size. During 1900 many were taken (trolling with minnows). They scaled 6, 8 or 9 pounds.

Black Bass

Black bass are found all along the different shores. Our favorite grounds are: The western shore of the lake from Urbana to Branchport, the eastern shore from Grove Springs Hotel down to Keuka Point. An exceptionally good spot in this run is just off the dock below the Club House. Out and out the best spot in the lake is around Bluff Point in water running from 15 to 40 feet deep over a clean, hard, rocky bottom. The limit of this water is from the dock on the eastern side of the Point to the dock on the western side, a little less than half a mile. Bass act differently in Keuka from any other waters we have ever fished. They bite well from the opening of the season up to the middle of July, then they disappear but come on again with renewed vigor about the first of September. From this time on the grandest of catches can be made. It is nothing uncommon to get a big string running from 2 to 5 pounds each, the latter not at all uncommon.

Pickerel and Perch.

Pickerel and perch are found along the shores, especially where it is weedy. A first-class spot for these fish is along the eastern shore from the point above the Grove Springs Hotel to Keuka Point, and again in the little bay just around Keuka Point. It is not at all uncommon to get perch scaling 2 pounds, and even those weighing 3 pounds have been taken.

JAMES CHURCHWARD.

"Hauling Gear" on the Sou'west Ledge.

THE most doleful tooting that ever startled the ear of man awoke me. It was pitch dark outside, for the sky was overcast and the earth but one degree blacker than the arch above. I lay perhaps half a minute (it seemed much longer) trying to imagine what had broken in upon my sound slumber.

"Too-te-too-to-o-ot!"

I bounded out of bed and thrust my head out of the open window. Was this a new kind of serenade, or was it Gabriel's warning trump? If the latter, why had he chosen Block Island as the scene of his first operations in raising the dead and the sleeping?

Suddenly 'way out upon what would have been the horizon, had it been defined, a light flashed out. It was old Montauk and I began to get my bearings. Immediately a voice reached me out of the chaotic blackness below the chamber window.

"Mornin', sir! Th' old man said you wanted to go out an' see us haul th' gear to-day an' he sent me on ahead to wake ye."

" 'Morning!' " I repeated, with considerable emphasis. "What time do you call it?"

" 'Bout ha'f after one. We gotter hurry. There'll be a breeze b'fore sun up. The elder goin'?"

"So he said last night." Then with a wicked desire to have company in the misery of being awakened at such an ungodly hour, and by such an ungodly instrument as a battered fishhorn, I added: "Go around and toot under his window, Phil. I'll dress."

The mournful notes of the horn sounded at the other end of the house while I groped for my garments, and when I descended to the kitchen the Elder was getting into his most disreputable coat. He looked a good deal as I felt. We glowered surlily, each blaming the other in his heart for ever expressing any interest in the lobster industry, but neither had the pluck to back out of the trip.

Young Phil gave an admonitory toot on his horn, and we pulled on our rubber boots and went out. I never remembered seeing such an utterly black night. There had been a heavy fog earlier and this had now risen and blanketed the sky, so that not a star was visible. As we set out in single file to cross the higher shoulder of Beacon Hill (I simply knew by intuition where we were going, for the path we followed was invisible to my eyes—I could but see the outline of the Elder's figure ahead). I noticed lights in the windows of several houses on the island. The fishermen were rising in expectation of the breeze which Young Phil declared was due, though there was no warning of it to a landsman's mind.

Montauk light blazed regularly, and as my eye swept the half circle, I noted the beacons on Fisher's Island, Watch Hill, Sand Point (the upper extremity of Block Island itself), and Point Judith at the entrance to Narragansett Bay. But these lights simply twinkled through an otherwise impenetrable gloom; even the sea was invisible, though its voice sobbed quietly where the gentle swells washed the west beaches.

"John-Ed. 's been hillin' up his potatoes," Young Phil remarked, as we tumbled over a fence into a mysterious place which, as far as I could see, was as likely to be a bottomless pit as a potato field.

"Where's your boat lying, Phil?" the Elder asked, and I hoped he would back out even at the eleventh hour. But if it was in his thought he did not suggest it, when Young Phil replied:

"Cormorant Cove. We'll hafter to stop for Cap and Lawyer. They'd never git up if the old man 'n' I didn't wake 'em."

He strode on tirelessly. For a breed of short-legged men these fishermen are the most wonderful walkers I ever met. Pounding away through plowed ground in heavy gum boots seemed nothing to Young Phil; but I was getting winded when we struck into the New Harbor road. Down this, and across other planted fields, and through pastures where the sheep, huddled together, were just visible as we passed, and finally into a door-yard littered with broken pots, a drying seine, and other maritime lumber. Our guide routed out the skipper and the fourth member of the crew, Levi (pronounced "Lawyer" by the islanders), and we all descended at last to

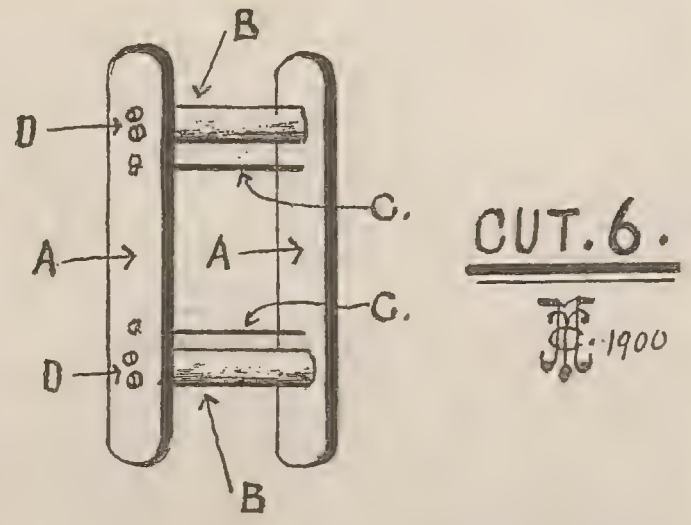
CUT. 5.



CUT. 6.

the shore of the cove, where old Phil waited for us at the fishhouse door.

"Come, come, boys! the breeze is comin'," old Phil said. "Bundle right into the boat, Elder. That was a good discourse ye give us last Sunday, sir. Pull away, Lawyer! Everybody 'll be out o' the breach ahead of us if ye ain't lively. I ain't lookin' for anybody to haul our gear to-day."

Voices and the creaking of blocks echoed across the cove. How the various crews found their boats was a mystery. Lawyer rowed the skiff unswervingly to the side of the twenty-four foot cat. Young Phil held her alongside while we hopped aboard, and then the skiff's painter was tied to the anchor buoy and the heavy sail went up into the darkness slowly.

Cap took the tiller the instant we were aboard and Old Phil was too busy hauling on the sail to scold.

"Cast off, there!" was the command. "Here she comes!"

A faint breath of air fanned my cheek as I tried to peer across the cove.

"Got your 'scare', Phil?" demanded the skipper.

Young Phil answered from the head of the boat with a mighty blast upon the horn. The catboat, lumberingly, at first, began to move. The water—smooth as oil elsewhere—rippled at the bows, and I hung over the rail and watched our phosphorescent wake.

Old Phil came back into the standing room evidently improved in temper.

"Light up down there, Lawyer, an' put some water on. There's some 'shorts' in the well, an' the Elder an' the doctor here'll have an appetite in no time."

I wasn't altogether sure of that, but I said nothing. A fishing smack isn't expected to smell like the perfumed boudoir of a duchess; but there was something about the odor which pervaded this boat that laid over anything I ever before experienced, and I once resided for a brief time between a soap house and a fertilizer manufactory—which ever direction the wind blew, it was always strong. They tell about one fastidious old lady on the island who, during the lobster season, made her husband sleep in the barn, and I don't blame her.

The luscious crustacean (which is most extensively canned and then served to us in our Broadway restaurants in beautifully manufactured paper-mache shells) is not a beast of cleanly tastes. Like the oyster and the clam he is a scavenger—whether from taste and desire or because of a partial paralysis of the olfactory nerves I am not prepared to say. Certain it is that nothing attracts him to the pot but bait in an advanced state of decay. Perhaps, as he is largely a native of the New England coast, he may be troubled with the universal catarrhal difficulties of that region.

However, there was a good sized bait tub with us and before we got through the breach and out where the morning breeze was chopping the sea nastily. I began to feel as though I'd have saved money and effort by skipping my several previous meals. But those "shorts" steaming hot from the pot, were delicious!

"Get enough of 'em down ye, an' ye can't be seasick," declared old Phil, and I have faith yet that he was right, only—I couldn't get enough down! I am not naturally a garrulous individual and I can usually keep a secret all right, but after the catboat was by the end of the breakwater and heeled over before the gale, I positively could keep nothing to myself!

But day was coming now with a rush. There was a broad band of light in the east and a flash of blue overhead as the breeze swept the fog blanket away to seaward. The sand hills loomed up on the island—great yellow patches against the darker background; and soon the isle in its entirety, all hills and vales, with scattering trees and clustering, weather-beaten dwellings, lay as pretty a picture as God ever made under the beams of the rising sun.

The boats swept by the fish pounds, the piles which held the long strings of twine (the fisherman's term for nets), casting monster shadows across the tumbling waves. The crews hailed each other and the tooting of the "scares" was stilled. It was a pretty race past the rock-strewn shore, and stretches of smooth beach where the boats lay above the reach of the tide. The two sturdy figures, approaching the life saving station from opposite directions were the surfmen coming in from their last "beat."

The boats drew apart now, for although the sea is so trackless to the landsman, it is like the streets of a city to these fishermen. They know the shortest course to their gear, and take it, for it will soon be low tide, and the pot buoys float too far below the surface to be picked up at any other time.

"In a line nor' nor'west from the kam buoy—twenty-two pots," the skipper mutters, and although there isn't such a thing as a compass aboard he rounds the catboat to directly over the first yellow-striped pot buoy.

The boat lays there with her big sail all shaking and Young Phil, hanging far over the rail, catches the buoy with the boathook and hauls it in. A big, black "1" painted on one side of the four by four strip of timber, proves that Cap has made no mistake in his calculations. Everybody but the helmsman lays hold of the rope and the pot, weighted heavily with ballast rock, comes in slowly.

The pot is a home-made cage of laths with a two part net inside in which the foolish lobster is led astray. The bait is in the inner net and Mr. Lobster never knows enough to get out the way he came in. If the gear lies too long without being pulled, however, the victim may cut the twine and get clear—a costly proceeding for the lobsterman, for each of these pots cost a dollar and fifteen cents to manufacture and the profits from the business is not what it once was.

"There's a 12 inch one," Lawyer observes, with satisfaction, plunging his hand in and grabbing the angry crustacean, whose clashing nippers have no fear for him.

The two others, however, are 'shorts'—under the legal length—but all are taken. The fishery laws are not very faithfully enforced on the Sou'west Ledge. There are several deep sea crabs lunching on the lobsters' dinner, too, but these are flung back as not being worth marketing. The bait is renewed, the heavy pot raised to the rail and tipped over, and with a reverberating splash it sinks again into the sea.

"Boom!" shouts the Cap at the tiller, the sail sweeps round, catches the breeze again, and we are off for the next pot.

"When we used to find two and three good lobsters in a pot every mornin' there was money in it," Old Phil remarks. "But they're scarce—have been for several seasons. The papers say we kill off all the small ones and that's what's the matter, but we gotter live. The hotels 'll take all the 'shorts' we get at three or four cents apiece, so why shouldn't we take 'em? Now we only haul gear every other day, an' the season is short at the best. Just as soon as the bluefish strike on, you bet we don't fool away our time at this heavy work."

And it is back-breaking work to haul the heavy gear. The men are saved from saturation by their long boots; but their hands are cut and parboiled, and it is disheartening to sometimes haul pot after pot to find nothing in them but crabs and sea-spiders, which devour the bait and are worth nothing.

Every time the bait tub is uncovered we get a stronger whif of its odorous contents and finally I give up the fight again and cross over to the other rail to "commune with Neptune" once again. I am disgusted to see that the Elder is a better sailor than myself, and am doubly disgusted that I cannot follow Old Phil's prescription and eat enough of the hot boiled lobsters to cure my well developed case of mal de mer.

"You can see how little there is in it for us, sir," Old Phil says, oracularly. "We've got to invest more 'n a hundred dollars every season for new gear, for what pots the sea don't pound to pieces, the brick barges and such like pick up, and those chaps don't stop for a poor fisherman's lobster pot."

I have sufficient interest, despite my perturbation of soul, to ask a question on this point.

"How do they pick 'em up? On their hawsers. The barges drift along behind the tug with their hawsers hangin' slack most of the time. The hawser catches under one of the pot-buoys and the whole gear is dragged off the bottom. It makes them barge men so mad to get tangled up that way that they just slash in with a knife and let the pot go to the bottom and the buoy go floatin' ashore. There ain't many of 'em like a barge captain, that run afoul of some gear off the Old Harbor last season."

"What did he do?" asked the Elder.

"Why," and Old Phil bit off a "chaw" apologetically behind his hand, which act the Elder carefully refrained from noticing, "his tow picked up a pot and he carried it along with him to Boston. The feller what set the gear put it down to profit 'n' loss, same 's we all do, but a couple of weeks later he found the lost gear set right in line with the other pots an' only two or three numbers out of the way. There was a shingle nailed to the buoy tellin' where it had been an' how the barge captain had brought it back with him an' dropped it as near home as possible."

There was a strained silence after that lasting several minutes. The Elder confided to me later that our friends restrained themselves very well, indeed; it is hard for sailors not to play somewhat upon the credulity of landsmen.

The first string of gear was finished and the cat ran over to the second, and then a third. The last was scarcely under run before the tide rose too high to make such work impossible. The other boats were beating up the island toward home and we followed with them. The gale had not changed its direction and there was a spatter of rain occasionally which drove the passengers under cover. But the cabin was strongly impregnated with the effluvia from the bait tub, and I quickly preferred a wetting to its hospitality.

A long leg out into Block Island Sound and a short leg toward the shore brought us up to the breach. I believe the sea began to grow smoother then; at least I was more used to its pitching, and by the time we scuttled through the narrow passage into the New Harbor I felt (like Jerome K. Jerome's brother-in-law who went on a sea voyage for his health) that if I had only a little more time I could have gotten square with those hot lobsters.

For a man with no olfactory appreciation of bait a lobster boat is the place on which to eat the succulent crustacean. If he has ever eaten them steaming hot out of boiling salt water, he will forever deny the "stiffs" offered him along Broadway, no matter how fancifully they may be served.

But between the reckless breaking of the law by the fishermen, and the greediness of hotel keepers who would rather buy "shorts" for a cent or two less per pound than pay the proper price for lobsters of legal length, that course will soon have to be cut out of our menus altogether. There are a few lobster nurseries along the coast, but young lobsters are harder to raise than Jersey cattle, and it is rather discouraging for any private individual to spend money, care and much time in hatching and feeding the youngsters while somebody else reaps the financial benefit.

W. BERT FOSTER.

Spring in the Adirondacks.

ESSEX, N. Y., April 18.—A sign of spring more potent than the first robin was the arrival of the steamboat Chateaugay at the Essex dock this morning on her maiden trip for the season. The ice broke in the head lake a week ago, but there are still miniature icebergs and floes in abundance.

Essex enjoyed just one-third of a year of consecutive sleighing during the past winter. There are places in the woods where runners are still being used. The snow in the basin at Dix last week was from six to eight feet deep, while at the base of the mountain, though soaked and settled considerably, it was from two to three feet deep, with no bare ground to be seen. The deer have had one of the hardest winters in this section for many years. The snow water will not be entirely out of the brooks till late in May, and good brook trout fishing cannot be counted on before June 1.

In the ponds, of course, the season will be earlier, the best fishing being immediately after the ice goes out, or about May 1 for this section.

J. B. B.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

New England Fishing.

BOSTON, April 20.—The ice is out of Sebago Lake, Me., and that opens the landlocked salmon season there. On Tuesday the telegraph announced that the lake was practically clear of ice, one day earlier than last year, when the Big Bay was clear April 16, though the ice hung in the Lower Bay for several days. Boston fishermen were hardly ready to be off, the ice going earlier than was anticipated, but some of them have started. Mr. John G. Wright, who has fished that lake almost every spring for a long time, will not be there this spring, for he is in Europe. The Sebago Club members have lost their interest there, having disposed of their camp, Camp Sebago, last year. They will seek another location somewhere in Maine—have several fishing places in view. J. L. Peters started for Sebago on Wednesday. J. P. Kendrick and a fishing friend are all ready to start, but are hoping for warmer weather. Mr. Farrington, of Lewiston, with Elliott Russel, of Rangeley, for guide, will fish Sebago next week. It is a new feature for a Rangeley guide at Sebago. A Portland dispatch of Wednesday evening gives a glowing account of fishing at Sebago. A party of Portland fishermen returned that evening from the lake, where they had been since Saturday, having gone up as soon as word came that the ice had started at all. They brought home twenty-four salmon, ranging in weight from 4½ to 7 pounds. Mr. Edward C. Walker, of Portland, also took, in three days, seven salmon, the united weight of which was 27 pounds. G. Fred Murch landed a salmon yesterday that weighed 7½ pounds.

The ice is not out of Grand Lake at this writing, though expected to go very soon. A number of Boston fishermen are anxious for the report that the ice has gone. The ice is out of Cobbosseecontee, Gardiner, and fishermen are flocking there. Of late years the early fishing there has been excellent, many fine salmon being taken. Lake Auburn is not yet clear of ice, and Lewiston and Auburn fishermen are all ready for the event. Almost every day some one of the more experienced of them goes up to the lake and reports on the condition of the ice. The last report suggested that it might be the 25th before the lake would be clear. The weather is very cold in that part of the country. Snow has fallen in some parts of northern Maine several times during this week. Most of the nights have been very cold, with hard freezes. The ice is not yet out of Varnum and Clearwater ponds, Farmington, and it is likely to remain in some days longer. Reports from the camp and hotel people there say that several Boston and New York sportsmen are expected as soon as the ice goes out.

As for the Rangeleys, the ice is likely to linger for a couple of weeks longer, at the very shortest. Following the lead of Sebago, the ice will not leave the Rangeleys till about May 10 or 11, since Mooselucmaguntic was not clear till the 12th last year, and Rangeley till a couple of days later. But Capt. Fred C. Barker, of Bemis and the Birches, is reported to have written a Lewiston party that they could come about the first of May and bring their fishing rods. Still it must not be forgotten that a number of sportsmen were stranded at Bemis last year for three or four days, waiting for the ice to go out.

Now it looks like the putting up of a lot of camps and summer cottages in the vicinity of Sunday Cove, Umbagog Lake, the lower lake of the Rangeley chain. Mr. F. N. Saunders, of Lewiston, and Mr. Estes, of Auburn, have purchased a large tract of timber land in that vicinity, including a long strip of shore, and will sell such lots, along the line of the lake, as may be desired. These lots will front directly opposite Metalluc Island, on which Mr. Harry Dutton, of Boston, erected a summer home last year costing about $100,000. A great many years ago somebody did the foolish thing to put pickerel into Umbagog Lake, always a wonderfully good trout lake before. But soon the trout fishing begun to decline, till finally nobody thought of going to that lake for trout, though there was good pickerel fishing for several years. But finally that began to decline also. The Maine Fish and Game Commissioners have stocked Umbagog with black bass, and a good many landlocked salmon have found their way down the Rapid River, five miles, from Richardson Lake and the Middle Dam, till now trout and salmon fishing begins to be good in Umbagog itself. The theory is that the pickerel are destroyed, or at least cannot thrive where there are black bass, and this has certainly proved true in Maranacook and the other Winthrop lakes, as well as Cobbosseecontee at Gardiner. Those most interested hope to see Umbagog restored to its former prestige of furnishing the giant trout of the Rangeleys, while salmon fishing is very likely to be good there. Rapid River shows a wonderful number of these fish in the spawning season.

Massachusetts lovers of the lobster, and particularly the Fish and Game Protective Association, are greatly pleased that Gov. Crane has vetoed the bill to repeal the law against the mutilation of lobsters, as well as the bill reducing the size of lobsters that may be legally taken to 9 inches. The Governor is flatly against both measures. He set forth in his veto message to the House, concerning the bill that was designed to permit of the mutilation of lobsters, that if such a measure were passed all protection of the lobster would be lost; since it is so easy for the lobster fishermen to tear lobsters to pieces that are under the legal length, and then sell them as lobster meat. The bill reducing the legal length the Governor did not believe to be either reasonable or expedient, since there is great danger of the utter destruction of this noble crustacean along the Massachusetts coast. Maine has a law preventing the selling of mutilated lobsters.

BOSTON, April 22.—The ice is going out of the Maine fishing waters early, after all. A dispatch from Lewiston Saturday stated that the ice had gone from Lake Auburn, and that local fishermen were on the lake, although the weather was cold with a dense mist. This clearing is six days earlier than last year. Mr. Henry Hanson, a local fisherman, has a record of the departure of the ice from Lake Auburn for the past ten years, as follows: In 1890, April 26; 1891, April 27; 1892, April 21; 1893, May 5; 1894, April 24; 1895, April 23; 1896, April 25; 1897, April 26; 1898, April 18; 1899, April 30; 1900, April 26. It will be seen that April 20th, the date

of the clearing this year, is the earliest in eleven years, with one exception.

A Saturday's Augusta, Me., dispatch also says that Lake Cobbosseecontee is clear of ice, with a number of the Gardiner and Augusta fishermen trying for salmon and trout. Three or four Boston fishermen started for that lake this morning. Lake Auburn is well inland, and it may be expected that the Rangeleys will follow in clearing early, unless the weather should change from wet and raining to freezing. Moosehead may also be expected to clear early. Late reports say that the Moosehead ice is covered with water and becoming very rotten. A large number of horses were drowned on that lake Friday and Saturday. The teamsters say that the water over the ice has dissolved it much sooner than they had expected. If the Rangeleys should follow the pace set by Lake Auburn, they may be expected to be clear of ice by the 5th or 6th of May. A record of the clearing of these lakes, from the FOREST AND STREAM, will be of interest: In 1882 the ice went out May 12; 1883, May 14; 1884, May 13; 1885, May 15; 1886, May 3; 1887, May 16; 1888, May 21; 1889, April 30; 1890, May 9; 1891, May 10; 1892, May 4; 1893, May 20; 1894, May 2; 1895, May 7; 1896, May 9; 1897, May 12; 1898, May 1; 1899, May 9; 1900, May 12.

Moosehead Lake usually clears two or three days earlier than the Rangeleys, though fully as far north. But the body of water is much larger. The dates of the ice going out are appended: In 1881 the ice went out May 9; 1882, May 19; 1883, May 13; 1884, May 16; 1885, May 16; 1886, May 2; 1887, May 12; 1888, May 21; 1889, April 29; 1890, May 8; 1891, May 14; 1892, May 4; 1893, May 19; 1894, April 29; 1895, May 8; 1896, May 9; 1897, May 10; 1898, May 3; 1899, May 6; 1900, May 11.

Maranacook, and the other Winthrop and Belgrade lakes are yet to be heard from, though the ice is doubtless about ready to depart. No reports have yet been received of the clearing of Grand Lake, Me., while Sebec and the other lakes of Piscataquis County are net yet clear. New Hampshire waters are still closed, with the exception of Winnipisaukee and Winnisquam, which are mainly open. A dispatch of Saturday evening said that the lake was clearing rapidly, and that the advance guard of the fishermen are at the lake. New Found and Sunapee waters are closed at this writing. A report from Winnisquam says that the ice was out early in the week, and good catches of trout and salmon have been made. Franklin fishermen have secured two salmon weighing 3½ and 4½ pounds, and a lake trout of 5½ pounds. Over thirty trout and salmon of good size have been taken since the ice went out. Boston parties intended to have been there over Sunday, but the cold storm kept them at home.

"Old Sebago is doing herself proud," says a sportsman from that lake Saturday, "though I did not get a fish." Portland fishermen seem to be having great luck. Friday W. L. Jones, of that city, brought out seven salmon, caught in a single day at Sebago. The two largest weighed ten pounds each. The other five run from 4¾ to 7½ pounds weight. He is very proud of his success. The fish were all caught on the east side of the lake in the vicinity of Kettle Cove. But the biggest salmon of the season, if not for several seasons, has come from the skill of William H. Babb, of Cumberland Mills. The fish was caught Saturday. It measured 32 inches in length, and weighed 15 pounds. Mr. Babb, with Henry J. Hanscom and Seth C. Morton, all of Cumberland Mills, have been camping at the lake since the ice went out. The big fish was caught near the gate of the water works, and within half a mile of Sebago Lake station. The three men were trolling from Mr. Hanscom's steam launch, when Mr. Babb got a tremendous strike. The salmon was very gamy and kept the angler busy, with a 10 ounce rod, for half an hour before he could be landed. Trolling from power launches is becoming the popular thing with fishermen in Sebago waters. The claim is that very much more ground can be covered than by means of a guide with a rowboat. It is also claimed that instead of frightening the fish away, as might at first be supposed, a power launch really stirs up the idle, well-fed fish, and causes them to bite, when they might pay no attention to a rowboat. Yachting.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

SHAMROCK II., Sir Thomas Lipton's new challenger for the America Cup, was successfully launched from the yard of Denny Brothers, Dumbarton, Scotland, shortly after noon on Saturday, April 20. The yacht was christened by the Marchioness of Dufferin. The weather was delightful and a large and enthusiastic crowd was present. Owing to the shallow water that fronts the yard where Shamrock II. was built, it was necessary to launch the boat on a pontoon. Shamrock II. is said to greatly resemble Columbia, but has longer overhangs, is flatter on the floor, with more rounded section forward. The trough keel contains about 95 tons of lead. The mast and main boom are of steel, and there will be a topmast of pine that will telescope into the lower mast. The hull frames are of steel, and she is plated with manganese bronze. The deck is of steel with a thin layer of yellow pine.

History of the Development of the Racing Yacht.

(Continued from page 312.)

When the first challenge for the Cup was received in 1870 from Mr. James Ashbury, public sentiment ran high. It was the first challenge for the trophy, and it was the wish of the public that the yacht which had won it so gallantly should have an opportunity of defending it. The Government gracefully yielded, and America was fitted out as a yacht at the Brooklyn Navy Yard at a cost of $25,000. The Navy Department does not pretend to know anything about fitting out racing yachts. Handicapped as she was by navy cut sails and navy rigging, it is a wonder she sailed as well as she did. The result, however, showed that much of the great speed she had shown when, in the glory of her day, she had astonished the world, was still hers. She came in fourth in a fleet of twenty-five yachts, beating the English challenger Cambria over the course, and, of course, had she been the only defender the Cup would have been saved by her.

America Purchased by Gen. B. F. Butler.

Shortly after this race the Government offered her at public auction, and she was bought by Gen. Benjamin F. Butler, of Boston. And here her wanderings cease, for she has remained in the family of Gen. Butler ever since, and is to-day safely laid up at Chelsea, Mass. She is still hale and seaworthy, and at the last Cup race in 1899 was one of the most observed of all the many craft that clustered about the starting line.

Long may she continue to exist and be an inspiration to those interested in the noblest sport ever invented by the fertile mind of man. Her influence has been more strongly felt than any yacht ever built. Had it not been for her adventurous trip to England in 1851 in search of cups and glory, those magnificent racers Mayflower, Volunteer, Thistle, Valkyrie, Vigilant, Defender and Columbia would never have been built, and the sport of yachting would never have received the fillip it has, and would be on a much more restricted basis than it is to-day.

The America Cup, as it has been called since that eventful Friday fifty years ago, was presented to the New York Y. C. as a perpetual challenge cup by the owners in 1857. It was stipulated in the deed of gift that it should be kept as a perpetual challenge cup for friendly competition between foreign nations, and that any yacht owned and built in a foreign country should always have the right to sail a match for it, provided proper challenge was made, as therein provided.

Yachting in the United States at this time, notwithstanding the remarkable success of America, was in its infancy. There were few events of any note in the early fifties, and the Civil War succeeding in 1861 prevented much further development for many years. The period between 1850 and 1870, however, is made notable in this country from the development of the use of the centerboard in American yachts. There is much misconception in the popular mind about this device. Many Americans seem to regard the centerboard as a part of the Monroe Doctrine. They imagine that it is an old, time-honored American invention that should be used in all American yachts, from patriotic motives, if for no better reason. This idea is, however, entirely erroneous. The centerboard is not an American device at all. It was used for a hundred years before it became a factor in the American skimming dish. In 1809 Capt. Shuldam, of the English Navy, patented a centerboard that is almost a counterpart of that used to-day on our centerboard boats. He made a working model of this, and it is to-day filed in the British Museum in Kensington.

The centerboard is simply a makeshift. It is used so that yachts may enter our shallow harbors. Boats were made shallow, and in this condition, of course, did not have sufficient lateral place to "hold on," as it is called, when beating to windward. To remedy this the centerboard was adopted. Were American harbors, as a rule, of as great depth as those in England, we would never have heard of the centerboard. It is true that in very small boats a centerboard may be used with good advantage, as far as speed is concerned, but it is an awkward contrivance at best.

In my opinion a centerboard boat could not be built that would compare in speed with the great fin-keelers that are now being constructed for the challenging and defending the America Cup. To place a centerboard in a craft as large as Columbia would be a herculean task to any builder. It would need be at least 60ft. long and 20ft. wide, a size that is practically impossible.

The First Challenge for the America Cup.

The next event of note in yachting history was the challenge for the America Cup in 1871, by Mr. James Ashbury. This was the first challenge received, and naturally attracted considerable attention among the rather limited number of enthusiasts then in this country.

This challenge was undoubtedly brought about by the trip of the American schooner Sappho to England in 1868. Sappho was built by Messrs. C. & R. Poillon, of Brooklyn, in 1867. Her designer was William Townsend, then employed by them as foreman. She was, up to that time, the largest American pleasure vessel ever constructed. She was 134ft. over all, 120ft. on the waterline, 24ft. 9in. beam and 10ft. depth of hold. Her lines were very fine—so fine, indeed, that she did not have sufficient stability to carry her rig until she was hipped some time later. She was given some tuning up races on this side by her builders and owners, and then sent over to England to sell. Capt. T. P. Baldwin, a retired ship master and merchant, took her over in July, 1868. Her crew consisted of two mates and six men before the mast, none of whom were yacht sailers. She made a remarkable passage to Falmouth, crossing in fourteen days, and it was the opinion of her captain that she could have crossed it in thirteen if she had been provided with a square sail.

Capt. Baldwin had been instructed not to race her there, but that if in his judgment it became necessary to test her speed in order to obtain a more remunerative price for her, he should notify the owners by cable and a racing crew would be sent over.

Being much elated by the quick passage he had made, however, Capt. Baldwin disregarded these instructions and entered the yacht in a race around the Isle of Wight on Aug. 25, 1868. Sappho was beaten by the entire fleet of four boats, Cambria beating her one hour and forty minutes and Condor, the nearest boat, by one hour and thirty minutes.

It was unquestionably this defeat of Sappho by Cambria that induced her owner, Mr. James Ashbury, to challenge for the Cup, and thus start that long line of unsuccessful efforts to recover that famous trophy, whose end is not yet.

Of course after thus being shamefully defeated it was practically impossible to find a purchaser for the yacht in England. The papers ridiculed her and the Cowes boatmen laughed at her pretentions to speed. Her owners, therefore, ordered her back to America as soon as they heard the drubbing to which she had beeen subjected. It was their intention to refit her and send her over again the following year in charge of a competent skipper and crew and in racing fettle to wipe out, if possible, the stain she had received on her racing honor.

Before this was done, however, she was sold to Mr. William P. Douglas. Her new owner decided to hip her. This process consists in building out the sides of the vessel to give her greater beam and thus increase her stability. Sappho was widened about 14in. amidship and this was tapered gradually 30ft. in each direction. She was then thoroughly fitted up in the best possible racing condition and with a racing skipper and selected crew sailed away for England.

Mr. Douglas arranged a match with Cambria, to be decided in three contests. The first was to be sixty miles to windward and return; the second to be the same, and the third over a triangular course of the same distance.

After Cambria had gone half over the course in the first race she realized that Sappho was too far ahead to be overtaken, so she put up her helm and ran back to Cowes.

There was some dispute over the second race and Cambria did not start. Sappho sailed over the course alone and was awarded the race by the committee.

In the third (triangular) race Sappho won by nearly two hours. After this demonstration of her speed, Mr. Douglas found it impossible to arrange any more races and so returned to the United States with his now victorious boat.

Mr. Ashbury was not satisfied with the result of the match, and still believed that Cambria was the fastest yacht afloat, and so he forwarded the first challenge for the America Cup.

I will not weary you with the details of the match, but let it suffice to say that, after considerable correspondence and parleying, it was decided that the challenger should sail a race as near as possible like that in which America won the Cup. That is, all the boats of the American fleet were to be pitted against the English challenger.

The race was set for the morning of Aug. 8, 1870. All the yachts were drawn up in line with anchors down. Cambria was given the post of honor, on the windward side of the line. Next to her was the now famous America, as I have before stated, fitted out by the Government at an expense of $25,000, to sail against the Englishman. In addition to America were twenty-three others—six keel schooners and seventeen centerboarders. At the sound of the gun all was bustle. It was up anchor and hoist sail. Magic, one of the centerboarders, was the first to get away. Cambria was next and America last.

The course was laid from a start off the Narrows out to Sandy Hook Lightship and return. Magic secured a good lead by very capable handling and America lost any favors she might have had by exactly the reverse. The immense fleet worked their way down the bay and out to the Hook, with Magic well in the lead. All eyes were on the old favorite, America, and it gladdened many a heart to see her gradually forge ahead from the very last boat at the start, working her way through the fleet, passing boat after boat, till at the flagship she was fourth boat, having put no less than twenty yachts behind her. Magic was the first to turn at 2:03:16, quickly followed by Idler and Dauntless in the order named. America turned at 2:15:25, and Cambria, the eighth boat, at 2:27:17. America maintained her position as fourth boat to the finish. Magic won the race and Cambria could do no better than tenth.

The Second Challenge for the America Cup.

Thus ended the first attempt to capture the Cup. Mr. Ashbury took his defeat in good part, and the next year forwarded a second challenge.

His new boat was called Livonia, and she was an improved Cambria.

An important modification had been made in the rules for the Cup during the year, and the new challenger was to be called upon to sail against but one antagonist at a time—a much fairer proposition, and one conducing to

test the capabilities of each in a much more satisfactory manner. The fact that Mr. Ashbury was building a new vessel created no alarm in this country. There was a quiet confidence in the capabilities of our yachts to hold their own against all the other side could produce.

Considerable discussion arose over the terms and conditions of the new match. Mr. Ashbury advanced the rather startling proposition that as he was a member of twelve clubs in England he should be given twelve different races on as many days, and if Livonia were fortunate enough to win one of them, the match should cease at that point and the Cup be awarded to him as the winner of a race for whichever club he happened to be representing on that particular day.

The New York Y. C. would not agree to any such proposition as this, and for a time it looked as though the whole match would fall through.

Finally Mr. Ashbury agreed to a series of seven races, the winner of four to take the Cup.

The American schooner yacht Columbia was chosen to defend, and the first race was set for Oct. 16, 1871. The start was from the quarantine anchorage in the lower harbor to and around Sandy Hook Lightship and return. Columbia took the lead at the start and Livonia never had a ghost of a show to win, Columbia taking the race by a margin of over twenty-five minutes.

The second race was from the Lightship twenty miles to leeward and return. The wind was strong, and in the run out to the mark Livonia led and turned first. Columbia picked her up in a beat home and won by ten minutes and thirty-three seconds.

The third race was sailed in a strong southwest wind. Columbia lost three minutes at the start, and at the Southwest Spit she carried away her flying jib stay. Later in the race she also carried away her steering gear, and Livonia won the race by fifteen minutes and ten seconds. This was the only instance since the Cup racing began where an English challenger won a heat.

For the fourth race Sappho was substituted for the disabled Columbia. The race was outside, similar to the second. The wind was strong and dead ahead. Sappho beat Livonia twenty-seven minutes and thirty-five seconds in the thresh out, added about three minutes more to her score on the run home, winning the race by thirty minutes and twenty-one seconds.

The fifth and deciding race was sailed on Oct. 23, and was a repetition of the preceding. Sappho took the lead early in the day and won as she pleased by twenty-five minutes and twenty-seven seconds.

Mr. Ashbury did not admit that he was defeated, and asked for a continuation of the match. This the committee would not agree to, as they had decided that the Cup had been saved by the American boats. Mr. Ashbury made a private match with Dauntless for the next day after the last race and was beaten by ten minutes and thirty-one seconds.

Thus ended the second attempt to take back the Cup.

Just about this time there was designed in England a yacht that in the light of future years should be mentioned. This was the yawl Jullanar.

Jullanar was one of the largest yawls ever constructed, her over all length being 110ft. 6in., beam 16ft. 10in., depth of hold 12ft., draft forward 1ft. 6in., aft 13ft. 6in. She was very fast and defeated many of the schooners that carried double her canvas. The lines of this vessel bear a close resemblance in many respects to those made famous by Fife in Minerva, and Herreshoff in Gloriana, many years afterward.

She was designed and built by E. H. Bentall in 1875. Mr. Bentall has become noted as the original designer of the fin-keeler, or what I may call the "fixed keel." That is, a keel built down to a considerable distance below the boat, and then having a large piece of lead bolted to the bottom and constituting the ballast of the boat.

This craft he called Evolution, and though she was not a success, still the idea was a sound one, and one that is to-day the recognized method of building fast boats.

The Third Challenge for the America Cup.

The next notable event was the third challenge for the America Cup. This time it came from Canada, and the Royal Canadian Y. C. forwarded it. The challenge was on behalf of the schooner yacht Countess of Dufferin. Countess of Dufferin was owned, so it was stated, by a syndicate of club members, of which the controlling spirit was that sterling yachtsman, Charles Gifford, Vice-Commodore of the club, and was designed and built by Mr. Alexander Cuthbert, of Ontario.

The New York Y. C. accepted the challenge and named the schooner yacht Madeleine as the defender.

The rules were now definitely changed, and one defender in case to be matched against the challenger. Madeleine was 106ft. over all, 95ft. waterline and 24ft. beam. The Canadian boat was 107ft. over all, 24ft. beam and 94ft. waterline. They were practically of the same size.

The contest was to be decided in three races, the winner of two to take the Cup. The first race was sailed on Aug. 11, and Madeleine won easily by ten minutes and fifty-nine seconds.

The second and deciding race was sailed the next day over the outside course, starting from Sandy Hook, twenty miles to windward and return. Gen. Benjamin F. Butler, owner of America, asked the Regatta Committee to take her time, as he desired to see what chance she would have against the new Canadian boat. This was accordingly done. The wind was light and the yachts made slow progress to the outer mark, which they finally turned in the following order: Madeleine at 5:01:52; America at 5:04:53, and Countess of Dufferein at 5:13:41. Madeleine thus beat the Canadian eleven minutes and forty-eight seconds. In the run home both Madeleine and America constantly increased their lead, Madeleine finishing a winner twenty-seven minutes and fourteen seconds ahead of the Canadian, and America nineteen minutes and nine seconds to the good, thus proving that although twenty-five years old, America was still a much faster vessel than any of the three challengers yet brought to contest for the Cup, and that had the entire defense been left to her she could easily have held it alone for over a quarter of a century. Surely a wonderful record.

After the defeat of Countess of Dufferin yachting was rather quiet in this country. The only distinctive thing that marks this period was the development of what was probably the most vicious type of boat that the mind of the sailor man ever evolved, and which was a direct outgrowth of the centerboard. That was the sandbagger.

The sandbagger was a wide, shallow, square stern boat, usually with very little freeboard or height of side. Her beam was generally about half her length. Rival was one of the crack boats of this class in Bridgeport waters a dozen years ago. She carried an enormous rig, being fairly smothered in canvas. It was no uncommon thing to see one of these boats 21ft. long staggering under a sail plan that was over 60ft. from the forward to after point—a sail plan three times the length of the boat. The only way she could be kept afloat was by piling an enormous weight on the weather rail. This, of course, had to be shifted every time the boat went about. They were allowed to carry one man for every 3ft. of racing length, which was the waterline, in addition to the steersman. A 21ft. boat thus carried eight men. In addition to this, each man was provided with as many sacks of sand as he could possibly handle. Whenever the boat went about it was the business of the "ballast lubbers" to get themselves and their sandbags over to the weather side as quickly as was necessary to keep the cockle shell right side up, which in some cases was "instanter." Happily, this type has gone away never to return.

The next event which attracted attention in nautical matters was the fourth challenge for the America Cup. This, like the preceding, came from the Canadian Yacht Club. This time, however, they decided to try their fortunes with a sloop instead of a schooner, and accordingly named the sloop Atalanta as the challenger. She was the smallest vessel that has ever sailed for the Cup, being but 64ft. on the waterline. The challenge was sent and accepted in the spring of 1881.

This year also marked a new departure in choosing a defending vessel. The New York Y. C. decided to hold a series of trial races to select the American representative. Four sloops entered these trials—Gracie, Hildegard, Mischief and Pocahontas. After the series had been sailed the committee decided that Mischief should be chosen as the defender of the Cup.

The first race was sailed over the inside course of the New York Y. C., from Staten Island to Sandy Hook Lightship and return. It was hardly to be called a race, being little more than a farce. The Canadian sloop was beaten by over forty-five minutes.

The second race was sailed the next day over the outside course, and was simply a repetition of the preceding day, the Canadian being again beaten by about forty minutes.

Capt. Cuthbert, designer of Atalanta, announced that it was his intention to alter the sloop and try again. It was this determination that caused the New York Y. C. to alter the deed of gift of the Cup. It was returned to Mr. George L. Schuyler, the only surviving member of the syndicate of gentlemen that had owned and sailed America when it was won.

Mr. Schuyler again presented the Cup to the club with a new deed of gift that contained a number of important changes. Among these was the provision that a defeated vessel could not again challenge until a race with some other vessel had intervened. Another was that challenges could only be received from yacht clubs holding their races and having an ocean waterway for their course.

These two provisions of course barred out our enterprising neighbors, and they have challenged no more.

The Success of the English Cutter Madge.

The year following, 1882, saw the advent of the Scotch cutter Madge in our waters. She was from the design of Mr. George L. Watson, the designer of a number of fast vessels then in English waters. Madge was something new in these waters. She was the first of the famous "plank-on-edge" type of fast English cutters to visit us.

Madge sailed in eight races in 1882. Six of these she won against all competitors, the seventh was a sail over and the eighth she lost to Herreshoff sloop Shadow. In all her races her victories were complete. She demonstrated beyond question that she was a great advance on anything of her size that we then had.

Madge was 47ft. over all, 38ft. 6in. on the waterline, 7ft. 9in. beam and a draft of 8ft. 3in. She carried 10 tons of outside lead bolted on her keel.

There is little doubt that if the English had sent over a cutter of this type of Madge at this time they would have carried off the Cup. But they waited till 1885, and by that time we were ready for them. The lessons of Madge had been learned.

The next great event in yachting matters was the fifth challenge for the America Cup. This was received in 1885. The challenger was Sir Richard Sutton, the challenging vessel Genesta, and the challenge came through the Royal Yacht Squadron. At the same time it was received the New York Y. C. was informed by Mr. J. Beaver Webb, the designer of Genesta, that Lieut. Henn, owner of Galatea, another of Mr. Webb's designs, intended, in the event of the failure of Genesta, to challenge the following year.

The ease with which Genesta had defeated the two crack English cutters, Marjorie and Vanduara, both of which had been mentioned as possible challengers, opened the eyes of the Americans to the situation and warned them that if the Cup was to be retained on this side it would be necessary to meet Genesta with something better than anything then afloat in our waters.

Accordingly, two syndicates were formed—one in Boston and one in New York. The Boston syndicate commissioned Edward Burgess to design for them a yacht that would uphold the honor of America afloat in a creditable manner. Mr. Burgess turned out Puritan. She was the largest single-stick yacht ever built in this country—at least since the days of Maria, and in some ways she was a larger yacht than Maria. Mr. Burgess undoubtedly had the lesson of Madge well in mind, and while retaining the centerboard, he made a radical departure from the then accepted American type of boat. Puritan had about 8ft. draft, was provided with about 50 tons of outside lead ballast and was of good form in her midship section. Taken all in all, she was a wholesome and creditable design.

The New York syndicate commisioned A. Cary Smith to design Priscilla. Mr. Smith was then a well-known yacht designer in New York, and it is to his genius, mainly, that the old-fashioned manner of whittling out a block of wood until it looked "good," and building a vessel from it, was abandoned. He held that the proper way to work out the elements of a boat's design was upon the drawing board in the same manner that architectural and engineering problems are solved. He demonstrated this theory in the design of Vindex, built for Mr. Robert Center in 1870. From the fact that no model was made, she was known as the "paper" boat. She was a very successful boat, however, and the new theory took root, and it was not long before there was an army of yacht designers following the same lines.

The trial races between Puritan and Priscilla were very interesting. Puritan was chosen as the defender by the Cup committee, as she demonstrated her superiority unmistakably.

The date of the first race was set for Sept. 7. The race was to be twenty miles to windward or leeward. The weather was unfavorable, the wind being very light. After four or five hours of drifting the race was called off on account of lack of wind. This was the first time that this had happened in the contests for the Cup. Puritan had a little the better of the argument in the very light wind that prevailed.

The second attempt was made on Sept. 8. In jockeying about for position this day Puritan fouled Genesta and was ruled out by the committee. Sir Richard Sutton was informed that he could sail over the course and take the race. True sportsman that he was, however, he replied that he had come over for a contest and did not seek to win races in that manner. Of course, the committee and all concerned were much pleased at this decision.

Both yachts were duly repaired, and on the 11th they met again for the ocean race. Puritan obtained the best of the start and crossed the line at 11:35:41, and Genesta crossed at 11:35:48.

The Englishman seemed to gain rapidly at the start, and it was but a little while until he tacked across Puritan's bow and planted himself on her weather quarter. The hearts of the attendant patriots went down into their boots, as patriots' hearts are wont to do with little provocation sometimes. The talent on Puritan, however, still had a thing or two up their sleeves. Giving the Boston sloop a good full, they quickly drove her through the lee of the challenger. She continued to gain, and in a short time had reversed the conditions. The wind now began to show signs of dropping out, and it soon became evident that they were doomed to another failure. The race was finally called off at 5 o'clock for lack of wind.

The third trial was made on Sept. 14, over the New York Y. C. course. Puritan got the better of the start, which was made after considerable jockeying for position. The wind was light, and it was a beat out to the lightship. The breeze freshened considerably before the yachts reached the turning point, and a good scupper wind was blowing when they finally turned. Puritan beat Genesta about four minutes on the beat out, and in the freshening wind increased this to sixteen minutes and thirty-five seconds on the run home. Genesta was beaten by nearly a mile. And so the first race was won.

The next and decisive trial was made on Sept. 16, and the finest contest that has marked the annals of the Cup racing was the result. The wind was strong, and the course was twenty miles down wind and return. The yachts made splendid time to the outer mark, but Genesta proved a little better than the American in the running, and turned fully an eighth of a mile ahead of her. They then hauled their sheets flat along for the long thresh of twenty miles to windward, the real fight of the day. Here the excellent lines and perfect balance of Puritan began to tell. Slowly but surely she overhauled the flying Englishman, working to windward of her all the time. The wind was constantly increasing in force, and both vessels were staggering in a smother of foam. At five minutes after three the two yachts were beam and beam just off Long Beach, and it was still anybody's race. Puritan had a little the better of it, as she had the weather berth. The finish of the race was a most exciting one. Puritan had overstood the mark somewhat and was obliged to ease sheets to make it. Down she came rap full. The water flew from her forefoot like the spray from the cutwater of a steamboat. They were now converging rapidly with the mark in plain sight ahead, and the entire fleet of excursion boats and yachts gathered around it. Who would cross first? This was the question on every lip. The Englishman was coming straight for the line with the speed of a torpedo boat. Just on his weather beam was Puritan, coming a little faster. Now they were but half a mile away from the finish. It was clearly seen that Puritan was ahead, but was the margin sufficient to give Genesta her half-minute time allowance? In a smother of foam the Boston sloop swept across the finish, and just two minutes and nine seconds later Genesta followed. Puritan thus won by the narrow margin of one minute and thirty-eight seconds corrected time. Truly a close finish for a forty-mile race.

There is hardly a doubt that Genesta would have taken the Cup back to England had the genius of Mr. Burgess not given us Puritan. It is hardly possible that Priscilla could have stopped her.

Sir Richard Sutton was a most chivalrous enemy, and his visit will long be remembered by all yachtsmen in this country. This match was the first that aroused the real enthusiasm over the Cup races and started us in on that remarkable series of victories of which the end is not yet.

Genesta Wins the Cape May and Brenton's Reef Cups.

Before leaving for England Genesta challenged for and won both Cape May and Brenton's Reef cups. Puritan did not start in these races.

During the ten years that had just elapsed yacht racing had received quite an impetus in this country, especially in the smaller classes. The Larchmont and Seawanhaka clubs had been organized and devoted their attention principally to this form of the sport.

Yacht designers began to multiply. Up to and about this period there could hardly be said to be a professional designer in the country. A few gave it some attention as a side issue, but the usual method was still to whittle out a block of wood and build a vessel as near like this as possible. Of course this hit or miss plan

frequently produced results very different from that which the prospective owner had reason to expect. Designing under these conditions was really more of an art than a science. A good model maker would produce a model which he would claim to be of a very fast type, his only reason for this belief being that it looked right.

The modern design is carried on in a much more scientific manner, and to-day many of the greatest speed producing factors in a boat are well known quantities and capable of scientific demonstration.

The next challenge for the Cup came as expected in the year 1886. The challenger was Galatea, also designed by Beaver Webb, and the vessel selected as the defender was Mayflower, designed by Mr. Burgess.

The Atlantic Y. C. took a hand in the defense of the Cup this year, and a syndicate of those yachtsmen built the sloop Atlantic, from the designs of Capt. Joe Elsworth. The races for choosing a defender this year were, therefore, very interesting, as the '85 champion, Puritan, was met by two new sloops—Mayflower and Atlantic. Mayflower proved her right to the honor of defending the Cup in a series of races held off Sandy Hook. Atlantic was afterward sold to Mr. Wilson Marshall, of this city. She was changed into a schooner, and is to-day one of the well-known vessels of the Bridgeport Y. C.

The races between Mayflower and Galatea did not prove as interesting as those of the previous year. Mayflower defeated Galatea with ease in two straight races, and the Cup was safe for another year. Galatea remained for about a year in American waters, and her owner, Lieut. Henn, made many friends among the yachtsmen on this side.

Immediately on the conclusion of the match between Galatea and Mayflower, it was announced that there would be a challenge from a Scotch syndicate for the following year, and that the designer of the vessel would be Mr. George L. Watson, the well-known designer of the cutter Madge, which I have mentioned as playing such havoc in our smaller classes a few years before.

This challenge was forwarded in due course and accepted. The challenging vessel named was Thistle.

Thistle proved very fast in English waters, and had no difficulty in defeating everything brought against her on the other side. She was brought over early in 1887, and excited much favorable comment from well-posted yachtsmen.

Mr. Burgess had gained so much prestige by his successful designs of Puritan and Mayflower that he found no competitor this year. The only boat built, therefore, as a defender was Volunteer.

Volunteer was a pronounced success from the start. She was the first vessel with a metal hull in the Cup races. She also made a departure, or rather a return, in that her bow was of the well-known clipper type, similar to that used in America. Volunteer's sheer plan was very similar to America.

Her keel was made hollow, and into the trough thus formed was poured about fifty-five tons of lead. Her lines were extremely fine and her shape was that of a normal boat of the most advanced type for the day, however.

The first race was set for Tuesday, Sept. 27. The start was to be in the lower bay, as usual, and the course was inside to Sandy Hook Lightship and return. The wind was very light and in the preliminary centers about the starting line Thistle gave a wonderful exhibition of light-weather sailing. She seemed to move as though by magic. The wind was hardly sufficient to lift the dog vanes at the mast head, and yet this graceful cutter slipped through the water in a truly wonderful manner.

Her owners and their hardy Scotch sympathizers were gathered on the steam yacht Mohican. From her decks could be heard the strains of bagpipes playing the pibroch. They were wonderfully elated at the witch-like manner in which the pride of rugged Scotia glided hither and thither over the surface of the bay, that was smoother than the traditional mill pond.

"No wonder she beat Irex and Genesta; why, she will simply have a walk over," said one enthusiastic partisan of the cutter. "Surely there never was a yacht that could sail in such light wind as Thistle."

And where was Volunteer all this time that her stock was being forced down and the hearts of the patriots were being made heavy as lead by the marvelous exhibition Thistle was giving? She was jogging along quietly in the ruck of the fleet, giving no foretaste of her quality. Gen. Paine, her owner, and Mr. Burgess, her designer, stood quietly alongside Capt. Haff, who grasped the wheel in the old stolid manner, and none of the three gave any indication of elation or depression at Thistle's maneuvers. It was easy to discover, however sluggish her movements seemed, that everything on board was in spick and span condition for the contest. It was the opinion of those who had seen Volunteer so many times victorious in Eastern waters that she was being sailed with sheets trimmed flat as boards. She seemed at least to sail hardly 2ft. to her rival's 3. It was with heavy hearts, therefore, that the patriots heard the sharp crack of the starting gun from the bridge of the Electra. Thistle was first to cross at 12:33:06, and Volunteer followed at 12:34:58.

The Electra's gun had galvanized Volunteer into life; she seemed to start forward like a high mettled horse under the whip. In a few minutes she had weathered Thistle and assumed the lead, which she never surrendered. The yachts glided through the Narrows like phantoms, Volunteer increasing her distance all the time. At 1:20 she was fully a mile ahead of the fleet Scotchman. The wind was growing steadier and a little stronger as the day wore away.

All the tugs, excursion steamers and yachts had now gathered around the lightship, waiting for the turn. Volunteer, now careening gracefully to a good fresh breeze, approached it like a thing of life. She luffed around the mark in fine style, and was greeted with such a din of guns, whistles, gongs and shouts as was never heard on sea before.

Meanwhile Thistle pursued her lonely way. She rounded the lightship at 4:01:15 and began to hunt Volunteer. Her hunting was a forlorn hope, and she never came near the American champion. Volunteer finished at 5:28:16, and Thistle at 5:45:52. Volunteer therefore won by nineteen minutes and twenty-four seconds corrected time.

The second race of the series was sailed from Scotland Lightship in a fine whole-sail breeze. The starting gun was fired at 10:40, and with lee rail awash, Thistle rushed across the line. Volunteer flew after her, and thus was begun the long thresh of twenty miles into the eye of the wind. The gain of Volunteer was steady. She gave a most wonderful exhibition of windward work. She seemed to move bodily to windward, and easily outfooted Thistle. It was merely a procession to the outer mark, and never at any time did Thistle have a ghost of a show. Volunteer rounded fourteen minutes ahead of the Scotchman. The run from the mark back to the lightship was only notable from the gain of Thistle, which amounted to nearly three minutes. This was easily accounted for by the wind increasing much in force toward the close of the day. Volunteer won the race by eleven minutes and forty-nine seconds.

Thus ended the seventh attempt to capture the Cup.

A New Deed of Gift.

Some friction had arisen when Thistle was measured, from the fact that the Scotch boat was 18in. over measurement specified on the waterline. The New York Y. C. thought that it would be well hereafter to have this point fully covered, and so the Cup was again returned to Mr. George L. Schuyler, the only surviving member of the original America syndicate. He then returned it to the club with a new deed of gift.

This deed was regularly drawn up, and its provisions made similar to other legal documents.

The gist of its provisions is as follows:

1. The Cup is to be a perpetual challenge Cup.
2. Sloops, to sail for it, to be not less than 65 nor over 90ft. waterline.
3. Schooners to be from 80 to 115ft. on waterline.
4. Ten months' notice to be given.
5. Challenge must specify rig, name, owner's name, length on waterline, beam at waterline, extreme beam and draft of water. These dimensions not to be exceeded.
6. Centerboard vessels allowed.
7. Mutual consent to waive conditions herein provided.
8. All races to be on ocean courses free from headlands.
9. Courses must provide for 22ft. of water.
10. A defeated vessel not allowed to challenge until race has intervened or two years elapsed.
11. No challenge to be received while one is pending.

In these provisions, the fifth clause, calling for the dimensions, provoked the most acrimonious discussion. The English yachting papers took the matter up, and claimed that the provision was unfair as it would reveal the lines of the vessel. The New York Y. C. defended its position as vigorously, and the disagreement grew.

Through this and other causes no challenge was received for the Cup again for six years, or until 1893.

Meanwhile there had been made perhaps the greatest advance in the building of yachts that had been seen since the dawn of the art of boat building. In fact so great was the advance that at the time of the next challenge, in 1893, the boats of 1887 had become practically obsolete.

One of the strongest factors in this advance was the Scotch cutter Minerva. Minerva was designed by William Fife for C. H. Tweed, of New York. She was 57ft. over all, 39ft. waterline and sailed in what was known at that time as the "40ft. class."

One of the strange things about her was that she was not designed for a racing boat, but for a cruiser—at least that was the statement of her owner and designer. If this was true she was the luckiest accident that ever happened. She began her racing career in a very modest way. Mr. Gardner, the well-known New York designer, was to sail in one of the races of the 40's in a vessel named Liris. Liris broke down at the last minute and Mr. Gardner borrowed Minerva from Mr. Tweed, transferred his crew to her and won the race with ease, to the astonishment of the vessels, as well as the owner of Minerva. After this she was regularly entered in every race, and as regularly won them. She was the champion forty for 1888, and 1889, and it was not until 1890 when Burgess finally laid her colors with Gossoon, an out and out racing machine. Over twenty boats had been built to defeat her, and Gossoon was the first to accomplish the feat.

It was unquestionably the success of Minerva that roused Herreshoff in 1891. Her story, following the lessons of Madge, told in unmistakable terms that the days of the wide, shallow, skimming dish type of centerboarder were passed forever. The genius of Nathaniel Herreshoff was the first to recognize the handwriting on the wall. He discarded once and forever the rule of thumb and whittled block method, and set about his task in a properly directed manner, and his labors produced Gloriana.

She was new. In almost every particular she showed evidences of the most advanced thought. Especially her bow, and her immense overhangs, attracted universal attention. As becomes the fate of most things new, she was universally condemned. Her success, however, was pronounced and emphatic from the start. She was one of a fleet of nine new 46-footers, seven of them from the designs of the famous Burgess, builder of the last three successful Cup defenders, and one from the design of William Fife, the builder of Minerva. There were eight races sailed in 1891, and Gloriana won the entire series. She defeated all her opponents so decisively as to make her appear in a class by herself, which she really was. The old had gone, the new had come, and again the yacht designing of the world was revolutionized. Her first race was off Sandy Hook, and she won it by a margin of over thirty-two minutes. She was truly an epoch-making vessel.

The lines embodied so successfully in Gloriana were not entirely unknown, however, and designers in this country and in England had been tending in her direction for some time.

In the year 1892 Mr. Herreshoff accepted an order to build a boat that would beat Gloriana, and he turned out Wasp.

His prediction was fulfilled, and Wasp proved as much superior to Gloriana as the latter had been to the other 46-footers. Wasp defeated all comers, and, I believe, lost but one race, and that in a light air and practically a drift.

The year 1893 was a very memorable one in yachting circles. In addition to the first challenge of Lord Dunraven for the eighth contest for the America Cup, the large Herreshoff sloop Navahoe was built for racing in English waters.

Lord Dunraven's challenge named Valkyrie II. as the contesting vessel.

Valkyrie was, of course, of the new type, with long, graceful overhangs and deep keel. She carried about 70 tons of lead, 17ft. below the waterline, and spread some 10,000ft. of sail. She was from the design of Mr. George L. Watson, who also turned out for the Prince of Wales the cutter Britannia in the same year.

For the defense of the Cup four vessels were built. Two were by the Herreshoffs, Vigilant and Colonia; one by Gen. Paine, of Boston, Jubilee, and one by a Boston designer, Mr. George Stewart, called Pilgrim. Vigilant had a centerboard, Colonia was a keel, Pilgrim was an out and out fin-keel and Jubilee was a combination of fin-keel and centerboard.

The trial races among these vessels were very interesting, but I will not weary you with an account of them, but let it suffice to say that Vigilant proved her right to defend the Cup by defeating all the others.

Vigilant was the most expensive vessel of her type that had ever been built up to that time. Her underwater body was composed of an expensive non-corosive metal called Tobin bronze. She was rigged with the best that could be obtained, and no expense was spared to make her a winner.

She was a very powerful vessel, and carried nearly 11,000 sq. ft. of sail.

[TO BE CONTINUED.]

Our Boston Letter.

BOSTON, April 20.—It is now thought that Independence will take the water about May 15. It is expected that next week the work of burnishing her plating will be started. To-day all of the rivets were tested and the heads smoothed up. The caulking was carefully gone over by one of the foremen to see that everything was all right. There will be no difficulty in launching her at any time that she is ready, for there is 25ft. of water just outside of the shop in which she is building, at ordinary tides.

There is considerable doubt at present as to whether or not Capt. Nate Watson will be on Independence during her races. It was reported here within a few days that Mr. Francis Skinner, Jr., had made all his plans for the season's yachting, and that he considered it necessary that Capt. Watson should be on board Constellation. It is said that Mr. Skinner's refusal to release his captain is due to the social feud which exists between Thomas W. Lawson and Mrs. Jack Gardner. At the time when Independence was started it was desired that Capt. Watson should take charge of her, and it was said that Mr. Skinner would be willing to release him. But Mr. Skinner's desire to have the captain on board Constellation has probably no connection with any social feud. Mr. Skinner is a very enthusiastic yachtsman and, as this will probably be the greatest year in the history of the sport, it is only natural that he should wish to have the captain of his yacht where he can put his hands on him at any time.

It was originally intended to have the wooden mast and topmast of Independence form practically one pole mast, the topmast burying into a socket at the mast head, but this plan has been altered. The wooden topmast will be held on end in the usual manner. It will have a fid but will not be housed. It will be secured to the mast head with 10ft. doublings. It is expected that the work of finishing up the hollow spars will be started at Lawley's early in the week. There was some question as to whether Lawley could find the space to do the work, but it was stated to-day that it would be done at the City Point yard.

The first race of the season has been sailed in Dorchester Bay. It was between the little one-design 12-footers which have been built for members of the Savin Hill Y. C. The boats were built by A. O. Gifford, of Cohasset, and were only delivered to their owners about an hour before the start of the race. The race was given on Patriots' Day by the city of Boston, and 14 of the little fellows lined up at the start. They had a very lively tilt around the bay, and the boat owned by J. H. Will was capsized. As the boats have not yet received names, they are known by the names of their owners given in the following summary:

Owner.	Act. time.
J. E. Robinson	1.23.40
F. F. Benson	1.24.00
C. T. Leach	1.25.15
Ernest Kuepers	1.26.50
G. W. Goodwin	1.27.00
W. F. Scott	1.27.02
Louis Hoag	1.27.50
J. F. Turner	1.28.05
A. P. Hawes	1.29.20
A. P. Loring	1.29.22
C. A. J. Smith	1.30.10
A. B. Howland	withdrew.
A. J. Horton	withdrew.

It will be noticed that the finishes of these little boats were very close indeed, there being less than six minutes between the first and the last boat. It is expected that the racing of these boats will furnish a great amount of sport for the members of the Savin Hill Y. C. during the season. It is considered likely that they will all be over to the opening race of the South Boston Y. C. on Memorial Day. The club is making great efforts to perpetuate the interest in small-boat racing.

The special committee of the Hull-Massachusetts Y. C. has issued a preliminary circular of the Lawson cup races. The classes are as follows:

First—To all single-masted sailing yachts measuring over 80ft. and not over 90ft. in length on the load waterline; prize, silver cup appropriate for this class.

Second—To all yawl-rigged yachts; prize, silver cup valued at $1,000.

Third—To all schooner-rigged sailing yachts; prize, silver cup valued at $1,000.

Fourth—To all single-masted sailing yachts measuring not over 75ft. in length on the load waterline; prize, silver cup valued at $750.

Fifth—To all single-masted sailing yachts measuring not over 65ft. in length on the load waterline; prize, silver cup valued at $750.

Sixth—To all single-masted sailing yachts measuring not over 51ft. sailing length under the rules of the New York Y. C.; prize, silver cup valued at $500.

Seventh—To all schooner-rigged fishing vessels, to be sailed for without time allowance; prizes, $1,000, $500 and $250.

The courses for yachts will be triangular, clear of all headlands, about 30 miles in length, with starting line off Boston Lightship.

As most of the yachts which are likely to compete in these races were built under the rules of the New York Y. C., time allowance and measurement for time allowance will be based upon these rules.

The racing rules of the Hull-Massachusetts Y. C. will govern except as otherwise specified.

Entries may be sent to Charles E. Hodges, secretary of the committee, 40 Water street, Boston, and should specify the length on the load waterline and racing length.

The start of the race will be so arranged that the fishermen and yachts will not interfere.

David Barrie, Sir Thomas Lipton's American representative, was in Boston this week for the purpose of securing a tender for Shamrock II. He looked over the Bay Line steamer Cape Cod, and had a conference with the directors of the company that owns her in regard to chartering. When Mr. Barrie left for New York Thursday night nothing definite had been settled. He will return to Boston on Monday, when it is expected the business will be finished up. It is thought that Mr. Barrie will take the Cape Cod.

Work in the yards is still on the boom. Lawley has all that he can attend to. The keel of the Y. R. A. 21-footer for Starling Burgess was laid this week, and the keel of the Y. R. A. 21-footer for H. H. Wiggin, of the Annisquam Y. C., will be set up next week. McIntyre, of Neponset, is busy with the four 18-footers designed by Starling Burgess. Hanley, of Quincy Point, has all he can attend to in the Canada cup defender and two Y. R. A. 25-footers. Smith launched two boats last week.

JOHN B. KILLEEN.

The New Measurement Rule.

THE following interesting letter has been received from one of the best known yachtsmen in America. His comments on the new rule, adopted by the Seawanhaka Corinthian and Larchmont yacht clubs, clearly indicates that he has given the subject careful consideration. Any of the three modified rules suggested by him are thought to be superior by many yachtsmen to the rule recently adopted:

The same old question involved in all yacht measurement rules is presented as to how the fully developed racer can be handicapped and penalized to enable the family cruiser of slow speed to beat her in the races and take away from her all the prizes.

A rule may be all right, as applied to existing boats, and may accomplish the results desired of putting the racing yacht, so to speak, out of it and bringing into prominence as a mug winner the steady old family wagon of the fleet; but, if when the problem involved in the building of new boats to meet the new conditions is undertaken, and the designer finds that, as the expression is, "he is able to drive a horse and cart through the rule," and a boat of the most pronounced freak type is the only possible product of the remedial legislation, one can understand how important it is for clubs to act in these matters deliberately and advisedly in arriving at a conclusion.

The important point, therefore, in any rule, is not so much how it will affect existing boats, but what kind of yachts will have to be built to take all the advantage possible of its limitations.

It is not assuming a great deal to say that among the American designers who have given the rule any consideration, there would be few who would not undertake to produce designs which would show the restrictions of the rule to be entirely ineffectual to accomplish the objects desired.

The normal boat, the *ignis fatuus* of the cruising, and would-be, at the same time, racing yacht, will never materialize in successful form in the yacht racing fleet.

Normal dimensions do not prevent abnormal features.

Any rule which brings racers in the regular classes back to the level of cruisers checks progress in designing.

It is a very dangerous thing to make rules which limit the development of speed in racing yachts. It may be proper to limit sail area to length, or to displacement, but imposing penalties and limitations on form or design is a dangerous departure to make in yacht measurement.

The measurement rule for the regular classes should leave the designer as free as possible, and limitations of dimensions and form should be made applicable to special design classes only.

One of the most notable defects apparent in the rule is the dropping down much below the limits of the class of boats heretofore at the upper limits of their class.

This is noticeable in the 75ft. class of schooners.

There will be this season in the racing four schooners built to the top of the present class, which, under the new rule, would measure some 5ft. below their class limit. The opportunities that would be afforded the designer of a new boat to put these four schooners entirely out of the racing must be apparent to even the most inexperienced racing man.

The same may be said of the operation of the rule in the 51ft. class of sloops.

The advantage of taking the area of the submerged midship section, overtaking the measurements of the outline of the same, is not apparent. The English system of taking the midship section measurements is in every respect simpler and better.

The outline or girth of the submerged midship section affords a suggestion of an easy solution of the problem of effectually and equitably penalizing abnormal proportions of the midship section without the necessity of invoking the involved measurements and calculations of area required by the proposed rule.

This summer we will have some foreign naval architects with us. Cannot we get them together in consultation with our designers here and an international rule be suggested that will be acceptable to everybody?

Modification of the English rule to suit American conditions:

$$\frac{\text{C. L.} + \sqrt{\text{S. A.}} + .5\text{B} + .5\text{C. G.} + \text{G. D.}}{2.5}$$

C. L. = L. Y. C. rule corrected length.
S. A. = sail area.
B. = extreme beam.
C. G. = chain girth.
D. G. = difference between chain and skin girth.

Modification of the Larchmont rule I.

$$\frac{\text{C. L.} + \sqrt{\text{S. A.}} + \text{G. D.}}{2.1}$$ Syce 50.8

C. L. = corrected length as in L. Y. C. R.
G. D. = girth difference between skin and chain girth.

Modification of the Larchmont rule II.

$$\frac{\text{C. L.} + \sqrt{\text{S. A.}} + \text{M. S. M.}}{2.1}$$ { Amorita 73·73, Wasp 55.50, Syce 49.85

C. L. = corrected length = length of L.W.L. + beam at L.W.L. taken at one-eighth of its length from fore end + beam at L.W.L. taken at one-eighth of its length from after end — greatest beam at L.W.L.

S. A. = sail area = taken as heretofore.

M. S. M. = midship section measurement = .9 of skin girth of submerged midship section, less the sum of the extreme L.W.L. beam and the extreme draft.

Design for an Open Launch.

OWNERS are beginning to realize the many advantages to be had by using power boats for tenders to their yachts. The additional comfort derived and the time saved compensate for the additional expense put into such a boat.

The launch plans which appear in this issue were designed for Mr. W. C. Allison, of Philadelphia, Pa. He will use her as a tender to his 32ft. cruising cutter, plans of which were reproduced in FOREST AND STREAM Feb. 23, 1901. Both of these boats were designed by Mr. B. B. Crowninshield, and were built this winter by the Geo. Lawley & Son Corp., of South Boston, Mass. The Allison launch is a handsome boat with a square transom and full waterlines forward. She will make a fast and dry boat in all weather. The cockpit, which is forward, is large and roomy. Her dimensions are as follows:

Length—		
Over all	23ft.	4 in.
L.W.L.	21ft.	10 in.
Overhang—		
Forward		8⅝in.
Aft.		9⅜in.
Beam—		
Extreme.	5ft.	7½in.
L.W.L.	5ft.	5¾in.
Freeboard—		
Bow	2ft.	6⅝in.
Taffrail	1ft.	9⅞in.
Least	1ft.	5 in.
Draft—		
Extreme	1ft.	10 in.
To rabbet	1ft.	3 in.
Displacement	3,727lbs.	

She will be driven by a 2-horse-power Gas Engine and Power Co. and Chas. L. Seabury Co. engine.

Gen. Butler and the Yacht America.

IN the article entitled the "History of the Development of the Racing Yacht" which appears in these columns this week, mention is made of the yacht America during the time she was owned by Gen. Benjamin F. Butler. In this connection the following interesting note from a contemporary issue of the N. Y. Sun demonstrates that the boat was in the hands of an owner who was a thorough yachtsman:

Gen. Butler's hobby is his yacht America. She lies now in Boston harbor, with a crew aboard, and some day soon, when the notion takes him and a big storm threatens, he will take a cab, drive at full tilt for her wharf, and start for some place beyond the reach of telegrams. When he took his Southern trip in his yacht from Fortress Monroe last spring, he waited before going to sea until he could get a good northwest storm. When Gen. Hazen of the Weather Bureau, in response to his telegrams, sent him word that a northwest wind was coming, and that it was probably strong enough to suit him, Gen. Butler crowded on all the sail he could, settled himself in the cockpit, planted his arms akimbo and audaciously faced the storm. The America skimmed the waves with such speed that Gen. Butler declared that he would yet sail into some European port with her and astonish the timid yachtsmen. He puffs away all care at the end of his finger tips when he treads the deck of the America, eats four meals a day, has a game of penny ante with his guests at night, and is up early the next day looking out for a storm. If there could be found a sea of perpetual storms, Gen. Butler would probably make for it. There are enough amusing stories told of his adventures at sea to fill a summer book of fun. It is said that his yacht never yet carried enough sail for him, and that he has not yet met a storm that has even disturbed him. Sometimes his sturdy old captain (Mr. Reed), who is as strong-minded in his way as Gen. Butler is in his, has a wordy encounter with the General about the chances the latter seems to have to take, and once he is said to have told Gen. Butler to take his "—— old yacht," and run it as he pleased, when in face of the trepidation of the crew and the prudence of the Captain, the General wanted to crowd on more sail. Mr. Reed tells of several hairbreadth escapes, as well as amusing adventures, he has had with Gen. Butler at sea, and some of his crew have predicted that if Gen. Butler dies at all, he will become food for whales. When the storm runs so high as to make every one on board seasick except the captain and the owner, Gen. Butler is sure to be found seated in the cockpit, with his old, mysterious smile curving about his face.

Yacht Club Notes.

The Indian Harbor Y. C., whose house is near Greenwich, Conn., is first in the field of the Sound clubs, with a cup valued at $500 for a race of the 90-footers, to windward and leeward, seven and a half miles each way, to be sailed over twice, making a total distance of thirty miles. This race will take place probably in the last week of June.

The yacht clubs on Gravesend Bay have formed an association which is called the Gravesend Bay Yacht Racing Association. The clubs in the Association are the Atlantic, Marine and Field and Brooklyn Yacht Clubs and New York C. C.

At the meeting to complete the organization, which was held at the Yachtmen's Club, Manhattan, on Monday evening, April 15, the organizing clubs were represented by delegates, as follows: Atlantic Y. C., George Hill; Brooklyn Y. C., John R. Brophy and P. H. Jeannot; Marine and Field Club, Arthur Clapp; New York C. C., Capt. Speer and Barron Fredricks.

George Hill acted as chairman and Arthur P. Clapp as secretary. The rules of the Long Island Sound were adopted and it was agreed that handicap races should be arranged, the handicaps being figured on past performances. The following schedule was arranged:

June 1, Atlantic Y. C., all classes; 8, Brooklyn Y. C., open regatta; 15, New York C. C., annual regatta; 22, Marine and Field Club, open regatta; 29, Atlantic Y. C., regatta; July 4, Gravesend Bay Yacht Racing Association, first open regatta, all classes open to yachts enrolled in club fleets; Aug. 3, Atlantic Y. C.; 10, Brooklyn Y. C.; 17, New York C. C., midsummer regatta; 31, Marine and Field Club, regatta; Sept. 2, Gravesend Bay Yacht Racing Association, second series of races; 7, Atlantic Y. C., races; 14, Brooklyn Y. C., fall races; 21, New York C. C., fall regatta.

It is announced that King Edward will resign the post of Commodore of the Royal Yacht Squadron. He will become, instead, its patron, in the place of the late Queen Victoria.

The annual meeting and election of officers of the American Model Y. C. was held at the Liberty Hotel, Fulton street, near Clark street, Brooklyn. The election resulted as follows: Com., James H. Lane; Vice-Com., John C. Meyer; Sec'y, George F. Pigott; Treas., George W. Townley; Meas., William Herne; Board of Trustees, Michael Ondosko, John C. Meyers and Edward Antenen.

Mr. James Baird, of the Larchmont Y. C., has resigned as Rear-Commodore of the club, and Com. Adams has appointed in his place Mr. Fred Hoyt, the owner of Isolde.

The Cohasset Y. C. has elected the following-named officers and committees for 1901:

Com., Dr. John Bryant; Vice-Com., Daniel H. Tower; Sec'y and Treas, Charles H. Cousens; Executive Committee, William H. Crane, Charles W. Gammons, Amos A. Lawrence, Lyman D. Willcutt, George W. Collier; House Committee, Samuel C. Bates, Russell B. Tower, Paul J. Bates; Membership Committee, Harold B. Cousens, William C. Appleton, Burgess C. Tower, Sheldon N. Ripley, F. R. Pegram, H. E. Mapes, E. F. Willcutt; Regatta Committee, Ralph B. Williams, Arthur O. Higgins, Francis J. Moore, Frederick H. Platt, James Dean.

YACHTING NEWS NOTES.

Mr. Robert P. Doremus, N. Y. Y. C., has purchased from Mr. N. C. Nash, of Boston, through the agency of Mr. Frank Bowne Jones, the schooner yacht Loyal.

The Taunton Yacht Works is building a Crowninshield-designed yawl for Mr. Sanford, of New York city. She is 51ft. over all, 30ft. waterline, 11ft. beam and draws 6ft. 6in. Work has begun on a 27ft. racing boat for Mr. Gilpin, of Philadelphia.

Mr. R. D. Evans, N. Y. Y. C., has sold his auxiliary schooner yacht Lesbia to Mr. W. H. Bromley, Philadelphia, through the agency of Messrs. Gardner & Cox.

Mr. A. B. Hart, of St. Louis, has bought from Mr. John H. Cromwell, of Newark, N. J., through the agency of Messrs. Tams, Lemoine & Crane, the schooner yacht Scimitar.

The schooner yacht Wayward has been sold by Mr. Charles Smithers, N. Y. Y. C., through the agency of Mr. A. J. McIntosh, to Mr. Frank W. Duryea, N. Y. Y. C.

The steam yacht Wanda has been chartered by Mr. G. Searing Wilson, N. Y. Y. C., through the agency of Mr. A. J. McIntosh, to the Associated Press for the races to be held by the New York Y. C.

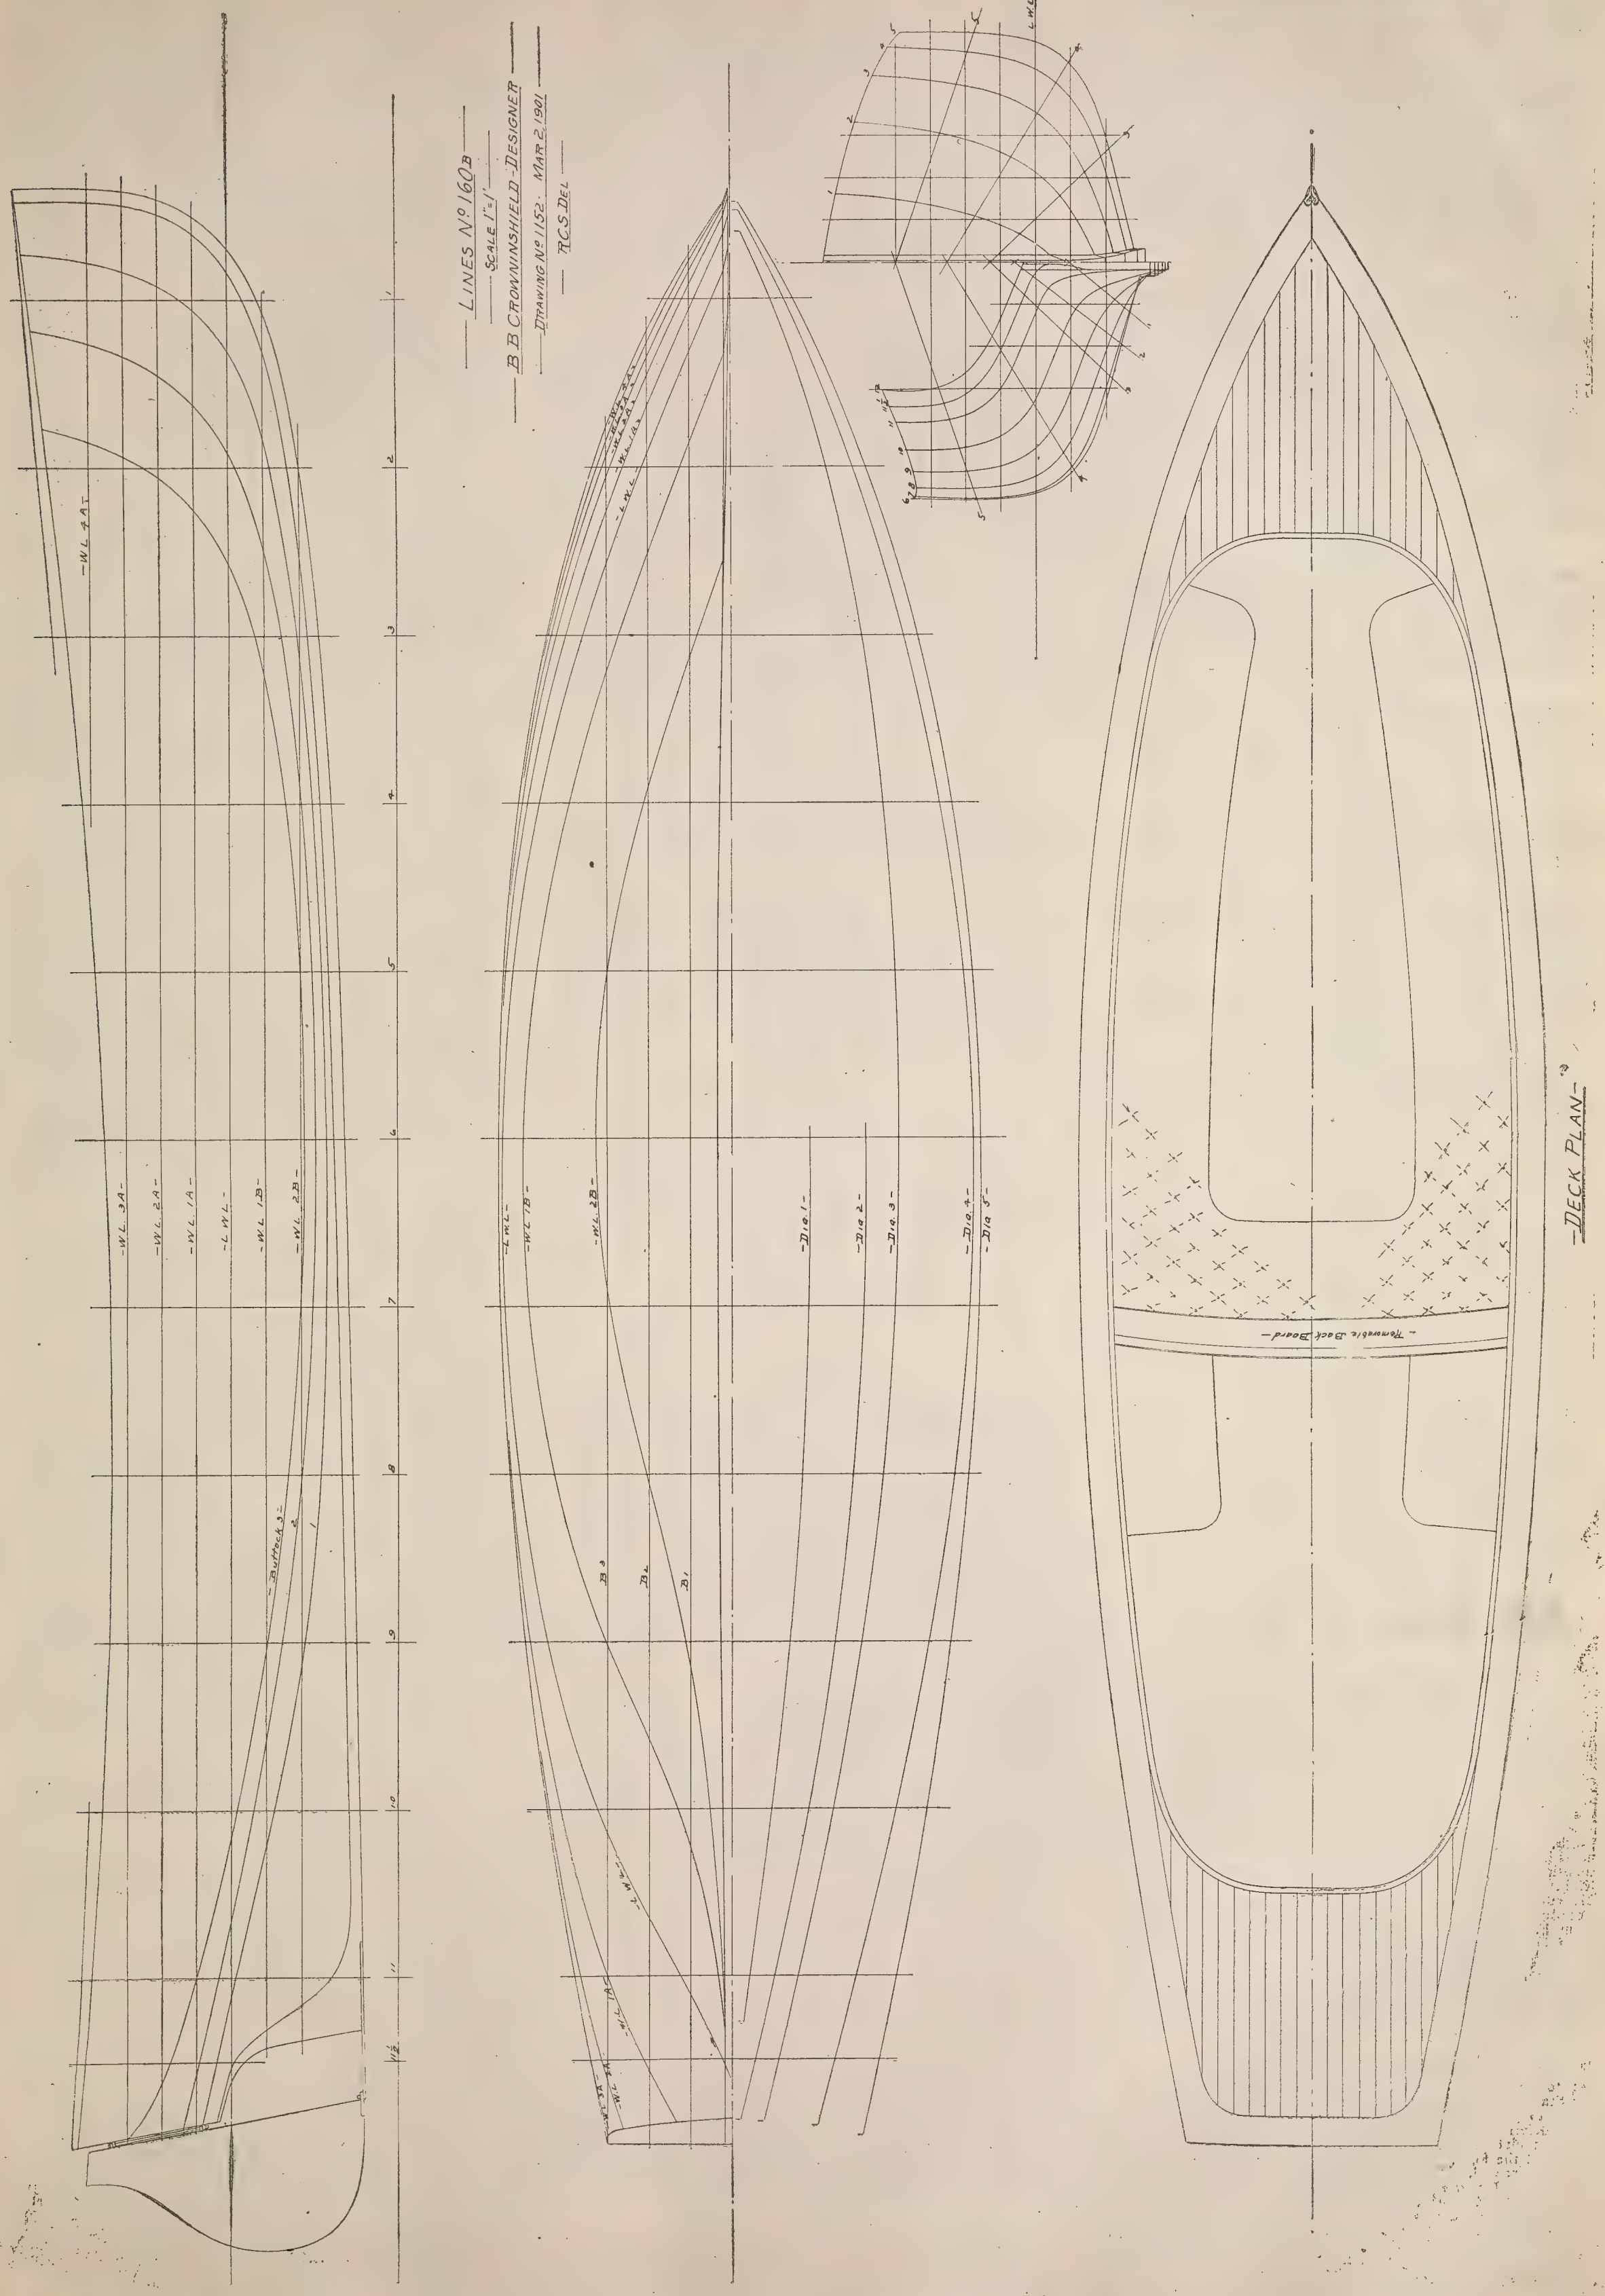
Mr. A. P. Bliven has sold the following boats through his agency: Schooner yacht Woodmansie, by Edward F. Cole, to Dr. B. F. Curtis; sloop Flora, by Mr. H. H. Landon to Mr. James N. Norris, of Brooklyn. N. Y.

Mr. William C. Whitney has chartered the twin screw steam yacht Artemis from Mr. Frederick G. Bourne, N. Y. Y. C.

The fast steam yacht Kanawha has been sold through the Gas Engine and Power Co. & Charles Seabury & Co. The name of the buyer has not been announced.

The schooner yacht Southern Cross, owned by Mr. Edward F. Cole, N. Y. Y. C., is having new spars and sails and a general overhauling at Bridgeport, Conn.

The steam yacht Mayita, which has been purchased by



OPEN LAUNCH—DESIGNED BY B. B. CROWNINSHIELD FOR W. C. ALLISON, 1901.

Messrs. Uhlmann and Schaefer, N. Y. Y. C., through Seabury & Co., and has been taken from McIntosh's Basin, South Brooklyn, to Morris Heights, where she will fit out.

Mr. Frank Tilford, owner of the steam yacht Norman, is having extensive improvements made on the boat at Manning's Basin, South Brooklyn.

Word has been received from Southampton, England, that L'Esperance, one of the boats built by the Stevenses as a challenger for the Seawanhaka cup, has been launched and showed considerable speed when under sail. Gray Friar, another boat being built by the same firm for the same purpose, will be ready to launch shortly.

The steam yacht Cherokee, designed and built by Seabury & Co., at Morris Heights, for Mr. S. H. Vandergrift, of Pittsburg, Pa., was launched on April 17. Cherokee is 85ft. over all, 72ft. waterline, 14ft. beam and draws 5ft.

Messrs. Huntington & Seaman have sold through their agency the yawl Themis II. for Mr. W. Fisher to Mr. C. Stein, of New York city. They have also sold the high speed launch Item to Mr. Henri B. Lothrop, of Detroit, Mich.

The steam yacht Baracouta is being fitted out at Morris Heights.

At Tebo's Basin, South Brooklyn, the schooner yachts Latona and Carlotta, the cutter Ilderim, the auxiliary Aloha and the steam yachts Virginia, Jathneil, Vedette, Juanita and Kismet are fitting out. At Manning's Basin, South Brooklyn, work is being rushed on the steam yachts Corsair and Aphrodite. The sloop Isolt is being put in commission at McIntosh's Basin.

The auxiliary schooner yacht Tekla, owned by Mr. A. Fabbri, has been sold through the agency of Messrs. A. Cary Smith & Barbey to Mr. Richard Wainwright, N. Y. Y. C.

Elmina is the name selected for the 75ft. racing schooner building at Shooters' Island, S. I., for Mr. Frederick K. Brewster, N. Y. Y. C., from designs by Messrs. A. Cary Smith & Barbey.

The 110ft. waterline cruising schooner now being built at Shooters' Island, S. I., from designs by Mr. H. C. Wintringham for Mr. Robert E. Tod, N. Y. Y. C., will be called Thistle.

The launches Delia, Lavina, Rebecca, Francis, Embla, Ethelen and Fleur de Lis have been sold through the agency of Mr. A. J. McIntosh.

The 51-footer Altair, owned by Mr. Cord Meyer, N. Y. Y. C., has been thoroughly overhauled at Bristol, and is now at City Island, where she will be fitted out for the racing season.

The auxiliary schooner yacht Oonas, designed by Messrs. A. Cary Smith & Barbey, was launched at the yard of Messrs. C. & R. Poillion, South Brooklyn, on April 22. Oonas is a centerboard boat with 35 tons of lead ballast. She is 95ft. over all, 75ft. on the waterline, 20ft. 6in. beam and draws 10ft. She will be fitted with a 25-horse-power motor.

The 50ft. launch Thetis, owned by Mr. J. W. Broughton, of Chicago, has been sold through Manning's yacht agency to Mr. H. B. Wittaker, of New York city.

A. C. A. Membership.

Mr. A. W. Lang, of Lawrence, Mass., has been proposed for membership to the Eastern Division of the A. C. A.

The following gentlemen have been proposed for membership to the Central Division of the A. C. A.: C. A. Baird, Rochester, N. Y., Irondequoit C. C.; A. P. H. Warren, Buffalo, N. Y., Buffalo C. C.; Ellicott R. Colson, Buffalo, N. Y., Buffalo C. C.; Norman S. Jarvis, Buffalo, N. Y., Buffalo C. C.

Rifle Range and Gallery.

Our Own Shooting Society.

Hoboken, N. J.—The Our Own Shooting Society, of Hoboken, which is regarded as the largest and most successful organization of its kind in New Jersey, thanks to its membership of 165 marksmen and bowlers, had a regular weekly practice meeting at headquarters, Gallenkamp's Hall, 110 Grand street, Wednesday evening, April 17. A great throng of members attended, but only twenty-one of the Our Owns utilized the ranges and alleys, the others finding interest in other amusements. The society's three ranges and two alleys were kept busy from 8 o'clock until after midnight, and some interesting struggles for supremacy were witnessed.

Shooting Master Adam Schmitt excelled both in shooting and bowling. He placed a string of ten shots in the black for a total of 244 out of the possible 250. He received the bowling medal by scoring 71 out of 100 pins at the headpin game. Ex-Captain William F. Dilger was second best on the ranges. The shooting scores follow: Capt. Louis Christ 227, Wm. F. Dilger 234, Wm. Pfeiffer 232, Adam Schmitt 244, Chris Brincker 226, Andrew Mare 202, John Spinck 230, Lesser L. Levy 224, Gus Jaeger 201, Wm. Rosenthal 201, Fred Bunger 229, W. J. Scott 203, Lieut. Herman Warnken 209, Fred Buehler 200, Wm. Welz 208, H. Jacobsen 207, Owen Smith 231, Wm. C. Schmidt 209, John Kroll 212, Wm. Hoag 201, Henry Hohn 220.

National Rifle Association.

The tournament of the National Rifle Association and New Jersey State Rifle Association, at Sea Girt, N. J., next September promises to be of exceptional international interest. The Ulster Rifle Association, of Belfast, Ireland, will send a team, which will shoot a special match. The secretary, Mr. John McKenna, of Belfast, sent the following official letter on this subject:

"Belfast, Ireland, April 6.—Lieut. Albert S. Jones, Assistant Secretary New Jersey State Rifle Association, Passaic, N. J.: My dear sir—I cabled you yesterday, 'Ulster accepts, caliber .315,' which I trust reached you in due course. I am very pleased, indeed, that the match is now arranged, and it is most agreeable to me to confirm the cable.

"We had a very large meeting of the Ulster Rifle Association, and on the proposition of Maj. Millner, who shot on the Irish team in 1880 against you, it was unanimously agreed that your challenge be accepted by our Association, independent of whether the Irish Rifle Association accepts the challenge of your National Rifle Association for the old America vs. Ireland match or not.

"However, we will be over in August, and hope to have a pleasant time with you. Your conditions are perfectly agreeable to us, except that .45 bores being relics of the past we cannot admit; .315 is the maximum now in use here, so this will amply cover your modern caliber. Then so many of our juveniles wish to have a look in that we should desire it left an open matter on our arrival in the United States, to name number of men in team, not exceeding eight or less than five. We fancy this will be quite agreeable to you, having so many capable shots to select from. All other conditions are perfectly satisfactory. In fact, we go to meet Americans, our real brother riflemen. Victors or vanquished, we shall return happy.

"The captain of our team will be Mr. James Wilson, an old-time rifleman. With renewed good wishes, and hoping to find you all in tip top fettle (after the match), I am, dear sir, yours very truly John McKenna, Secretary Ulster Rifle Association Team."

Maine, Massachusetts, Rhode Island, Pennsylvania, New York and the District of Columbia have already signified their intention to be represented by State teams.

Cincinnati Gun Club vs. Blue Grass Gun Club.

Cincinnati, O., April 17.—There was a most interesting sixteen-men team contest between the Cincinnati Gun Club and the Blue Grass Gun Club, of Paris, Ky., at Cincinnati to-day. The former club won by a score of 667 to 625. Mr. J. Q. Ward was high with 48. Messrs. Gambell and Clay were tied for second to Mr. Ward with 47 out of 50, a 94 per cent. gait.

The race was shot in one hour and fifty-five minutes in windy weather. The judges were Messrs. J. Hirsch, of Aurora, Ind., and C. H. Bateman, of Cincinnati, while Mr. John Faulk, of Cincinnati, acted as referee. The scores:

Cincinnati Gun Club's Team.		Blue Grass Gun Club's Team.	
R Trimble	24 21—45	T H Clay	24 23—47
Squier	16 17—33	V Ferguson	19 19—38
Phil	21 24—45	Nye	19 18—37
Ahlers	22 19—41	Crawford	19 19—38

Maynard	22 22—44	F Clay	23 21—44
Mackie	22 23—45	E Ferguson	20 13—33
See	21 17—38	James	18 22—40
King	23 22—45	Smith	20 21—41
Sullivan	19 22—41	McLaughlin	15 16—31
Jay Bee	19 16—35	B Clay	22 20—42
E Trimble	22 16—38	E Turney	8 15—23
Goodman	20 22—42	Brennan	18 18—36
Dick	20 22—42—667	J Q Ward	24 24—48—625

Cincinnati Rifle Association.

The following scores were made in regular competition by members of the Cincinnati Rifle Association at Four-Mile House, Reading road, on April 14. Conditions: 200yds., off-hand, at the German ring target. Gindele was declared champion for the day with the good score of 222. Weather, cloudy; thermometer, 62; wind, light, from 8 o'clock:

						Union.		
Gindele	222	217	216	212	212—1079	19	23	23—65

Elite Rifle Club.

Brooklyn, L. I., April 20—The Elite Rifle Club's meeting to-day was marked by the excellence of the shooting. The conditions were 10 shots per man, 75ft. range, ring target, off-hand shooting. Champion Fred Ross made the top score of 247 out of a possible 250 points. The scores: F. C. Ross 247, Theo. P. Fritz 245, John Kaufmann 244, Ignatz Martin 241, G. Krauss 240, Dr. F. A. Schlitz 238, Charles Kannofsky 230, Louis Zoellner 236, John Zimmermann 226, Otto Spangenberg 225.

Trapshooting.

Fixtures.

April 23-25.—Spirit Lake, Ia.—Klein-Barmeister's third annual target tournament; $50 added each day.

April 26.—Owego, N. Y.—Amateur shoot of the Owego Gun Club. John Parker, Mgr.

April 26-28.—Chicago.—Annual spring tournament of the Crescent Gun Club. John S. Boa, Mgr.

May 1-2.—Toledo, O.—First annual handicap shoot of the Edgewater Gun Club. F. W. Dyar, Sec'y.

May 1-3.—Newell, Ia.—Newell Gun Club's annual tournament; targets and live birds. Henry G. Hall, Sec'y.

May 2-3.—Beatrice, Neb.—Tournament of the Beatrice Gun Club.

May 4.—Summerdale Station, Pa.—All-day shoot of the Frankford Gun Club. Main event, twelve-men team contest. D. D. Mercer, Secy, 4461 Frandford avenue, Frankford, Pa.

May 5.—Chicago, Ill.—Universal Gun Club's tournament.

May 6-7.—Bowling Green, Ky.—Bowling Green Gun Club's tournament.

May 7-9.—Peru, Ind.—Fifth annual amateur tournament of the Peru Gun Club; two days at targets for amateurs; one day at live birds. Chas. Bruck, Sec'y.

May 7-10.—Tournament of the New Jersey State Sportsmen's Association. C. W. Feigenspan, Sec'y.

May 7-10.—Lincoln, Neb.—Twenty-fifth annual tournament of the Nebraska State Sportsmen's Association, under the auspices of the Lincoln Gun Club. W. D. Bain, Sec'y.

May 8-9.—Chicago, O.—Deer Lick Gun Club's tournament.

May 9-10.—Marion, O.—Marion Gun Club's tournament.

May 10-11.—Johnstown, Pa.—Johnstown Rod and Gun Club's tournament.

May 12.—Brooklyn, L. I.—All-day shoot of the Fulton Gun Club, East New York. Team race: Oceanics vs. Fultons. Address Bob Schneider or A. A. Schoverling, P. O. Box 475.

May 14.—Brooklyn, L. I.—Shoot for naphtha launch; 10 live birds, $10 entrance, birds extra; surplus divided; seventeen entries to fill. F. Lebohner, Mgr.

May 14-17.—Allentown, Pa.—State shoot of Pennsylvania State Sportsmen's Association. C. F. Kamlich, Cor. Sec'y. Elmer E. Shaner, Mgr.

May 14-16.—Elwood, Ind.—Tournament of the Zoo Rod and Gun Club.

May 14-17.—Newton, Ia.—Annual tournament of the Iowa State Sportsmen's Association, under auspices of the Newton Gun Club. D. R. Tripp, Sec'y.

May 15-16.—Luverne, Minn.—Tournament of Luverne Gun Club.

May 15-16.—Elgin, Ill.—Tournament of Elgin National Gun Club.

May 15-16.—Zanesville, O.—Spring tournament of the Zanesville Gun Club. L. A. Moore, Sec'y.

May 16-17.—Pekin, Ill.—Twin City Gun Club's tournament.

May 20-25.—Springfield, Ill.—Twenty-seventh annual tournament and convention of the Illinois State Sportsmen's Association. Charles T. Stickle, Sec'y.

May 21-22.—Greenville, O.—Annual shoot of the Greenville Gun Club. F. C. Brehm, Sec'y.

May 21-22.—Greenville, O.—Greenville Gun Club's tournament.

May 22-23.—Mechanicsburg, O.—Ninth annual tournament of the Mechanicsburg Gun Club. C. W. Phellis, Sec'y.

May 23-24.—Cedar Rapids, Ia.—Cedar Rapids Gun Club's tournament.

DRIVERS AND TWISTERS.

The programme of the New Jersey State Sportsmen's Association, to be held May 7 to 10 inclusive, provides eleven events on each day at 15 targets, $1.30 entrance, excepting the Nos. 6. No. 6 on the first day is for the individual target championship of the State, 50 targets, unknown angles, entrance price of targets, for the E C cup, which is subject to challenge. No. 6 on the second day is the three-men team championship of the State, 30 targets per man, unknown angles, price of targets. All members of teams must be bona fide members of the teams which they represent. A medal will be given for the two days in the regular target events. Five per cent. will be deduced from the net purse each day to be added to the Association's fund for the propagation of game and fish. The third and fourth days are live-bird events. On Thursday there are four programme events, of which No. 1 is at 5 birds, $3; No. 2 is as follows: "Individual championship of the State at live birds, 15 pigeons; entrance $7.50, birds included Prize, the New Jersey State Sportsmen's Association individual championship gold medal; winner of the previous contest to receive the net purse in this. One miss out, with privilege. The winner of this match will receive a special gold badge, which will become his personal property. Event No. 3, three-men team championship of the State. Ten live birds per man; entrance $15 per team, birds extra. Net purse to the winning team at last tournament. Event No. 4, 10 live birds, entrance $5, birds included. A special medal will be given for high average in regular live-bird events. Only those who have shot through the regular live-bird programme events (New York and New Jersey team contest excepted) will be eligible for this prize. Five per cent. will be deducted from the net purses each day, to be added to the Association's fund for the propagation of game and fish. On the fourth day at 9 A. M. the amateur team contest, between teams of ten to fifteen men each, representing the States of New York and New Jersey, will take place. Conditions: Each man to shoot at 25 live birds, 30yds. rise. Entrance cost of birds, each man to pay for his own birds only. Prize, honor of winning. Extra events will be shot if time permit."

Mr. Geo. C. Lebohner has sent out invitations to shooters, inviting attention to the Electro-Vapor launch contest, which takes place at Dexter Park, Jamaica avenue and Enfield street, Brooklyn, L. I., Friday of this week. The event is at 10 live birds, $10 entrance, birds extra, at 25 cents, 25 to 33yds. rise. All entrance money above seventeen entries will be divided 50, 30 and 20 per cent., class shooting. Ties miss-and-out. The shooter winning the launch will not be entitled to any of the money. Sweepstakes at 10 o'clock. Launch event at 1 o'clock. Entries may be made up to the beginning of the third round. The launch is valued at $175 and may be seen at Von Lengerke & Detmold's, 318 Broadway.

The programme of the Glen Rock, Pa., Gun Club, May 3 and 4, provides one day at targets, one at live birds. There are ten target events on the first day, a total of 180 targets, with a total entrance $12. On the second day there is one event at 7 birds, $4; one at 15, birds, $10, and miss-and-outs if time permits. The Rose system, ratios 4, 3, 2 and 1, will govern. To highest general average, $3; to second, $2. The committee is Messrs. W. H. Burnham, E. T. Eyster, Allen M. Seitz and Dr. C. G. Wiley, to any one of whom guns and shells may be shipped. Targets 2 cents; birds 20 cents.

The daily press, which in its entirety is a most eminent authority on ethical matters, quotes Mr. John P. Haines, president of the S. P. C. A., as an eminent verbal authority on trapshooting, inasmuch as he asserts that "clay pigeons, so called, satisfy all the demands of the real sportsmen who wish in this way to test their marksmanship, and they are harder to hit," etc. Did any one ever hear of a target shooter who had buck fever shooting at "clay pigeons" or bluerocks? There is a matter of nerve as well as of skill to be tested.

Mr. W. Fred Quimby, who has for many years been eminent in sporting matters in America, has resigned his position with the American E C & Schultze Gunpowder Company to take a position with the Western Cartridge Company, of St. Louis, as general sales agent. Mr. Harold Money, famous as an expert shot, will be associated with him. Mr. Quimby, in mentioning the matter to us, said that he looked back with much pleasure on his friendly relations with all the officers of the E C & Schultze company. He resigns solely for business advancement.

Mr. M. S. Brey, of Zionsville Station, Pa., announces an all-day shoot on Thursday of this week, commencing at 10 o'clock. There are fifteen events on the programme, at 10, 15 and 20 targets, entrance 50 and 75 cents and $1, $1.25 and $1.50. Class shooting. Also there will be a special match between J. G. Kuerstner, of Reading, and M. S. Brey, of Zionsville, at bluerocks, for a purse. If the weather is unfavorable the shoot will be postponed to the following day.

Under date of April 19 Mr. Elmer E. Shaner, manager of the Interstate Association, writes us as follows: "Kindly announce to the readers of Forest and Stream the cancellation of the dates of the Memphis tournament, viz., May 8-10. I have received a telegram from Mr. Irby Bennett stating that the Memphis Gun Club is not in a position to conduct the tournament in a manner that would prove satisfactory to it or to the Interstate Association."

The Trenton Shooting Association six-men team at Freehold, N. J., defeated the Freehold team by a score of 234 to 229, each man shooting at 50 targets. Also in a State championship team shoot, six men to a team, 30 targets per man, $6 entrance, the Trenton team came out first, the scores being: Trenton Shooting Association 140, Freehold Gun Club 135, Asbury Park Gun Club 117, New Brunswick Gun Club 109.

The novel match, at 50 live birds each, shot at Interstate Park Saturday between Messrs. L. T. Duryea and T. W. Morfey, for $100 a side, was won by the former by a score of 46 to 43. The contestants used 8-gauge guns and shot from the 33yd. mark, facing a driving rain storm, the wind blowing in their faces. The birds were an excellent lot. Under the circumstances the scores were very superior.

The next shoot of the Oceanic Rod and Gun Club will take place at Rockaway Beach, L. I., on the first day of next week. This is the last shoot of the season, and will have as a matter of special interest a team shoot with the Fulton Gun Club. Trains leave East Thirty-fourth street and Flatbush avenue at 9 and 11 o'clock A. M.

The live-pigeon series of shoots held by the Garfield Gun Club, of Chicago, were concluded on last Saturday. Dr. Shaw won first prize, Dr. Meek second, Mr. T. W. Eaton third, Dr. Mathews fourth. The competition was exceedingly close, there being but a narrow margin between the leaders in the scores.

Mr. J. W. Berger, secretary of the Arlington, Minn., Gun Club, writes us, April 12, that his club reorganized with a membership of fourteen. The following officers were elected for the ensuing year: Captain, H. McGovern; President, Wm. Timm; Secretary, J. W. Berger; Treasurer, Robert Iten.

Mr. E. C. Griffith, of Pascoag, R. I., who made his State famous in addition to a national fame for himself by collogating the G. A. H. trophy, recently, was a participant in the shoot of the Boston Gun Club last Saturday, and scored first in the prize match, 26 out of 30 from the 19yd. mark.

In the Patriots' Day tournament of the Haverhill, Mass., Gun Club, the prize event resulted in a tie between Messrs. Williams and Lambert on a score of 44 each out of 50. Mr. Lambert won in the shoot-off. Mr. Merritt was second with 43. Mr. Rule won the shoot-off for third.

The Lynn, Mass., Gun Club is arranging for a summer series of Saturday afternoon shoots for merchandise prizes, a Winchester shotgun going to first, and other prizes to twelfth place, the latter having a Heikes hand holder. The series will close on Sept. 2.

At the meeting of the Kansas State Sportsmen's Association, at Leavenworth, Kan., on April 17, it was determined that the next State shoot of the Association would be held at Olathe, Kan., not later than May 30, 1902.

The Illinois State Sportsmen's Association announces that it adds $100 in the State team shoot, May 22, which corrects an omission in the regular programme. The latter we will publish in full in our next issue.

In a contest between sixteen-men teams of the Cincinnati Gun Club and the Blue Grass Gun Club, of Paris, Ky., the former won. Each man shot at 50 targets. The score was 667 to 625.

The Fitchburg, Mass., Rifle and Gun Club opened its season on Patriots' Day with an all-day shoot. On May 1 the club starts a handicap shoot for the season.

Three tied for high average on targets at J. Sheehy's shoot, at Pella, Ia., April 16 and 17, Messrs Burnside, Klein and Bently averaging 86 per cent.

At th tournament of the Valley Stream Association, Reading, Pa., the Eagle challenge trophy was won by Mr. Lee Wertz, by a score of 39 out of 50.

The Greenville, O., Gun Club will hold its annual shoot on May 21 and 22, at the club's grounds. Mr. F. C. Brehm is the secretary.

As a sign of prosperity, it may be noted, on reference to Mr. Banks' interesting report of the Interstate Association's tournament, at Jacksonville, that said Association is now the owner of a new tent.

BERNARD WATERS.

Pigeons for shooting. Private matches a specialty. Antwerps for breeding.—L. M. Gilbert, 1128 Palmer St., Philadelphia, Pa.—*Adv.*

The Cleveland Gun Club Co.

CLEVELAND, O., April 11.—The semi-monthly shoot of the Cleveland Gun Club at targets resulted as follows:

J. I. C., high score, 38 out of a possible 40.

April 1.—Smith won cup for breaking the greatest number of targets; score 151 out of a possible 160. J. I. C. won cup for winning the greatest number of points; score 4 points out of a possible 4. J. I. C. broke the second greatest number of targets—143 out of a possible 160. Forty other prizes were awarded during the day. The small attendance was due to its being held on election day.

Events:	1	2	3	4	Events:	1	2	3	4
Targets:	40	40	40	40	Targets:	40	40	40	40
J I C	35	37	33	38	Burton	26	28	29	28

April 6.—Annual smoker. Each man shot at 50 targets: Hill 38, Maygo 43, Lewis 36, Harris 43, Decker 45, Harvey 45, Steele 37, Talmage 22, Dawson 44, Cathau 39, Dallas 41, Scott 34, Smith 44, Wallace 35, Hogan 41, Hopkins 40, Johnson 34, Allen 32.

Harvey and Decker tied for first with 45 out of a possible 50, very fair for a couple of young men. Stevens, you did fine. Come again. Owing to the rain, the attendance was not as large as we would otherwise have had. Some of our members are sugar-coated and cannot come out in the rain. The only way they can prove to the contrary is to attend more regularly.

SECRETARY.

The Anti-Recreationists Defeated.

THE anti-pigeon shooting legisaltion attempted by the S. P. C. A. and by individuals whose hearts are larger than and as tender as their heads, was finally disposed of by the New York Legislature on Monday of this week, the Assembly then relegating it to the realm of innocuous desuetude by a vote of 70 to 64.

The first bill, a copy of which was published in FOREST AND STREAM last week, was so framed that, should one grow or sell a pigeon which was used at the traps, he was a principal in the eyes of the contemplated anti-pigeon-shooting law, which, nevertheless, passed the Senate by a vote of 26 to 13. Further discovery of its far-reaching significance, however, was strongly against its success. The antis then presented a simple bill for the repeal of the law of 1875, a copy of which was also given in our issue of last week.

Charges of unfair lobbying were freely made by the anti-pigeon-shooting supporters, which meant that the sportsmen were represented simply on their merits. However, on Monday, Assemblyman Sullivan is quoted as presenting the following, which is taken from the New York Times, an anti-shooting organ:

"Mr. Speaker: In view of what has heretofore been said about lobbying on the floor of this House, I desire to call attention to the fact that the Superintendent of the society for the Prevention of Cruelty to Animals has been on the floor of this House all day, going from member to member, lobbying in behalf of this bill. I do not think that this should be permitted."

Speaker Nixon said that the rules of the House relative to lobbying should be enforced.

Other papers stated more definitely than the last paragraph that Speaker Nixon intimated that Mr. Haines would perforce need to withdraw.

The International Trapshooters.

CLEVELAND, O., April 20.—Have just received a copy of the Peru Gun Club's programme, and am pleased to note a feature in the programme that must have originated in the fertile brain of J. L. Head.

The Peru Club allow manufacturers' agents and experts to shoot for targets only, and offer to give one-half of the money so received to the fund being raised to send the American team to England this summer.

Now if every gun club would do this, and in addition have one extra 10-bird event some time during the tournament, with $1 entrance, and deduct 50 per cent. of the purse for the team fund there would soon be a fund raised that would be amply sufficient to send the team in a short time.

We would then have a representative American team sent by the trapshooters of America to compete with a team representing a nation that has always claimed the supremacy in everything pertaining to the shotgun.

This would give thousands of trap shots throughout the country a chance to show their interest in the matter, and there is no question but that the team would far rather represent thousands of men each contributing a little than to represent a few giving large amounts.

I am sure the Peru Club will have an event of this kind, and that the example set by them will be followed by hundreds of clubs.

PAUL NORTH.

Providence Gun Club.

PROVIDENCE, R. I., April 13.—At the opening shoot the following scores were made:

Targets:	10	15	20	15	15	15	15	10	20	15	Broke.

R. C. ROOT, Sec'y.

Mississippi Valley Notes.

PROGRAMMES are at hand for the first annual target handicap shoot of the Edgewater, O., Gun Club, May 1 and 2. The programme carries 190 targets per day. Targets will be 2 cents, and division of moneys under class system. All are invited, and a good time is assured.

Over forty shooters competed in target and live-bird events at Dupont Park, St. Louis, on the 21st. As a trapshooting community St. Louis is certainly very much alive these days.

F. C. RIEHL.

Interstate Association at Jacksonville.

THE Interstate Association opened its target season at the furthest point South to which it has as yet ever carried its trapshooting paraphernalia (as Elmer Shaner likes to call his belongings). Its first shoot for the inanimate target season of 1901 was, in short, held at Jacksonville, Fla., Wednesday and Thursday, April 17 and 18, under the auspices of the Jacksonville Gun Club.

In point of number of shooters present the tournament was not remarkable; but in figuring up the success of a trapshooting gathering there are other things to reckon with besides a large entry list. And all those "other things" were to be found at Jacksonville during the two days that the shoot lasted. There was the usual Southern geniality, hospitality and sociability; there were no kickers; the shoot moved along smoothly and easily, for very nearly everybody did his best to help Mr. Elmer Shaner at one time or another. Secretary B. W. Sperry was conspicuous in that respect. The sun, too, was warm enough to thaw out some of the Northerners, who had become muscle-bound, owing to the chilly times that had been their lot since winter first set in. The new tent—emphasis on the word "new," please—of the Interstate Association was extremely usefnl, providing a cool and shady retreat when the sun's rays became a little too warm. On the first day the wind was quite strong enough to make the shooting somewhat difficult, but on the second day it blew very hard, making the targets take all kinds of queer jumps, and sending the loose particles of sand disturbed by the feet of the shooters right into the eyes, ears and noses of the spectators. It was a rough and boisterous breeze for a fact.

The shoot was held out at the driving park. A line of trolley cars, that ran the greater part of the distance through a boulevard lined on each side with palm trees, landed the shooters within three or four minutes' walk of the gruonds. That three or four minutes' walk, added to the fact that the cars did not run very frequently and that walking was not much relished either before or after shooting, caused most of the contestants to take a hack and drive out in style. On the second day Jack Fanning and L. Z. Lawrence rose even to the dignity of a landau, swinging in at the gates of the park in a cloud of Jacksonville dust, which completely obscured the halo which most of us thought ought to be somewhere above the former hat after his great shooting on the previous day.

As to the Arrangements.

Members of gun clubs under whose auspices the Interstate Association has given tournaments during the seasons of 1899 and 1900 will appreciate Elmer Shaner's smile of satisfaction as he surveyed his new tent, the new blackboard and the complete outfit of new boxes for his "paraphernalia," when everything was ready for the starting of the tournament on the morning of April 17. The tent is a dandy, something like 50 by 30, without a single peep hole in its roof or a taint of mildew on its canvas.

A magautrap threw bluerocks against a background that would be easy were it not for an odd pine or two that the Jacksonvillians have been too busy or too tired to cut down at present. There are half a dozen such old pines to the left, but the whole lot of them did not do so much in the way of producing goose eggs as a solitary old fellow exactly in line with a straightaway when one stood at No. 3 score. Dr. Vincent found left-quarterers hard to connect with, but he did not say much about the pines; most people, however, abused the lonesome one in front of the score most effusively.

As to the scoring, that department was in the hands of W. T. Morris, who did his work so well that it was the subject of much favorable comment. He used up a whole lot of chalk, as it takes more of that article to make round 0s than it does to mark up 1s. Look at the scores, and you will readily realize that there was somethin' doin' on the score board most of the time.

The cashier's department was in charge of Roy Ingersoll, who quickly caught on to Mr. Shaner's system and kept things running all the time with the precision of an oldtimer. The pulling was mostly done by Secretary B. W. Sperry, his assistants being several of the visitors, while occasionally Elmer Shaner would pull and referee at the same time, thus economizing help and adding grace to the scene.

First Day, April 17.

Clear, bright and warm, with a strong breeze to temper things in the shade, was the weather dealt out for the first day of the shoot. It was fully 9:30 before the first squad was called to the score and told to stand at ease, while the Interstate Association's manager delivered for the first time this season his interesting remarks anent the official score being that which was marked up on the blackboard, cautioning the shooters to watch the board closely, and also to observe with due respect the rulings of the referee, etc. Seriously speaking, Mr. Shaner's remarks at the opening of every Interstate tournament, while brief, are to the point and save a possible amount of trouble that might arise were he to be silent on the points touched upon.

Trade representatives who were present were A. W. du Bray, of Parker Bros.; H. P. Collins, of the Dupont and Hazard powder companies; J. S. Fanning and L. Z. Lawrence, of the Laflin & Rand Powder Company; H. B. Lemcke and J. E. Avery, of the Peters Cartridge Company; Edward Banks, of the E. C. & Schultze Gunpowder Company.

Among the amateurs who took part were Dr. F. C. Wilson, of Savannah, Ga.; W. J. Jeffords, Jr., A. A. Lynah and B. H. Worthen, of Charleston, S. C.; Col. J. T. Anthony, Charlotte, N. C.; F. G. Ronald, Cocoa, Fla.; H. A. Ford, Ocala, Fla., the remainder of the contestants being Jacksonville residents. Among the latter was John, son of Mr. F. Gray, of the S. H. Hubbard Co., of Jacksonville, a boy of less than fourteen years, who, with the aid of a 16-gauge gun, broke more targets than some of those who could give him cards and spades in the matter of years and gray hairs. Johnny is a born shooter, and the pride of the Jacksonville Gun Club.

Jack Fanning was easily high for the day, breaking 98 out of his first 100, but losing 7 of his last 65. Banks came next with 147, while Dr. Wilson, Jeffords and Worthen were tied for third with 140. As the local club had offered a gold medal for competition among the amateurs, the contest between the three above-named was watched with much interest, and at no time during the day were any of them far apart in the matter of breaks, closing the programme on the first day tied on equal scores, leaving the issue to the 165 targets on the second day's programme.

Scores of April 17.

As it was yet early when the programme was shot out, a team race, 20 targets per man, losing team to pay for the targets, was proposed. Mr. Sperry and Dr. Vincent were chosen captains, the first-named seeming to have the best judgment, if results prove anything. Scores in the race were:

Sperry's Team—Sperry 17, Banks 18, Worthen 16, Du Bray 16, Anthony 15, Lemcke 14, Collins 12, Ronald 13, Avery 16; total 137.

Vincent's Team—Vincent 18, Fanning 17, Wilson 16, Jeffords 17, Lawrence 14, Lynah 14, Fairhead 12, Long 9, Stripling 11; total 128.

Second Day, April 18.

The wind was much stronger to-day, rising at times almost to the dignity of a gale. The sand was blown into the shooters' and spectators' eyes, making it altogether a fierce combination to defeat when at the score, and doing one's best to make a straight.

Several new faces appeared on the grounds, chief among them being Mr. W. A. Battle, of Birmingham, Ala., representing the W. R. A. Company. Waycross, Ga. sent a whole squad, made up as follows: W. J. Swain, C. I. Allen, G. W. Barnes, S. T. Holtzendorf and J. W. Newton. Philadelphia had a representative present in the person of Mr. P. Laurant.

The competition for the amateur medal was keen and most interesting, the trophy being in dispute until the very last event was decided, Dr. Wilson eventually winning out by 1 target. The Waycross squad rooted for Jeffords, the latter being, if I remember correctly, the daddy of the club in days lately gone by. Barney Worthen was not in his u. g. f., shooting much below his average gait, but nevertheless he gave both Dr. Wilson and Jeffords a good scare when he broke 14 out of 15, and 20 straight in the eighth and ninth events.

Banks was high for the day with 150 out of 165, Fanning and Dr. Wilson tieing for second place with 142 each; Jeffords was next with 141, Barney Worthen scoring 140, the same total that he made on the first day.

Scores of April 18.

Jacksonvilliana.

Col. Chas. L. Davis, of Warm Springs, Ga., dropped into Jacksonville the night of the 16th, and was out at the shoot all the next day. He told the boys what he was going to do for them at his shoot, which is scheduled for June 17-20, and added that the swimming pool with its toboggan slide would again be at their service. Colonels Anthony and Thos. Martin found the toboggan slide most amusing last summer at the Warm Springs first annual tournament.

In pointing out the beauties of his new tent, Manager Shaner remarked that "the boys at Providence, R. I., and at Newport, Vt., would be tickled to death if they could only see it!"

The accuracy of the scoring done by the blackboard keeper, W. T. Morris, was easily explained when once I had learned thae he came from some place in Illinois, not far from O'Fallon, the home of Billy Crosby.

"Fairhead" was the nom de fusil of a member of the Jacksonville Gun Club, who did not dare to kick at anything; he had recently been vaccinated most thoroughly in the calf of his left leg.

The lunch which was served in one corner of the tent was just about as right as it could be. Prices were moderate and the articles A1.

Drifting sand caused some trouble with the electric pull on the first day, but when the wire pull was installed, targets came and went with a regularity that satisfied all.

The Seminole Club, of Jacksonville, made the visiting shooters its guests, an honor that was duly appreciated.

That pine tree will be cut down some day, and then—

EDWARD BANKS.

Providence Gun Club.

PROVIDENCE, R. I.—The annual meeting of the Providence Gun Club, had a double significance to the members, as a reception was given to our captain, E. C. Griffith, who won the Grand American Handicap, at New York last week, incidentally a silver cup and first money, consisting of $600. After the meeting a special car conveyed the party to the Casino at Roger Williams Park, where a banquet was given in honor of the Rhode Island winner.

The meeting, which was the third annual, was held at the office of the secretary, R. C. Root, on Weybosset street. Vice-President E. N. Cook presided.

The minutes of the last meeting were read and approved. The treasurer's report by R. C. Root, who is also secretary, showed a handsome balance in the treasury. The election of officers resulted in E. N. Cook being chosen President; Frank W. Arnold, Vice-President, and R. C. Root was re-elected Secretary-Treasurer. The latter was also appointed a prize committee for the Interstate shoot, which will be held at the grounds of the club three days in August.

The party then boarded the special car and arrived at the Casino, where Caterer Betts had plates laid for twenty-two, also an elaborate menu arranged.

President E. N. Cook sat at the head of the table, with Capt. E. C. Griffith occupying the place of honor on the right.

After the cigars were lighted toasts were in order, the first of which was as follows:

"Here's to the Wooden Indian from Pascoag,
Who shoots a Parker gun and the Winchester load;
He killed his last bird from number four trap,
And won the Grand American Handicap."

Brother Small wished to know why Griff was a greater shot than Noah, and pertly informed us that Noah let one dove go.

The event of the evening was the presentation to Griff of a gold plate set in the stock of the gun with which he won the shoot, and inscribed as follows: "1901. Grand American Handicap. 43 straight. E. C. Griffith."

The presentation speech was made by Philip L. Voelker, and was a complete surprise to Mr. Griffith, from whom the gun had been borrowed under the pretense that some ambitious shooter wanted to purchase one like it.

Mr. Griffith responded modestly, and it was evident that the captain of the Providence Gun Club is not affected with what in slang is called a "swelled head."

At this stage of the meeting the peace, sleep and time annihilators took charge of the gathering, and right here I will state that the motto of this society is: "Silence is golden."

Many of the shooters who were in Providence at the last Interstate shoot will remember this society. They have a mania for steamboats, clam dinners, etc., and usually help themselves to what they want.

R. C. ROOT, Sec'y.

Pressure upon our columns has prevented the publication of a number of news contributions this week. They will appear in our next issue.

A Sanguinary Muse.

We find in the Springfield Republican, where they are printed with editorial indorsement, some verses by John Paul, or Charles Henry Webb (for this was a bit of poesy too choice and too rare to give to the world without both of his names), inspired by yellow journal stories of what did not happen the other day at the Grand American Handicap. Mr. Webb tells us that the white-plumaged mates of the Interstate Park pigeon—

Once the golden car drew
Of the fair Queen of Love;

and while they were heathens and cruel pagans who wrote "the mythic sweet story of Venus of old," as for himself, Charles Henry Webb—

sooner with them
I'd Eternity share
Than with Christians who reek
Of powder and prayer—

it being expressly agreed by both parties to this contract that the Christians who reek as aforesaid are trapshooters. The declaration of a preference for a permanent domicile with the shades of Anacreon and Catullus in the Elysium beyond the Styx is not to be taken as evidence that our twentieth century poet is idly dreaming in any remote and pagan Venus' dove stage of thought and sentiment. On the contrary, he is altogether modern and strictly up to date in virile and strenuous convictions and the forcible expression of them in verse. In ferociousness he out-Kiplings Kipling, and is more truculent than Alfred Austin when the Laureate concerns himself with the Boers; indeed we are inclined to retire Kipling and Austin as celebrators of powder and shot to a place in the ranks some distance in the rear of Webb. For hear him in his appeal to "the heavens above":

Oh, let some high arm
For a match, I implore,
Pigeon shooters "provide"—
Twenty thousand or more.

To further fair sport—
Or slaughter of these—
No Hurlingham rules,
But load as you please.

And that none may escape,
By any mishap,
Put Death at the score—
And let me pull the trap!

Rhyme omitted and verse reduced to prose, Mr. Webb here gives us to understand that he breathes a prayer to the Almighty to deliver into his hands twenty-thousand human beings for the slaughter; and he would have the killing of them made so certain that "none may escape by any mishap." There is nothing small about Mr. Webb when it comes to riot and revel of slaughter. He wants blood, and he wants lots of it. He is like the minister who in praying for rain stipulated that the people were not asking for a mere drizzle-drazzle drizzle, but for a good, hard freshet.

As to the general proposition that heaven should give him a job of killing, there can of course be no quarrel with Mr. Webb; and if he wants blood it would manifestly be far better for him to confine himself to some one class of his fellow beings than to shoot up the town—men, women and children, dogs, cats and cab horses promiscuously. But, if we may venture to make a suggestion, in praying for "twenty thousand" or more our poet asks too much. Could not Mr. Charles Webb be prevailed upon to restrain the exuberance of his ambition for slaughter, restrict the expansiveness of his purpose to kill, and modify the magnitude of his demand upon the Almighty? To satisfy his bloodiness, would he consent to nothing less? Would he not fewer victims take, if he could burn them at the stake? Would not his thirst for shooters' gore be sated with but twenty score? Or must he all these thousands kill, to drink of human blood his fill?

We will all cheerfully concede that if a person does not like trapshooting he should have license to kill trapshooters—that is, within reasonable number—but Mr. Webb's aspiration to butcher his fellow beings by the thousand goes beyond the limit which existing public sentiment would be likely to sanction, or the heavens above to grant. If Mr. Charles Henry Webb will only look at it in this way we are confident that when he calms down he will consent to compromise on fewer buckets of blood.

Still, the situation is not without its possible perils; for if we assume that Mr. Charles Henry Webb has spattered the blood and mangled remains of 20,000 trapshooters over the universe, men whose offense consists in holding an opinion different from that of Mr. Charles Henry Webb, then we must concede that Monsieur Webb is subject to spectacular extermination for the delectation of some other fellow from whom Webb differs; and granting all this to Webb, he has arrived centuries back in the dark ages.

Peru Gun Club.

THE Peru Gun Club, of Peru, Ind., has issued an announcement and programme. The first and second days, May 7 and 8, are devoted to targets, twelve events, at 10, 15 and 20 targets, entrance based on 10 cents per target, a total of 185 targets the first day, $18.50 entrance, and 200 on the second day, with a total entrance of $20.

Following is the announcement:

"In announcing our fifth annual tournament to the amateurs of Indiana and the surrounding States, we feel that it is hardly necessary to say anything beyond the fact that we are to have a shooting match on May 7, 8 and 9. There is hardly an amateur in the middle West that has not been with us at least once, and a number have been with us in all our tournaments. To those we will simply say, come again. The management will be the same as before, and could be in no better hands than Mr. Parker's. The division of moneys and general arrangements will be the same as in the past, and from the encouragement already received we look for a larger attendance than ever before.

"To the amateur who has never been with us we will say, if you want to attend the best amateur shoot in the country, come to Peru. The gentlemen comprising this club will guarantee the fairest of treatment. No shooter ever left the Peru Gun Club grounds complaining of unfair treatment. Nor is that all. No sportsman will ever be treated unfairly on these grounds by either participant or spectator. We won't have it. There is no dropping for place, for the reason that the shoot is too big for any man, no matter how astute, to watch the place. There is no standing around on the part of the home shooters until after the best shots have competed in an event that they may then enter and drop in to the unfilled places. Our boys are stayers, make their entries from the start and take what is coming to them. If you don't believe all this get your little gun, come along, and we will show you.

"Five dollars will be paid to the two high guns shooting through entire programme both days.

"Five dollars will be paid to the two low guns shooting through the entire programme both days. One gun cannot win both high and low average prize.

"The programme on Thursday, May 9, live birds, open to all, handicaps 26 to 32yds., provides as follows:

"Event No. 1, 7 live birds, $5 entrance, two moneys, 55 and 45 per cent.; event No. 2, 10 live birds, $7 entrance, three moneys, 40, 35 and 25 per cent.; event No. 3, 10 live birds, $7 entrance, three moneys, 40, 35 and 25 per cent.; event No. 4, 15 live birds, $10 entrance, four moneys, 40, 30, 20 and 10 per cent. Other events to suit the shooters. Live birds 25 cents, which will be deducted from the purses in all events. We guarantee the best of country pigeons, and the boys who have shot live birds on our grounds can assure you that you need have no fear of killing too many. The retrieving will be done by Mr. Fred Erb's celebrated retrievers, and handled by Mr. Erb in person. Don't forget our annual autumn tournament next October. All live birds, open to all. All handicap, and all high guns.

"Rules and conditions: Revised Interstate Association rules to govern. Magautrap and one set of Sergeant system traps. Ten-bird events, three moneys, 40, 35 and 25 per cent.; 15-bird events, four moneys, 35, 30, 20 and 15 per cent.; 20-bird events, five moneys, 30, 25, 20, 15 and 10 per cent. Refreshments and substantial meals will be served on the grounds. Plenty of machine loaded shells for sale on the grounds. Plenty of shelter for all shooters except the Indians; these will be compelled to take all the weather and water than can be forced upon them. (Chief Rio Grande excepted.) This may seem like discrimination, but they deserve it. Manufacturers' agents may shoot for targets only, but will be welcome to attend and show their products. Shells shipped to the secretary will be delivered upon the grounds. One-half of all moneys paid by manufacturers' agents and experts for targets in this tournament will be subscribed by the Peru Gun Club toward defraying the expenses of the American team to England."

IN NEW JERSEY.

Forester Gun Club.

Newark, N. J.—The two days' tournament of the Forester Gun Club had events and scores as follows:

April 12, first day:

Targets:	10	10	10	10	10	10	10	10	10	10	*	T		*	T
Mihlon	4	5	7	9	5	6	8	7	6	8	3	10	5	1	6
Merrill	5	7	6	8	7	5	..	..	5	4	4	8	..	..	..

*Allowance.

Events Nos. 3, 4, 5, 6, 7, and 8 were merchandise events.

J. J. FLEMING, Secy.

Trenton Shooting Association.

Trenton, N. J.—The last two shoots, April 10 and 13, were well attended. The scores made on the 10th suffered a drop in the usual average percentages, due to the high winds that prevailed, and on the 13th cloudy weather, with the usual accompaniment of mixed lights, caused a number of miscues.

All of the work of the latter date was done on the Sergeant system.

Our magautrap has been giving considerable trouble for some time past, and it is now varying the monotony of breaking down in the middle or latter end of the programme by refusing to work at all.

The interest in the poultry sweep remains unabated. Some of the newly acquired members are improving steadily in their work, and are giving some trouble to the older hands and "past grands" in the art.

We send a team to Freehold on the 17th to contest in the third and last race of the series of team matches. We expect to go early and stay all day, as the Freehold Club will run their annual spring tournament on the same date.

The scores of April 10 follow:

Events:	1	2	3	4	5	6	7	8	9	10	11
Targets:	10	10	10	10	15	15	5	5	5		
Maddock	6	6	..	7	8	10	3	4	2	4	3
Lutes	7	7	..	7	11	11	4	3	3	..	..
Mickel	7	..	..	7	11	11	3	4	4	4	..
Wilkes	5	5	6	6	8	7	3	1	2	3	3
Thropp	8	6	..	8	12	11	..	0	3	3	4
Thomas	9	6	7	7	9	9	3	4	4	3	4
W L Colville	..	5	6	9	7	8	5	3	4	..	..
Brokaw	..	..	4	7	8	6	..	..	..	2	..
Vanarsdale	..	..	8	7	11	9	3	2	4	2	..
Applegate	..	..	5	6	7	8	2	1	3	..	..

Duryea vs. Morfey.

Interstate Park, Queens, April 20.—There was much interest manifested in the match between Messrs. L. T. Duryea and T. W. Morfey, at 50 live birds each, 8-bores, 33yds., for $100 a side. Each shot an exceedingly heavy load, said to be 6drs. of powder and 2oz. of shot. Early in the contest Morfey began to show the effects of punishment on his face. It was noticeable that each was rather frugal with the second barrel. Mr. Duryea killed 15 out of the 50 with one barrel; Mr. Morfey killed 18 in a similar manner. Mr. Duryea shot in much more regular and quicker time than Mr. Morfey, the extra five or six pounds apparently being inappreciable as extra weight.

On the other hand Mr. Morfey's time changed appreciably, and he shot behind several of his birds. Every one of the birds which he missed was a right-quarterer or right-incomer. The birds were a good lot. There was a driving downpour of rain in the faces of the shooters, and the scores, under the circumstances, were commendably excellent. In the first 25 Mr. Duryea missed 3 in a bunch, the 22d, 23d and 24th, owing to the heavy drive of rain in his face, all these birds going to the right as drivers or incomers. His fifth bird in the second 25 was also a right incoming quarterer, which died out of bounds. The scores:

Sheepshead Bay Rod and Gun Club.

Sheepshead Bay, N. Y., April 18.—There were twenty-three shooters in the handicap club event of the Sheepshead Bay Rod and Gun Club to-day, and of these Dr. Wood and P. Suss killed straight. In the shoot-off, miss-and-out, for the medal, Dr. Wood won in the first round. The scores:

New Utrecht Rod and Gun Club.

Interstate Park, Queens, L. I., April 20.—There was a good attendance of shooters, considering the weather, which was of the wet, wettest. The rain fell in a steady downpour, with a driving incoming wind, which was most obstructive to good work. There were three who qualified in the club event for April, Messrs. Creamer, "Ramapo" and Capt. Money. Dan Bradley, a visitor, also killed straight.

No. 1, 7 birds:

Dr Martin, 28.....2120020—4

WESTERN TRAPS.

Chicago Gun Club.

Chicago, April 13.—The scores of the second weekly shoot of the Chicago Gun Club are appended. The weather was fine, and those who came out had all the shooting they wanted. In the weekly trophy handicap, dead birds, Dr. C. W. Carson won high gun, with R. B. Mack winner of the handicap trophy after a lively shoot-off with Turck and Borroff:

		Hdcp.	Total.
R B Mack	11111111011110111111111110—22	4	25
Mrs Carson	10111100111111101111110111—20	6	25

Borroff	11111011111111111111111 0—23	5	25

First, second and third ties, R. B. Mack won:

		Hdcp.	Total.
Mack	1111110111— 9	1	10
Turck	1111011101— 8	2	10
Borroff	0111110011— 7	2	9
Mack	1111001011— 7	1	8
Dr Turck	0110111001— 6	2	8
Mack	1111111111—10	1	10
Turck	1100111100— 6	2	8

Fifteen targets, handicap rise:

R B Mack, 16.....111110111111111—14
Mrs Carson, 16.....101100011010100— 8
Balmer, 16.....10011111111111011—12
De Wolff, 16.....10010110 11101— 8
Dr Turck, 16.....11011110111011—10
Borroff, 16.....11111111111111—15
Dr Morton, 18.....10110111001111 0—10
Richards, 18.....11111111111111—15
Dr Shaw, 18.....11101001011111—10
Kuss, 18.....11111100110111 0—11
Atherton, 18.....11011111110110—12
Dr Carson, 20.....11110010011 0110— 9
Stannard, 20.....11111111111110—14
Pollard, 20.....11110111010111 1—12
Kuss, 20.....11001110111011 1—10
Dr Shaw, 20.....11011111011110—12

Borroff went straight in the monthly handicap in rise, with W. D. Stannard close second at the 20yd. rise. Mr. Stannard lost his last target, which was badly dusted, but not broken. Mr. Richards, who was a visitor, broke straight. The shooters are getting in form for State shoot in May.

BLUE JEANS.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Kansas State Sportsmen's Association Tournament.

Leavenworth, Kan.—It has been heralded abroad for many moons that the Kansas State tournament for 1901 would be held in Leavenworth, and after the following introduction, which was printed in the programme, do you think it was any wonder that there were one hundred shooters present?

"To our shooting friends:

"You are cordially invited to join us in a shooting tournament April 16, 17 and 18, to be managed by Aire Lue Hart, one of the most competent, capable and best fellows in the great West.

"We will have a private detective on the grounds to protect all from crooked work of all kinds. No betting or books to be made by Chris Gottlieb unless he shows a roll before he opens up. As to hotel comforts we would kindly refer you to Frank Parmelee, of Omaha, and Chas. Budd, of Des Moines, who will make arrangements for you without charge.

"This will be a reunion of amateurs, and two sets of traps and plenty of targets. Come and have the best time of your life, Wednesday evening. The National Hotel and the management will give a smoker. Don't miss it. Bring your jokes and stories with you. Everything goes, and the town is yours. Mrs. Nation will bury the hatchet for three days. Signed, J. W. Sexton, President; H. W. Koohler, Secretary; Louis Erhart, Manager."

Rules and Regulations.

"American Shooting Association rules. Sergeant system, with two sets of traps. All ties divide. Money divided by the Rose system, 4, 3, 2, 1. Targets at 2 cents. Manufacturers' agents will not be allowed to compete for the money except in extras.

"Convention to be held Wednesday evening. After that a smoker to be given at the National Hotel. Songs, music and speeches will be indulged in. Come on, boys, eat, drink and be merry with us, and enjoy a good time, because there is no telling where we may be next year."

Is it any surprise, then, after such an invitation that about seventy-five shooters were present on the first day?

A canvass brought out the following names present: O. K. Stout, Severance, Kan.; A. Fulton, Bendena, Kan.; G. W. Lindsey, Leavenworth, Kan.; M. P. Creager, Atchinson, Kan.; J. H. Cox, Detroit, Mich.; R. T. Guy, Le Loup, Kan.; G. Hicks, Stafford, Kan.; Ed O'Brien, Florence, Kan.; Torry Moore, Lincoln, Neb.; Frank Parmelee, Omaha, Neb.; Chris Gottlieb, Kansas City, Mo.; C. B. Clapp, Moberly, Mo.; B. Johnson, Le Loup, Kan.; A. C. Holmes, Kansas City, Mo.; C. E. Wright, Kansas City, Mo.; W. H. Heer, Concordia, Kan.; M. M. Patton, Platte City, Mo.; C. B. Cockrill, Platte City, Mo.; J. E. McIlrevy, Kansas City, Mo.; H. E. Sherman, Kansas City, Mo.; W. J. Baldwin, Atchison, Kan.; Herbert Taylor, St. Louis, Mo.; W. M. Howe, Kansas City, Mo.; T. J. Hearn, Kansas City, Mo.; F. E. Rogers, St. Joe, Mo.; Chas. Spencer, St. Louis, Mo.; W. H. Allen, Pleasant Hill, Mo.; Lill Scott, Sheffield, Mo.; W. A. Smith, Greenwood, Mo.; W. A. Waddington, Beatrice, Neb.; G. O. Raines, Beatrice, Neb.; G. B. Simpkins, Lincoln, Neb.; J. E. Johnson, Atchison, Kan.; G. W. Goff, Leavenworth, Kan.; Wm. Krall, Parnell, Kan., and W. Tramp Irwin, Chicago.

The day opened bright, but the sun was soon behind a cloud, and a cold wind came from the north, and before night quite a lot of rain fell. The background was a dark one, and the targets hard to see, yet very good scores were made, and everything passed off in good shape. But the shooters got "cold feet in reality, and some will not come up in good shape to-morrow. Sunny Kansas has gone back on the Leavenworth crowd this time "for sure."

If everybody was as big and stout and used to out of door life as "Buffalo Hump," of Omaha, or Dick Linderman, of Lincoln, the weather would not be of such importance; but many a business man plans for weeks to take an outing with the boys, and when such weather is met with they stand a fair chance of getting diseases, such as colds and pneumonia. Most of the shooters, however, kept right after the "mud pies," and did not stop until the programme was finished.

The programme was too long; including the two-men team shoot it meant 250 shots. It is no wonder some of the boys had lame shoulders and headaches, especially when many of them present were using shells with more powder and shot than was necessary to burst a clay bird.

The highest scores for the day, omitting the team shoot, were Koohler and Rogers 216; Linderman 216; Spencer, Moore, Parmelee and Arnold were close up.

The most interest was centered in the team shoot, open to any two amateurs in the United States, which resulted in the prize going to western Kansas. It is strange that shooters do not shoot so well in team races as they do in regular events, some of the best shots entered going down to 21 and lower. Ed O'Brien and Gottlieb made a straight, while O'Brien's partner lost 3 and Gottlieb's lost 4. They were paired as follows: Sexton and Koohler 44, Guy and Johnson 37, Clapp and Gottlieb 46, Linderman and Moore 44, Waddington and Raines 46, Cunningham and Rogers 42, Goff and Lindsey 45, Herr and Arnold 46, O'Brien and Hicks 47.

The boys did not lack for amusements at night. There was no time for the little Indian games that Charley Budd runs. We were all out to a vaudeville show and a sparring exhibition and a smoker and free refreshments, and did not get in until 12 o'clock. Mrs. Nation had a little trouble at Kansas City, and did not show up as yet. What Koohler says goes, and his word is out.

First Day, April 16.

Second Day, April 17.

Getting on the grounds a little late, I found the scores were not as good as yesterday. Wind was blowing across the traps and the flight was irregular and puzzling. No two set of traps were sending the saucers out further than yesterday, and after about five to ten events had been shot through many of the amateurs put their guns aside and put on their overcoats, and proceeded to amuse themselves by looking on.

We had new men to-day, viz., C. C. Herman and Guy Little, of Kansas City, Mo.; G. W. Jenkins, Wamego, Kan.; Frank Hodges, Olathe, Kan.; C. F. Clay, Perry, Okla.; D. B. Jenkins, White City, Kan; F. M. Berkey, Kansas City, Mo.; M. H. McGee, Kansas City, Mo.; F. W. Tyson, Olsburg, Kan., and W. H. Howard, Half Mound, Kan.

There were altogether forty-eight participants, yet but twenty-three shot the entire programme. Of these, four were trade representatives.

In explaining the falling off, I will mention that the weather conditions were bad, yet the manner of trapping was somewhat responsible for it. The flight was rather swift, and the unknown angles rather puzzling in a wind and bad light.

The attraction was the Rochester Brewing Company challenge trophy, the conditions of which were 50 targets per man, entrance $3; money divided first high gun, trophy; second, 40 per cent.; third, 30 per cent.; fourth, 20 per cent.; fifth, 10 per cent. Open to any resident amateur shooter of Missouri, Kansas, Nebraska and Oklahoma, and shall be emblematic of the target championship of these States, and shall be competed for at annual tournaments of this Association. The holder of trophy to receive $15 for the delivery of trophy to the club holding the next tournament.

Winner of trophy is subject to challenge from any resident of the four States. Challenger shall deposit $10. Winner to take money and cup after paying for the targets. Challenger to place forfeit in the hands of the sporting editor of the Kansas City Star, who shall notify the holder, etc.

There were sixteen entries, and some good scores were made, but none phenomenal. Strange things generally happen in a shooting match. Moore made 40 straight, then lost 4 out of the last 10, landing him in fourth place alone. Goff broke 25 straight and lost 6 in the last string. O'Brien lost but one in the first string, and yet fell down in the second.

The most steady fellows were Linderman, Herr and Arnold. Each has a hard luck story, and will tell their grandchildren how they lost that "one." But the tie furnished excitement, and much pleasure was evinced by the large crowd of shooters and visitors present, among whom were a great many old G. A. R. boys who are now living at the Soldiers' Home. Some of them were overheard to remark that they did not have smokeless powder at the battle of Bull Run, etc.

The result proved a popular one, as the trophy stays in Kansas and goes to Arnold, of the short grass country.

The tie was shot off at 25 targets. Result, Arnold 24, Linderman 23, Herr 21. Mr. Arnold is about the only live-bird shooter in the State, and living on a large farm in the great Arkansas Valley, has great opportunity to practice on game. The scores:

Annual Meeting.

At 9 P. M. the meeting was called to order, with J. W. Sexton, president, in the chair, and H. W. Koohler secretary.

The minutes of last year's meeting were dispensed with, as none were on hand. Mr. Koohler explained that his predecessor had not favored him with a report of the last meeting. He explained how this year's meeting was held at Leavenworth. As the constitution and by-laws were misplaced or lost, and with no criterion to go by the Leavenworth Gun Club made their own rules for the championship this year, viz.: Any Kansas man can become a member and contest by paying a fee of 25 cents. Something must be done to bring the State Association to the fore once more, and should now be reorganized.

Selecting the place for the next meeting was brought up, and Mr. Herr, of Concordia, stated that if no one else wanted the shoot next year it could be pulled off at his town, but could not guarantee much added money. Mr. Frank Hodges, the genial mayor of Olathe, was called to say something for his city. He thought that if it came there he would be compelled to see to all the work, and he might not have time, etc. The sentiment of the old officers and most of those present seemed to favor Olathe, and after electing Mr. Hodges President for the coming year, W. H. Herr, of Concordia, Vice-President, and H. W. Koohler Secretary, Olathe was selected, and dates chosen not later than May 30. It was carried that the chair appoint a committee of three to draft a constitution and by-laws for the Kansas State Sportsmen's Association, to report at the next meeting, at Olathe. The following were selected: Ed O'Brien, of Florence; H. W. Koohler, of Leavenworth, and Frank Hodges, of Olathe.

Meeting adjourned.

The Smoker.

All were invited to the dining room, where a royal spread was in waiting and some elegant music was being furnished by the Kansas City Colored Mandolin Club. Here again Mr. Koohler appeared to be as much at home as on the shooting ground, and acted as toast master in a masterly manner. His first attempt was in welcoming the boys and friends, and stating that Leavenworth had the reputation of being a very hospitable city and receiving her guests with open arms. It has been known that no matter what gathering was being held at Leavenworth the mayor of the town could always be found at the depot ready to lead them to some place where a banquet was ready for them.

The first speaker, after the many good things, such as frog legs and several courses, had been indulged in, until everybody was more than satisfied, was Mr. Van Trump, of the Rochester Brewing Company. He said that he was pleased to be able to add something for the encouragement of shooting, and yet was selfish enough to wish that it might stay in Leavenworth.

Mr. Koohler then unveiled the cup and called up Mr. Arnold, presenting him with same. Mr. Arnold responded, saying he was glad to have been here and be so royally treated, and that should any of the Leavenworth shooters come after the cup by challenge he surely would endeavor to give them a hot time.

Mr. Taylor was called on and invited everybody to St. Louis' State tournament.

Remarks were made by Tom Norton, Dr. Clapp, Mr. Sexton, C. D. Linderman and Mr. Shindley.

Third Day, April 18.

The shooters were slow in getting out, and started late, though the weather was perfect—very little wind, and sun shining brightly. The way the boys were treated and the late hours of going to bed were good excuses for coming out tardy. When the squads had been made up it was found that there would not be above four of them, thus a falling off of about half that of the day before. Two hundred and twenty-five targets on the regular programme and then an extra event bringing the number of shots up to 275, is just about 100 too many for three days in succession. Good scores were made.

Only one set of traps was necessary for the day. A good lunch was served on the grounds during each day, which was the proper thing, as the shooting ground was a long way from the city.

The principal event for to-day was the State trophy, property of the Association, and put up for competition each year. It is emblematic of the Kansas State target championship.

Conditions, 30 targets, unknown angles; entrance $2.50. The winner of the cup receives 40 per cent. of entrance money next year upon return of the trophy in good order to the gun club giving the next Association tournament.

There were eleven entries, and competition was close. Rogers, of Hiawatha, made the only straight, and won, but the margin was narrow, as Goff, Sexton and Johnson made 29, Arnold and Koohler 28, O'Brien and Herr 27, George and Erhart 26, and Hodges 25.

Tom A. Marshall.

Puckle's Repeater.

From the New York Times Saturday Review.

Puckle was the inventor of Puckle's machine, a formidable engine of destruction that was tested on the artillery grounds at Finsbury in 1722. Concerning this novel piece of ordnance, Mr. Dobson says: "Judging by the contemporary description, it must have been a sort of exaggerated revolver, mounted on a tripod, and expelling its missiles through a single long barrel from a breech of six or more chambers. This breech could be removed and another substituted for it, containing, according to the taste and fancy of the artillerist, either round bullets for Christians or square bullets for unbelievers. The apparatus was also available for "Grenado shells." Its performance, from the account given in the London Journal for Saturday, March 31, 1722, must have been highly satisfactory. "'Tis reported for certain," says this veracious print, "that one man discharged it 63 times in 7 minutes, though all the while raining; and that it throws off either one large or 16 musquet bullets at every discharge, with very great force." Letters patent were taken out covering the machine, and a joint stock company was formed to put it on the market, for, those were the hopeful days of South Sea Bubbles and Mississippi companies. But Puckle was before his time, the British war office was as slow and unenterprising 200 years ago as it is believed by many to be now, the machine was laughed at, and Mr. Dobson has been unable to find any other account of it or trace its subsequent history. A South Sea squib, "The Bublers Mirrour," characterizes it as:

> A rare invention to Destroy the Crowd,
> Of Fools at Home instead of Foes Abroad;
> Fear not, my Friends, this Terrible Machine,
> They're only Wounded that have Shares therein.

Trap at St. Louis.

St. Louis, Mo.—Match between L. D. Cabanne, challenger, and W. D. Kenyon, holder, for Mermod championship trophy, April 14. Birds only fair; day, clear; light wind blowing in. Kenyon 30yds., Cabanne 31yds.:

J. Sheehy's Shoot.

PELLA, Ia., April 16.—Jim Sheehy's first annual tournament commenced this morning with sixteen entries in the first event.

The weather was rainy and cold, with a strong wind from the southeast. The shooting was done from one set of three bluerock traps, Sergeant system. Targets were thrown about 55yds., and the shooting was quite difficult, owing to the erratic flight of the targets.

The programme consisted of eight 15 and four 20 target events for to-day, $2.50 added to each 15 and $3 added to each 20 target event.

Mr. F. C. Whitney had charge of the cashier's office, and C. W. Budd managed the tournament, and kept things moving.

This being the first tournament of the season in this locality, the boys were anxious to shoot, and by 4 P. M. the programme was completed, with a few extras on the side. Bentley, of Des Moines, was high man to-day with 90 per cent. Hughes, of Wisconsin, was second, Burnside third and Kline fourth. About 4,000 targets were thrown to-day. Rain commenced to fall about 5 o'clock, and to-night at 11 rain was still falling, and the prospects for to-morrow are very gloomy. The scores:

First Day, April 16.

Second Day, April 17.

The sun shines brightly this morning, and prospects are good for a fine day, with the exception of a high, cold wind from the north.

Quite a large delegation of sportsmen came in this morning from Oskaloosa and other points, and twenty-eight took part in to-day's programme, which was the same as yesterday in the events and added money. There were 5,300 targets thrown to-day. The shooting was very difficult, only five straight scores being made, and these were in the 15-target events. Nineteen was made but three times in the 20-target events, once by Burnside and once each by Kline and Bottger, 18 and 17 being high in the other two 20-target events.

Burnside and Kline tied to-day for high average with 86 per cent., Mitchell second average with 85 per cent., Milner third with 82 per cent., and Bentley fourth with 82 per cent. The high averages for the two days were Burnside, with E C powder and U. M. C. shells, .861 per cent.; Kline and Bentley second, with 86 per cent. To-night Mr. Sheehy gives the visiting sportsmen a smoker at the Opera House, which means many things pleasant to the sportsmen besides using the scatter gun will take place, and should the smoker prove as erratic as the targets were to-day the scores will not be high.

Events:	1	2	3	4	5	6	7	8	9	10	11	12

High Averages on Targets.

The following are the averages for the two days:

	1st Day.	2d Day.	Total.	Av.
Burnside	173	172	345	.861
Kline	172	172	344	.860
Bentley	180	164	344	.860
Mitchell	171	171	342	.855
Milner	143	165	308	.770
Crisman	157	159	316	.790
Mattox	128	149	277	.691
Doty	167	143	310	.772
Stege	157	163	325	.811
Sheehy	167	132	299	.743

Third Day, April 18.

Mr. Sheehy's smoker was a grand success, about fifty sportsmen being in attendance. Several straights were made, while one gentleman had four 10s without a miss. The weather is fine to-day. The shooting will be at live birds from five traps. No regular programme. Three 10-bird events, $7 entrance; four 7-bird events, $5, and three miss-and-out events, $1 entrance, birds extra, were shot. In the 10 and 7 bird events the purses were divided 50, 30 and 20 per cent. The birds were a good lot, and the shooting of a high order. About 850 birds were used.

This is Mr. Sheehy's first attempt at holding a shooting tournament. Every one went home well pleased, and will be on hand when Jim, as the boys call him, holds his next annual.

Event No. 1, 7 live birds, entrance $5, divided 50, 30 and 20 per cent.:

Doty	1212222—7	Mitchell	2121011—6
Crisman	2211202—6	Sheehy	1112202—6

Event No. 10, miss-and-out, entrance $1, birds extra:

Marshall	111110	Guy B	11211221
Bottger	22212221		

Bottger and Guy B divided.

HAWKEYE.

Fitchburg Rifle and Gun Club.

FITCHBURG, Mass., April 20.—We opened the season yesterday, Patriots' Day, with an all-day shoot, commencing at 9:30 A. M. It almost rained in the morning, but burned off about noon and made a fine afternoon for shooting. Twenty-eight shooters showed up, among them quite a number of new men, which showed that we have got some good new material to develop.

As we have not shot since last September all hands were a little rusty. The club served dinner free to all shooters, and thus made it a nice social occasion during the noon hour.

During the day eighteen men shot at 50 birds for a record. They will do the same at the next two shoots. On May 1 we start a handicap prize shoot for the season. Each man will be handicapped on his record for the first three shoots, and this handicap will be revised the first of each month. In this match shoot every one entered will shoot a race of 50 birds with every other man.

The following are the scores. It is fair to state that Wilder's first 80 shots were with a 16-gauge brush gun:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20

I. O. CONVERSE, Sec'y.

Illinois Gun Club.

SPRINGFIELD, Ill., April 18.—Nine members of the Illinois Gun Club were present to-day and contested for the class medals in the trophy contest. G. T. Hall, Chas. T. Stickle and Frank Workman tied in Class A with the possible 25, and they were followed closely by A. H. Bogardus, Jr., with a score of 24. Richardson, the scratch man in Class B, landed the B medal.

A strong wind was in evidence during the entire afternoon, and this caused several of the shooters to make comparatively poor scores. As soon as the weather moderates, it will see an increased number facing the traps at our weekly shoots, as few care to participate until sweaters and overcoats can be laid aside.

Appended are the scores, with class handicap allowance, etc.:

Class A.

G T Hall, 0	1111111111111111111111111 —25
Chas T Stickle, 2	1111101111111111111111110111 —25
F Workman, 3	1111111111101101111101111111 —25
A H Bogardus, Jr, 1	1111101111111110111111111 —24
J R B Van Cleave, 1	1111111110110011111101011 —21
Capt H M Smith, 1	1101111111101101101111110111 —21

Class B.

Richardson, 0	1011100001110001100111011 —14
P Lamereaux, 2	0000101001011010001000110000 — 9

CHAS. T. STICKLE, Sec'y.

Chelsea Heights Gun Club.

LINOLEUMVILLE, S. I., April 13.—No. 4 was at 10 targets, 50 cents entrance. J. Lewis, E. Rawson, G. Bechtel and G. Seawood broke 10; P. Heffernan 9.

In a match at 10 targets between Bechtel and Heffernan the former won by the score of 10 to 9.

Event No. 1, 10 live birds, 29yds. all, silver cup, $5.50, birds included:

G Seawood	12002212*0— 6	J Weir	2221210*00— 6
S Worth	0001201200— 4	E Rawson	*120110112— 7
J Lewis	2101010200— 5	G Bechtel	2222112011— 9

Event No. 1 was for championship of Richmond county and cup. Won by Geo. Bechtel, of the Richmond Gun Club.

No. 2, 5 birds, all 29yds., $2.25, birds included:

G Seawood	02122—4	J Weir	01110—3
E Rawson	02112—4	Murray	22010—3
J Lewis	02111—4	C Wallers, Jr.	01000—1
G Bechtel	12012—4		

Miss-and-out, $2, birds extra:

J Lewis	1112	J Weir	2112
G Seawood	10	Murray	0
E Rawson	10	C Wallers, Jr.	0
G Bechtel	110	S Worth	20

No. 4, 10 targets, 50 cents: J. Lewis 10, E. Rawson 10, G. Bechtel 10, P. Heffernan 9, G. Seawood 10.

No. 5, match at 10 targets; Bechtel vs. Heffernan: Bechtel 10, Heffernan 9.

A. A. Schoverling was scorer.

Portsmouth Gun Club.

PORTSMOUTH, N. H., April 20.—The Fast Day shoot of the Portsmouth Gun Club, April 18, proved a most successful opening of the trapshooting season. Although rather a cold, raw day, the attendance was excellent, and the occasion a very pleasant one to all. A programme of 100 targets was thrown, divided into 10-target events. Nos. 1, 2 and 3 were for cash prizes, to which several merchandise prizes were added. Events 4 to 7 inclusive were for merchandise prizes, with several special prizes for best average scores for the entire programme.

So generously and well had the merchants contributed that of the twenty-five shooters every one drew a prize. All the way from hunting knives, boxes of cigars and handsome umbrellas down the list of fancy and useful articles to neckties, sleeve armlets, pocket knives, etc., the list was a long one, and contained many fine prizes; among them a handsome consolation prize. President W. E. Storer worked hard for the success of the shoot, and is a hustler in club events. The club expect before holding their next shoot to be established on their new grounds with a magautrap.

At the recent annual meeting the officers for the previous year were re-elected: President, W. E. Storer; Vice-President, H. E. Philbrick; Secretary and Treasurer, W. I. Philbrick; Field Captain, E. P. Merwin.

The scores for the day were as follows:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	10	10	10	10	10	10	10	10	10	10
H E Philbrick	7	8	6	5	5	4	7	..	..	..

W. I. PHILBRICK, Sec'y-Treas.

Aschenbroedel Gun Club.

NEW YORK, April 20.—Herewith are the scores made by our club at the second regular shoot, held Friday, April 19. Two events were shot at 25 targets each:

Heidelberg	9 11—20	Siemers	14 13—27
Baier	9 7—16	Spargur	0 9— 9
Buhlender	14 9—23	Heiser	7 5—12
Grunert	15 13—28	Knittel	2 4— 6
Moeslein	8 11—19	Iverson	9 11—20

The expectations expressed in my last report, that the shooting of our members would improve, has not been realized, with one or two exceptions. But there were several good reasons for the many misses made. Not that the weather was against us; to the contrary, the weather was ideal for shooting. The fault lies elsewhere.

In the first place one of us (I do not wish to mention his name, for reasons which you will appreciate) used cartridges loaded with what I believe to be a mixture of soft coal and dynamite. The report was terrific, and the smoke so dense that it formed a solid curtain between the score and the traps, and when he did hit a target, which was not often, it was blown into atoms.

Then our friend Spargur (whom your printer designated in your issue of April 13 as "Sprague," and who shot the last time, as you will remember, wearing a Prince Albert coat), having taken our criticisms to heart, came attired in an outfit well worth describing. He wore this time a light green sweater, over which he had a tan shooting vest bristling with cartridges. A pair of very loud checked trousers turned up at the bottom revealed light blue silk embroidered socks. He also wore patent leather dancing pumps. But it seems that this outfit suited him, for once he got used to it, which was after he had shot his first 25 cartridges, and thus had delivered himself of part of his ballast, he hit 9 out of 25, at one time hitting 3 straight. So we think there is still hope for him.

But the combination of soft coal cartridges on the one hand, and the gorgeous clothes on the other, proved too powerful for the rest of us, with the exception of our worthy treasurer, Grunert, whose nerves were apparently not affected by it, as he carried away the honors of the day, to his great satisfaction, as his smiling countenance sufficiently showed. This is all the more to his honor when it is known that he always insists upon shooting scientifically. He scorns holding his gun in readiness against his shoulder, but holds it at rest until the target is well out of the trap, when with a quick movement he brings his gun to his shoulder, fires, and—generally misses.

I have made application to the Board of Health for an injunction against the sale and use of soft coal cartridges.

E. MACDONALD, Sec'y.

Aquidneck Gun Club.

NEWPORT, R. I., April 20.—The weekly shoot of the Aquidneck Gun Club, the second for the Hughes medal, was held last Wednesday afternoon in a raw easterly wind, which made shooting anything but a pleasure. Since last week a circular cross platform has been built, enabling members to shoot squad system, which was tried for the first time. Four events were shot, three at known and one at unknown angles. The scores

Events	1	2	3	4	Events	1	2	3	4
Targets	15	10	15	10	Targets	15	10	15	10
Manchester	8	5	4	2	Griffin	8	3	6	6
Coggeshall	6	2	7	6	Mason	4	3	7	5
Dring	9	6	12	8					

J. S. COGGESHALL, 2D, Sec'y.

The Pickaway Rod and Gun Club.

CIRCLEVILLE, O., April 15.—We feel like we were going to have a good, big shoot, and would ask all our friends to be with us. We will add between $250 and $300 to the different events, which, with the different cup events, will make a good three days' shoot, with not so much shooting either.

We think our programme will come as near suiting everybody as one could possibly make it, and it will be mailed to any one for the asking. If one can't make good scores on our grounds, it's no use to try any place, for we are second to none. Eight acres of sod, level, with a sky background—what more could you ask?

G. R. HASWELL.

Gardner Rod and Gun Club.

GARDNER, Mass., April 12.—At the shoot of the Gardner Rod and Gun Club to-day, Le Noir shot at 164, broke 129; Morse at 78, broke 29; Knowlton at 20, broke 8; Paine at 70, broke 61; Turney at 25, broke 11; Leland at 102, broke 70; Spaulding at 10, broke 6.

PUBLISHERS' DEPARTMENT.

Over running by multiplying reels has proved a thorn in the flesh of many an angler. This, together with other troubles which arise from it, is said to be overcome by the Anti-Tangle Reel attachment, which is advertised in another column by the Anglers' Outfitting Company, of Chicago.—*Adv.*

From childhood we have been taught that the perfect fishing rod was spliced, not put together with ferrules, yet how many of us have ever used a spliced rod. To read the advertisement of the Kenyon Silkien Rod, made in Toledo, is to desire to use one.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1901, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, MAY 4, 1901.

VOL. LVI.—No. 18. No. 346 BROADWAY, NEW YOR

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

THE AWAKENING OF THE MARSH.

SILENCE still broods over the marsh. Under the depressing chill of heavy fog, the sluggish waterways respond slowly to the quickening pulses of the spring. The air lacks resonance; none of the quick flying echoes we heard last autumn are now abroad. Every sound seems but a dull jolt, at once choked, as it were, into stillness. Yet nature is at work. We know that her artists are busy over all the sweep of the marshland. Hidden under the low-hanging fog, they are blocking out with delicate touch the tender green of reed and rush, and all the varying growths that will greet our delighted eyes a few weeks hence when they throb with living color in the sunlight that is surely coming.

Soon there is a day when the winds are still, the air warmer. Under some unseen impulse the enshrouding fog in deadly quiet, begins to heave and writhe. Slowly it drifts away toward the northeast, where it packs in masses along the horizon. Then we know that the south wind is the magic that disperses the mists, for we feel its gentle caress as it breathes about us. Shadows chase across the levels, as the clouds recede, till at last—sunshine! The now distant fog banks are dazzling to look upon; there is snap and glitter to the waters so lately sluggish and dead. Life is renewed. After many days the marsh has awakened.

Débris of broken reeds, twigs and odds and ends of small wreckage from winter storms, set afloat by the swelling tides, are rafted hither and yon wherever the waters flow, now circling aimlessly about some little pool, changing course with every puff of wandering breezes till left by the subsiding flood to dot the meadows with irregular patches of dun, in pleasing contrast with the fresh green of the springing reeds and grass.

Soon there comes a soft, dark night, mysterious with curious sound of bird noises, and morning finds the recent solitude peopled with returned families of meadow hen and willet. From dawn to dusk the echoes are busy with cackle and call, and the sunlight is reflected prettily from hundreds of white-barred wings as the willet touches them above his head for an instant after alighting.

Beneath the cover of the patches of stranded débris the birds make clever little runways leading to and from their nests so called; though the shallow depression which serves to hold their eggs hardly deserves the name. With the laying of the eggs, the always hungry crow, buzzard, grackle, the wandering pigs and, alas, even man himself, sally forth to gather them. Over all the marshland the destruction goes on, yet somehow the meadow hen and willet seem numerous as ever each returning season.

Now perchance for a day or two an easterly storm may rage. Then once more a soft balmy night shuts in, with all its suggestion of mystery. Hung low in the southwest a thin crescent moon gleams white against the sky. Phe-oo-e! a marvelously clear, far-reaching call comes from the zenith to the sleeping marsh folk below. It startles the prowling fox, who answers with a questioning Yap! Yap! Phe-oo-e! musical—wild and free as the creature that utters it—this voice in the darkness rings out its challenge, telling us that a plover is on his way north; a blackbreast, the *avant courier* of hurrying hosts far in the inky void behind. Presently we hear them coming; soon the vanguard is overhead. They do not make a silent advance; the darkness is musical with many voices as they pass.

Our craft is anchored close to the meadow bank and from its deck we hear the smooth, soft rush of wings, as bunch after bunch of migrants plunge to the meadows around us. All night long they pour into the marsh, and morning finds them still arriving, while thousands speck the blue sky above with hurrying forms as they push steadily northward on the favoring breeze.

The marsh, its long slumber ended, is full of excitement for the next fortnight, and when these whirling myriads of feathered people again sail away north under the stars, it will once more settle down to its summer routine with the meadow hen and willet for company.

"PICTURES FROM FOREST AND STREAM."

THIRTY-TWO of the full-page pictures printed from time to time as illustration supplements to FOREST AND STREAM have been selected for publication in book form under the above title. A preliminary announcement of this has already been sent out, and the response has been such as to indicate that the projected volume will be given cordial welcome.

The scope of the collection is fairly comprehensive; the subjects include the reproductions of Audubon's bird portraits; big-game pictures by Rungius, field scenes by Osthaus, hunting pictures by Deming, shooting and fishing pictures by Davison, and yachting scenes, one of which is the supplement of to-day. Every care will be taken to insure for the volume the highest artistic excellence, and to make it in paper, presswork and binding a creditable contribution to the literature of the field. A list of the plates will be found on another page.

THE TIME OF BIRDS.

HEAR ye! Hear ye! Hear ye! Fathers and mothers, big brothers and sisters and all small children. The great wave of bird migration is on. Husbands, tell your wives about it; mothers, tell your little children to look out for the passing birds; big brothers and sisters, polish up your opera glasses, and for the next ten days spend all the time you can abroad in the open air, watching for the tiny travelers which in the same way will not be seen for another year. True it is that when the fields have grown dry and bare, and the parched plants along the dusty highway begin to shrivel with the first frosts of autumn, these wanderers will return, but they will do it stealthily, in part by night, and most of them will be clad in a garb far more modest than the gala dress of spring.

Many of the birds have long been here. The robins came a month ago, telling us that the time was at hand. With puffed out red breasts and bills straw colored, except at the very tip, they hopped boldly about on the changing grass, and whistled defiantly at one another and had their mimic battles. Then came the mating and the building of the nests; the blue eggs appeared—and many a one was washed out of its shelter and broken in the rains of the past few weeks. Many others of our more hardy birds are with us. The redheaded woodpecker drums persistently on the dead limb far up in the oak tree, while the flicker sitting crosswise on a branch untiringly utters his monotonous song.

But now, during the next ten days, will come the horde of more delicate and more beautiful birds, some of which will spend the summer with us, while others will pass on to more northern climes, where in the deep pine and hemlock woods they will rear broods that will make up a part of the noiseless throng of autumn migrants.

To-morrow morning, then, if it be fair, take your field glasses and some friend who knows the birds, or, if you have no such friend, the bird book which you should have purchased long ago, and go out into the fields. In the bushes and along the fences and hedgerows, in the apple trees in the orchard or hovering amid the topmost branches of giant oak or chestnut, are a multitude of friends whom you should know, and whom once knowing you will welcome year after year with joy and gladness. At the end of each twig an opening bud is offering sweet food to tiny insects, and among the twigs, attracted by these insects, are the warblers and flycatchers and vireos that you wish to see.

There are many of them, and of many kinds. Black-capped and brown-vested and green-coated, they dart hither and thither, never for a moment keeping quiet, and puzzling the novice by their swift movements and ever-changing combinations of color. Yet each species has its own peculiar ways, and if interest and patience in the novel sight do not fail, before long the observer will be able to pick out one from another, and from the manner in which a bird moves along a branch or darts from its perch in pursuit of a flying insect, or balances itself as it stretches out for one almost beyond its reach, he will be able to identify approximately the birds of one group and another.

This is the time of the birds' greatest abundance, and those who wish to study the passers by should do it now. Teachers should take out their classes into the open air and study this broad page of the book of nature. Above all, parents should see that this spring their children are introduced to the passing birds.

Happy are they who live in the country and have, within easy reach, this page unblotted by great edifices of brick and stone and mortar. Let them make the most of this beautiful season. But even those less happy—who dwell in the cities—can either get out into the country for a day, or by going into one of the large parks can there see some of the busy wanderers. The day has come for a widespread appreciation of the importance of learning something of nature, and now for a few days there is the opportunity to study her directly and not through the medium of books.

Go forth, then, to field and copse and woodland; take the children with you and make the most of your brief opportunity.

SNAP SHOTS.

We have often urged the establishment by the individual States of game parks on the plan of the Yellowstone National Park, where the game might have a permanent refuge for breeding and stocking the adjacent country. It will be recalled that Mr. Willard G. Van Name, of Connecticut, has suggested that the National Government should set apart such reservations for the migratory species. Just now the scheme of public game preserves promises to have recognition in the Legislature of Mr. Van Name's own State. The Fish and Game Committee has reported with approval a bill to empower the Fish and Game Commission to establish preserves by leasing tracts of from fifty to three hundred acres for terms of twenty-five or fifty years. The land thus set apart may be used by the owner for other purposes. The value of such small game preserves has been demonstrated again and again by the posting of farms and other private holdings, from which as a source of supply the surrounding territory has been stocked. We trust that the Connecticut plan of public reservations may be put into operation and that the system may be extended to other States.

The FOREST AND STREAM has more than once discussed the question as to how women should ride a horse, and expressed its opinion that the correct way is riding astride. Gradually the view which we have held seems to be gaining ground. In Boston and in other cities more and more women are riding astride, and it is said that the practice is gaining ground in England, where already some women ride to hounds in the novel and reasonable method. It is quite possible that the day may not be distant when there will be a revolution of public opinion on this subject. It is well remembered that when the bicycle first became popular, women for a long time held back from riding it, very much on the same grounds that now are urged against riding horseback astride, yet after a time they yielded, and almost at once women were seen riding bicycles as frequently as men. Safety, comfort and grace are the three principal things to be gained by a change in women's custom in this respect.

Work on a large scale is soon to begin on the roads in the Yellowstone National Park. The work will be in charge of Col. Chittenden, of the U. S. Corps of Engineers, who has previously been stationed in the Park on the same duty and is extremely familiar with it. Col. Chittenden's interest in the Park is very great, and he is well known as the author of an admirable history of it. It is stated that the system of roadway when completed will include 390 miles, of which 162 miles are now in use. The system will consist of a belt line or circuit of the Park, to pass through all the important centers of interest, approaches by which the belt line may be reached from the boundaries of the Park, and cross roads, side roads and trails, connecting different roads or giving access to special individual objects. The length of the belt line, including some of the cross roads, will be over 150 miles, while the total length of the approaches, entering from the north, east, south and west, will be 132 miles. Of these about 100 miles is in the Park and the remainder outside of the Park in the forest reserve.

The Sportsman Tourist.

Gens Des Bois.

X.—Joseph McGuire.

JOSEPH MCGUIRE, or Jomaguire (with the accent on the first syllable), as he is familiarly called by the descendants of the Canadian French charcoal burners who are his neighbors, lives in a walled-in valley between Poke-o-Moonshine Mountain and Baldface, in a half-forgotten corner of the Adirondacks. Here in a modest way he fills the place of a feudal lord, and though he does not sally down from his eyrie on the blueberry hucksters, and chance travelers who pass along the highway crossing the foot of his valley, he is practical monarch and has no rival from Buckstand to the country lying beyond But'nut Pond.

This territory is not so popular as it once was. From Jim Lesperance's north on the Albany Post Road there is not an occupied house for at least four miles. There are half a dozen deserted places, and it was only last winter that old man Duclow gave up the battle, when his boy ran away, and the weeds have not yet choked the path leading to the little whitewashed cabin among the rocks. Beyond Duclow's the mountain turns, an unbroken wall of rock to the road for two miles, except that back of some ruined cabins, unsavory with the story of a murdered peddler, there is a wooded ravine and a path once used by berry pickers leading to the top. Where this wall of rock ends is the entrance to Jo McGuire's domain.

The Discovery.

I had followed deer in the snow completely around the place, but its discovery is due to a certain person of the gentler sex who loves berries and berrying so much that she picks them in her dreams, and who by a secret intuition devined that blueberries were ripe and waiting to be gathered in this particular locality one day late in July.

We left the main road just at dark and turning up the valley came presently to a birch sapling laid across the road, and a minute later to a gap of fifteen feet deep and about the same distance across, where there should have been a bridge spanning the brook. Masons' tools and shovels were lying about on the level top, and above the steep banks of the stream had been gashed and trees cut right and left. A broken stringer of the old bridge was still there to show, if evidence were needed, the story of the break down of a time-honored servant of the public.

We made a long detour by a dark passage tunneled through the woods and climbed a steep hill and then followed along the edge of the brook so close that my companion more than once clutched my arm and insisted that the wheels on her side were over the edge before at length an opening appeared and we emerged into a daisy-dotted intervale. A cow bell tinkled somewhere in the distance through the crisp, almost frosty night air, and a glow-worm point of light indicated the presence of a house in this little oasis surrounded by the dark rampart of rugged mountains.

My companion said something about a Swiss farm, and the next moment Toby and Guess were barking at the horses' heads, and Jo McGuire himself had made us welcome, and we were no longer strangers and wanderers.

Mrs. B. and I spent the night in the barn, despite Jo McGuire's protestations, for it was the particular and not to be gainsaid wish of the important member of the party that we should sleep on new-mown hay, and it did not matter that the other member was enough of a farmer to have lost the gilt edge of his reverence for herds' grass and clover, and had no moral scruples against the ordinary bed of civilization. Once in the night the bell cow in the barnyard rubbed her horns against the door of our quarters as if she were determined to come in too, but Toby settled her, and after he had nipped her heels and spoken in no uncertain terms, the cow went off and we were not again disturbed.

The Dogs.

It did not take long in the morning for Mrs. B. to gain the friendship of the dogs, and soon she knew their history as well.

"Toby is a full-blooded collie," she announced. "He is a splendid dog and understands everything you say, and he won't allow any chickens in the garden. Mr. McGuire says he 'regulates' the cows. He stays awake all night to look after them, and he is so eager to keep them out of mischief that he has to be shut up in the day time to get any rest.

"Guess is a fox terrier. He killed three rats yesterday, and kills a woodchuck regularly every day in the week. He has helped kill ten porcupines this year, and he has a sore throat, poor doggy, because he swallowed some quills."

Blueberrying.

Parts of two days were spent on the mountainside above McGuire's, during which time we succeeded in gathering a bushel of berries. Our arithmetic was refreshed to the extent of realizing graphically that there are thirty-two quarts, or six-four pints, or between two and three hundred saucers of blueberries in a bushel, and we concluded that the individual berries must mount in numbers well up to the million mark, though this latter result was reached without resorting to mathematics. It was a poor season, and berries were rather scarce, but if we had been laboring for the cash return we could easily have succeeded better.

A part of our reward—the major part—was derived from the prospect at our feet as we gained each new ledge on the side of old Baldface. Butternut Pond, Auger Lake, Warm Pond and other sheets of water lay close by, while over Bigelow and Rattlesnake and Sugar Loaf in a trough bounded beyond by Mansfield and Cornell's Hump and other peaks of the Green Mountain range, stretched the steely blue of Lake Champlain, the old war route of many fighters.

"I don't think there'll be many blueberries here a week from now," said Mrs. B., alluding to the fact that they were already beginning to drop from the stems.

"Not at this particular spot," I assented. "You have cleaned them out too effectually." The frau laughed.

"You know, Jack, there is such a fascination in picking these berries, every last one of them, that I don't know how to stop," she said. "When it comes time to leave you will have to blindfold me and drag me off by sheer force."

The larger and finer berries grew in partially shaded spots, or else in places where the soil was deeper and better adapted to conserve the moisture than the average on the ledges. The very best of all were found under the scattering jack pines, seeming to gain vitality from the heavy mulch of needles. Along with the blueberries from time to time under the pines we found beds of scarlet bunch berries, while a very highly colored kind of choke cherry was quite common, as well as the purplish shad berry.

A find which gave me keen delight was a shed deer's antlers, colored a delicate green and brown by contact with the matted berry undergrowth. It was from a cunning old buck, its age being certified by ten points, one hollowed and another thin and fluted, and all odd and distinctive. Somehow I had an idea that the horn was a message from a deer I had followed the year before almost to this very spot, a gauntlet thrown down to meet in the lists when the leaves are off and snow flies again in November.

A Lost Deer.

That evening we sat upon the porch and talked with the family.

"We're all bachelors or old maids except my sister that's a widow," said McGuire. "We don't kill ourselves with work and we have all we need to live on, and though it's a little out of the world up here, we have a lot of friends and visitors. We're satisfied with it and haven't time to be lonely.

"There's trout in the brook and game on the mountains—often we see deer feeding on those bare ledges right in front of the house, and last fall one came almost through our yard. I grabbed my rifle and started for the door, pushing cartridges into the magazine as fast as I could, but just as I got there our little dog started to get by me to go for the deer. I tried to keep him back with my leg, but he jumped and pushed, and the first thing I knew the old gun went off and blew a hole in the stoop floor and lost me my chance at the deer.

" 'Tain't the first time I've had a gun go off by accident, either. The best man that ever shot a gun will have the same thing happen. The only safe way is to have the gun always pointed some way so that when she breaks loose there won't be anybody killed."

Jo McGuire.

Jo is a smallish man with a good-natured, kindly face. If he has any failing it must be that, from his sisters' standpoint, he is over-hospitable. He looks to be about sixty years of age. He came into the Poke-o-Moonshine country as a boy with his father, and saw the forest shorn for miles around to supply the charcoal kilns and the forges. One of the forges was located in his valley. There may or may not have been an ore bed near; in those days an abundant supply of wood was the chief factor influencing the location of the forges, and the ore was often hauled long distances to them.

The country was booming, and every one was prosperous. Hundreds and thousands of wagon loads of lumber, charcoal and iron rolled down the long grade to Lake Champlain, and was shipped in barges to the outer world. Little farms sprang up wherever there was an available patch of level ground, and the coal burners pushed back still further and built their cabins among the ledges, sometimes on perches that would have satisfied an eagle's heart. There are two of these primitive cabins at the edge of a crater-like basin near the summit of the mountain, one of them so tiny that a large man can reach from side to side with his outstretched arms, while his head touches the overlays. A rude ladder leads to an upper floor, where it is impossible to get around except on one's hands and knees. The walls are of stone, laid with clay, and the main part of the house is practically a cellar, for only the roof projects above the surrounding level.

The place has been deserted for years, yet there can be no doubt it was once occupied as a human habitation, for there is an old bedstead still there and little odds and ends, indicating the presence of a woman and children.

Jo McGuire first learned to love hunting in the company of one of these coal burners, who was an ingrained woods character. Though the country was much more thickly settled than it is at present, the game was abundant and less wary. There was so much to do in subjugating the wilderness that few men could afford to take the time for hunting, and the game was not nearly so persistently pursued as it is now.

The Cave on Poke-o'-Moonshine.

Once in company with his friend Jo McGuire visited a famous cave on Poke-o-Moonshine. "You know that place at the top of the mountain where it's like a road?" asked Jo, referring to a great groove riven a mile or more along the summit. "It was among the ledges north of that—the third ledge up, I think—that the cave is located. It was a Sunday afternoon when I was about nine years old that we went up there. The cave was sixty or seventy feet deep and cold enough to freeze a nigger inside. At the back end was an opening from above that let in the light, so that you could see. There were some queer things there that I don't remember much about, and the only thing that I can tell for sure is that the names of the men who first came into this country as much as a hundred years before were scratched on the rock.

"I've never been to the cave of late years, though I've been near it often enough. It was no great distance from there that I got two deer once on a ledge on the front of the mountain in a way that's not apt to be duplicated.

Trapped in a Ledge.

"I had been following the trail of four deer in the snow one afternoon, and night overtook me before I could come up with them and get a shot. The next morning I took the trail again. The deer were working east toward the precipice over the State Road, and presently they separated and two turned back. I kept the trail of the two going east, for I judged one of them to be a good big buck, though as a matter of fact I was mistaken in this.

"The pair kept right on, further than I had any idea they would go, and by and by they turned on to a kind of shelf that swung around the northeast corner of the mountain. Then I knew that I had them, for that shelf ran along the side of the precipice a good 200 feet above the bottom, and gradually petered out till it ended in nothing.

"I was a little too sure, though, and I came near being disappointed, for at one place water had trickled down and frozen and made an ice hill with about the slant of one of these flat roofs. I didn't want to be shot off into kingdom come, but I wanted those deer, and finally I compromised the matter by crawling along the upper edge, holding on to some bushes that grew there.

"When I got near the end of the ledge I saw one of the deer's heads pop up over a rise in front, but before I could shoot it had ducked. The deer had run back on the trail toward me, which showed she knew she was in a tight place. The next minute I saw both deer. They were standing at the very end of the shelf where there was hardly footing for a squirrel, and one deer was trying to crowd by the other.

"I had my rifle ready for fear they would try to rush past me on the ledge, and the minute I saw them I fired. Both deer went off into space, one of them dead and the other hard hit with the ball, which had gone into its shoulder.

"It took me an hour to work around below the precipice to where the deer lay on the rocks below. Their hides weren't broken, but when I came to dress them there wasn't a whole bone in their bodies, and a good part of the meat was so bruised it wasn't fit to eat.

"A good many years ago some men who were hounding jumped two deer on top of the mountain, and the dogs and deer all went over the precipice and were killed. The dogs were running by sight and had almost caught up with the deer, when the edge suddenly opened up in front and over they went in a bunch.

A Sure-Footed Deer.

"The deer hereabouts are wonderful climbers and can go over places that a man or dog couldn't attempt. I was off one time on the snow with La Mountain, and we followed a big doe over the top of Baldface down to the head of the steepest slide on the whole front of the mountain. The slide is smooth rock, nearly quarter of a mile long, and it rounds over like the edge of a bowl, growing worse every foot of the descent.

"Just as we got to the top of the slide La Mountain said, 'There goes the deer.' I wheeled and saw her on the jump, going straight out of sight. I let her have one, but I think I overshot, as I most generally do on those down-hill quick chances.

"I was perfectly sure we'd find her dead at the foot of the slide, for at the speed she started she would hit the bottom like a cannon ball, and I was confident she'd be in pretty much the shape of those other deer I was telling you of. I was mistaken, though.

"We had to go around the best part of a mile to reach the end of the slide, and when we got there our deer had disappeared, carried off by her own legs, too.

"The slide above us was a good part ice, and I could no more have gone up it, even in summer, than I could fly, yet that deer had only missed her footing once, when she was almost down, and she had gotten her feet right off again, though she slipped and sprawled considerable doing it. We left the trail then and there and went home. That deer certainly had earned her life, and besides it was an almighty hard climb back again to the top of the mountain where she'd gone.

Infrequent Bears.

"Bears somehow are not very common on this range. I have never seen one alive in the woods, and I've seen very few trails. I lost fifty sheep one year—all the increase of my flock—but I believe it was a two-footed thief carried them off. Over on Arnold Hill, which is a good deal more out of the woods than this, bears are thick, and there and on Hale Hill the farmers are losing sheep all the time on account of the bears, and Black Mountain, just across the Clintonville Road, is a great place for them. They have some reason for not liking Poke-o-Moonshine, though what it is I can't say."

An Impractical Inventor.

McGuire relapsed into a reminiscent mood, and talked of the country as it had been in the days of its prosperity. Incidentally he discoursed on the impracticalness of the inventor of the machine for cutting horseshoe nails who had been a friend of his and not very distant neighbor. "The man could invent machines all right, and yet he wasn't practical enough to do what any snipe of a nailer could do and run them. Two of the hands they had running machines at Keeseville wanted to go off to Rhode Island one time to get a better job, and he said to let them go and he'd keep the machines in shape. Well, sir, he didn't run them over two hours before they were cutting the worst shaped nails you ever saw, and do what he could he couldn't get them to working right, because he didn't know enough to keep his dies properly sharpened. According to his theory they shouldn't have needed attention, though any boss nailer knew it was necessary. The man who told me about it was just a common, uneducated nailer, but he must have had what the man who had invented the machines didn't have, for the company sent him over to Ireland to set up machines and teach them how to use them, and he got four dollars a day and found for the two years he was gone.

History of a Kaolin Find.

"This Dr. Pollard who found the kaolin on the west line of my farm was something the same kind of a man. He'd been to Californy and made a strike, and came back here and began practicing medicine in Westport. They were working a gold mine back on the mountain—it

hasn't been long since the tunnel they got their quartz from filled in—and either their road had uncovered the kaolin or else the coal burners had. Any way, Dr. Pollard found it, and he was educated enough to know what it was and all about it.

"He came to father and asked him to buy the land west of his line, knowing that if he bought it himself he would have to pay a fancy price, and father got it for him at the value of the wood, and turned over the deed to him. Dr. Pollard got a partner, and together they set to work putting up buildings for refining the kaolin.

"The first year their tanks wouldn't hold, and the thing was a failure. The tanks had to be strong enough to stand a pressure of 400 pounds to the square inch, and they used just common lumber. The next year they hired a better superintendent, and he said he would make the tanks hold if the pressure was 400 tons to the square inch. He got first growth Canada pine that cost him with the high prices there were then just after the war over $50 a thousand at the mine. It was spring, and the roads were soft, and the teams he hired at $5 a day couldn't haul much over half a thousand to a load. They put in 10-inch round sills and then 10-inch cross sills, and made the tanks narrower and longer than before and braced them with good oak knees and cross braces, and when they were done they were as good as could be—only the Doctor had lost a year getting ready and his money was coming harder than it had at first.

"They built bleaching shelves in buildings 16 feet across, a good deal like pantry shelves with a space down the middle to wheel a wheelbarrow. First the decomposed feldspar was washed in their puddlers, something the way they used to wash gold, the Doctor said, and after the quartz sand had been gotten rid of it was dried and shoveled out on the shelves 4 inches thick or so and left there till it was ready for market.

"After a while they sent off a lot, and word came that it was first-class quality, and you can bet the Doctor was pleased. But he had made another of his mistakes, for when he was ready to go ahead and get some return for all the money he'd spent, summer had come on, and the brook was so low that he couldn't get enough water to keep the mill going. If he'd built a little lower down he'd have had plenty of water, but he was so full of the finer points—figuring how porcelain was made and all that—that he overlooked the other matter that a practical man would have thought of first of all.

"The partner that was with him got discouraged, and one day while Dr. Pollard was away the buildings took fire and burned down. I am not saying that they were set on fire, but the insurance companies threatened the man with suits, and very little money was ever collected from them.

"When Dr. Pollard got back he hunted for the man to kill him, but the fellow got away. Old Sherman, down at Port Henry, that had shaved some of the Doctor's notes, took the mine, and that was the end of it, as far as any development went. I was up there the other day to get some samples for a man who wants to use the kaolin for filling printing paper, and the side of the mountain has been slipping down till it has covered all the part they had stripped. The paper makers may give this country a new lease of life. They want kaolin, and they say too they want peat for making paper, and there is plenty of both in Essex county."

Making the Home.

Jo McGuire's farm is interesting as exhibiting the extent to which a particularly unfavorable wilderness may be subjugated by two generations of resolute pioneers. McGuire's father was the first permanent settler at this place. He found a cold upland valley with an eastern exposure at an elevation where killing frosts might be expected in the height of summer. Only the brook bottom was fit for cultivation, and elsewhere were perpendicular ledges or broken slide rock that will remain the same inhospitable waste at the Judgment Day—a delight to berry pickers and hunters, but the despair of the agriculturist's heart.

The two McGuires, father and son, cleared and burned the tillable land and sowed oats and herds' grass and planted potatoes among the stumps, and by and by the stumps rotted and mouldered away and the mounds that marked the graves of forest trees were dragged and cross dragged and smoothed over, and fine level meadows with a tough sward of exotic grasses were created.

For pasture, the cattle were turned into the woods and let browse on the leaves and shoots.

Then came improved roads, over which the provident builders would let no heavy loads be drawn on wheels to rut the surface, but waited for the winter snow to do their heavy teaming, enlarged barns and outbuildings, and built a new clapboarded house in place of the original log structure. The flocks and herds had increased along with those improvements to pay the interest on the investment of brawn and labor, and so the home was wrested from the rocks and the wilderness made to blossom and become productive.

J. B. BURNHAM.

Quail on Toast.

When the Western packer who wanted to enter the Four Hundred offered Ward McAllister $1,000 to teach him the society way of eating quail on toast, he did not know the chances were dollars to doughnuts that the meat he was to experiment on was Wisconsin pigeon, instead of Nebraska quail. That the shipment of these "quail" is an industry peculiar to Watertown of all Wisconsin towns would be a surprise to even most Milwaukeeans, who, as a rule, are unaware that about 30,000 pigeons are kept in cotes in that city to breed and sell to game dealers.

As a matter of fact, Watertown's "quail" industry is one which would astonish the average Wisconsin person by its magnitude. Thousands of birds are killed there and shipped to Chicago and the East annually, but in Milwaukee, only a few miles away, there is almost no market for the birds. This is probably because the game laws in this State forbid the sale or killing of the real bird, so any placing of the substitute delicacy on a menu card would bring the game wardens around in coveys. The occasional pigeon pie, however, may be a Watertown exportation.—Milwaukee Sentinel.

Some Boyhood Memories.

VIII.—The Hollow Tree.

Sweet memory, wafted by thy gentle gale,
Oft up the stream of Time I turn my sail,
To view the fairy haunts of long lost hours,
Blest with far greener shades, far fresher flowers.

ONE of the most pleasing pictures hanging on my memory's walls is that of a great tree standing on the bank of Huron River in Ohio.

This tree was a sycamore of enormous girth, and hollow. Leaning at an angle of about 45 degrees, its great arms nearly spanned the stream, which at this point was some fifteen yards in width. The hollow tree, as it was called, was a fit trysting place for a crowd of some half-dozen boys, ranging in age from eight to ten, for its roots were washed by the waters of a broad, deep pool, from which were taken many a dace and chub and shiner—fish as dear to our little hearts as the larger ones that filled our strings in after years. One day one of the boys, by a stroke of good luck, caught a fine rock bass, and he was at once voted the leader of the crowd and the boss fisherman. But he couldn't keep the pace, and never duplicated the catch. No expensive outfit was ours. A pole cut in the woods, a line having more or less knots in it, a cork bobber, two or three hooks and a box of worms and we were prepared to crowd more enjoyment into an hour than comes to our middle age in a week.

Two of the crowd, on their solemn promise to keep quiet, were one day allowed to accompany their paters on a trip to the river to see how grown up men caught the big fish. And they caught them, too—a big basket full. Among the catch was an ornery looking thing, but whether fish, animal or reptile we knew not. It had a long tail, a leg at each corner of its body and a very open countenance. We boys took turns in carrying the critter home, and before the next night had gathered in pins enough from the boys of the town who came to see the curiosity to nearly answer the problem of what becomes of the pins.

The hollow tree was the rendezvous of the crowd for several summers, and no trip was made to the woods without making the tree a call. Its massive bole was carved with the names of the boys, traced in rough but legible characters, and the year when we took possession of the property.

Ah, those happy, care-free days, never more to come again.

That was forty years ago. The forest with its odors sweet—far sweeter than was ever distilled by man—the woodland path, the hollow tree, are long since gone, the pool is filled up and naught remains of the seemingly far off time but a memory, and the music of the rippling waters of old Huron, singing a requiem for four of the crowd who have crossed over the river to rest in the shade of the old hollow tree.

FALL LEAF.

NORWALK, Ohio.

The champion pike fisherman (Mr. A. Jardine), who has been lecturing at Leeds, related the following, says the Fishing Gazette: "Francis Francis was fishing on Loch Tay, and the Duke of Breadalbane was having a dinner party, for which he was anxious to place a fresh-run salmon on the table. His fisherman had been unable to catch one, but Francis had been more successful, and hearing how matters were he sent his fish to the Duke, with his compliments. An Irish priest was present at the dinner, and improvised the following grace:

"'God bless Loch Tay,
Which I've heard say
The region of romance is,
God bless the Duke of Breadalbane,
And God bless Francis Francis.
And bless his rod, his reel, his line,
Also his phantom spinner,
And bless this fish
Who left his "Tay"
To come up to our dinner.'"

Natural History.

An Outing in Acadia.—IV.

BY EDWARD H. SAMUELS.

[*Continued from page* 265.]

FOR four days I divided my time pretty equally between fly-fishing at the mouths of the small streams which emptied into the river and in collecting specimens of insects, small mammals, fishes, etc. I made no long excursions, however, which necessitated my being from the house at night, for I expected to be joined by my friend Doctor ———, who, in consequence of having some critical cases on his hand, was unable to leave the city at the time I did, but who promised to meet me as soon as he possibly could.

It is no wonder, therefore, that I looked impatiently for his arrival every evening when the stage passed through the settlement and that I was more than pleased when it at length stopped in front of the house and he alighted. The Doctor and I have been close friends for many years; our tastes are entirely congenial and both of us are enthusiasts in the use of the rod and gun. Every season has found us together on a Canadian salmon stream or in the forests of the North in pursuit of the moose and other large game, or upon the shores and marshes of the sea coast, where the bay birds and water fowl are wont to congregate. Comrades we are, and many have been "the hair-breadth 'scapes and moving accidents by flood and field" we have shared in our various outings.

"HAW, BROWN! HAW, BEAUTY!"

Our intimacy has not, however, been restricted to these periods of recreation, for we are neighbors in the same city, and we have generally found opportunities for passing two or three evenings together every week, and as often as we could manage to drop our work for a day or two we have taken short runs into the country, sometimes in pursuit of game or fish, but as often in the study of natural history.

The Doctor stands high in his profession, his skill as a surgeon, anatomist and microscopist having earned for him a wide reputation; in addition to these attainments he is a scientist of no mean repute, his studies in all branches of zoology having been varied and extensive. He is always an interesting and instructive conversationalist, and I have never yet passed an hour with him in which I did not learn something new and valuable concerning the great phenomena in which we both feel an engrossing interest.

Of course the welcome I gave him as he came to the house was a hearty one, and the Murrays were not a whit behind me in the cordiality of their greetings.

While he was at supper I entertained him with an account of what I had done, and what the prospects were for sport, and the evening was passed in the cozy sitting room in reading the magazines and late newspapers which he had brought with him from the city. We sought our beds at an early hour, however, for the rough ride the Doctor had taken and my day's long tramp had tired us both pretty effectually.

"I propose that we give the trout a rest for a day or two," said I to John, when he made his appearance on the following morning. "There ought to be a few woodcock within reach, judging by some of the coverts we passed yesterday."

"Yes," was the reply; "there's good woodcock cover within a mile of the house, and we can, it's likely, find some partridges, too."

"It's a pity we hav'n't a good dog," I remarked, as I took my gun from its case and adjusted its parts for use.

"Yes," added the Doctor, following my example; "one of my greatest pleasures in shooting is found in the intelligent work of a well-trained setter or pointer."

"I can't get a setter or pointer for ye," answered the guide, "but our old brown water spaniel Dash is not a bad bird dog. He will not point the game, it is true, but he knows how to find it, and we can tell by his bark and

actions when game is near; he's a grand retriever, also, and I've no doubt he will give a good account of himself if we take him along."

"Good," I replied, "We'll take him along, and be glad to have his company; but how shall we arrange for lunch? We may be out all day."

"If you would like to have me bring your lunch to the falls at noon," said Phœbe, who had been watching our preparations for the day's hunt, "I shall be glad to. One of our neighbors, Miss Freeman, has invited me to accompany her to the old clearing down there to pick blackberries for preserving; they are very abundant there, and we propose to spend the entire day in the work. We can carry lunch for all, join you at noon and we can take the meal together."

"That will be jolly, indeed!" I exclaimed. "We shall certainly expect you."

"Yes," added the guide; "we can work through the cover all along down the river to the falls, and that will use up the whole forenoon; we'll reach the pine grove below the upper falls by noon without any doubt."

"I see that Uncle Bob is starting in on his fall plowing," said the guide, pointing to a man who was busily engaged, with the aid of a pair of oxen, in turning over the green sward in an adjoining field. "We might cut across to where he is at work and ask him if he has seen any woodcock lately; he owns a piece of swamp back of yonder hill that has always been a famous place for 'em."

"All right," replied the Doctor; "it is nothing more than courtesy to ask his consent to shoot in his coverts; we will interview him."

We soon traversed the distance between the meadow and the farmer, and pausing beside him we watched his operations. The plowman stopped his team at the end of the furrow, and wiping his head with a huge bandanna handkerchief, he greeted us with a "Good mornin', gentlemen: good mornin', John. I heered ye've had great luck among the trout lately. I'm glad on't. Yes; glad on't. I wish more of your American sportsmen would come among us; as the preacher says, 'We need ye every hour.'"

"I see you believe in fall plowing," said I, after the introductions had been made.

"Yes," replied the farmer; "these cold, clay lands need a winter's opening with the frost to ripen 'em up, and even at the best they're poor crop bearers. I find that medder muck is no good on 'em, and barn manure, even, isn't much better. The land's too poor, but what's the odds?—even if we had big crops there's no market for 'em. We're too far inland, and so we keep on farming in about the same way the darky took a contract to do a certain piece of work."

"How was that?" asked the Doctor, becoming interested in the old man.

"Didn't ye ever hear about it? Lord! I thought every one had heered the story. Ye see, the darky took a contract to build a piece of wall for fifty dollars. He didn't figger clost enough, and when they came to settle up he discovered that he had to pay out for help and haulin' stone and sich, fifty-seven dollars. Some one joked him about it afterward, when he grinned and said, 'Yes, sah, there wan't much money in it, suah, but by golly 'twas wuff something to boss de job.' That's about all the satisfaction we're gittin' nowadays in farmin'."

"Ha, ha! Uncle Bob," exclaimed the guide "You're always irrepressible!"

"I'm what?" said the other. "Who says I'm irresponsible?"

"You're all right," replied John. "Have you seen any woodcock lately?"

"Woodcock? Yes; I started up three or four last night when I was driving my cows up from pasture; they were down near the brook crossing in the swamp. But I don't b'lieve you'll git a chance at 'em, for they fly up mighty lively. You can't see 'em on the ground, for they're just the color of the dead leaves."

"These gentlemen don't want to see them on the ground; they shoot their birds on the wing," said John.

"Oh!" exclaimed the farmer, glancing at us with a somewhat skeptical expression on his face; "they're all right, then. I've seen pa'tridges shot on the wing, but it takes a good hunter to do it. I say, squire," he added, addressing the Doctor, "that's a mighty nice lookin' gun you've got there; two-barrelled, I see, and a breech-loader. I reckon that gun must 'a' cost a lot er money."

"Yes," answered the Doctor; "I paid two hundred and fifty dollars for it; but that was a number of years ago. The same kind of gun can now be bought at a much less price."

"Whew!" whistled Uncle Bob; "two hundred and fifty dollars! Why, by gum! that's twicet what my steers are worth."

"We came to ask you if you have any objections to our hunting for woodcock in your swamp," said the Doctor.

"Of course not; shoot all ye can, and welcome, only take care and not hit any of my cows. Two hundred and fifty dollars for a gun! That gits me! Shoot all the birds ye can and welcome. Haw, Brown! Haw, Beauty!" he shouted to his oxen, and flourishing his whip, added, "Git up there, ye lazy critters," and then to the Doctor and me, "Git all the birds ye can, but don't hit the cows," and the plow again began its slow course through the sward.

"Ha, ha!" laughed the Doctor, as we climbed the hill and descended to the swamp on the other side "the old man is quite a character; a rough diamond, but interesting."

"Yes; old Uncle Bob is quite interesting in many ways," said the guide. "He is a hard worker, and his farm is not very profitable, but he keeps right along the same old steady jog year in and year out, and will to the end of the chapter."

It is not my intention to follow in detail the sport we obtained during the forenoon's tramp through the coverts in pursuit of the long-billed beauties; suffice it to say we bagged three more.

"I enjoy woodcock shooting very much" remarked the Doctor as he smoothed the plumage of his last bird; "to my mind there is no bird in America or out [illegible] rate, the ruffed grouse, that can compare with a flight woodcock, and on the table he is incomparable. But, John," he exclaimed, as he consulted his watch, "it is almost noon, and we promised to be at the falls at 12 o'clock. Are we far from them?"

"No," replied the guide; "listen a moment and you will hear their roar." As he spoke the murmur of falling water was heard apparently at no great distance. "We have been steadily working along toward them for the last hour. I did not forget your promise to Miss Freeman and Phœbe."

"Well, we will go there without delay. We have had a good forenoon's sport, and I confess I long for a little luncheon."

Our steps were now hastened in the direction of the falls, and it was not long before the sheet of brown and white foaming water was visible. As we clambered down the ledge that flanked the falls and entered the large clearing which lay between them and the grove of great pines and spruces that Phœbe had mentioned, we beheld the two girls running toward us hatless and with disheveled hair, screaming and gesticulating, apparently in great terror.

"Oh, John!" ejaculated Miss Freeman, a slightly built blonde of apparently sixteen or seventeen years of age, "we've had an awful fright. There's an animal down in the grove like an enormous great cat. Oh, he has such savage great green and yellow eyes and long pointed ears, and he is eating another animal, and I gave such a scream when I saw him! I got within six feet of him before I saw him, and when he jumped up I thought I should faint, I was so frightened. Ha, ha! Isn't it too funny?"

At this point the frightened girl began to grow hysterical, and it was several minutes before we could reassure her.

"Have no fear, young ladies," said the Doctor, "we are with you and the animal cannot touch you. I have no doubt it ran away from you as rapidly as you fled from it."

"Did you see it, Phœbe?" asked the guide.

"Yes; I got just a glimpse of it. Edna was ahead of me, and she almost stumbled over it before she saw it. It was a large lucivee (*Loupcevier*)."

"Yes; I thought so. It was a Canada lynx," he added, turning to the Doctor and me.

"Well, we'll put your dog on his trail," said the Doctor, substituting for the cartridges in his gun two loaded with buckshot. "We cannot have bobcats frightening young ladies in this manner. Come on!" he exclaimed, hurrying toward the grove; "the lynx will be out of our reach if we delay."

Following the Doctor, we hastened to the pine grove. At the spot where the girls had discovered the lynx we found the remains of a porcupine that the animal had killed and eaten.

"Ha, ha! Poor old quill pig!" exclaimed the Doctor. "Your race is run! Now, John, let us see if your dog can find large game."

The guide motioned to Dash and pointed to the spot where the porcupine lay. The dog began to scent over the ground around the spot, and in a moment he gave a growl, his hair stood erect on his back and he darted away with his nose down, evidently in pursuit of the marauder, and uttering at the same time fierce barks, quite different from those he had emitted when in search of birds. Fainter and fainter grew the sounds as he followed the track further away; then for a few moments they ceased, and then they were renewed, but in a different key.

"Treed at last," ejaculated the guide. "We'll get that lynx without a doubt, and its skin will make a handsome rug for him who shoots it."

"Well, we had better attend to the beast without delay," said the Doctor, moving rapidly in the direction from which the sounds came, "or your spaniel may meet with reverses."

"I'm not alarmed on his account," replied John; "he can take care of himself."

"Don't hurry so, please," exclaimed Edna; "I can't keep up with you."

"Hadn't you better wait here until we return?" asked the Doctor.

"Not for worlds," she replied. "One experience with a lynx is enough for to-day."

And so scrambling over rocks and windfalls and among the underbrush, we followed the Doctor and joined him just as he was about to aim at something high up in a towering old spruce, at the foot of which Dash was barking with the greatest vigor.

"I can see him!" exclaimed Phœbe, pointing to an animal that was perched on a high fork of the tree. "And see those eyes; they are as big as saucers!"

"The heavy report of the gun at that moment broke the stillness of the forest and echoed back and forth until its reverberations were lost in the distance. The lynx for an instant seemed paralyzed, then throwing out its huge forepaws it clung to the bough and endeavored to hold itself in position. The gun again was discharged, when the animal loosened its hold, and crashing through the dry limbs of the tree fell to the ground, where, after a few struggles, which Dash watched with the keenest interest, it stretched itself out dead.

"Upon my word," said the Doctor, "I do not wonder much at your being frightened; it's the largest Canada lynx I ever saw."

"Yes," added the guide; "he's an exceptionally big brute. I don't see how it happens he was here, though; probably not in ten years has there been any out here so near the settlement. Well, Doctor," he added, lifting the animal by its hind legs and throwing it over his shoulder, "as I told you before, his skin will make a handsome rug for you."

"Now that we have disposed of the wildcat," said the Doctor, "I think it would be a good plan to partake of our lunch—that is, if we can find it."

"Oh! yes," replied Phœbe; "I know just where I dropped it when Miss Freeman gave her first scream."

"In that case," said he, "we will return to the spot and recover it, and then find a comfortable place in the grove and have our meal."

The lunch basket was soon found and a delightful spot was chosen for a resting place, where the ground was covered with long, soft moss and pine needles. The lynx was laid upon the ground near by, and close to it the dog reclined, evidently determined that it should not again escape.

"Really, this is not half bad," said the Doctor, as he took a recumbent position against the gnarled and lichen-covered trunk of a tree. "Mrs. Murray has given us a capital lunch," he added, as the viands were spread out on a couple of large napkins, "and we have had exercise and excitement enough to make it thoroughly acceptable."

"Yes, Doctor," said Edna, "but if you had not arrived just as you did perhaps the lynx would have made a lunch off Phœbe or me."

"Not a bit of it," he replied, helping himself to a sandwich; "the animal was, no doubt, as frightened as you were."

The lynx that was stretched out on the moss beside us was a remarkably fine specimen of the Canada lynx (*L. canadensis*), and was much larger than the ordinary bay lynx or bobcat (*L. rufus*) that is so often killed in Maine and some of the other New England States.

The Canada lynx is pretty generally distributed throughout northern New England and Canada, and it is very destructive to game birds and animals. It prefers the solitude of the wilderness, and, unlike the bay lynx, seldom robs the farmer of his poultry, although occasionally the loss of a sheep or lamb is charged to his account. It is very powerful and active, making when pursued prodigious leaps, but generally if hard pressed it takes to a tree. It captures its prey by stealing on it until it is quite near, and then with a leap strikes it down. Its principal food is the Northern hare, but it will kill and eat almost any animal it can conquer. It often captures the fawns of the common deer by dropping on them from a tree that overhangs their path—in fact the mother deer sometimes falls a victim to its rapacity, she being unable to shake off the relentless assailant.

Young moose are also captured in the same manner, but the cow moose is a hard fighter in defense of her young, and usually beats off the marauder. The porcupine also often falls a victim to the rapacious beast, and the facility with which the quill-covered rodent is flayed is wonderful. I have often found the skin of one of these unfortunates that had been taken from its body by a lynx, and a more perfect piece of work could not be done by the sharp knife of a trapper.

"What do you suppose the porcupine was created for, Doctor?" asked Phœbe, who was busily engaged in plucking some of the longest quills or spines from the skin that lay before us. "We are told that every created thing has its mission, but I cannot see what this animal was sent here to accomplish."

"It is not very apparent, I admit," he replied, "but no doubt it has its place in the great economy of nature for some wise purpose; possibly it was designed as one of the food animals for the carnivora, its meager intelligence and peculiar habits rendering it an easy prey for the marauders."

The Canadian porcupine is almost exclusively an inhabitant of trees, being very rarely seen on the ground, and when it is found there it seems to be entirely out of its element, for it moves so slowly that it appears to almost lack the power of locomotion. It is chiefly diurnal in its habits, although it moves about sometimes in the night, particularly in the mating season, at which period its dismal shrieks and quavering cries are often heard in the Northern forests. On many occasions the writer has when tenting in the wilderness been awakened at night by the wailing love notes of the "fretful porcupine," and the serenades have been so persistent sometimes that a resumption of sleep has been impossible.

Its food consists of the bark, buds and smaller twigs and branches of trees, the hemlock, spruce, basswood and elm constituting its favorite diet. For an animal of its size, it is a gross feeder, the trees it attacks often being killed by being denuded of their bark.

The quills of the Canadian porcupine are but slightly attached at their roots; they are sharp pointed and readily enter the flesh of an enemy, in which they remain, for they readily become detached from the porcupine's skin. They are very finely barbed, and having entered living flesh every movement of the muscles of the victim causes them to penetrate deeper. So slow is the porcupine in its movements that it seems to regard all attempts at flight as useless, and when pursued it curls itself up on the ground, drawing its head and feet under its body and presenting to its assailant a mass of sharp and dangerous spines. If an opportunity offers, it strikes severe blows with its tail, which is armed with the strongest quills, and is, in fact, the animal's chief weapon. A well-placed blow from the tail fills its opponent with the sharp-barbed spines, and these have been known to cause death in animals that have molested them.

"See, Doctor," exclaimed Phœbe, in a low voice, pointing to a large heron that was standing on the shore of the river a few rods from where we were sitting, "there is a newcomer; he has not seen us yet. What a beauty he is!"

"Yes," replied the Doctor; "it is the great blue heron; if we keep quiet he will not discover us, and we can watch him feeding."

Not a word was spoken nor a motion made that would attract the attention of the bird, and we were thus enabled to watch his movements, which we did with the keenest interest.

It was a large adult bird in perfect plumage, its long crest of delicate, tapering feathers showing plainly as it raised or depressed it in moving about. Out into the shallow water it waded, and for a few moments it stood as motionless as a statue, then with a dart as quick as a flash its long, sharp bill was thrust into the water, and a small fish was seized and quickly swallowed. The bird again became motionless, and in a few moments another fish was captured and eaten.

"Shoot him!" whispered John. "He'll depopulate the river."

"No, no; don't kill the handsome creature," said Phœbe; "he is entitled to a dinner, surely."

"No; I'll not shoot him," replied the Doctor in a low tone. "He has a perfect right here, given him by the Creator, and the few fish he eats are as nothing compared with those that the minks and fisher cats and otters and sheldrakes destroy."

"He's off!" exclaimed Phœbe, as the bird opened his wide wings and flew away. "His keen eyes must have discovered us."

"Yes," said the Doctor; "his senses are very acute. This is the largest of our herons, and in my opinion the handsomest."

"An interesting fact in relation to this heron has been

recorded," he continued. "According to several observers it has been established that it has been the agent by which various aquatic plants have been diffused in waters that did not before contain them."

"But, Doctor," I exclaimed, "the heron does not eat plants; its diet is restricted to fish, frogs and other living things."

"Yes, I know," was the reply; "but it was through eating the fishes that the work was done. Audubon, the naturalist, states that he found the seeds of the great Southern water lily in a heron's stomach, and we know that seeds retain their powers of germination even after they have been ejected from birds that swallowed them."

Darwin in commenting on this fact says that freshwater fish eat some kind of seeds; even small fish swallow seeds of moderate size, as of the yellow water lily, etc. Herons eat these fish and must often have flown with their stomachs thus well stocked to distant ponds, where they rejected the seeds in pellets in a fit state for germination. Darwin enlarges on this topic in a very interesting manner. He believes that herons and other wading birds distribute the seeds of aquatic plants by carrying the mud which sometimes adheres to their feet from places where they have been feeding. He proved that the sediment in ponds was charged with seeds by taking three tablespoonfuls of mud from three different points, beneath water, on the edge of a little pond; this mud he kept covered up in his study for six months, pulling up and counting each plant as it grew; the plants were of many kinds, and were altogether 537 in number—an astonishing degree of fecundity in such a small amount of soil.

"I must confess, Doctor," said I, "that I never thought of such a thing as the spreading of plant life in such a manner. I can see now that various aquatic plants can thus be carried into waters that did not contain them before, and very likely minute animals are scattered in the same way."

"There is no doubt of it," was the reply, "and there is no question that seeds are also transported in earth adhering to the feet of land birds. Darwin also establishes this fact. In one instance he removed sixty-one grains of dry earth from the foot of a partridge, and from another twenty-two grains. In another example the leg of a woodcock was sent to him with a little cake of dry earth attached to the shank, weighing only nine grains, and this contained a seed of the toad rush, which germinated and flowered. The leg of a partridge was sent to him with a ball of hard earth adhering to it. The earth had been kept for three years, but when broken, watered and placed under a bell glass, no less than eighty-two plants sprang from it; these consisted of twelve monocotyledons or such plants as common grasses and the oat, and of seventy dicotyledons of at least three distinct species."

"It is perfectly wonderful, Doctor," said Phœbe, "but what patience it must have taken to find out all this."

"Yes," he replied; "patience is certainly requisite in scientific investigation, and also the most scrupulous attention must be given to even the most minute details. But we must now resume our hunt for birds. Shall you remain here?" he asked, addressing the young ladies. "If so, we will come here for you in three or four hours and we'll return home together."

"Yes," replied Edna; "if there are no more lynxes to trouble us."

"No; I'll guarantee that," said John. "You'll be unmolested by anything larger than a mosquito."

"Then we'll continue our blackberry picking," said Phœbe, "and wait for you here."

"All right, then," I responded; "we'll return by 4 o'clock for you, and in the meantime we'll leave the lynx where it lies."

Dash uttered a joyous bark as we moved across the clearing and thence into the hardwood growth beyond, and he resumed his hunt with renewed energy. As we had done in the forenoon, we walked through the covert in Indian file, the Doctor taking the lead until a bird should fall to his gun.

"There's a tract of young birches on a hillside near here in which we ought to find some partridges," said John, as we passed through the larger hardwood forest. "At this season the birds keep in less open cover than this."

"Yes," answered the Doctor; "although there are many oaks and beeches here, the partridges, or more properly speaking, the ruffed grouse, seem to prefer such a growth as you name. A little later, when the mast is on the ground, they will find their way here, for they are fond of it, and I have shot birds with their crops so distended with acorns that it almost seemed as if they would burst."

At this moment the dog uttered a series of quick, eager barks, which were instantly followed by the thundering whirr of a number of grouse which flushed from a neighboring thicket and sped away. The gun was at the Doctor's shoulder in an instant, but the birds gave him no opportunity for a shot.

"That's bad," he exclaimed; "they flushed very wild."

"Yes," replied the guide; "uncommonly so for the season of the year; probably the lynx has been making a raid on them, or perhaps a fox has captured one."

"Possibly," was the response. "We will find more, no doubt. It's capital cover and if we move more cautiously we'll get a shot or two, I'm sure."

John whistled to the dog and signaled him to keep closer to us in his ranging, which command the spaniel obeyed, and we moved among the birches silently and on the qui vive for a flushing bird.

In a few minutes the dog gave a low, querulous whimper, which was followed by his short, nervous bark, and a number of grouse sprang into the air before us.

Both barrels of the gun were discharged in an instant, and two of the birds dropped to the ground.

"Good!" exclaimed the guide. "Two of them are stopped in their flight, sure. Seek them, Dash," he continued. "Find dead bird."

"BROWN AND WHITE FOAMING WATER."

The dog sprang into the thicket and in a few moments returned with a large grouse in his mouth, which he dropped at the feet of the sportsman.

"Seek again, good dog," said John, pointing in the direction in which the other bird had fallen. "Find dead." The retriever again rushed into the thicket, but instead of returning with a bird as he had done before, he began circling around, uttering at the same time a peculiar whimper, as if he were at fault.

"I think the other bird is only wing-tipped," said the Doctor, "and no doubt it is running away. Dash will probably be on its track very soon."

The Doctor was right in his conjecture, for the bird, which was uninjured except on one of its wings, and like all its tribe, was a rapid runner, gave the spaniel a long chase before it was overtaken.

"He's found it!" at length exclaimed the guide, as the dog uttered a joyful bark, which was followed by a loud fluttering of the grouse's wings as the spaniel captured it. "Good dog; bring it here," he shouted. The spaniel for a moment or two was unable to conquer the struggling bird, but at length he appeared, bringing the grouse, which was still endeavoring to escape.

"Your spaniel is, I repeat, one of the best retrievers I ever saw," said the Doctor, taking the bird and putting an end to its struggles. "A wounded grouse is not always captured; many a bird have I lost, even with a good dog to assist me."

Our tramp was again resumed, I leading the way, but although we hunted the covert thoroughly for over an hour, a single bird only fell to my gun.

"Well," exclaimed the Doctor, "we have evidently lost the grouse. It is possible there were but the two broods here. I think we had better try elsewhere."

"All right," answered the guide. "There's another tract of young growth about a half-mile from here that ought to contain one or two coveys."

"We'll give it a thorough searching, at all events," said the Doctor, "and when we have done so it will be time to return to the young ladies; but there goes an enemy," he exclaimed, and as he spoke he took a quick aim at a large brown bird that sprang out of a tall spruce near by and flew away. The discharge of the gun was followed by the fall of the bird, which, when it was found, proved to be a large specimen of the great horned owl. "I always shoot one of those fllows," added the Doctor, "when I have an opportunity, for they destroy game birds almost without number."

"Yes; and rabbits, too," said John. "I have on many occasions found the spot where an unfortunate bunny had fallen a victim to one of these marauders."

Whether or not the Doctor did right in killing the owl there is no doubt that he was correct in his statement that the species is very destructive to game birds.. The great horned owl is one of the largest of American birds of prey, and is widely distributed throughout North America. It is most common in stretches of large forest, and in some localities is rather abundant, so much so that I have heard several of them at the same time making night hideous with their discordant, mournful cries of "Waugh, hoo, hoo, hoo," or as the Western traveler understood it, "Who cooks for you?"

The flight of this owl is rapid, noiseless and vigorous; he passes through the mazes of the forest with great dexterity and ease, and, when flying above the trees, frequently soars in the maner of the hawks. He is often very destructive to the domestic poultry of outlying farms, pouncing on fowls that are roosting on trees in the night, and bearing them off in his powerful grasp. He is very destructive to game, rabbits, grouse and other birds falling victims to his rapacity.

When a flock of crows discover the presence of one of these owls, they immediately collect from all quarters and attack him on every side, uttering their harsh, discordant cries; the owl is kept dancing and dodging on the limb, his perch, in a ludicrous manner; if he takes to flight he is pursued by his enemies, and is soon forced to alight again.

The writer has had several specimens of the great horned owl in captivity, and found them rather interesting pets; they fed on raw meat or fish when thrown into their cage. They seem to be able to see very well by daylight, for if a living animal is introduced into their cage they instantly seize it.

"There is one animal that this species of owl kills which destroys as much game as any other marauder that prowls the woods," said the Doctor. "I have shot a number of these birds whose plumage was strongly scented with the unmistakable oder of the skunk."

"The skunk!" exclaimed John. "I should hardly think an owl could master it."

"Oh, yes, indeed," was the reply. "The sharp talons, over an inch in length, are thrust into the animal's body with fatal effect. The skunk, like the owl, is nocturnal in its habits, and as it moves leisurely and noisily about with no apparent attempt at concealment, it quickly attracts the attention of one of these birds if it is near, and falls a victim to its rapacity."

"Yes," said I, following the Doctor and John as they turned into the thicker growth again; "I dislike a skunk beyond all expression, and never spare one if I meet it."

"The skunk destroys a great many noxious insects," said John, forcing his way through a thicket of alders.

"Yes; no doubt," was the reply; "but not enough to begin to offset the injury it does by killing hundreds of birds in a season."

The opinion that the Doctor expressed is undoubtedly shared by many good observers, and the animal's thoroughly wicked character and peculiar weapon of defense have caused it to be universally detested, its destruction being generally regarded as an act meriting the highest approbation. Its only recommendation is that it destroys quantities of insects, both in the larvæ and perfect stages. Its habits are almost entirely nocturnal, although it is often seen in the day time, especially in spring. Unless one is provided with a gun, it is always best to give it a wide berth, an encounter in any other case resulting in a total and inglorious defeat. On one's coming suddenly on it, it immediately faces the intruder with its tail erect or lying along the back, its little black eyes sparkling maliciously. Woe to the comer unless he stands perfctly still until the animal walks leisurely away, the least movement being surely followed by an ejection, often in one's face and eyes—its aim being very accurate—of a liquid with a most intensely and disgustingly nauseating odor, which, if it reaches the eye, produces an inflammation and partial blindness, and causes the skin to become inflamed and vesiculated. The glands in which this liquid is secreted are situated near the base of the tail; they are very muscular, being capable, by contraction, of throwing the liquid twelve or fourteen feet. This liquid is of a yellowish color, is very acrid and at night is said to be luminous. The skunk when ejecting it lays its tail flat on its back, throwing little jets of a few drops at a time with great precision.

In addition to its destroying great numbers of game and other birds, the skunk is a great nuisance to the farmer, often doing considerable damage in the poultry yard. In seizing its prey it throws itself over and around it like the weasels, usually biting it at the nape of the neck, or through the skull into the brain. In a lot of eleven fowls that were examined by the writer, which were killed by a skunk in one night, none were found to have been bitten anywhere except on the head; in some cases the head was eaten off entirely.

It often trails animals like a dog, and though comparatively clumsy and slow in its movements, will perseveringly follow the object of its pursuit until it has driven it to its burrow, where following it in, the whole family is sacrificed to its rapacity.

The skunk breeds but once in a year, and has from three to seven at a birth. In early winter it usually retires to its burrow, where it remains sleeping until early in the spring.

Beaver in Minnesota.

SAUK CENTRE, Minn., April 23.—Mr. von Lengerke's article in your issue of April 20, regarding beaver in New Jersey, was very interesting to me. The last beaver that I remember was caught here twenty-five years ago. Their old dams indicate that they were thick here some day. I have often thought that beaver farming would pay; they raise skunks for their pelts and make it pay; why could not one raise beaver and make it pay? The cost of keeping a colony would be nothing here in this country, where popple and willow are plenty. Two things always prevented me from putting the plan into execution—scarcity of beaver and of money. V.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Cutting the Rattles Off a Live Snake.

Editor Forest and Stream:

"Experiences with Wild Animals" reminds me. It was on a hot August day, and we were driving up the side of a Blue Ridge mountain. It was a long, hot, dusty pull, and we were giving the horses their own way, and they were making haste slowly with their heads well down.

A short distance ahead at the side of the road I espied a rattlesnake, fully grown and stretched as straight as a ruler upon the dusty roadside, its head being covered by some leaves. As we neared the reptile it did not move or show any signs of life, although the horses stepped within a few inches of its numerously buttoned tail. Coming to the conclusion that the snake had been perhaps stoned by some previous passer by, I was seized with the desire to secure the rattles as a trophy, and reaching for my jackknife, expressed my intention of jumping out then and there and securing them. My older companion refused to pull up the horses, and held me in the seat, advising that I leave the rattles alone until we returned along the road later in the afternoon. I carefully marked the spot by a dead and fallen chestnut tree.

In due course we on our return journey reached the spot. We pulled up the horses at what we were certain was the place where the snake lay dead, but nothing was there. I jumped from the wagon and walked a few feet ahead, and there sure enough was the trail of the serpent in the dust as he had crossed the road after his nap and glided down the ravine. A momentary chill went down my back as I stepped into the wagon, and then I pictured myself grabbing for the buttons on the snake's tail and those rattles springing suddenly into life, an instantaneous coiling of a mottled bidy, an uplifted ugly head from within the coiled body and—a wild race to town for whisky.

ST. PAUL, Minn.

The Red Squirrel.

THE red squirrel is popularly credited with a taste for bird eggs and nestlings, and is for that reason regarded as a nuisance. In our issue of last week Hermit combated this view, and related incidents which had come under his own observation tending to show that the squirrel was harmless in its relation to the birds. In comment on this a correspondent writes: I have carefully read Hermit's article. He is usually a close observer, but I wonder that he gives a red squirrel such a good character. A red squirrel is much worse than a weasel, as he destroys more young birds and eggs, and does no good catching mice as a weasel does. I know surely that a squirrel will take large young robins from the nest, taking one after another till all are taken. I have seen one robbing the nest of a chipping sparrow close to the window of a house in a large village. Very often in June red squirrels come in numbers into our villages for no other reason which I can think of except to rob the birds' nests, which are more plentiful close to houses than in the woods. They are cannibals, as they will eat each other. I have dozens of times had one eat another which had got into traps set for game. They are a perfect nuisance in sable lines or among mink traps, as they will come to a meat bait much quicker than a weasel, as the weasel prefers to catch his own food. It is nice to have a weasel around a camp, as he will drive off the mice and squirrels; but a squirrel will destroy your provisions and eat holes in every bag, and even in one's clothes. I have studied them carefully, and consider them the most bloodthirsty villains we have in the woods, not excepting a mink. I like to see them, and never hunt them, but lots of things laid to crows are their work.

Game Bag and Gun.

Experience with Wild Animals.

GRAND RAPIDS, Mich., April 22.—*Editor Forest and Stream:* I have been much interested in the articles regarding dangerous wild animals, and send the following incident as additional evidence of the fact that bears, at least, are not so black as they are painted. The story is a sort of tradition in the family, and for personal reasons I do not wish my name to appear in connection with it, but I am willing to vouch for its accuracy.

It was when the Tonawanda Creek country in the northwestern part of New York State was mostly a wilderness. My great-grandmother was the wife of a pioneer there, and among other belongings they had a nice young pig confined in a log pen near the house. Early one evening, before the men had returned from their day's work in the woods, the good woman heard a terrible squealing, and what was her surprise, on going to the door, to see a large black bear attempting to get the pig out of the pen. Without thinking of danger and intent only on "saving her bacon," she seized a small fire shovel and charged the bear, which immediately dropped the pig and made for the woods at his best pace. The bear in this case was evidently hungry, and I have always been quite proud of this evidence of courage in the family, but the outcome shows that the element of danger was entirely wanting.

A. J. S.

BOSTON, Mass., April 23.—*Editor Forest and Stream:* Reading Mr. Adam Moore's letter in last week's FOREST AND STREAM moves me to remark that there are exceptions to all rules, and here is one of them:

One quiet Sunday morning in December about twenty-seven years ago I was crossing a tamarack swamp in the Province of Quebec. About a foot of snow had fallen the day before, and I was driving a quiet old horse hitched to the forward half of a bob sleigh, on which I sat with a buffalo robe for cushion and covering. Ahead of me I saw a big caribou cross the wood road and stop in the open. I drove up, and when opposite the caribou stopped at about 30 yards distance and looked him over. As the beast stood perfectly undisturbed and seeming to be much interested in my team and myself, I got off the bob and walked toward him. He did not budge, and when I got to within about ten or fifteen yards I stopped and threw a snowball at him to see him run. I saw him all right. He ran, but the wrong way, for with two or three snorts and after pawing the snow like an angry bull, he trotted right at me, and I ran, too, for my sleigh, and called "Get up" to my old horse. After we got started the caribou ran alongside the horse for nearly a quarter of a mile, until the road entered some big woods, when I lost sight of him.

Now I had no weapons, not even a pocket knife or whip, and perhaps the caribou knew it, or he may have been attracted by the horse, or the fact that it was Sunday may have encouraged him, but any way he did not act as he ought to have done according to the rule of Mr. Adam Moore.

I will add that it was a very large caribou, without horns, fat and in fine condition, and as my horse was a sleepy, slow fellow and would only just jog in the snow, I had a chance to admire the clean, active steps of the caribou as he slowly trotted alongside, distant about 20 feet in the frozen swamp. The snow did not bother him in the least.

MATTAPAN.

CHICAGO AND THE WEST.

Snipe Season a Failure.

CHICAGO, Ill., April 27.—The snipe season in this part of the country is by all accounts a complete failure, and in fact there has not been one decent bag reported which one can believe to be of authentic nature. Upon the other hand there are a great many shooters who have been out and who bring back stories of little or no success. The birds seem to be well below this latitude, if indeed there is to be any flight at all this spring. Last Thursday settled the matter for this State, and although there is a general belief that one cannot be prosecuted in Indiana for killing snipe, under the terms of the new law, there are only a few who care to change it. Between the non-resident license law, the involved construction of the new statute, and the strict Sunday law which the average Indiana warden this spring has no hesitation about enforcing, it requires a certain amount of hardihood to enable a Chicago shooter to go out after the elusive jack snipe within the confines of the dark and mysterious State of Indiana. The average Chicago shooter is this week consoling himself with the fact that the birds are lean and wild and not very good to eat anyhow. It has been the best spring for ducks in fifteen years, and thus far about the poorest for jack snipe, although this latter phase of the shooting season is contrary to reason and expectation.

There has been no golden plover flight of any consequence, according to the reports of those who have been out west and northwest of the city. Hon. Hempstead Washburne spent the last day of the season on the marshes west of Evanston with a team, four dogs and two companions, and he saw absolutely not one single jack snipe, although he found the ground good and passed over a wide strip of country. He met two young men who said that they had been out all day and had seen just three snipe, or three apparitions which they took to be snipe. The season ended very dismally for this part of the country.

E HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Non-Resident Licenses.

PORTLAND, Ind.—*Editor Forest and Stream:* It seems that the State of Indiana has put her foot down hard on Chicago sportsmen. Well, what is sauce for goose should be sauce for gander. For some years now Indiana lovers of the chase have been practically shut out of the deer range. A sportsman who does not like a scatter gun can sit at home and nurse his grievance, realizing at the same time that the law that would not hesitate to lay a heavy hand on him winks at all manner of transgressions by resident shooters. I have no ill-feeling for Chicago sportsmen, though in the past they took many of our wildfowl and hooked our finest bass; but wouldn't I like to get a grip on Milwaukee! I wouldn't do a thing to those fellows! Oh, no! Come over, gentlemen, and get some of our birds and bass. Be neighborly.

The last time I was in Wisconsin I killed one deer and a few grouse and rabbits, and was then advised that a non-resident license law would be enacted. The parties who thus informed me that they intended to protect their game against non-residents were hounding deer every day in violation of law, and they were prominent citizens of Milwaukee, too.

Well, they gave it to us good and strong—a $30 license for two deer. Then Michigan followed, and if she had put it $10 for two deer instead of $25 for five, she would have received our blessing. No hunter should kill five deer in a season, and it is the opinion of the undersigned that no hunter should be deprived of the God-given privilege of hunting in season, nor restricted beyond reason.

G. W. CUNNINGHAM.

Big-Guns.

Editor Forest and Stream:

I was much interested in your quotation in the FOREST AND STREAM of an account of shooting ducks with a punt gun.

That is strange reading to one who knows the big-gun fowl shooter only as the outlaw of the Chesapeake. And yet from the standpoint of true sportsmanship, if we take into account the arduous nature of the pursuit, the physical exertion, the caution, patience and self-control requisite, we may readily concede that as an achievement successful punt gun shooting ranks quite as high as the art of lying hid in a blind and potting decoyed fowl. And there is good reason to believe that if our coast shooting conditions were like those of Great Britain, and the conditions of the game supply similar, the use of the swivel gun would be as legitimate here as there.

BATTERY.

Jefferson County Association.

THE Jefferson County Sportsmen's Association, of Watertown, N. Y., is bound that the game laws shall be lived up to, and with that end in view at a recent meeting a resolution was adopted offering a reward of $25 for information which might lead to the conviction of any person violating the amended game law relative to the shooting of web-footed fowl during the close season. The law as amended provides that no web-footed fowl shall be taken in any manner between the first day of February and the first day of September. Before being amended the season for shooting or taking of this kind of fowl game was extended from Sept. 1 to May 1.

Another resolution was adopted offering a reward of $10 for information which might lead to the arrest and conviction of any person shooting pickerel at any time.

In years past it has been customary for many persons to frequent Black River Bay and shoot large numbers of these fish in a single day, and few years have passed when arrests have not been made.

This move by the Association will doubtless cause the slaughter of pickerel to be stopped.

Water Killing Deer in Ontario.

MILTON, Ont., April 22.—Though the Game Commissioners in their report recommended the prohibition of killing deer in the lakes, which meant the forbidding of hounding also, no action was taken. I am afraid the slaughter next season will be heavy.

WM. PANTON.

100 Sportsmen's Finds.

Some of the Queer Discoveries Made by Those Who Are Looking for Game or Fish.

58

Cornelius Evans, while fishing near Easton, Md., caught an unbroken and uncorked jug, which had small oysters and barnacles attached to the outside. When Mr. Evans poured the water out he found there was something alive inside the jug and too big to be got out through the jug's neck and mouth. The only way to find out certainly what was the live thing was to break the jug, and when this was done a large, fat, and healthy toadfish, or dowdy, or miller's thumb, as it is variously called, tumbled out. The fish had evidently slipped into the open mouth of the jug when young and small, either when looking for food or as a place of refuge when pursued by an enemy. Finding comfortable quarters it was content to stay there. A current would naturally flow past and into the jug's mouth, bringing an abundance of fish food.—Baltimore Sun.

59

"Some of the richest gold mines in Colorado were stumbled upon in the most accidental way," said a miner. "When the gold fever was at its height several years ago, a party of prospectors traveling through the mountains came upon the dead body of a man lying beside the trail. 'Poor fellow,' said one of the men, 'he has passed in his checks; let's give him a decent burial.' They accordingly began to dig a grave. Three feet below the surface they discovered signs of gold. The stranger was buried in another place, and where they had located a grave a gold mine was opened up which turned out to be one of the richest claims in that section of the country. The mine was named 'Dead Man's Claim.' Another instance is where an adventurer who drifted into Leadville awoke one morning without food or money. He went up into the mountains and shot a deer, which in its dying struggles kicked up the dirt and disclosed signs of gold. The poor man staked out a 'claim' and opened one of the most profitable mines ever worked in Colorado."—St. Louis Globe-Democrat.

Norton's Barn.

IT was long and dark as a winter's night,
And the old roof arched to a lofty height;
Like tawny ribs the rafters loomed
In the high old top where the swallows roomed;
While down below was the mow and bay,
In summer void, but filled with hay
When the chilly days of winter fell—
The winter days that we loved so well!

The square old beams with their coats of dust,
The gray barn doors with their reddish rust
On hasp and hinges, quaintly wrought,
By the village smith from iron brought
In English ships of the long ago—
Do you remember how we'd go
To Norton's barn on a rainy day
And hide and seek in the tons of hay?

We walked the beams in the dusky loft,
Or jumped to the depths of the haymow soft,
And burrowed deep in the yielding straw
Till the frightened cattle thought they saw
The robbers come from their caverns deep,
And phantom ghosts from the roof-tree leap!
We dug us holes in the rustling hay,
Where the hired men fell in sad dismay.

And the fussing hen who hid her nest
And thought us a bothering childish pest!
How proud she was when at last she found
A nest that 'scaped our searching round!
The lame old horse with the hungry maw,
We fed him to oats when no one saw—
How we pick'd the lock on the grain box tight
And call'd it "Robbing at dead o' night!"

O Norton's barn! I see thee still,
Homely and quaint on the side of the hill,
With weather stains, and knotholes shot,
A rickety, cranky, queer old lot—
But to my boyish mind of old
A castle fit for a baron bold!
And the boys and girls who used to play
At hide and seek—oh, where are they?

—J. Otis Swift in Springfield Republican.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Fishing Up and Down the Potomac.

The Ethics of Nomenclature.

IT has long been a general rule among scientific writers where a fish has received two or three specific names, by various authors, to preserve that first used, thus reducing to a minimum the confusion bound to arise from the use of a multitude of names and yet give credit to the first discoverer or describer. The rule has worked well enough, though it has not been universally applied, but it has been by consent of a comparatively limited circle of scientists who are all laboring to the same end of certainty; all students who desire the adoption of the best single name, and the elimination of confusing and meaningless terms.

The situation is very different where the same fish is distinguished in many parts of the country by a different local name, and any attempt is made at harmonizing the situation by adopting a single name to the exclusion of the others. As an instance, the big-mouth black bass now swarming in the lower Potomac is trout in some of the Southern States, and chub in Virginia.

It is all very well for official reports and reading anglers to always call it black bass, but the inhabitants of distant localities who do not see the reports, and do not read the periodicals, who have learned in childhood to distinguish the fish by its local name, will be very slow to take up with, what is to them, an innovation of the ignorant who do not know a chub when they see it.

It will hardly be questioned, however, that it is desirable that such a change should be made, and that it will be better for science when the same fish is known everywhere by the same name.

This difficulty is suggested by the fact that the latest official reports of the fisheries of the Potomac River do not mention the herring fishery, the most important of this river, and indeed of any river on the Atlantic coast.

It is true one may find a record in these statistics of alewives caught in this river, but as alewives are menhaden here and not herring, the omission gives rise to serious confusion and error.

The fact is, it is doubtful if among the thousands of men engaged in the catching, curing, marketing and consumption of Potomac herring, a single man may be found who applies the term alewife to this fish, or a half-dozen who even suspect it is an alternative name. Of course the authorities have a plausible reason for thus designating the fish; in the first place, the real or sea herring fishery is a business of such vast importance not only on our own coasts, but all the North Atlantic, that the name herring cannot be taken away from it, even if that were desirable, and it only confuses to apply the same term to both fish, different as they are in characteristics, habitat and capture.

Besides this, the herring of the fresh waters is called alewife throughout the most of New England, and it is thus easily distinguished from the herring of the sea; so alewife is applied to all river herring, though it is so known in none of the streams of the middle and southern coasts.

It is particularly embarrassing to apply the name alewife to the herring in the Potomac, since in this region, where the menhaden industry assumes such importance, the menhaden has been so long known by the name of alewife, and it is simply impossible to swap names among those who handle the fish every day and do not see the books at all. What adds to the difficulty is that our official reports have only in recent years taken to the new name alewife exclusively for this fresh-water herring. For instance, in the Fish Commission Bulletin No. VI. for 1885, the statistics are given at page 202 for the "Shad and Herring Fisheries of the Potomac," and to have the latest figures entirely omit the word "herring" leads to the impression among the uninitiated that the fish has disappeared from these waters, though last year 300,000 were taken at a single haul. Browne Goode's "Fishery Industries of the U. S. (Geographical Section)," page 428, speaking of the Maryland fishery, says, "For a number of years menhaden (*B. tyrannus*), locally known as ellwives, alewives and oldwives, have been taken in considerable numbers by the farmers of the region, who have used small haul seines for catching a supply with which to manure their land," and at page 458, on Virginia fisheries, the tables give, "The herrings (*C. vernalis* and *æstivalis*)."

The name alewife does not help, since there are two of these river herrings, the branch herring and the glut herring, not easily distinguished by the fishermen themselves in the net; alewife, which has no descriptive meaning, only makes the situation worse. If, however, the name must be used for the sake of uniformity, and maybe it is best, it is only fair to use some term by which the fish can be recognized in the reports, at least until such time as the rest of us may get accustomed to the change.

Fresh-water herring, or river herring or Southern herring, any old name that preserves the word herring. It would be easy to have it "river herring or alewives," as it is in many of the reports, and this enables one to identify the industry in the upper as well as the lower rivers, and at the same time reconciles the last reports with those of former years. It is not defense enough to say the Department has taken the trouble to explain this in former publications, because nobody gets the opportunity, or takes it, to read all the former publications.

In endeavoring to find the opinion of the authorities as to the relative value of this food fish, called here when salted and smoked the Potomac robin, one runs across a startling contradiction.

In Section 1 of the Fishery Industry of the United States, page 587, Marshall McDonald, quoting and apparently indorsing Professor Baird's second report as Commissioner of Fisheries, says, and it will be noticed that both names are used for the herring or alewife: "I am inclined to think for various reasons that too little has been done in our waters toward the restoration to their primitive abundance of the alewife (*Pomolobis mediocris*), the herring of our Southern and Middle States, not to be confounded with the sea herring (*Clupea elongata*). The alewife in many respects is superior, in commercial and economical value, to the herring, being a much larger and sweeter fish, and more like the true shad in this respect."

In the Bulletin for 1898, Vol. XVIII., page 450, occurs the following, and still the alternative terms are used: "At various points along the Atlantic coast more or less alewives or river herring are brine salted each year. They are prepared in greatest abundance in the tributaries of Chesapeake Bay and the coastal waters of North Carolina, where they are known only as herring, and also to a less extent in Maine and Massachusetts. The methods of pickling river herring or alewives do not differ greatly from those applied to the sea herring on the New England coast, except that the market price being lower necessitates that they should be prepared in a cheaper manner. The flavor of the alewife does not equal that of the sea herring, consequently there is little need for the nice discrimination required in the case of the latter."

Now if a court overrules one of its decisions, it is usual to cite the former case, and to give the reasons which lead to a change of opinion, though in this case both parties to the controversy may have the satisfaction of having its contention sustained by the highest authority and the champion of the Potomac River herring may still console himself with the names of McDonald and Baird as evidence that it is a "larger and sweeter fish and more like the true shad" than its rival of the sea; but it will be long before the fish known here for two or three hundred years as herring will be called alewife, and until then statistics are useless that do not mention the "river herring" as part of the fishing industry of the Potomac River.

HENRY TALBOTT.

Early Spring in Canada.

A LETTER has just reached me from Lake St. John intimating an early opening of the fishing season. In fact there is little doubt that the residents generally about the lake will be catching ouananiche before this letter appears in print. On Thursday, the 25th inst., the date upon which the communication from Lake St. John was written, there was but little ice remaining upon the surface of the lake, and as this was well covered with water, which was rapidly rising, its total disappearance was looked for from hour to hour. This is therefore going to be one of the earliest fishing seasons seen in Canada for many years past. The rivers tributary to Lake St. John have long been clear of their winter covering. Strange as it may appear, the weather is milder and the spring thaw earlier in the vicinity of Lake St. John, which is sheltered from cold east winds, than in the neighborhood of Quebec, which is so much further south. The little steamboat on the Mistassini River made its first trip on April 9, and since that date has been running regularly between the mouth of the river and the foot of the first falls, where there is a small farming settlement. In a few days from this date the steamers will be running on Lake St. John, though the summer hotels at Roberval, Lake St. John, will not be opened until the first week of June. In the meantime there is plenty of accommodation to be had in the village of Roberval, opposite to which the earliest fishing for ouananiche may be had, which often continues well into the summer. Along the southern side of the great lake, where the ice is already away from the shore, I have no doubt that the early native bait fisherman is already catching the fresh-water salmon, and that the famous game fish of the north will be rising to the fly off the mouths of the Metabetchouan and Ouiatchouan rivers before the end of the first week of May.

I have already written so often of the lures that are the most killing for this fish that repetition may seem monotonous; but I have so many inquiries by letter relative to this subject, some of which I may not be able to answer very early, that I would fain trespass a little further upon your space, especially as I have no doubt that FOREST AND STREAM is continually increasing the sphere of its useful influence and coming to the hands of new generations of intelligent and studious anglers. In the first place, let me urge that none but the very best and strongest of casting lines be risked in the encounter with this fish, and that larger and more showy flies are advisable for use in the early spring, when the water is high and dark, than in the hot months of summer. All the well-known salmon flies make good lures in May and early June for the ouananiche, especially the Jock-Scott, silver-doctor, Durham-ranger, and in very bright weather the dark-fairy and even the black-dose. They may be used too with good effect in the ordinary salmon sizes, though some smaller ones should also be carried, and, of course, as the season advances, the size of the flies used must be reduced. In addition to the flies already mentioned, the brown-hackle, professor, coachman and other of the more showy trout flies will often be found useful. Other and smaller and less showy flies will be required later, but of these I need not speak now.

My Lake St. John correspondent tells me that for forty years past the water of the lake has not been so high as it is at the present time. From this I am led to believe that the spring fishing there will not only open extremely early, but that it will continue somewhat longer than usual, for it lasts in the lake itself, as well as in the Grande Décharge, until the water falls to a certain level.

To-day I learn that the ice has left all the lakes and rivers in the vicinity of Lakes St. Joseph and St. Gabriel. Nothing has yet come to hand from Lake Edward, which is usually one of the last lakes to be freed from its icy fetters. No doubt, however, that by the end of next week, if not sooner, there will be clear water at Lake Edward. As the trout are taken freely there almost as soon as the ice disappears, there ought to be good fishing there this spring by May 10 or 12 at the latest.

E. T. D. CHAMBERS.

QUEBEC, April 27.

Talks to Boys.—XVII.

Muscallunge Fishing.

THE muscallunge is the largest of our American game fishes, unless we except the salmon of the North Atlantic seaboard, which sometimes attain weights similar to those of the large muscallunge. The salmon, however, is not so generally distributed as the muscallunge, and cannot be so justly called one of the popular game fishes. The muscallunge ordinarily taken by anglers runs in weight from 5 to 50 pounds. It is said the specimens have been taken weighing 75 and 80 pounds, these giants having been captured in the St. Lawrence River in the earlier days. Weights of 50 to 55 puonds were not unusual in the early days of the muscallunge waters of Wisconsin and Minnesota. By this I would not seek too much to excite your imagination, for to-day, if you go muscallunge fishing, the probabilities are that you will rarely get a fish weighing over 20 pounds. To-day a 15 or 18 pound muscallunge is a good fish, and at this weight he is apt to give you as long and hard a fight as though he weighed twice as much, the older fish sometimes being more heavy and sluggish in their habits. It is likely that in the much-fished waters of the muscallunge country the weights of the fishes do not run so great as they did ten or twenty years ago. Some think that this is because the fish is becoming extinct, and no doubt its numbers are being cut down very much. Yet the fish commissioners of certain States who have set their nets in waters supposed to be nearly fished out, have in some instances taken giant muscallunge of 40 and 50 pounds weight, where it was supposed no such fish had lived for many years.

There are two great waterways for the muscallunge in this country—the Mississippi River and the St. Lawrence River. This fish was formerly found all through the Great Lakes, as far north as the Sault Ste. Marie. It is even yet taken in the nets of the lake fishermen on Lake Erie, and within ten years has been known to be captured in this way in the lower part of Lake Michigan, though now it is rarely heard of in any of the Great Lakes. It still remains in the St. Lawrence River and in some Canadian streams. It is, or was, common to most of the bolder rivers of the Mississippi system. It prefers the clear streams, and is not commonly found in the Missouri River or in the Ohio River, though, on the other hand, it has been taken in certain streams of Kentucky and Ohio which are tributary to the Ohio River. In early days it was not uncommon in the Skunk and Des Moines rivers of Iowa. These streams are in the middle part of the Mississippi system. The great home of the muscallunge is further up toward the head of the Father of Waters. There are two great inland muscallunge regions, those of Wisconsin and Minnesota, and both of these are tributary to the Mississippi River. The Wisconsin country lies tributary to the head of the Wisconsin, Chippewa and Flambeau rivers, all of which drain into the Mississippi. There are literally thousands of little lakes in this country, connected by tiny creeks or thoroughfares, in all of which the muscallunge is or was native. These lakes or streams run quite up to the divide which separates the Mississippi waters from those which run into Lake Superior. Across this divide and in the streams which flow into Lake Superior you will not find any muscallunge at all. So the cold waters of Lake Superior seem to separate these two great muscallunge districts, the St. Lawrence and the Mississippi rivers. On the left bank of the Mississippi, as you go up, there are many streams which carry the muscallunge. These lead into a magnificent system of lakes, which even to-day hold fine specimens of this great game fish. Again, if you push on further north until you strike the waters which drain into the Lake of the Woods, you will find no muscallunge at all, though you will meet its giant cousin, the Great Northern pike, almost as hard a fighter as itself. In advising you where to go fishing for muscallunge, the lesson need be but very short; perhaps to the St. Lawrence River, but better yet to the less fished country of upper Wisconsin and upper Minnesota, though even in these latter localities you must remember that civiliztion has done much to cut down the once wonderful supply of this greatest of all American pikes.

Some think that the muscallunge is the same as the overgrown pike or pickerel, but you will disabuse your mind of any such inaccuracy. It is as easy to tell a muscallunge from a pike as it is to tell it from a bass. Its shape is not so snaky and sway-backed. Its upper jaw is shorter and more gamy looking. Its body is full and thick. Its cheeks and gill covers are naked and do not show the scales which mark the lower half of the cheeks of the Great Northern pike. Moreover, the body color of the muscallunge does not in the least resemble that of the pike or pickerel. The latter shows oblong white spots on a dark green background. The muscallunge may be either of a solid yellowish green color, or, if it be marked with dark color at all, it is in splotches or spots of black or darkish color upon the lighter background. If you have once caught a muscallunge, you will never need any further description regarding it.

Now, in pursuing this noble game fish, you will leave quite behind you the centers of civilization and get you to the wilderness, just as you did while after the brook trout. Indeed the brook trout and the muscallunge are often found in practically the same country, and some little stream running into the muscallunge lake may perhaps carry its share of trout, which, however, will do very well to keep to their stream and not venture out into the home of this voracious and gigantic fish, which never seems to know when it has enough to eat.

Study the habits of this fish as you have those of the other fishes which you have been pursuing. You will find that in the early spring, just as the ice gets out of the lakes, the largest specimens of this fish come out along the edges of the lakes and in the shallow waters. This is their spawning season, and it is then that you may see the biggest fish. It is not likely that you will venture into the cold woods so early as this for muscallunge fishing. It will be a month or so later before you go out for your trip. By that time the fish will have left the shallow water and have dropped back into the deep water, which is their natural home. Yet you will not find these fish similar in habits to the Great Lake trout, which lies at the bottom of the deepest part of the lake

during the summer months. On the contrary, the muscallunge naturally makes its home along the bars which sometimes rise up in the lake, forming a deep cut bank or a drop off into the greater depths. On these bars a certain amount of fish food grows among weeds, lilies, water plants, etc., and in this growth there swim the bass, wall-eyed pike, suckers, etc., upon which the muscallunge regularly preys. It is a habit of nearly all fishes, when approaching some obstruction, to swim around or along it for some distance rather than to try to surmount it. The muscallunge knows that when a school of smaller fishes strikes the face of this bar, they will not try to cross the bar or to avoid it, but will swim along the face of it. He simply lies there, with his two yellow, cold and cruel eyes looking steadily out for what may come along. He is making his living in the easiest possible way, which is just what any wild animal or wild man always does. It is this habit of the muscallunge of lying hidden on the bar and looking out upon the deeper water which should give you a clue to the easiest method of making him your prey.

There are two ways of angling for the muscallunge—by trolling with the spoon hook and by casting with the spoon hook or with large bait. The method of trolling is the most common one, and for a long time was the most successful one, though to-day there are many skillful muscallunge anglers who do not troll at all, but prefer to cast a large spoon, or sometimes a spoon with a baited hook below it. In either case the fishing is done along the edges of the bars where the muscallunge are supposed to lie.

We will suppose that you wish to follow the customary fashion of trolling for the muscallunge. You will use a No. 8 fluted spoon, silver and red or copper and red. Below this hook there may be a triple gang and a tuft of colored feathers, or, if you wish to be very modern in your notions of muscallunge fishing, you may perhaps have a single large hook wired below the spoon. Upon this hook you may use a piece of bait made of the gullet of a wall-eyed pike or of a pickerel, or you may use preferably as a bait a very large minnow or a small sucker. Some anglers prefer the unbaited spoon, as they say they are then less troubled by wall-eyed pike, which are so apt to strike at a small bait trolling behind a spoon. Personally, I like to cast for muscallunge with a single large hook and a large bait, but sometimes I use a spoon above this hook. You may use your own judgment in these matters, as I do not wish to lay down any hard and fast rules for you, but simply to put you in the way of exercising your own intelligence.

It is necessary that either you or your guide, if you have one, should possess a knowledge of the location of the bars in the lake where you propose to fish. The stock in trade of any guide is simply his knowledge of this sort of country. Perhaps, to begin with, we will do better to employ a guide and let him row us about the country, at least until we have learned the location of the bars. When he tells you to begin fishing, you drop overboard your spoon and let it troll 30 to 40 feet behind the boat, the motion of the boat compelling the spoon to revolve rapidly in the water a few inches below the surface. Your reel should be a large barreled double multiplier. Your line should be a braided silk line very much larger than you employed in bass fishing. Your rod should be one weighing 8 or 10 ounces, and it should be stiff and springy, not over 8 or 8½ feet in length. The strain on the rod is considerable when you drag a big spoon through the water, and should you strike your fish, you need to have a rod springy enough to stand very stubborn and heavy rushes. Two can fish from a trolling boat as well as one. I will give you the inside position, or the one nearest to the bar. You will notice that I let my line out much longer than yours, so that my spoon is 50 or 60 feet, or even more, back of the boat. You would think that my spoon would be the one most apt to catch the fish, yet this does not seem to be ordinarily the case. The shorter line and the spoon closer to the boat is the one which ordinarily produces the most fish. The theory of the guides is that as the boat passes along the bar the muscallunge is frightened and starts down for deeper water, trying to get behind the boat. As he does so, he sees this small, glittering object following along after the boat. Why he strikes the spoon, whether in anger or in hunger, is something not yet answered of human wisdom. Yet it is true that, if he starts to go behind the boat, he will first see the spoon which is closest to the boat. Hence, as a matter of courtesy, I give you this choicer position, just as after awhile I would expect you to give it to any stranger or any guest whom you might have out with you in the boat.

Do not let your line troll out too far behind the boat. You will find plenty of little weeds sticking up beyond the water, and if you have out too long a line the least little variation in the course of the boat will allow your spoon to sag, so that you will be continually afoul. Moreover, if you should raise a fish at that great distance, it would be hard for you to strike and play him successfully. There is no set rule about the length of line. Experiment in this regard, but always keep a line short enough to give you control over your bait. This is a good rule to follow in every kind of fishing.

Now we run along, and all at once you feel the tip of your rod suddenly jerked down. It felt as though you had struck a snag or a weed, but you have a wrench and a tug which shows it is a fish. You are very much excited, for any strike on a trolling rod seems heavy at first. Not so with your guide. He knows that things would be more serious had it been a muscallunge that struck. "Only a wall-eye," he says, and barely stops the boat to allow you to recover your line and shake off the unfortunate wall-eye into the water. The wall-eyed pike is very numerous in these Northern muscallunge waters, and constitutes a great nuisance to the man who is fishing for the greater game fish. Still worse is the little pickerel, so called, a fish rarely attaining over 3 pounds weight, yet exceedingly ambitious in the matter of spoon hooks. These "snakes," as the guides call them, are always the abomination of muscallunge fishermen.

Sometimes we strike three or four of these wall-eyes, or "snakes," or bass, before we get into the serious business of the day. Then all at once you feel a tremendous smashing pull at your tackle, as though you had run afoul of a steamship or something of that kind. There is no mistaking it this time, and you and the guide exclaim at once, "It's a 'lunge!" You need no one to advise you in the matter, for the way in which your line goes through the water and the manner in which your rod tip is drawn down below the surface is proof enough of that. I hope that in trolling you have been careful to keep your rod out over the side of the boat, close down to the water and parallel with the water. If so, you now have a much better chance to strike and play your fish than you would have had the rod been held up with the tip above your head. In the latter case the fish in jumping would be apt to get a slack in the line. On the other hand, if the rod be kept with the tip close down to the water, the fish will not jump so high, and he is more easily pulled down again flat upon the water and prevented from either falling upon the line or shaking out the hook.

The tactics of the muscallunge in fighting the rod and spoon will very soon be obvious to you. You are fast into a good fish, as your guide informs you, and by the way he pulls at the rod you are satisfied that he will weigh at least 40 pounds. Perhaps he weighs 15. He makes away in a long, straight line, and then, all at once, you see your line begin to go up. The guide informs you that the fish is going to jump, and at the same instant you see a great form hurled high into the air far to the rear of the boat. Now is the time, as I said, to keep your lie taut and to pull the head of the fish down upon the water just as fast as you can. He wants to throw the spoon out of his jaws, and if he jumps on a loose line he will shake his head so savagely that he is very apt to throw the spoon hook far away from his jaws. I have seen a spoon hook thrown in this way more than 20 feet by a muscallunge, and once saw a spoon hook cast directly into the boat from the mouth of a fish which rose close up and shook himself free.

You will see your fish rise once, twice, three times—perhaps four times—quickly and savagely in his natural maneuver in the attempt to cast out the spoon. If you stop him in this and get his head down on the water pretty soon after each jump, your fish will change his tactics, and instead of making these savage runs upward will take a long, steady run downward as deep into the water as he can. Your guide, if you leave the matter to him, will probably start at once for the middle of the lake, rowing rapidly and endeavoring to tow the fish after you. This is a favorite maneuver of the guides, and they think that they thus tire out the fish and drown it, as they call it, more rapidly than it can be done in any other way. It is perhaps a safe proposition that it is desirable to get the fish free from the bars as soon as possible, but this is as far as I can go in the way of indorsing this custom of towing a muscallunge out into deep water. On the contrary, so far from attempting to drag a muscallunge behind the boat, I counsel you, as soon as your fish has sounded, or gone down into deep water, to have your guide row directly to him, picking up all your line as you go, and keeping a smart strain all the time upon the line. Your fish is big and heavy, and perhaps has imbedded himself in the coarse growth at the bottom of the lake, so he will stand quite a strong strain. Get close to him, perhaps nearly over him, and then, by striking on the butt of the rod or by twitching on the line, try to drag him up again. When he finds that you have come directly to him and are forcing the fighting, he will get into a kind of panic. At first the embodiment of ferocious rage, he will now show that he is susceptible of fear like any other fish. His runs will be shorter and more nervous. His leaps will not be so high nor so frequent. At last he will turn up the side of his head as he comes to the surface and you will be able to get his head started to the boat. Slip the boat down to him slowly and at the same time reel the fish toward the boat carefully and delicately, seeing that your line is free both in guides and on the reel, and keeping always ready for a quick rush. As soon as the fish comes alongside the boat you may look for trouble. He may lie and glare at you with his cold yellow eye, looking as savage as you like, and yet lying as still as a log. Then quick as a flash he may change ends and roll over, going away in a long, steady run, which very often proves fatal to your chances if you are not looking for it. Keep your line free now and see that the reel does not clog. Just touch the barrel with your thumb and let it run free if the fish so desires. His run will not be very long and the strain on the rod will soon bring him around. Two or three times he may do this, until at last you have him close to the boat and fairly whipped. Then the guide reaches out with the gaff hook, strikes him either through the shoulders or through the gills, and with one long, sweeping motion pulls him up into the boat. Sometimes the guide carries a pistol, and as the fish lies alongside, shoots it through the head near the eyes, thus stunning it, so that it can be brought into the boat without any trouble. Some consider this latter method brutal, though really it is more humane than impaling the fish upon the steel gaff. Yet other anglers prefer to stun the fish by a blow from a club dealt upon the head as it lies swinging at the mercy of the rod. This blow sometimes throws the spoon hook out, and it is a more risky way of administering the coup de grace than either of the ways above mentioned. After the fish is in the boat, look out, for it is very apt to begin its fight anew and to thrash about violently. A muscallunge has a nasty mouthful of teeth, and it is not safe to approach its head with the naked hand until one is sure that both teeth and head are quieted for good.

You will observe that in killing a muscallunge on your rod, which does not weigh over 8 or 10 ounces, you will probably occupy the best part of an hour. A 30-pound fish will ordinarily take from an hour to an hour and three-quarters to subdue, perhaps much less if you go directly to him and fight him savagely. It is not wise to urge the matter too much; but, on the other hand, the fight is much longer if you stay away from your fish and try to work him on a long line. A fish of 10 or 12 pounds weight can be brought to boat in less than half an hour, sometimes in less than five minutes under proper circumstances. There is much difference in the fighting qualities of different specimens of the muscallunge. A fish in good flesh and good condition will, of course, put up a more vigorous battle than one which is lean or in ill sorts.

As for the method of casting for muscallunge, you will observe that it is much the same as casting bait for bass, excepting that your reel is a little bit larger and your tackle a little bit heavier, the line especially being stronger. You row slowly along the face of the bar and sweep the rod just as you do in casting for bass. Place your bait or your baited spoon along the edge of the bar, reeling it rapidly toward the boat as soon as it has struck the water. As you are thus fishing with a shorter line than that actually used in trolling, and as you therefore very often see the rush of the fish in striking the lure, you will find this form of fishing the muscallunge far more exciting than that of trolling. For trolling I cannot say that I have ever had very much favor, though it is a very killing way of taking the fish. Casting with the spoon may be called more difficult, more scientific and more exciting. The playing of the fish in either case should be the same. Keep your rod close to the water so long as your fish is fresh and strong. If he jumps, see that he does not fall on the line, and do all you can to keep him from shaking his head free on a slack line. If he starts straight for the boat, your reel cannot take in the line rapidly enough, and your boatman must aid you in keeping a tight line. In either case, just get free enough of the bar to afford you good fighting room. Then do not be afraid of your fish, but go to him and fight him out boldly.

Muscallunge are sometimes taken by putting out large floats near the edge of the bars and fastening to these floats lines baited with good sized wall-eyed pike, suckers or bass. This method of set fishing once in a while will produce a big muscallunge. I cannot recommend it to you, as it is not properly to be classified within the limits of sport.

It is probable that muscallunge in these later days have become more or less accustomed to the sight of the artificial spoon hook. At best this is a small bait, or would if it were alive be a small bit of food for so large a fish as the muscallunge. Perhaps the constant trolling around the lakes has taken half the attraction from this sort of lure. Really, if the muscallunge wishes to do so, he can take very large bait. A 20 or 30 pound muscallunge can swallow a 3 or 4 pound bass if he likes. Very fine bass, wall-eyed pike or Great Northern pike have been taken, showing on their shoulders and sides the deep scars made by the teeth of the muscallunge. It is probable that the largest muscallunge could be taken by using very large bait, fishes weighing perhaps 2 or 3 pounds at least. Of course, in trolling or in casting, such large baits are impracticable. In casting one must use a minnow weighing at most only a few ounces. Yet this minnow, when arranged back of a spoon hook, makes the appearance, on the whole, of a rather large bait, and as such it appeals to the appetite of this insatiable fish. He rushes at it perhaps purely in anger, and perhaps because he wishes something to eat. The rest of it depends upon your own coolness and steadiness.

I want to counsel you, while fishing for muscallunge, not to get excited and fall out of the boat, for such a mishap might be serious to yourself and to your friends. It is the part of the sportsman to keep his nerve with him, to be always steady and not excited. The rush and the spring of the muscallunge are things calculated to try the nerves of the nervous. It is this excitement, this element of chance, which gives you the sport. I would not have you impassive or apethetic, if that were possible, but I would counsel you in this line of fishing, as in all others, to be master of yourself, and in this way you will best learn to be master of the creature which you are pursuing.

In the summer time the lakes of Wisconsin and Minnesota become impregnated with a light milky substance known as the "bloom," which is no doubt composed of the pollen of certain aquatic plants. When the water is in this condition fish commonly do not bite very well. Most people think that this "bloom" is the reason why muscallunge do not rise to the spoon. Other fishermen point out, with much greater likelihood of truth, that the reason the muscallunge does not rise freely in midsummer is that at that season of the year he sheds his teeth. That he does so shed his teeth is certainly the case, and it is natural to suppose that during the shedding season he would be somewhat off his feed. This is perhaps the greatest reason why the midsummer months are the poorest for muscallunge fishing. June is perhaps the best month, or at least the one which is the most popular. Late in the fall—in October or even early in November—is a very good time to fish for muscallunge, and it is in the fall that often the largest specimens are taken. The weather is not so pleasant then, but the fish seem to strike the spoon better than they do during the warmer times of the late spring.

I have only one parting word of advice to you, as you set out for your adventures with the giant pike of America—that is, when you go muscallunge fishing, leave your gun at home. There are deer in the summer time along nearly all the better muscallunge lakes of our Northern States. The temptation to shoot a deer out of season should not be allowed to overcome you. You do not need a gun to kill muscallunge, nor do you need it to kill a deer. Leave it at home. Take an extra rod, an extra line or so, and a dozen spoons ranging in size from No. 6 to No. 8. Learn your own angling grounds as soon as you can and do not leave everything to your guide, as is the habit of a great many sportsmen. The guide is in the business not purely as a matter of pleasure. The best feature of sport is that it develops one's own resources and cultivates his own self-reliance. I must ask you, therefore, in your investigations of the muscallunge, to get your knowledge at first hand, and to apply it then as advantageously as you are able.

W. G. DE GROOT.

Massachusetts Lobster Veto Stands.

MASSACHUSETTS FISH AND GAME PROTECTIVE ASSOCIATION, Boston, April 23.—*Editor Forest and Stream:* Your readers will be glad to be informed that both the 9-inch lobster bill and the other to permit mutilation of lobsters have been defeated by the interposition of Governor Crane. The attempt made yesterday to pass the bills over the Governor's veto was unsuccessful. In the House the vote was 50 in favor of passing the bill over the veto to 127 against, and in the Senate it was 8 to 19.

The Massachusetts Association has won another victory. In 1896 the 9-inch lobster bill was vetoed by Governor Wolcott.

HENRY H. KIMBALL, Sec'y.

SUPPLEMENT TO FOREST AND STREAM, May 4, 1901.

RAP FULL.

New England Fishing.

BOSTON, April 27.—The ice is not out of the Rangeleys nor Moosehead, but may go from either at any time, if the stormy weather and rain continues. Still, if the weather should turn cold and freezing, it might remain fast for a week longer. A couple of Rangeley guides were here on Wednesday and Thursday, and they were for hurrying back, believing that the ice might go at any moment, and their work begin. The Brackett and Clark veteran angler party, made up each year of W. D. Brackett, W. P. Clark, S. Henry Emery and Rufus Brown, is all ready to go to the Upper Dam as soon as the ice is out. Mr. Clark has fished those waters regularly every year for about forty years, and he and Mr. Brackett have been there together almost as many seasons. Mr. C. P. Stevens, of Camp Vive Vale, Richardson Lake Narrows, is always one of the first to be off. Going to the Rangeleys is to include a new feature this year. Two parlor cars are to be put on from Portland to Bemis. The cars are named the Rangeley and the Bemis, running as follows: Leave Portland at 8:30 A. M. and 12:55 P. M., and Bemis at 7:55 A. M. and 1:25 P. M. The service will commence May 13. On the other route parlor car service will be made between Portland and Farmington, broad gauge; with a new parlor car on the narrow gauge from Farmington to Rangeley.

Grand Lake waters are clear of ice. They cleared early this week. Mr. Jacob P. Bates, C. A. Hopkins and Rev. C. A. Slack are off for their spring salmon fishing. They go to their own camp, in the Grand Lake region. Dr. Heber Bishop, W. S. Hinnan, Mr. Whiting and Mr. Perry have started for Clearwater Pond, Farmington, Me. There are good reports of salmon and togue fishing in that pond, as well as in Varnum pond, near by. At Lake Auburn fishing has been greatly hindered by the cold rain and northeasterly gales. But a few salmon have been taken. On Tuesday Fred Lemaire, of Lewiston, caught a salmon of 8 pounds and a trout of 3 pounds. The ice is out of Newfound Lake, New Hampshire, and some Boston sportsmen have gone up there. The weather has been too bad for any sort of success, though one or two salmon are reported; one to P. H. Smith, weighing 4 pounds. Mr. T. J. McDonald, of Lowell, with Mrs. McDonald started for Newfound Lake Friday. They fish this lake every spring, and then go to the Upper Dam. With some fishing friends, they have built a camp at Black Point, Mooselucmaguntic, the past winter. Mrs. McDonald is a good deal of an angler, and well up to her husband in that direction, though his record is one that would make the novice stare. She has been in California a part of the winter, and has been fishing for sea bass in Pacific waters. She caught one of 10 pounds weight, and told her husband of her success with a great deal of pride; and how she landed the big fish all herself. "And did it really weight 10 pounds?" he asked. "Well, what's the harm if it weighed a pound or two more or a pound less?" was the reply. There the matter was dropped. Winnipisaukee fishermen have been having a rather hard time since the ice went out. The wind has blown a gale almost every day, with a cold rain. Mr. D. W. Tenney, of Methuen, and George Tenney are there, but they send only reports of the lake being too rough for fishing. The ice still lingers in Lake Sunapee.

April 29.—At last a couple of bright, sunny days, following the continued cold storm and gales, have given the fishing season a start. New England waters are, many of them, open very early, but the weather has kept back the fishing. An Augusta, Me., report of Saturday says that fishing at Cobbosseecontee has been retarded by the cold rains. E. H. Langston was the first fisherman to report any success, including a trout weighing 2½ pounds. Stanley Hawkins has taken three fine trout, one weighing 5 pounds. Charlie Kinsman caught one fishing from the steps of his cottage. R. W. Soule has taken three trout, the united weight of which was 10 pounds. Milo McLinch has caught a trout measuring 22 inches in length. Among the other good fishing lakes in that vicinity may be noted the Belgrade chain, Annabessacook and Maranacook, at Winthrop, Pleasant Pond in Litchfield, and China Lake at China. These waters have all been receiving the attention of the Fish and Game Commission in restocking for several years, and all of them are beginning to show good results in both trout and salmon. Catches at Lake Auburn have been kept back by the cold winds and rain, but Saturday brought out a lot of fishermen, with more or less of success. A Skowhegan report says that the lakes and ponds in that vicinity are all open, with something doing on the trout brooks, though the water is still too high for the best results. At Lake George E. Richardson and George Averill have the honor of taking the first landlocked salmon of the season. At Alton Bay, New Hampshire, the fishermen have been gathering since the end of the storm. Nearly all the fishing camps at Alton Bay and Glendale are occupied, and good weather will bring strings of trout. Horace Pope, of Brockton, Mass., has already taken one salmon and two trout; H. L. Sargent, Haverhill, a trout of 4 pounds and a salmon of 6 pounds. A Meredith, N. H., dispatch says that despite the bad weather more trout and salmon have been taken at that point than for several years. All of the local guides are very busy, with new parties arriving since the storm. Bristol, N. H., reports say that Newfound Lake is starting in well. Gen. Paul Lang, of Oxford, has taken a salmon of 7½ pounds, and Gen. Rufus N. Elwell, of Exeter, two salmon of good size. William and Frank George have taken a lake trout weighing 12 pounds, the largest fish of the season, thus far. They have also caught two or three salmon. Mr. and Mrs. Eben Phillips, of Swampscott, Mass., have been at Newfound the past week, and Mr. Phillips has caught a trout of 6 pounds and two salmon of 3 pounds and 4 pounds weight. Mrs. Phillips has taken a handsome laker of 4 pounds. Local sportsmen are still in the lead at that lake, having taken last week more than a dozen salmon, from 3 to 8 pounds weight, and a number of trout. Boston anglers are gathering there. A report from The Weirs, New Hampshire, mentions cold weather and high winds, with a downpour of rain. Fishing has not been indulged in to the extent that is usual on the ice first leaving Winnipisaukee. At Laconia women anglers have been taking trout and salmon from Winnesquam, and good weather promises to bring good fishing.

The big salmon pool at Bangor, Me., has not been panning out to the fishermen very well the past week, by reason of the rains and freshet in the river. Still one or two good ones have been landed; George Willey, a 24-pound salmon; Samuel Drinkwater, 22-pound. Beyond Bangor there are numerous trout and salmon lakes and rivers, many of which are open, and all promising ample room and good sport for the lovers of the angle. From Square Lake, Aroostook county, some good catches of trout are already reported, such as 50 pounds of trout and salmon in one day by P. N. Burleigh and O. N. Smith. In northern Aroostook waters the ice still lingers, but it will soon be out, and great catches of trout may be looked for. Most of these waters are new, and generally they are well supplied with brook trout. Stream fishing in that part of the county is all that could be asked. Happy is the lover of the rod and reel who can spend his vacation on the right spot in Aroostook county. Washington county is also coming to the front in the way of trout and salmon fishing. The Union Salmon Pool, at Calais, is expected to show good results this season. At Pennesseewassee Lake, Norway, Me., the early fishermen have got into some trouble. As soon as the ice went out they begun to assemble and to fish. A warden soon appeared and warned them, that under special provision of the statutes that lake was not legally open till May 1. Some of the sportsmen ceased fishing, while others continued. Some of the anglers who persisted in fishing were leading citizens of the surrounding towns and legal complications are expected. SPECIAL.

ANGLING NOTES.

Scap Net.

A GENTLEMAN much interested in fish and game protection and president of a society that is very active in this direction, writes me a letter which I will give nearly in full:

"Will you tell me what a scap net is? It appears in the game law, but it is new to me, and undefinable by any man in this section of the State, as far as I am able to find.

"Our game protector seized a number of fyke nets in the river a few days ago, and took from the docks where they were in use four squat nets, or, at least the men under him seized them. The owners of the squat nets swore out warrants for the game protector's men before a justice of the peace, and yesterday the case was tried. The game protector was well defended by an able lawyer, and our society had two lawyers in attendance as his counsel. An ex-assemblyman represented the pirates and made a pretty stiff case for them. He claimed that the 'scap net,' so called, was a squat net, which they were using, and that the use of these nets is permissible under the law for the purpose of catching minnows for bait, but upon our production of the nets, showing that the mesh was too large to catch minnows, the tide turned against them, and the protector's men were acquitted.

"The case stirred up an immense amount of interest. A large court room was packed, three or four hundred men, mostly interested in fish piracy, being present. The lives of our protectors have been threatened, and there was blood on the moon, but nothing came of it; all was quiet. Still, we are all anxious to know what a scap net is. My thought is that a scoop net was referred to in the law, and through typographical error it was made 'scap.' I supposed I was familiar with all sorts of nets, but scap is beyond me."

It is safe to believe that scap is a corruption of scoop, but a scap net has been a scap net as long as I can remember, and it means a small hand net used for lifting fish fry out of a trough in a hatchery, or minnows out of a bait bucket, and I have often heard the term applied to a landing net. The Century Dictionary recognizes a scap net thus: "Scap net. A net used by anglers to catch minnows, shrimp, etc., for bait. See scoop net."

"Scoop net. A form of net used to bail out fish collected in a pound; also a small hand net, used for catching bait; a scap net."

The expression scap net occurs in the Forest, Fish and Game Law of New York in Section 65, as follows: "Nets other than scap nets, dip nets and minnow nets, when permitted, shall not be set or used without a license granted by the Commission."

The context indicates that a scap net is not to be used for taking food fish, but belongs to a class of nets used in taking minnows.

Large versus Small Trout.

"Massachusetts has a new trout law which forbids taking trout under six inches in length. The Hartford Times says that this law will bear hard on fishermen in the mountain streams in Berkshire county which are much like those of New Hampshire, where the limit is wisely placed at five inches. This matter has been often discussed, and the six-inch limit in Connecticut works the same hardship in small streams. Dr. Pyrne, an excellent authority on fishing, maintains that 'if the purpose is to prevent the depletion of streams the proper way is to forbid the taking of large fish instead of small. One of the large fish will produce thousands of young where a small one produces scores.'"

The quoted matter is a marked editorial from the Albany Argus of recent date which I received this evening in my mail, and I assume that I am expected to say something on the subject in this column of FOREST AND STREAM.

The first thing I desire to say is that the Hartford Times' man has a good memory, for I answered this same heresy more than a dozen years ago, when Dr. Prime first uttered it, for it was Dr. W. C. Prime who advanced it, and not Dr. Pyrne, as the types now make the name. Just one week ago to-night I was at the Suffolk Club on Long Island and something that was said by one of the members recalled Dr. Prime's article and my criticism upon it, and I then determined to look for the article and my comments, and now this editorial comes as a further reminder. First, I will quote a part of the original article as it appeared in the New York Journal of Commerce under the head lines "Stop Killing Large Trout." "Useless Fish Commissions," "Absurd Game Laws." I had hoped that the argument in favor of killing small trout and preserving the large ones was forgotten, and its teachings unheeded, for if followed it is bound to work great injury to the trout fishing of the country, and for this reason it is well to discuss the matter once more, as it has come to the fore again after all these years.

The Original Complaint.

The following quoted matter appeared over the old-English W. used by Dr. Prime in his contributions to the Journal of Commerce:

"Do I intend to keep this small fish? Of course I shall keep him. You have the common notion that small trout should be put back and only large fish taken home. This notion is one of the absurdities of angling literature and angling legislation. It is just possible that continued combating may in time educate the people, so that what is called 'fishculture' may proceed on correct principles.

"The best way to combat it would probably be to take the boldest course, and advocate statute law forbidding the capture of any trout weighing over a pound. Better still, for a few years at least, would be the preservation, in some waters, of all weighing over a half-pound.

"The indignation with which the city sportsman has met this proposition when I have heretofore made it has been very amusing. But no one ventures to answer the common sense argument—namely, that if you wish to breed for food or market purposes any animals, cattle, sheep, chickens, trout, you are very ignorant indeed if you adopt the practice of killing off your old breeders every spring and depending on future increase on the young animals. Take, for example a farm through which runs a good stream. The owner desires to restore the trout fishing which was once good, and which supplied his family with many luxurious meals. They eat lamb, chicken, veal, various meats. They consider the question of adding fish to their home supply. The farmer purchases a lot of trout and stocks the streams. Then he consults books, anglers and statute law, for instruction how to secure a steady supply of trout in his brook. He is told never to kill small fish, but when they grow large to kill and eat them. He tries the experiment, catches all the trout he can over five inches long and expects a lot more from year to year. He finds his experiment is a dead failure as ninety-nine out of a hundred have found it of late years. Then he tries again on common sense principles. He treats trout as he treats his hens and his sheep, keeping the well-grown for breeders and killing each year more or less of his lambs, chickens and young trout. This time he is successful. In his stream are a goodly number of large trout. They grow to weigh from one to three or four pounds each. He would no more kill one of those large trout than he would kill his breeding sheep. From each pair of them he expects and has many thousands of young fish. He preserves them two years, by which time they are good little food fish. The stream swarms with them. * * * I have no doubt that the total disappearance of trout from very many streams is due to the fact that the large trout have been killed out. * * * Repeal the ridiculous statutes which forbid killing and eating the trout chickens, and enact and enforce statutes forbidding the taking of any breeders—in short, of all which weigh over a pound. Each pound trout, if left to live, will be ancestor of a hundred thousand trout, and the breeders will live ten or twenty years continually producing."

There is more of it, but I have quoted a fair sample—enough to show that the author had scarcely any knowledge of the habits of trout from the standpoint of a breeder. He says no one ventures to answer the common sense argument he advances, but I did have the hardihood to answer it, and I will quote from what I said.

Comments Twelve Years Old.

"The letter, printed in another column, is sent to us by a subscriber in New York city who writes, 'Read it carefully; there is much room for thought in it, and it has common sense in it—at least, I think so.' The letter is signed with an old-English W., the sign manual of no less an authority on angling than Dr. Wm. C. Prime.

"We are a great admirer of Dr. Prime's writings, and we have read this particular letter carefully, as advised to do, and in our opinion it is weak in argument, wrong in assumption of facts and utterly lacking in that for which it was commended to us—common sense. We say it with regret, but the author appears to have given no heed to the results derived from years of practical fishculture, and little thought to the habits of the fishes themselves, otherwise he would have chosen comparisons in breeding with surrounding conditions more similar than those of farm cattle and wild fishes.

"Trout are cannibals. They eat the eggs of one another as they are deposited, if they are not securely covered, and the eggs that are covered are eaten by the next pair of trout that uncover them to make their own spawning bed. They eat the fry that escape destruction at an earlier stage, and then they eat one another so long as life lasts. How would sheep and cattle thrive under such conditions? Is it not an absurd comparison?

"Trout breeders—those who raise trout for market or breeding fish for sale, men who do this for bread and butter—will say, and they judge from practical experience, that the ponds and streams must be watched for old fish—big fellows that prey upon everything in sight smaller than they are—that they may be removed. It will be difficult to catch them, for they are wary from long experience with the lures of men, but fish breeders will tell you if you would preserve your stock to remove them with net snare or spear if other means fail. Protect the big trout and permit the small ones to be taken, and between the trout and the fisherman there would soon be nothing but big ones, and then, in a short time more, when big ones, if any, would have to be caught, there would be none left worth mentioning.

"Nearly twenty years ago the writer obtained permission to fish a small pond which for ten years or so previous had been closed to all fishing. The owner would not fish it nor permit any one else to do so; but when the property was inherited by his son, the permit was obtained. The fish were nearly all of uniform size, as if they had been screened as coal is screened to obtain lumps of equal size. They were gaunt, ferocious looking fish, and far from inviting in appearance. There was absolutely no

young stock in the pond; it had been eaten as soon as born. The reason that the farmer's trout brook now contains no trout is because the farmer and others has had the same mistaken idea about trout that the author of the letter gives expression to. He thought he could catch all the baby trout as they came to be of fingerling size and the stock would be kept up in some mysterious manner by a merciful providence.

"Kill the big trout and let the little ones grow to six inches by statute law (not five) and the brook will be replenished. The trout will spawn at least once before they can be captured legally, and with each recurring season there will be a stock of young fish to grow to breeding age and size before they can be lawfully caught.

"There never was a more mischievous, misleading letter written upon the subject of fishculture than the one we refer to. The author thinks fish commissions useless, yet fish commissions hatch from 95 to 98 per cent. of the eggs they take from trout and nature hatches less than one per cent. Cut off the supply of young, vigorous breeders and the fish commissions could not hatch fry fast enough to feed trout over one-half or one pound in weight protected from capture by law. * * *

"If all male trout could have rings in their noses and be led with leading sticks and the female trout hatched in box stalls, and the fry herded in pastures by watchful men, then Dr. Prime's plan might work; but until trout are taught to eat hay and oats and stay on a farm without jumping fences and escaping, we will have to continue to breed fish in water; strengthen our excellent fish commissions, protect young, healthy, breeding fish; kill the old cannibals and fine or send to jail the netter and fingerling hunter for non-compliance with just and reasonable laws.

"There is not a stream, other conditions, such as food, temperature and due observance of law, being favorable, where the six-inch law is enforced but the trout are increasing. The farmer does not eat his chickens the moment they break the shells, nor his calves before they are six weeks old, and a thoroughbred fisherman does not kill baby trout under six inches and feel that he is enjoying manly sport. * * * We can charge the letter only to lamentable ignorance of the life and habits of our trout, but coming from such a source it might work injury if it were passed by unnoticed, as it would be if written by another pen. We have attempted to write mildly upon this subject in face of the fact that a grievous wrong is done to our fish commissions by one whom we feel would uphold them if he understood better the admirable work they have accomplished and are accomplishing, but such changes as are advocated in the letter, if followed, would surely be the means of destroying our trout fishing."

Except to cut out a good part of letter and comments, I can, after a lapse of years, see no changes to be made. I feel now what I said then, only more so.

Comments To-day.

The big trout which would be protected under the proposed plan would not be the best breeding fish. The letter states: "Each pound trout, if left to live, will be ancestor to a hundred thousand trout, and the breeders will live ten or twenty years, continually producing." This is a most unfortunate error to put in circulation. A yearling trout, if well grown, will produce eggs, but a trout that is called a yearling will really be eighteen or twenty months old. They are born in the spring and spawn in the fall, so that a "yearling" at the spawning season may be twenty months old, and a two-year-old may be over two and a half years. Eggs have been taken from a yearling trout that was four inches long, but in a hatchery it is not customary to take eggs from yearlings, although in exceptional cases it has been done when the fish are well grown. At two and three years of age trout produce strong, plump, healthy eggs. One establishment in this country breeds from two-year-old fish and never from older fish. One of the most successful of the English establishments breeds from two and three year old fish; but remember that the two and three year olds are really nearer three and fours years respectively, and these, I think, are the best fish for breeders. Four and five year old fish may be used as breeders, but after that, while they may produce a greater number of eggs, they are apt to be small relatively and the resulting fry is less strong and vigorous than the fry from younger fish. As an example: Last autumn there were a lot of six, seven and eight year old fish in a breeding pond, but few, however, of the latter age. At first it was determined not to take spawn from them, but for certain reasons they were finally spawned and the eggs were kept separate from the eggs of younger fish. The impregnation of the eggs of the old fish was imperfect as compared with the eggs of young fish, and the fry were weak. A flood came, washing surface water into the pond feeding the hatchery, and with the surface water was mud, and the hatchery troughs were so thick with it that it was impossible to see the fry. Of course the fry were all removed at once, and no harm came to the fry from the eggs of the young fish. The fry from the eggs of the old fish died, the gills becoming inflamed and distended until death ensued.

Just here it occurred to me to look at a book written by Frederic M. Halford (Detached Badger, of the London Field), author of "Floating Flies and How to Dress Them" and "Dry Fly-Fishing," etc., one of the best known of English anglers. The book is entitled "Making a Fishery," which is the English for improving the fishing in an English stream—keeping down weeds and the enemies of trout, and keeping up the stock of trout for angling purposes. There are two things which struck me at once as bearing on the point of this note. First, a rule under "Limits," which reads, "No trout or grayling to be killed under thirteen inches in length. Any under this length to be at once carefully returned to the water." Second, under "Netting," to remove anything that may injure the fishing. "When a net is once on a bank all trout and grayling should be promptly taken out; old or ill-conditioned specimens should be knocked on the head and the remainder deposited in bait cans or carriers." Under "Poachers" there is this, "Among fish, chub, perch and eels are certainly destructive; and overgrown trout, especially old male fish, are dreadful sharks. Wherever and whenever, in plying nets or other means of catching fish, any of the above are secured, it is hardly necessary to say that they should not be returned to the water."

Here is a book of over 200 pages devoted exclusively to the care of a stream to maintain trout fishing in it at its best, written by one of the most advanced anglers of this day who treats the subject from a business standpoint, considering pounds, shillings and pence, in a desire to obtain the best possible fishing now and in the future, and the whole tenor of the book is to preserve the small trout and kill off the large ones.

"But it is an English book!" Yes, I know that, but it is the only one I know of in the English language devoted exclusively to this subject, and what is good for an English trout stream can be applied with profit to an American trout stream, for the principles are the same on both sides of the water. A trout 6½ inches long, measuring to end of tail, weights 1¼ ounces—at least one that I weighed did. A trout of Mr. Halford's limit in good condition would weigh a pound. The 6-inch fish would produce from fifty to one hundred eggs, and the 13-inch fish from 1,000 to 1,200. If trout cannot be caught under 6 inches, and the law is enforced, there must be some natural increase, though the eggs from the yearlings are not as good as from the two-year-old; but preserve the 6-inch fish and some will escape capture the second year and produce better eggs and more of them. If big fish only are protected, the stock must deteriorate for breeding, and weaklings be the ultimate result, aside from the fact that the old breeders are cannibals.

As I am writing the FOREST AND STREAM for April 27 comes in and I find an editorial article in it regarding the breeding of the lobster, and desire to call attention to one paragraph: "Based upon these well-established facts (that lobsters do not, as a rule, produce eggs until they have reached a length of 10½ inches) of lobster life, the lawful limit of those which may be caught has been made in Massachusetts 10½ inches; in other words, the statute declares that no lobster may be caught until it shall have had a chance to breed."

Now the question is, if it is desirable, in order to keep up the stock of lobsters in the sea, that they should be allowed to grow to a size that will allow of their spawning before capture, will not the same principle apply to brook trout in a stream that can be netted and otherwise poached in season and out in spite of protectors and statutes?—for it would seem that a lobster in the sea has a better chance for life under prevailing conditions than a brook trout in a mountain brook.

Seeing Is Believing.

On more than one occasion I have said that so many remarkable things have occurred in the fish world that were absolutely true, that I had reached a condition of mind that I never disputed a fish story, however improbable it might appear on its face. My friend, Col. William Cary Sanger, Assistant Secretary of War, in a personal letter makes a suggestion to me that will hereafter enable me to listen to any kind of a story about fish. He says of a certain story (which I will not tell here): "It reminds me of the man who told of the most extraordinary and improbable event and ended by saying, 'I would not have believed it if I had not seen it, to which the listener replied, 'I hope you will allow me the same privilege.'"

Now I am ready to listen to any kind of a fish story that any man in America or elsewhere would not have believed if he had not seen it himself, and Col. Sanger has my profound thanks. A. N. CHENEY.

CHICAGO AND THE WEST.

Beginning of Bass Season.

CHICAGO, Ill., April 27.—Bass fishing has begun in this part of the world, more especially by those good folk who wouldn't kill a spring chicken until all the shell was off its back. As usual Cedar Lake, Ind., is the first water near here to report returns. N. B. Soper sent up word to-day that on yesterday he caught the legal limit, twenty bass, at Cedar Lake. This has started up several of our fisherman who have gone to Cedar Lake to-day. We should hear of bass fishing within the next two weeks in the many lakes of the Fox Lake chain north of here.

Trout.

The trout season has begun in the earlier streams of Wisconsin. I received a very pleasant invitation from Mr. John B. McLeod, of Milwaukee, to join him and Mr. Miller on their preserved stream for a few days. Their party left Milwaukee yesterday, and it is with certain heart burnings that one must stay behind, because a week ago Mr. McLeod was out for three hours and took thirty "sweethearts," as he expresses it. If this warm weather extends as far north as Waupaca, these gentlemen will have nice sport. This is the same stream upon which Mayor Harrison and his friend, Mr. Washburne, have promised to spend a day or two later in the season, and it is doubtful if they could do much better in Wisconsin.

The Washburne Combination.

By the way, mentioning Mayor Harrison and Mr. Washburne recalls the ancient friendship which exists between these two. They have both been mayors of Chicago, and perhaps it is this common experience in grief which draws them so close together, and which leads them now and again to take to the woods to hide their sorrows. Mayor Harrison does not deny that Mr. Washburne is a successful trout fisherman, but he deprecates the methods employed by the latter gentleman. The following is the formula, as given by Mayor Harrison, for the celebrated Washburne combination, which is warranted to cause any old trout to leave its happy home. The list begins at the hand fly, or that nearest to the tip of rod, and reads in order as follows: One artificial fly, any color so it is red; one large gob of garden hackles; one number one spinner; one artificial frog; one artificial mouse; one phantom minnow; one artificial grub. In the opinion of Mayor Harrison and others this combination is not strictly orthodox for a fly-fisherman. As to Mr. Washburne, he simply smiles and asks his friends to come up to his office and see the 5-pound trout which now adorns the wall.

Wonder if He Counted Them All.

A St. Paul newspaper states that the hustling executive agent, S. F. Fullerton, is going to put in 100,000,000 wall eyed pike in Cass Lake this summer.

The Saginaw Crowd.

The good car W. B. Mershon will go into commission at Saginaw next week, and at midnight of the 8th of May its long, low, piratical form will be seen counting the ties north of Saginaw to some mysterious stream regarding which no better information is obtainable than it is "up north." The party will consist of ten. This is one more chance I had to decline. Sometimes I think it is tough to be a newspaper man, and think I could enjoy a job similiar to that of the lily of the field, which toileth not, neither does it spin. There will be some lilies on that car.

Fly-Fishing on the Evergreen.

Any open stream suitable for fly-fishing in the State of Wisconsin is apt soon to be fished out. It is with great pleasure, therefore, that I print the following kind and brotherly advice from Mr. Sam J. Ryan, of the Evening Crescent, Appleton, Wis. It is not every one who will tell about good trout fishing when he finds it, and Mr. Ryan deserves the thanks of all good anglers. His letter reads as below:

"I have discovered something that may be of interest to some of your readers. Since the Evergreen has been logged, the lower end of the stream no longer affords the trout of 1, 1½ and 2 pounds it once did. The Oconto streams just north and east of the Menominee reservation yield only small fish, but in large quantities. Another field has been opened, or will be this spring. It is in Langlade county on the upper stretches of the Oconto streams, where there are also a few little lakes. To get there, go by rail to Antigo, then east twenty-eight miles to Markton, Langlade county, and drive to A. M. Maeder's sheep farm. At the latter place there is some fishing, by walking one mile, but the best is several miles north in the wilderness, where last summer one string of thirty brook trout was caught, weighing 74 pounds. To get up there guide and tents are necessary, which Maeder has for small parties of three and four people. On one of the streams up in this wilderness a raft has been built and affords excellent fly-fishing; there the big ones are taken. Mr. Maeder is not in the resort business, but can in a pinch take care of four or five fishermen (no more) and can furnish tents and guides. He is an ardent angler and from his residence in this city for several years, we can say he is O. K. in every respect.

"It seems to me this is the best chance (outside of Prairie River) for fly-casting with some hope of reward in this State.

"Please understand I do not write this to give Mr. Maeder any free resort advertising, for he does not need the money he might charge boarders, but to put all venturous trout anglers in way of new grounds."

I have referred to this new locality on the Evergreen Mr. Geo. M. Eckels, of Chicago, who wants to go somewhere about June 1. I hope he will do well.

To-day I was talking with Dr. Boyesen, of Black River Falls, Wis., and he told me as a piece of exceptional valuable angling news that the best place he knew of in Wisconsin to fish for trout was a place called Dudley, on the Prairie River. This was hardly any secret, as I have before now told about many delightful experiences on that charming little river.

The Wisconsin anglers get action a little earlier in the season than the average Chicago fisherman. This is what the Appleton paper says regarding certain streams and certain persons of the delightful sporting grounds of upper Wisconsin:

"Many parties go to Shawano and thence to the Oconto streams north and west twenty or thirty miles. Otto Kuehmsted swears by the Oconto, and says nothing can be better. It is certainly a fact that in numbers the trout in the Oconto outshine those of any other stream, but they are not so much when it comes to size. The old tales of 1,000, 1,200 and 1,500 trout brought down by parties of three or four from the Oconto River are happily no more told."

Dr. and Mrs. W. H. Meeker are planning an early May trip to Wild Rose in Waushara county, where they had good success last year. Messrs. Will Stoppenbach, P. M. Conkey and S. J. Ryan will probably have a few days in May on a Michigan stream near Floodwood, where there is room enough to cast a fly without catching a tag-alder branch every time the line goes out.

The Kennel.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for a quarter-century.

Points and Flushes.

The American Kennel Club Stud Book, the official stud book of the American dog world, for the year 1900 is now ready for distribution. It is the seventeenth volume. Besides the registrations, which number from 54,328 to 59,208, there is a vast fund of general information, such as a list of the active members, associate members, bench shows and bench show winnings of 1900, cancellations, champions of record, corrections, Executive Board 1900, fox hound and beagle trials 1900, kennel names, prefixes and affixes, officers American Kennel Club and associate members 1900, Pacific Advisory Committee 1900, re-registrations, standing committees 1900, transfers, etc. Address Mr. A. P. Vrendenburgh, Secretary A. K. C., 55 Liberty street, New York.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

THE Field commenting on the challenge received by the Royal C. C. from the Winchester Boat Club, says:

The challenger intends to race in a racing-machine type of canoe, with sliding seat. If it is true that the canoe is to be designed by Mr. B. B. Crowninshield, we may expect a very perfect model; and we can only regret that that very able designer of extremely fast and pretty yachts is not called upon to produce a canoe of the R. C. C. cruising class, instead of a skimmer plank-balanced machine.

The slackness of the R. C. C. in not taking advantage of opportunities will now be driven home with real effect in that club. It has been admitted by almost every canoe sailor in England that the racing machine, with its sliding seat and chronic capsizing habits, was the direct cause of the late downfall of canoe sailing; that the machine transformed canoe sailing into an acrobatic performance, absolutely confining success in the races to the acrobat against the sailor. The racing of canoes has been resuscitated in the cruising canoe class, and racing canoes have died down to one or two old boats which occasionally put in an appearance. All that was said when it was some two years ago proposed to cut the class out, and to substitute a class of useful little "traveling" canoes. "Let them alone, they will die out." And so they would were it not for cup challenges. The danger is that the best racing men are now in the cruiser class, and it may be that, in order to meet the American challenger, some of them will be drawn back into building new racing machines, and thus revive the craft which nearly killed canoeing. On the other hand, if the sailing men stick to the cruising class canoe, there may be in the cup races wind and circumstances giving a certainty to the machine.

The best policy for the club, in the interests for future sailing, is to decide and to publily state, before anything is known of the American racer, that this shall be the last year in which machines will be admitted to the cup races. It will be too late to do so after the event, even if the cup remains in England, as it would scarcely be fair to thus dictate that any future challenge must be in an English cruiser class canoe. The Quincy cup of the R. C. C. is confined to the cruising class, and therefore it seems odd that the challenger should have elected to come in with a canoe which is only eligible to compete for the one cup.

Two Days' Race Meet at the Pan-American Exposition.

THE Committee on Sports of the Pan-American Exposition have included in their schedule a two days' race meet for canoeists. The races are to be held June 24 and 25, and are to be under the auspices of the Central Division of the American Canoe Association. The following well-known canoeists have been appointed to act as an advisory committee on canoeing: C. P. Forbush, chairman; G. A. Howell, E. E. Coatsworth and J. S. Wright.

The events are open to all members of the American Canoe Association.

The following is a list of the races:

June 24.

1. Tandem, single blade, ½ mile with turn.
2. Single, double blade, ½ mile with turn.
3. Relay, single blade, ¼ mile, over triangle course.
4. Tail-end, single blade, ¼ mile, over triangle course.
5. Club fours, single blade, ½ mile with turn.
6. War canoe, ½ mile with turn.
7. Single, single blade, ½ mile with turn.
8. Tandem overboard, single blade, ¼ mile with turn.
9. Hurry-scurry, 100yds. run, 100yds. swim, 200yds. paddle.
10. Tilting, heats.

June 25.

11. Single, single blade, 1 mile with turn.
12. Single, double blade, 1 mile with turn.
13. War canoe tug of war.
14. Tandem, single blade, 1 mile with turn.
15. Pursuit races, fours, 1 mile with turn.
16. Novice race, single blade, ½ mile with turn.
17. War canoe, Pan-American Championship, 1 mile with turn.
18. Combination (lady and gentleman), single blade, 1 mile with turn.
19. Upset, gentleman, ¼ mile.
20. Tilting, gentleman, trial.

First and second prizes will be awarded to each member of first two crews in all races having three entries or more.

Event 6, individual prizes to first and second canoe.
Event 13, two flags to winning boat.
Event 17, trophy cups to first and second boats.
Entry list will close June 15 for war canoes and fours.

Captains must include name of each member of crew. Entry blanks can be obtained from the chairman of the Advisory Committee on Canoeing; Chas. P. Forbush, Vice-Commodore Central Division A. C. A., 164 Crescent avenue, Buffalo, N. Y., who will gladly answer any questions relative to the races or conditions.

All prizes will be carefully selected and will be emblematic of the Pan-American Exposition. It is the intention to make this the best and largest canoe race meet held.

The races will be on the Park Lake, within the Exposition grounds, on a quarter-mile course which will be carefully laid out and buoyed.

A. C. A. rules and limits to govern.

A typical canoe camp will be arranged and tents erected for the convenience of the contesting canoeists. In addition to the races, an illuminated parade will be held Monday evening, June 24, followed by a regulation camp-fire at the camp.

International Canoe Race.

THE plans for an international canoe race between boats representing the Royal C. C. of England and the Winchester Boat Club, of Winchester, took definite shape when the following challenge was mailed:

To the Honorable Secretary of the Royal C. C.

Sir: At a meeting of the directors of the Winchester Boat Club, of Winchester, Mass., held on March 29, 1901, it was voted to challenge the Royal C. C. to sail a series of races for the sailing challenge cup of said Royal C. C., subject to the rules and conditions governing such contests, in the year book of 1900 of said Royal C. C. At the same meeting it was further voted that the Winchester Boat Club be represented in this series of races by Hermann Dudley Murphy, member of said Winchester Boat Club. Therefore, I hereby make such challenge in behalf of the Winchester Boat Club. I have the honor to remain, very truly yours,

C. F. A. SIEDHOF,
Secretary Winchester Boat Club.

Winchester, Mass., April 2, 1901.

Thomas W. Lawson has ordered another canoe to be built for Hermann Dudley Murphy, the challenger for the Royal C. C. cup, to be sailed at Langsdon Harbor, England, next August. The boat will be turned out by W. F. Stevens, of Bath, Me., the builder of the noted Fleet, owned by Paul Butler. The second boat will have more of a dead rise, without the fullness of lines of the first boat, now building at the Atlantic Works. Both canoes will be ready by the first of May. Paul Butler will bring his fleet of canoes here from the Vesper Country Club at Lowell and trial races will be held on Mystic Lake. Butler is the most noted sailer of canoes in this part of the country, and Murphy's two boats will thus receive a fine trying out.

Brooklyn C. C.

THE Race Meet Committee of the Brooklyn C. C. has mapped out an interesting programme for the coming season. The feature of the season will be the novelty race, under what the committee terms "get there" rules. These will be three in number, any canoe, any trim of sails, starting at signal and going one mile to windward and return. Contestants can use sail or paddle.

The following is the schedule:

May 11, Paddling Races—Paddling and sailing competitions.

May 30 to June 2—Spring cruise up the Hudson River with Atlantic Division of the American Canoe Association.

June 8—Sailing trophy races off club house, Gravesend Bay, L. I., over club courses.

July 3 to 8—Annual cruise to Huntington Harbor, L. I., and contest for the Pagan Cruising Trophy, three miles triangular, sailing a mile to a leg.

July 27—Club competitions off club house, Gravesend Bay, L. I.

Aug. 2 to 16—American Canoe Association meet, Thousand Islands, St. Lawrence River.

Sept. 1 to 4—Fall cruise to Huntington, L. I.

Sept. 7—Open races given by club, sailing and paddling, off club house on Gravesend Bay, L. I.

Sept. 21—Closing races of the season off the club house, Gravesend Bay; sailing and paddling, tandem paddling and club fours, the latter invitation events.

Knickerbocker C. C.

THE Knickerbocker C. C. at a meeting held April 11 at its club house at West Fifty-second street and Hudson River, decided to hold a meet on Decoration Day at some place on the Hudson River to be selected by the Regatta Committee. Egg Beach, the regular camping ground of the club, which is almost opposite Mount St. Vincent, will probably be chosen. The Atlantic Division of the American Canoe Association will also hold a meet on the Hudson at Lime Point on the same date.

A. C. A. Membership.

THE following gentlemen have been proposed for membership to the Central Division of the A. C. A.: Irving V. Earle, Syracuse, N. Y.; James P. Watson, Buffalo, N. Y.; Stuart A. Lansing, Buffalo, N. Y.; Arthur R. Gregory, Buffalo, N. Y.; Geo. H. Voss, Buffalo, N. Y.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Yachting.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

Yachting Fixtures, 1901.

Secretaries and members of race committees will confer a favor by sending notice of errors or omissions in the following list and also of changes which may be made in the future.

MAY.

18. Huguenot, special, New Rochelle, Long Island Sound.
25. New Rochelle, special, New Rochelle, Long Island Sound.
30. South Boston, club race; City Point, Boston Harbor.
30. East Gloucester, club race, Gloucester, Massachusetts Bay.
30. Atlantic, Sea Gate, New York Bay.
30. Harlem, annual regatta, City Island, Long Island Sound.
30. Indian Harbor, special, Greenwich, Long Island Sound.
30. Bridgeport, special, Bridgeport, Long Island Sound.
30. Canarsie, opening and parade, Carnarsie, Jamaica Bay.
30. Brooklyn, opening, Gravesend Bay.
30. Staten Island, Stapleton, S. I.
30. American, opening, Milton Point, Long Island Sound.
30. Burgess, Marblehead, Massachusetts Bay.
30. Seawanhaka Corinthian, races for raceabouts, Seawanhaka knockabouts and club catboats, Oyster Bay, L. I. Sound.

JUNE.

1. Knickerbocker, annual, College Point, Long Island Sound.
1. Atlantic, Sea Gate, New York Bay.
5. East Gloucester, evening race, Gloucester, Mass.
8. Canarsie, pennant championship, Canarsie, Jamaica Bay.
8. Manhasset, annual, Port Washington, Long Island Sound.
8. Brooklyn, open, Gravesend Bay.
8. South Boston, club handicap, City Point, Boston Harbor.
12. East Gloucester, evening race, Gloucester, Mass.
15. South Boston, club cruise, City Point, Boston Harbor.
15. New York C. C., annual, Gravesend Bay.
15. Larchmont, spring regatta, Larchmont, Long Island Sound.
15. Seawanhaka Corinthian, first race, Center Island cup, Oyster Bay, Long Island Sound.
15. Burgess, Marblehead, Massachusetts Bay.
15-17. Boston, cruise, City Point, Boston Harbor.
16. South Boston, cruise, City Point, Boston Harbor.
17. Duxbury, club race, Duxbury, Mass.
17 Hull-Massachusetts, classes over 18ft., Hull, Boston Harbor.
17. Dorchester, classes 18ft. and under, Dorchester, Boston Harbor.
17. Corinthian, first club championship, Marblehead, Mass.
17. East Gloucester, club race, Gloucester, Mass.
17. Brooklyn, annual regatta, Gravesend Bay.
17. Pavonia, annual, Bayonne, Newark Bay.
17 Burgess, Marblehead, Massachusetts Bay.
18 Atlantic, annual, Sea Gate, New York Bay.
19. East Gloucester, evening race, Gloucester, Mass.
20. New York, annual, New York Bay.
20. Duxbury, ladies' day, Duxbury, Mass.
22. Marine and Field, open, Gravesend Bay.
22. New Rochelle, annual, New Rochelle, Long Island Sound.
22. Atlantic, special, Sea Gate, New York Bay.
22. Seawanhaka Corinthian, second race for Center Island cup, Oyster Bay, Long Island Sound.
25. American, Newburyport, Massachusetts Bay.
25. New York, Glen Cove cups, Long Island Sound.
26. East Gloucester, evening race, Gloucester, Mass.
27-28. Seawanhaka Corinthian, special, Oyster Bay, L. I. Sound.
29. Boston, City Point, Boston Harbor.
29. Atlantic, annual, Sea Gate, New York Bay.
29. Burgess, Marblehead, Massachusetts Bay.
29. Seawanhaka Corinthian, annual race for Leland challenge cup for raceabouts, Oyster Bay, Long Island Sound.

JULY.

2, 4, 6. Newport, Y. R. A., cup defender class, Newport.
2. Indian Harbor, Greenwich, Long Island Sound.
3. Columbia, City Point, Boston Harbor.
3. East Gloucester, evening race, Gloucester, Mass.
3-8. Brooklyn C. C., cruise, Gravesend Bay.
4. Duxbury, club race, Duxbury, Mass.
4. Boston City, City Point, Boston Harbor.
4. Corinthian, second club championship, Marblehead, Mass. Bay.
4. East Gloucester, open, Gloucester, Mass.
4. Gravesend Bay Y. R. A., first open regatta, Gravesend Bay.
4. Larchmont, annual regatta and schooner races for Colt cup, Larchmont, Long Island Sound.
4. Hartford, annual, Saybrook, Long Island Sound.
4. Seawanhaka Corinthian, club, Oyster Bay, Long Island Sound.
4. Pavonia, McInnis cup, Bayonne, Newark Bay.
4. Canarsie, parade, Canarsie, Jamaica Bay.
4. Penataquit Corinthian, annual, Bay Shore, L. I.
4. Columbia, Chicago, Lake Michigan.
4. Burgess, Marblehead, Massachusetts Bay.
5-11. Atlantic, cruise, Sea Gate, New York Bay.
6. Shinnecock Bay, club, Shinnecock Bay.
6. Mosquito Fleet, City Point, Boston Harbor.
6. Riverside, annual, Riverside, Long Island Sound.
6. Seawanhaka Corinthian, third race for Center Island cup, Oyster Bay, Long Island Sound.
6. Burgess, Marblehead, Massachusetts Bay.
6. South Boston, ladies' day, City Point, Boston Harbor.
8. Norwalk, annual, South Norwalk, Long Island Sound.
9, 10, 11. New York, Newport series, Newport.
10. East Gloucester, evening race, Gloucester, Mass.
13. Moriches, club.
13. Corinthian, third club championship, Marblehead, Mass. Bay.
13. Larchmont, open, first day of race week, Larchmont, Long Island Sound.
13. Seawanhaka Corinthian, race for Roosevelt memorial cup, Oyster Bay, Long Island Sound.
13. Manhasset, special, Port Washington, Long Island Sound.
13-20. Larchmont, race week, Larchmont, Long Island Sound.
17. East Gloucester, evening race, Gloucester, Mass.
18, 20, 23. Newport Y. R. A., special races, Newport.
20. Westhampton C. C., club.
20. Winthrop, Winthrop, Mass.
20. Duxbury, ladies' day, Duxbury, Mass.
20. South Boston, club handicap, City Point, Boston Harbor.
20. Stamford, annual, Stamford, Long Island Sound.
20. Seawanhaka Corinthian, fourth race for Center Island cup, Oyster Bay, Long Island Sound.
20. Trial race to select Canada cup defender, Chicago, Lake Michigan.
20. Burgess, Marblehead, Massachusetts Bay.
22. New York, cruise, rendezvous, Glen Cove.
22. Harvard, cruise, rendezvous, Morris Cove, L. I. Sound.
22. Canarsie, open, Canarsie, Jamaica Bay.
23. New York, cruise to the eastward.
24. Seawanhaka, cup race, Lake St. Louis.
24. East Gloucester, evening race, Gloucester, Mass.
25, 26, 27. Hull-Massachusetts, invitation races, Hull, Mass.
27. Corinthian, fourth club championship, Marblehead, Mass. Bay.
27. Shinnecock Bay, special, Shinnecock Bay.
27. Sea Cliff, annual, Sea Cliff, Long Island Sound.
27. Northport, annual, Northport, Long Island Sound.
27. Seawanhaka Corinthian, fifth race for Center Island cup, Oyster Bay, Long Island Sound.
27. Manhasset, special, Port Washington, Long Island Sound.
29. New York, Astor cup races, Newport.
29-30. Burgess, open, Marblehead, Massachusetts Bay.
30-31. New York, trial races to select America Cup defender, Newport.
31. Corinthian, Marblehead, Massachusetts Bay.
31. East Gloucester, evening race, Gloucester, Mass.

AUGUST.

1-3. Corinthian, Marblehead, Massachusetts Bay.
1. New York, trial race to select cup defender, Newport.
3. Duxbury, club, Duxbury, Mass.
3. Moriches, association regatta.
3. Atlantic, Sea Gate, New York Bay.
3. Hempstead Harbor, annual, Hempstead Harbor, L. I. Sound.
3. Seawanhaka Corinthian, Robert Center memorial cup races, Oyster Bay, Long Island Sound.
3 Manhasset Bay, special, Port Washington, Long Island Sound.
5, 6. Manchester, West Manchester, Massachusetts Bay.
7. Misery Island, Salem Bay, Mass.
7, 8. East Gloucester, Gloucester, Mass.
7. East Gloucester, evening race, Gloucester, Mass.
9, 10. Annisquam, Ipswich Bay, Mass.

10. Westhampton C. C., association regatta.
10. Brooklyn, Gravesend Bay.
10. Horseshoe Harbor, annual, Larchmont, Long Island Sound.
10. Bridgeport, special, Bridgeport, Long Island Sound.
10. Seawanhaka Corinthian, sixth race for Center Island cup, Oyster Bay, Long Island Sound.
10-15. Chicago, races for the Canada cup, Chicago, Lake Michigan.
12, 13. American, Newburyport, Massachusetts Bay.
17. Moriches, open.
17. Wollaston, Quincy Bay, Boston Harbor.
17. Corinthian, fifth club championship, Marblehead, Mass. Bay.
17. South Boston, club handicap, City Point, Boston Harbor.
17. New York, New York Bay.
17. Indian Harbor, annual, Greenwich, Long Island Sound.
17. Seawanhaka Corinthian, seventh race for Center Island cup, Oyster Bay, Long Island Sound.
17. Canarsie, Corinthian regatta, Jamaica Bay.
17. Columbia, Chicago, Lake Michigan.
20, 22, 24, 27, 29. American cup races, Sandy Hook.
24. Shinnecock Bay, association regatta, Shinnecock Bay.
24. Corinthian, sixth club championship, Marblehead, Mass. Bay.
24. South Boston, ladies' day, City Point, Boston Harbor.
26. Cape Cod, Provincetown, Mass.
27. Wellfleet, Wellfleet, Mass.
29. Plymouth, Plymouth, Mass.
30. Kingstown, Kingstown, Mass.
31. Duxbury, Duxbury, Mass.
31 Westhampton C. C., open.
31. East Gloucester, club, Gloucester, Mass.
31. Marine and Field, Gravesend Bay.
31. Hartford, annual, Saybrook, Long Island Sound.
31. Huntington, special, Huntington, Long Island Sound.
31. Larchmont, special, Larchmont, Long Island Sound.

SEPTEMBER.

2. Duxbury, ladies' day, Duxbury, Mass.
2, 3. Corinthian, cruise, Marblehead, Massachusetts Bay.
2. Lynn, Nahant, Massachusetts Bay.
2. Gravesend Y. R. A., all classes, Gravesend Bay
2. Norwalk, special, South Norwalk, Long Island Sound.
2. Sachem's Head, annual, Saybrook, Long Island Sound.
2. Larchmont, fall regatta, Larchmont, Long Island Sound.
2. Atlantic, special, Sea Gate, New York Bay.
2. Pavonia, special, Bayonne, Newark Bay.
2. Canarsie, ladies' day, Canarsie, Jamaica Bay.
2. Seawanhaka Corinthian, Oyster Bay, Long Island Sound.
2. Burgess, Marblehead, Massachusetts Bay.
2 Chicago, Chicago, Lake Michigan.
3 Shinnecock Bay, open, Shinnecock Bay.
5, 6. Seawanhaka Corinthian, open special, Oyster Bay, L. I. Sound.
7. Seawanhaka Corinthian, fall regatta, Oyster Bay, L. I. Sound.
7. Atlantic, Sea Gate, New York Bay.
7. Lynn, Y. R. A., rendezvous.
14. Brooklyn, fall regatta, Gravesend Bay, New York Bay.
14. Larchmont, Larchmont, Long Island Sound.
14. Indian Harbor, fall regatta, Greenwich, Conn.
14. Atlantic, fall regatta, Sea Gate, New York Bay.
21 New York C. C., fall regatta, Gravesend Bay.
21. Manhasset Bay, fall regatta, Port Washington, L. I. Sound.
21. Canarsie, commodore's cup races, Canarsie, Jamaica Bay.

THE list of fixtures which appear in this week's issue is still far from complete. This is easily accounted for, as some of the clubs have not decided on their racing dates, and from a number of others we have not heard. The publishers of FOREST AND STREAM are anxious to have the list of racing dates as complete as possible, and kindly request those secretaries and chairmen of regatta committees of the clubs whose fixtures are not given, to send them in at their early convenience.

INCOMPLETE as the list of racing fixtures is, still there are far more dates given than ever before at the opening of a season, and this indicates that a large amount of racing may be looked forward to all over the country. The inland and Canadian dates are not included in the list except in one or two instances, and there is a great deal of keen racing to be done by these fresh-water yachtsmen. The yacht clubs, both large and small, all along the coast have shown greater interest than ever before, offering handsomer and more costly prizes in all the classes. Aside from the great interest that is centered in the three international races, there has always been a feeling among many yachtsmen that an international race between the 90-footers tended to divert interest from the smaller classes, and in that way was not a benefit to yachting in general, but there is no indication that this is to be the case this year. The unprecedented interest in yachting this year is accounted for by the natural growth of the sport, and partially by the prosperous condition of the country at large.

English yachting is in rather a stagnant condition, due to various causes, and in consequence many desirable yachts, both steam and sail, are on the sale list. American buyers have taken advantage of this situation, and both the sail and steam fleet of English yachts in American waters will be greatly increased this year. The importation of the big yawl Ailsa ought to make some fine racing in the large class now that Vigilant and Navahoe will both appear in yawl rigs. Virginia, Yankee and Rainbow will be raced in the 70ft. class. The 65ft. linear racing class will have at least two additions. One is Senta, which has already arrived from England, and the other is Eelin, which is on her way over. These two boats, with Queen Mab, Isolde, Astrild and Hester, will make a total of six boats in this class, and there should be some splendid racing among them. The schooners Amorita and Quisetta will have two new rivals, both of which boats were designed by Messrs. A. Cary Smith & Barbey. Amorita has been altered and will be in better shape than ever before. In the 51ft. class there will also be two new boats, one designed by Herreshoff and the other by Huntington. Hussar II. will probably be out of the racing this year, as she has been sold, and her new owner will change her rig to that of a yawl. The 43, 36, 30 and 25ft. classes will all be strengthened by the addition of new boats, and the raceabout class will have at least ten boats, both new and old, so there will be as great interest and as much sporty racing in this as well as in the larger classes.

THE Boston Herald's foreign correspondent in speaking of Mr. Clark's new cutter, Kariad, says: On Saturday there was launched at Meadowside the first-class racing cutter Kariad, now owned by Kenneth M. Clark, of Paisley. She was designed by G. L. Watson and built last year for C. Day Rose, under the name of Distant Shore. Owing to family bereavements, Mr. Rose withdrew from the sport and she was never launched. A few months ago she was purchased by Mr. Clark, who has renamed her Kariad, and placed Capt. Archie Hogarth in charge. She has now been fitted out for first-class racing. In size she is practically the same as Britannia. She is 85ft. on the waterline, by about 20ft. beam, and floats to about 17ft. draft. The hull is fuller than we have been accustomed to see in racing boats in recent years, but it is beautifully modeled, and she gives every promise of being fast. Her Y. R. A. rating will work out to about 97 or 98ft.

History of the Development of the Racing Yacht.

(*Concluded from page 333.*)

THE first race for the Cup was set for Sept. 27. The fleet of excursion boats that gathered about the line at the start was so large as to call out expressions of astonishment from all who saw it. The conditions of the match agreed upon with Lord Dunraven were three races in five, all to be sailed outside of headlands, and time allowance according to the rules of the New York Y. C. to be given. Vigilant allowed Valkyrie one minute and thirty-three seconds.

The first race was a failure on account of a lack of wind, Vigilant at one time being entirely becalmed—so much so, in fact, that she lost steerage way and turned entirely round.

The boats met again on Sept. 29 in an effort to sail the first race of fifteen miles to windward and return. This time they were more fortunate. Vigilant obtained a lead in the first leg of the course, and turned the outer mark eight minutes and six seconds ahead. In the run home Valkyrie gained thirty seconds, and so Vigilant was an easy winner by five minutes and forty-eight seconds, corrected time.

The second attempt at a race was also a failure on account of lack of wind.

The third race was to be over a triangle of thirty miles, ten miles to a leg.

A good whole-sail breeze was blowing that gave the yachts a splendid test on this point of sailing. Vigilant again demonstrated that she was the master, as she won the race in a clean cut way by ten minutes and thirty-five seconds, corrected time. This race was one of the most exciting ever sailed. The din that greeted the great white sloop as she swept past the red lightship and the black flagship was something marvelous. The race was won on its merits and without flukes or flaws.

The fourth race was sailed on Oct. 13. It was similar to the first—that is, fifteen miles to windward and return. The wind blew great guns, and both contestants were reefed. The patriots were given a painful surprise in this race. Valkyrie obtained a weather position on Vigilant at the start, and to the amazement of every one held it. The wind kept increasing in strength, and it gave the partisans of the American boat great chunks of pain to see the cutter gradually forging to the front. Valkyrie turned the outer mark one minute and fifty-five seconds ahead of the sloop.

But the day was Friday, and it was the 13th of the month, and so all hope was not lost. As soon as Vigilant had turned she shook out her reef and sent up her largest club topsail. Under this tremendous spread of sail the great white sloop fairly seemed to fly. The spume flew from under her forefeet, and her tremendous speed may be known when it is said she ran the fifteen nautical miles (about seventeen and one-quarter land miles) in one hour and sitxeen minutes, or about fourteen land miles per hour.

Even at this time it was almost certain that she would have lost the race had not Valkyrie carried away two spinakers, and finally finished the race under a balloon jib used as a spinaker. As it was, Vigilant crossed the finish line two minutes and thirteen seconds ahead of Valkyrie, which gave her the race by forty seconds, corrected time. Vigilant gained four minutes and eight seconds in the run home.

The year 1894 is interesting in the small boat sense, as that year saw the birth of what is to-day one of the most popular of the small classes—namely, the knockabout.

This little vessel was 21ft. on the waterline and carried 500ft. of sail. They were intended for a handy, safe boat for two persons, and in their original form they fulfilled that position admirably. They have somewhat deteriorated, however, at the present time, and have imbibed more of the racing machine than is well for comfort sometimes.

The year 1894 was also memorable from the visit of Vigilant to England under her new owner, Mr. George Gould. Her success in English waters was not as pronounced as most patriots would have liked to see it. Out of seventeen races which she sailed with Britannia she lost eleven and won five. Some comfort was taken though from the fact that whenever the wind blew fresh Vigilant was a winner. All the races she lost were in light weather. Much disappointment was felt that Valkyrie II. could not meet her. She was unfortunately sunk by Satanita in a collision during the first race of the season, and was not raised.

Lord Dunraven's Second Challenge.

A second challenge was received from Lord Dunraven late in the fall of 1894 for the ninth contest for the Cup. The conditions caused some parleying, but were finally arranged satisfactorily. Lord Dunraven named Valkyrie III. as the challenger. She was thoroughly tried out with Britannia, and after some alterations had been made was sent across under jury rig, as her predecessors had been.

She was a much more pronounced type than the previous challenger, her keel being much deeper, her lead increased and her beam for the first time greater than that of the American boat. She was 27ft. wide, and her body was very shallow. Her overhangs were long and graceful.

Taken altogether, she was a very promising vessel, and the hopes of her designer and owner were very high, and there was a general feeling of expectation of great results from her.

Nor was the New York Y. C. idle. The syndicate was formed and Herreshoff was commissioned to build Defender. Defender was a keel boat and was a great advance on Vigilant. She was also deeper, carried more lead and was of a more powerful body than her predecessor.

Her overhangs were the best that had yet been put on a Herreshoff craft, and her profile showed unmistakably the hand of a master of his craft.

The excitement over the racing for the Cup had gradually grown with each succeeding year, and this year saw a still greater fleet around the starting line than ever before.

The American craft had been carefully tuned up in a number of races with Vigilant, and she had beaten the old craft with great ease, although the old champion, as well as Jubilee, which had also been fitted up, showed remarkable speed in many of their encounters.

Valkyrie had also been given a thorough tuning up, and was in good shape when the day for the first race arrived, which was set for Oct. 5.

The wind was very light, and the committee in order to get a windward and leeward course were obliged to move the starting point from Sandy Hook Lightship several miles down the Jersey coast. At the outset, Capt. Haff, who was handling the wheel on Defender, obtained slightly the best position. As the race advanced, however, it seemed that Valkyrie was leaving Defender rapidly. They split tacks, and the Englishman stood out to open ocean, while the American stood in toward the Jersey coast. All the while Valkyrie apparently was increasing her lead. This went on for about an hour, and then the boats were three miles apart on opposite tacks. Finally up went the Englishman's tiller and round he spun on his heel and headed in to cross Defender's bow. The excitement was now intense. Much speculation was indulged in as to how far he could cross by. All agreed that he would cross Defender. Closer and closer he came, and down went the hearts of the majority, but they were reckoning without the host. Defender was ghosting along in a wonderful manner. Nearer and nearer they came. Valkyrie was pinching all she could to make every possible inch count to windward. Now they were not more than 200yds. apart. Suddenly up goes the helm of the Englishman and round he goes again. He had failed, and was obliged to go under the lee of Defender. And what a din of whistles greeted the failure. From this point the race became a procession, with Defender constantly drawing away. She turned the outer mark well ahead, and setting her spinaker swept down to the finishing line into the arms of the mighty fleet awaiting her there, a winner by about eight minutes.

The second race was made memorable by the famous foul. In the jockeying for the start, Valkyrie turned too close on the weather side of Defender and the end of her main boom swept around caught the back stay, tore it from the spreader and allowed her topmast to fall over to leeward, breaking it nearly in two.

Defender, of course, protested the foul. She was practically disabled as she could not use her jib topsail, and the topmast sagged over so much that her club topsail was of little use on the wind.

She went on in the race, however, and with all these disadvantages she was only beaten by forty-seven seconds. After the race the committee took up the matter of the protest on the fouls and awarded the race to Defender on that account.

This, of course, caused some bitter words, and set up much friction. Lord Dunraven also protested on account of the crowding of the course by the excursion steamers. He also sent in a request that the remaining races be sailed off Newport or Marblehead. This the committee would not agree to, and ordered the third race to be sailed.

Valkyrie appeared at the starting line, but with only mainsail and jib set, and it was apparent to all that she did not intend to start. She merely crossed the line and then turned back and was taken in tow by her tug. Defender went on and sailed over the course and was awarded the race.

Lord Dunraven brought down a great deal of censure on himself by making charges of swindling against the owners of Defender when he returned to England. He charged that ballast had been added to Defender after she had been measured, and that she had been dishonestly sailed, etc.

During the years from 1895 to 1899 the yachting interest is principally attracted to the number of freak boats that have been developed. One of the most prominent of these is Cartoon, designed by Mr. William Gardiner, of New York. She is 25ft. on the waterline and 48ft. over all. Her beam is 12ft. and she draws but 10in. of water. Her bilges are very long and hard and when heeled over she sails on her side for nearly her entire length. This is what sailors sometimes call sailing on her ear. The object of such a construction is to have them do just this thing—that is, to sail on their sides. When such a boat is heeled in this manner, she becomes practically a long, narrow canoe, and hence goes very fast comparatively.

In Boston waters there has been quite a development of this type of vessel.

Hostess is one of a large number that were built to defend the Quincy cup. She is 21ft. on the waterline, 40ft. over all, 10ft. beam, draws 6in. of water and carries about 1,000ft. of sail. A freak in every sense.

The same freakish ideas have taken root in England, though not to the same extent as here.

Yacht Racing in Australia.

Yacht racing in Australia is confined almost exclusively to the small classes. In this, however, they have developed some strange and wonderful things.

Woonga, an Australian yacht, is but 23ft. long and about 10ft. beam. There is no deck. Her rig is something immense, and she carries a crew of eighteen men. While she looks somewhat peculiar in this shape, it is only when she starts home before the wind and spreads all her clothes that you realize the marvelous thing that she is. Her spread of sail seems almost large enough for an America Cup defender. That these boats can carry such immense rigs in this manner in Australia is explained from the fact that the trade winds there are almost constant during their racing season. A skipper may depend to a certainty, almost, on exactly the direction and force of the wind at all times.

During the last ten years the yawl classes have been greatly developed, and to-day this is a popular and growing type of boat.

A yawl is a type of two-masted vessel that differs from the schooner in that the after mast is set abaft the rudder and carries but a small sail. The main mast carries the principal sail of the boat. The rig is a very easy one to handle, and also a very safe one in heavy weather. It is for these reasons, principally, that it is growing in favor.

Satanita is one of the largest English yawls. She was formerly a sloop, and gained some notoriety from the fact that she sank Valkyrie II. in 1894 in a colision on the

Clyde. She is quite fast as a yawl, and has many prizes to her credit.

Sybarita is one of Mr. George L. Watson's best creations. She was new last year, and made an enviable record in English waters, defeating not only all yawls, but also all sloops that came against her. She is 90ft. on the waterline, the same size as the Cup defenders.

During the last ten or fifteen years the sport of yacht racing has made immense strides all over this country, and in no place more than in Long Island Sound, especially among the small classes. This is owing to the fact that the Sound presents one of the best racing grounds in the world. Singularly enough, also, the best course on the Sound is that of the Bridgeport Y. C. There is no question that they have here the premier waterway in this country. Twenty nautical miles wide and with over 30ft. of water over the entire course with no headlands and very small tides, we present a course that is almost ideal.

In 1880 there were but two yacht clubs on the sound with a membership of perhaps 500. Now there are twenty-six clubs, with a membership of nearly 5,000.

The years 1897 and 1898 were good years for the sport, and those who followed it closely were delighted in the latter year to hear that another contest for the America Cup was assured. Sir Thomas Lipton, through the Royal Ulster Y. C., forwarded a challenge in due form.

Sir Thomas named Shamrock as the challenger, designer William Fife, length on the waterline 90ft.

William Fife will be remembered as the designer of the very successful Minerva, Ailsa, Calluna, etc., and a large number of very successful boats in these smaller classes.

The New York Y. C. promptly accepted the challenge, all the details for the match were quickly and smoothly arranged and a tenth contest for the time-honored "blue ribbon of the seas" was thus inaugurated.

A syndicate of American yachtsmen gave the Herreshoffs an order for Columbia, and in due time she was launched from the Herreshoff works.

She was given a thorough tuning up with the old Cup champion Defender, which proved to be a most excellent trial horse. Many and exciting were the contests between the two great sloops during the summer of 1899, but the honors always lay with Columbia, proving again the ability of the Herreshoffs to outbuild themselves.

Columbia was much of an improvement on Defender in many ways and her underwater body was a thing of beauty. Her lines were as fine as those of the finest canoe. The workmanship on her was a great improvement over anything that we had yet seen in a Cup champion. Her sails spread were something enormous, being quite 13,000 sq. ft.

Shamrock proved also to be a great advance on anything that had been sent over for the Cup. The most notable departure in her was the design below the water. In model she resembled the defender much more than she did any of the previous English challengers. She was also similar to Columbia in many ways, and the two were much closer in design than any two previous contestants for the Cup.

Columbia and Shamrock each carried a chunk of lead bolted to the bottom of the keel weighing in the neighborhood of 90 tons. You will better appreciate this enormous weight when you know that it is practically the weight of the largest mogul locomotive and its tender now used on the consolidated roads running through town. And when you imagine a boat but 90ft. on the water and 22ft. wide carrying a 90-ton locomotive hung 20ft. under the water, you will have some idea of the enormous stability of these vessels. Then when we think of a sail plan rising nearly 200ft. into the air and 180ft. from the after end to the forward points, and comprising some 13,000 sq. ft. of sail, you will realize something of the terrific problems imposed upon the designer of a modern Cup racer.

The eventful Oct. 5, 1899, at last arrived. Columbia and Shamrock, tuned to concert pitch, met at Sandy Hook Lightship for their first tussle for the time-honored trophy. Shamrock certainly seemed fit to make the fight of a lifetime. Everything was spick and span about her, and her immense spread of canvas fitted her most beautifully. The contests between Columbia and Shamrock are too recent to warrant my going into detail with regard to the earlier attempts at a race. For the first seven attempts only failure resulted. The winds were light and baffling, and as the race had a time limit of five and one-half hours for the thirty miles, the yachts were unable to finish within the limit. In these earlier attempts Shamrock showed to such good advantage that, as usual with the patriots, a great many lost heart. Bets were freely made that Shamrock would win the Cup in three straight heats. Unmerited criticism by the cheaper class of newspaper writers was heaped upon Columbia, her manager, Mr. Iselin, and all connected with her. It was freely said that Mr. Herreshoff had played himself out and that Columbia was a failure, and that the Cup was certainly lost. How unwarranted these predictions were was clearly shown when the wind finally consented to allow them to finish within the specified time. It is my opinion and the opinion of nearly every one familiar with yacht racing and yacht handling that there never was a time in light winds or heavy when Shamrock had even a forlorn hope of winning the Cup. I saw every one of the trials and believed every moment of them, and believe now, that Columbia was the master of Shamrock on every point of sailing and every weight of wind. The first race occurred on Monday; the wind was light but held fairly steady, with every appearance of sufficient weight to finish the race within the limit. As soon as this condition was fully known aboard Columbia a great change seemed to pass over the big white sloop. She drew away from Shamrock immediately after the starting gun, and tack after tack placed herself further and further ahead, and finally swung round the turning mark, fifteen miles to windward, nearly ten minutes, a distance of fully a mile and a half ahead of Shamrock, and in the run home she increased this lead to over ten minutes, winning the race with perfect ease.

Some of the croakers began to hedge very rapidly after this exhibition. The abuse of the amateurs aboard Columbia grew very small, and there seemed to be a disposition to at least give our representatives fair play.

The second race, which was to have been over a triangle of thirty miles, was unfortunately marred by a break down of Shamrock. She carried away her topmast shortly after the race started, and, of course, was obliged to give it up. Columbia was well up to windward of her when the accident happened, and unquestionably would have repeated her great success of the preceding Monday had the race been carried to the finish. Under the agreement which had been entered into at Sir Thomas Lipton's suggestion, Columbia was obliged to go on and finish the race and, of course, be declared the winner.

The Last Race Between Columbia and Shamrock.

The last and deciding race was again fifteen miles to windward and return. A fresh southerly breeze was blowing and both yachts had all they could stagger under with mainsail, jib and staysail, and without any ballooners or flying kites. The race down to the outer mark was most exciting. Shamrock started one minute and thirteen seconds ahead of Columbia and squared away for her fifteen-mile run down wind. She broke out her spinaker promptly and dropping into a fifteen-mile-an-hour gait spread away for the distant mark. Columbia swung across the line after her, also with spinaker doing its best. The run to the outer mark was only remarkable for the steady gain of Columbia. The excursion fleet raced along on either side, and only the fleetest of the excursion steamers could keep within hailing distance of the beautiful fabrics which were speeding down that northerly wind like great frightened sea birds. About half a mile from the turning mark, which was then plainly in sight, Columbia swung up on the port beam of Shamrock, and side by side they rushed along. The skipper of Shamrock did everything in his power to hold the beautiful Herreshoff creation, but there was no magic or witchery in his command which could enable him to succeed. Slowly but surely Columbia drew ahead, and when the mark was but a short 300yds. away she was about one length to the good. The mark had to be left on the starboard or right hand, however, and as Columbia was on the port, or left hand, of Shamrock the latter had the inside of the course, and the advantage of Columbia was more apparent than real, as to turn first she was obliged to cross Shamrock's bow. It did not seem possible that she could do this, but within about 100yds. of the mark we saw her spinaker disappear, down went her helm, and with a sweep like a frightened gull she fairly leaped across Shamrock's bow, scarcely a hundred feet behind her, and spinning on her heel swept round the mark and pointed her beautiful prow for home. Shamrock was but a few seconds behind her. Both vessels gave a sharp luff up into the wind, their crews rattled in the main sheet, as rapidly as trained sailor men could possibly do, in a short space of time everything was sheeted home, and the great contestants dashed their bows into the now white-capped waves as they began the real contest in their thresh to windward of fifteen miles. The wind was now blowing at least twenty-five miles an hour; both yachts were heeling down to it at a tremendous angle. Shamrock attempted to carry a working topsail, but it did her no good, and she was obliged to take it in, and both vessels were under the same sail—mainsail, staysail and jib. In less than five minutes after the turn the marvelous superiority of Columbia in windward work was apparent to the veriest novice. She not only put it faster through the water, but she seemed to move bodily to windward, as compared with Shamrock. Her sails set very much better than those of Shamrock, due, unquestionably, to very much stiffer spars. Tack after tack was taken, and each told the same story—steady and progressive gain for the white sloop. About half way home Columbia was fully a mile to windward and ahead of Shamrock. At this point Shamrock determined to risk all in a forlorn hope, and luffing up for a moment sent up an immense club topsail. This did her no good, however, and Columbia now being eased and sailed very carefully, crossed the line an easy winner, fully three-quarters of a mile ahead and nearly seven minutes to the good. And so ended the gallant attempt of Sir Thomas Lipton to lift the Cup. No fairer sportsman and no more worthy antagonist has ever appeared to contest for this trophy. And it seems to be the sentiment throughout yachting circles that if the Cup must go to the other side, it could not go in better hands than his.

Columbia is one of the most beautiful yachts that has ever been turned out in this or any other country. In hull and sail plan she is the perfection of grace, and no one, even those who have not the slightest technical knowledge of the sea, can view her beautiful proportions without being warmed into admiration at the sight of this perfect creation of the genius of the most advanced yacht designer the world has ever known. There is, in my opinion, no question as to the position that Nathaniel Herreshoff holds in the yacht designing world. His is undoubtedly the most original and finished genius that we have ever seen. He combines with a perfect knowledge of form the true instincts of the capable engineer. He is hampered by no traditions, and prejudice plays no part in his calculations. His results are scientific, and capable of scientific analysis in all their parts, with the conclusion, inevitably, that here is the master hand.

Rap Full.

AT this season of the year, when all yachtsmen are looking forward to the time when they will get their first sail, and are chafing under the delays that prevent their boat from being put in the water, the splendid photograph of the schooner Constellation that forms the subject of our supplement this week cannot help but appeal to all of them.

The picture was taken off Marblehead during one of the Eastern Y. C. races last summer. It was blowing hard from the northeast, and there was a big sea on at the time. It was just Constellation's weather, and thrashing through the big waves with everything "rap full," she made a most inspiring picture.

Mr. Everett W. Burdett, of Boston, has purchased through the agency of Mr. Frank Bowne Jones from Mr. W. F. Mayo the 25ft. knockabout Isis. The boat will be used during the coming summer on Buzzard's Bay, where Mr. Burdett has a country place.

Yacht Building and Rigging.

BY arrangement with our English contemporary, the Yachtsman, a series of articles on yacht building and rigging, written by Mr. Linton Hope, the well-known English yacht designer, will appear in our columns, commencing with the next number. The subject will be treated in a most comprehensive and thorough manner, and will be profusely illustrated by drawings made by the author, whose articles will carry the intending builder from the first stage of buying the necessary tools up to the time the boat is ready for the first sail, covering each point in detail.

Mr. Hope is too well known both in England and America to need any introduction at our hands. Besides being a very capable yacht designer, he is an expert on yacht construction. Among the very successful boats which he has designed are Kismet, Sorceress, Windspiel and Colèbri (both winners of Emperor's cup, Kiel), Tiger Cat (winner of Queen's cup), Linton, Scotia, Flying Scud, Schelm and Lotus. He has also turned out many successful cruising boats. Mr. Lorne C. Currie, who has challenged for the Seawanhaka cup, will in all probability bring over a boat from Mr. Hope's design. Mr. Hope is one of the first living authorities on the designing, constructing and sailing of small racing and cruising yachts.

Our Boston Letter.

BOSTON, April 27.—It has been announced that both W. Butler Duncan and Thomas W. Lawson have signified their willingness to race in the series offered by the Newport Yacht Racing Association during the first week in July, so there seems now good possibilities of testing the merits of the Boston candidate for Cup defender honors. There is one thing, however, that may tend to make Independence show up at a disadvantage. It is not expected that she will be launched until after May 15. May 18 has been said to be about the time she will take the water, and it does not seem likely that this will be far from correct.

One man, who has watched her construction almost daily, said to me last week that he did not expect to see her take her first trial spin much before June 15. If this should prove to be the case, she would have but a short time in which to get into proper condition for a series of races with the Bristol boat. But chances or no chances, Boston yachtsmen are glad that there is to be a contest between the two yachts, and there is no doubt that there will be a large party of Boston people who will witness the races off Newport.

There seems to be no more light thrown upon the subject of the possibilities of Shamrock II. racing in Boston waters than there was when the project of the Lawson cup races was first started. The committee appointed by the Hull-Massachusetts Y. C. to take charge of the races recently received an answer to their cable message, inviting Sir Thomas Lipton to race. C. E. Hodges, secretary of the committee, would not give out the exact wording of the cable, but said that its contents were to the effect that Sir Thomas expressed his pleasure at being invited to take part in the races, and that he would be glad to visit Boston. This leaves the matter in just the same state as it was several weeks ago. This was just the same statement that Sir Thomas made to a Boston newspaper man who interviewed him. He has not said yet that he would or would not race Shamrock II. in Boston waters, but it is expected that his answer to the letter sent by the committee confirming the cable may settle the matter.

There has been considerable talk recently about the launching of Independence, and it has been said that Thomas W. Lawson's daughter, Marion, would christen her. It has been stated in contradiction to this, by parties who stand very close to Thomas W. Lawson, and who have more than an ordinary interest in Independence, that the rumor was entirely unfounded, and that it had not yet been decided who would christen the yacht.

Perhaps it may seem a bit inconsistent, in view of the opinions expressed, that Independence will not be in the water as soon as expected, to say that work on her is now being pushed, but such is the case, nevertheless. The work of burnishing the bronze plates has been started, and about three strakes have now been treated. The work is being done with emery wheels and buffers, operated by compressed air. It may be that a final polishing may show a very glassy surface, but at present the plates that have been operated on have not nearly so much luster as when they first came to the Atlantic Works.

About 20ft. of the steel mast has been put together and set up with bolts or rivets. As only one man can work inside of the mast at one time, the work is necessarily somewhat slow. The mast is being built from the heel up. As the holes in the diaphragm plates are but 8in. in diameter, the man inside has to finish up his work as he goes along. His position, to say the least, is not an enviable one. As each angle steel rib and diaphragm plate is fitted, he has to set the rivets, which are red hot, and hold a maul against the heads while the men outside rivet them up. If one has ever been in a boiler shop and heard the deafening noise of the hammers as the rivets are being headed up, one can imagine the position of this man inside of a 22in. steel tube with a couple of men on the outside banging away for dear life while the rivet is hot.

Both rudders for Independence are about ready to be hung. The brass sleeve of the balance rudder is in place and it is expected that the rudder will be hung this week. The plating of the balance rudder is of the first-class order. Between the plates there is a liner of spruce to prevent the water that will necessarily get inside from swashing around and ripping the plates off. The plating is smooth and true. The chain plates were bolted to place Friday. There are seven of them, which indicates that if bracing counts for anything, Independence will carry her big sail spread without accident.

It is expected that the first race of the 18-footers, conforming to the restrictions of the Eighteen-foot Knock-

about Association, will take place next Saturday. A match race has been arranged between Bacchante, owned by John Taylor Humphrey and C. E. Lauriat, Jr., and Oriana, owned by Alfred Douglas. A race between these two boats will be of great significance, as they are of two distinct types. Bacchante was designed and built by Hanley. She is an out-and-out centerboard, without a pound of inside ballast. Oriana was designed by Fred D. Lawley and built by the Lawley corporation. She is a keel boat with a lead shoe, placed as low as possible.

As all of the parties are members of the Hull-Massachusetts Y. C., it is likely that the race will be sailed in Hull Bay, over the regular club course for this class. Oriana has been launched at Lawley's. For some time she laid outside of the shop, where a good idea of her lines could be had. She is a very slick looking craft, with long overhangs and a very flat floor. She has a good entrance and a clean run aft. She should prove very fast. Bacchante has also taken her maiden dip. She shows the characteristic lines of all of Hanley's boats. She is very flat and has hard bilges, and has considerably more beam than Oriana. Some say that this beam is too great to compete with boats having the same sail plan, but this has to be proved. Mr. Humphrey has great confidence in the Hanley idea, and is anxious to see its value thoroughly proved.

At Lawley's the Sloane 85-footer is having her cabin put in. The cabin is being put in the 25-footer for Judge Lowell. The Parsons 46-footer and the Gibson Bar Harbor 25-footer have both been completed. The deck frames are being put in the 35-footer designed by Binney for C. E. Herter, and the 70ft. steamer from the same designer is having her house put on. The 86ft. steamer designed by Binney for C. H. Borland is nearly finished. The 21-footer, Eaglet, designed by Starling Burgess is all planked. The steam yacht Aquilo, for W. P. Eno, is all plated. The Y. R. A. 21-footer for H. H. Wiggin is set up. The 15-footer for S. Willard Thayer is nearly all planked.

Fred D. Lawley has an order for a steam yacht from C. H. Fuller, of Pawtucket, R. I. She will be 128ft. over all, 103ft. waterline and 6ft. 6in. draft. She will be used for cruising in Southern waters.

Fenton, of Manchester, has the Macomber 25-footer, designed by Crowninshield, nearly finished. It is expected that the Burgess 21ft. raceabout will be ready to go overboard about the middle of May. Last year's champion 25-footer Flirt is being fitted out at this yard.

Hanley has the Canada cup defender Cadillac in frame, and the work of planking her will commence this week. D. C. Percival's knockabout Sally V. has been launched. The Y. R. A. 25-footer for A. W. Chesterton is all planked. She will be called Calypso. The moulds are up on the 25-footer for T. B. Wales.

JOHN B. KILLEEN.

"The New Measurement Rule."

Editor Forest and Stream:

If your remarks under this heading in the last number of FOREST AND STREAM were allowed to go without some answer, the impression might get abroad to some extent among yachtsmen who have not read either of the reports made recently by committees of two clubs on the measurement question, that these committees had dealt with the matters undertaken in a very short sighted and incompetent way—that they had sought to effect purposes which it would be at once both foolish and impracticable to seek—and that they required the aid of some Solomon outside their own membership to define to them the true limits and just purposes of a good measurement rule. To anyone who is himself a competent and unprejudiced judge of the present needs of yachting interests and who has carefully read either of the reports which have been referred to, the remarks made in your last issue, in so far as these apply to the work of these committees, either as to the purposes they had in view or as to the effect which may warrantably be expected from their propositions, must appear to be wholly irrelative or misapplied.

It is not, however, for the purpose of refuting in detail the statements and inferences alluded to, nor yet to exhibit the fallacy of the expectation that some one of the various modifications which may be made of the girth rule, or otherwise some combination of one of these rules with a factor borrowed from the new formula proposed for S. C. Y. C. and L. Y. C. will fitly meet conditions in these waters that I now write. This would severely tax your space and my time. It cannot be contended that formulas affecting results so widely different are all equally good; indeed it is intimated that something different may result from a conference with foreign naval designers this summer and become an international rule; but it is not explained how this can apply to any modification of British rules, as these have been adopted for continuance through a term of years. As one who has participated in the work recently done to provide a remedy for the very commonly admitted insufficiences of the existing rules of measurement, I may be permitted to say that the adaptability of girth measurements to compass the requirements of American yachting have been duly considered, and the conclusion arrived at that such measurements have a limited range of application and effect, restrict features which equity would require should receive encouragement, and manifestly curb that liberty of design which, contrary to the inferences of your criticisms, it was the cherished purpose of the framers of the rules recently adopted to conserve.

If the suggested formulas for girth measurements or any others lead to a selection of one or more to be proposed for practical action in any of our yacht clubs, it will be time enough for a thorough examination of its character, and if anything better is brought forward than has been yet acted upon I for one shall not withhold free commendation. I can, however, see little hope for this through any of the many varieties of girth measurement. Some of the defects in the methods proposed are so easily made conspicuous that worse results would appear to be inevitable than those arrived at by the rule so short lived here, and more recently abandoned in Great Britain. There is some denunciation in your article, of attempts to limit elements of speed and to make racing yachts of cruisers, which remarks appear to be equally inconsequental as applied to efforts at amendment, whether these be by girth measurement or by other means. If there are features in a yacht which are as commonly recognized as elements of advantage to speed as are other features present in the formulas used, why not include them or else be consistent and abandon all attempts at measurement. By inclusion it is not necessary, if only an equitable charge is made, to exclude even the most extreme form of vessel, but on the other hand some liberty in design is obtained, and the less extreme vessel has some opportunity preserved to her. To the features of advantage for speed the new rule has a mort direct, intimate and measurable relation than any girth rule which has been brought forward. It is firmer in its grasp, less evasive, and wider in its comprehensiveness and application. In regard to form and choice of dimensions, beam, draft, and contour of midship section, it affords to the designer a choice and liberty not allowed by any girth rule which has come under observation, and one not to be easily conceived of. To anyone who will study the matter these things should become apparent, and they should prove superior and determinate over any question of the measurer's convenience, which is not very seriously involved, very little indeed beyond what is connected with a girth measurement.

It is perhaps not necessary to say that in the framing of a rule the adaptation of it to two or three yachts, or the adaptation of the same number of yachts to a rule, has practically no valuable significance.

JOHN HYSLOP.

Yankee.

IT is now stated that some nine boats will enter in the trial races for the defense of the Canada cup. The best known yacht designers in America have been employed to turn out boats, but perhaps none of them is better fitted to cope with the situation than Mr. Charles G. Davis, the designer of Yankee, plans of which boat appear in this week's issue. Mr. Davis was associated with Mr. Hanley at the time he built Genesee, the boat that successfully defended the Canada cup in the summer of 1899, and Mr. Davis handled the boat in all the races, at which time he had an excellent opportunity to see the weak points in Genesee's design. Knowing what conditions of weather he had to deal with, Mr. Davis has turned out a boat that is an improvement on Genesee both in looks and design. She is slightly narrower with a little more depth, giving more displacement. All the ballast will be inside, and she will be steered with a balance rudder.

The Thompson-Lytton-Price-Griffiths syndicate is the owner, and the boat is being built by the Racine Boat Company, of Racine, Wis. The sails will be furnished by Messrs. Geo. Carpenter & Co., of Chicago, and the Spalding St. Lawrence Company will furnish a complete set of hollow spars.

Yankee's dimensions are as follows:

Length—	
Over all	44ft. 6in.
L.W.L	28ft.
Overhang—	
Forward	8ft. 6in.
Aft	8ft.
Beam	11ft.
Draft of hull	1ft. 9in.
Freeboard—	
Bow	3ft. 6in.
Stern	2ft. 1in.
Least	1ft. 8in.
Sail area by rule	1,585 sq. ft.
Ballast inside	6,000lbs.

Her racing measurement under the Canada cup conditions are as follows:

L.W.L	28	Perp	42.5
Base	58	Topmast	10.5
Gaff	25	Beam	11.

$$\text{L.W.L.} + \text{Girth} + \text{C.B.}$$

$$28 + 11.7 + 2.5 = 14.2$$

$$\text{L.W.L.} + \text{B.} + .75\ \text{Girth} + .5\sqrt{\text{Sail Area.}}$$

$$\frac{28 + 11 + 10.65 + 19.9}{2} = 34.77\ \text{R.L.}$$

Yankee is flush decked with a long, narrow cockpit amidships, while aft is a small steering well for the helmsman. Aside from the general design of the boat, Mr. Davis has shown many ingenious features in the boat's rigging. The main sheet has two deck travelers, and there are two jib stays with the working jib bent on one, while the balloon jib is bent on the other. The halyards are all of steel wire with single parts and tackles. The standing rigging is of galvanized steel wire. The dolphin striker is of the tripod pattern, which will prevent its carrying away when there is a side strain on the bowsprit.

Yacht Club Notes.

The Excelsior Y. C., of Brooklyn, have elected the following officers: Com., Michael Watson; Vice-Com., Olaff Harrison; Rear-Com., A. J. Grasse; Fin. Sec'y, William A. Dwinell; Treas, George W. Daniels. The Fleet Captain and Regatta Committee are to be appointed by the Commodore.

The Pavonia Y. C. has moved from its old quarters at Communipaw to a new house at the foot of East Fifty-first street, Bayonne The officers of the club are: Com., D. F. Kohn; Vice-Com., Alexander F. Roe; Sec'y. L. T. Haeuptner, and Treas., L. Mittelsdorf.

The Harvard Y. C. has made plans for an extended club cruise next summer along the New England coast. Quite a number of the club members have signified their intention of going for a short time, while others will participate in the full cruise. Arrangements have been made whereby the fleet will start from New Haven on July 22 and will sail eastward to Newport, R. I. The fleet will disband at Newport the day before the arrival of the N. Y. Y. C.'s annual cruise to the eastward. Later in the summer the members of the H. Y. C. living or summering north of Cape Cod will rendezvous at Marblehead and cruise to the eastward to Isleboro, Me.

YACHTING NEWS NOTES.

Manning's yacht agency has sold for Mr. Richard P. Hart, N. Y. Y. C., his auxiliary yawl Natka to Mr. George C. Thomas, Jr., of Philadelphia. This agency has sold for Mr. James Baird, formerly Rear-Commodore of the Larchmont Y. C., his sloop Hussar II. to Mr. Frank A. Wilmot, of Bridgeport, Conn. The boat's rig will be changed to that of a yawl.

The following steam yachts are being put into commission at Manning's basin at South Brooklyn: Seneca, Marion, Zara, Whisper, Anita, Stella and Conqueror and the schooner yacht Nearra.

The Gas Engine and Power Co. and Chas. L. Seabury & Co., of Morris Heights, are building a 25ft. waterline knockabout for Mr. J. Montgomery Sears, of Boston. Mr. S. H. Vandergrift's new steam yacht Cherokee, which was launched at Morris Heights a short time ago, has had her official trial trip on the Hudson River. She developed 14½ miles against a strong head wind and tide. The guaranteed speed was 13 miles.

At Tebo's basin, South Brooklyn, the following steam yachts are being put in commission: Thetis, Virginia, Sapphire, El Placita and Jathniel.

The 53ft. cruising launch Alberta, owned by Mr. William A. Hamilton, of the Riverside Y. C., was totally destroyed by fire on April 27 in Cos Cob Harbor. The boat was valued at $6,000.

Mr. Oscar Lipton, of the Jamaica Bay Y. C., who recently sold his launch Laurena to Mr. James Harkness, is having a smaller boat built by the Daimler Company. She will be 65ft. long, 13ft. 6in. beam and 4ft. 6in. draft and will be driven by two 25 horse-power motors. The guaranteed speed will be 12 miles an hour. Below decks there will be two large staterooms forward. Aft of these will come the engine space followed by the galley. Aft will be a large saloon. On deck there will be a house forward and aft will be the owner's stateroom. The yacht will be named Leonora and she will be ready for delivery by June 15.

It is reported that Mr. Horace A. Hutchins, N. Y. Y. C., has chartered the English steam yacht Gunilda.

Messrs. A. Cary Smith and Barbey have chartered with the option of purchase the schooner yacht Uncas owned by Mr. C. P. Buchanan. Mr. W. H. Russell is the prospective buyer.

The purchaser of the steam yacht Kanawha, which belonged to the late John P. Duncan, is Mr. Henry H. Rogers, N. Y. Y. C.

The new 75-ft. racing schooner building at Shooter's Island, S. I., for Mr. Chas Shithers, N. Y. Y. C., will be named Muriel. Mr. Frederick K. Brewster's sister boat building at the same yard, which has already been announced in FOREST AND STREAM, will be named Elmina.

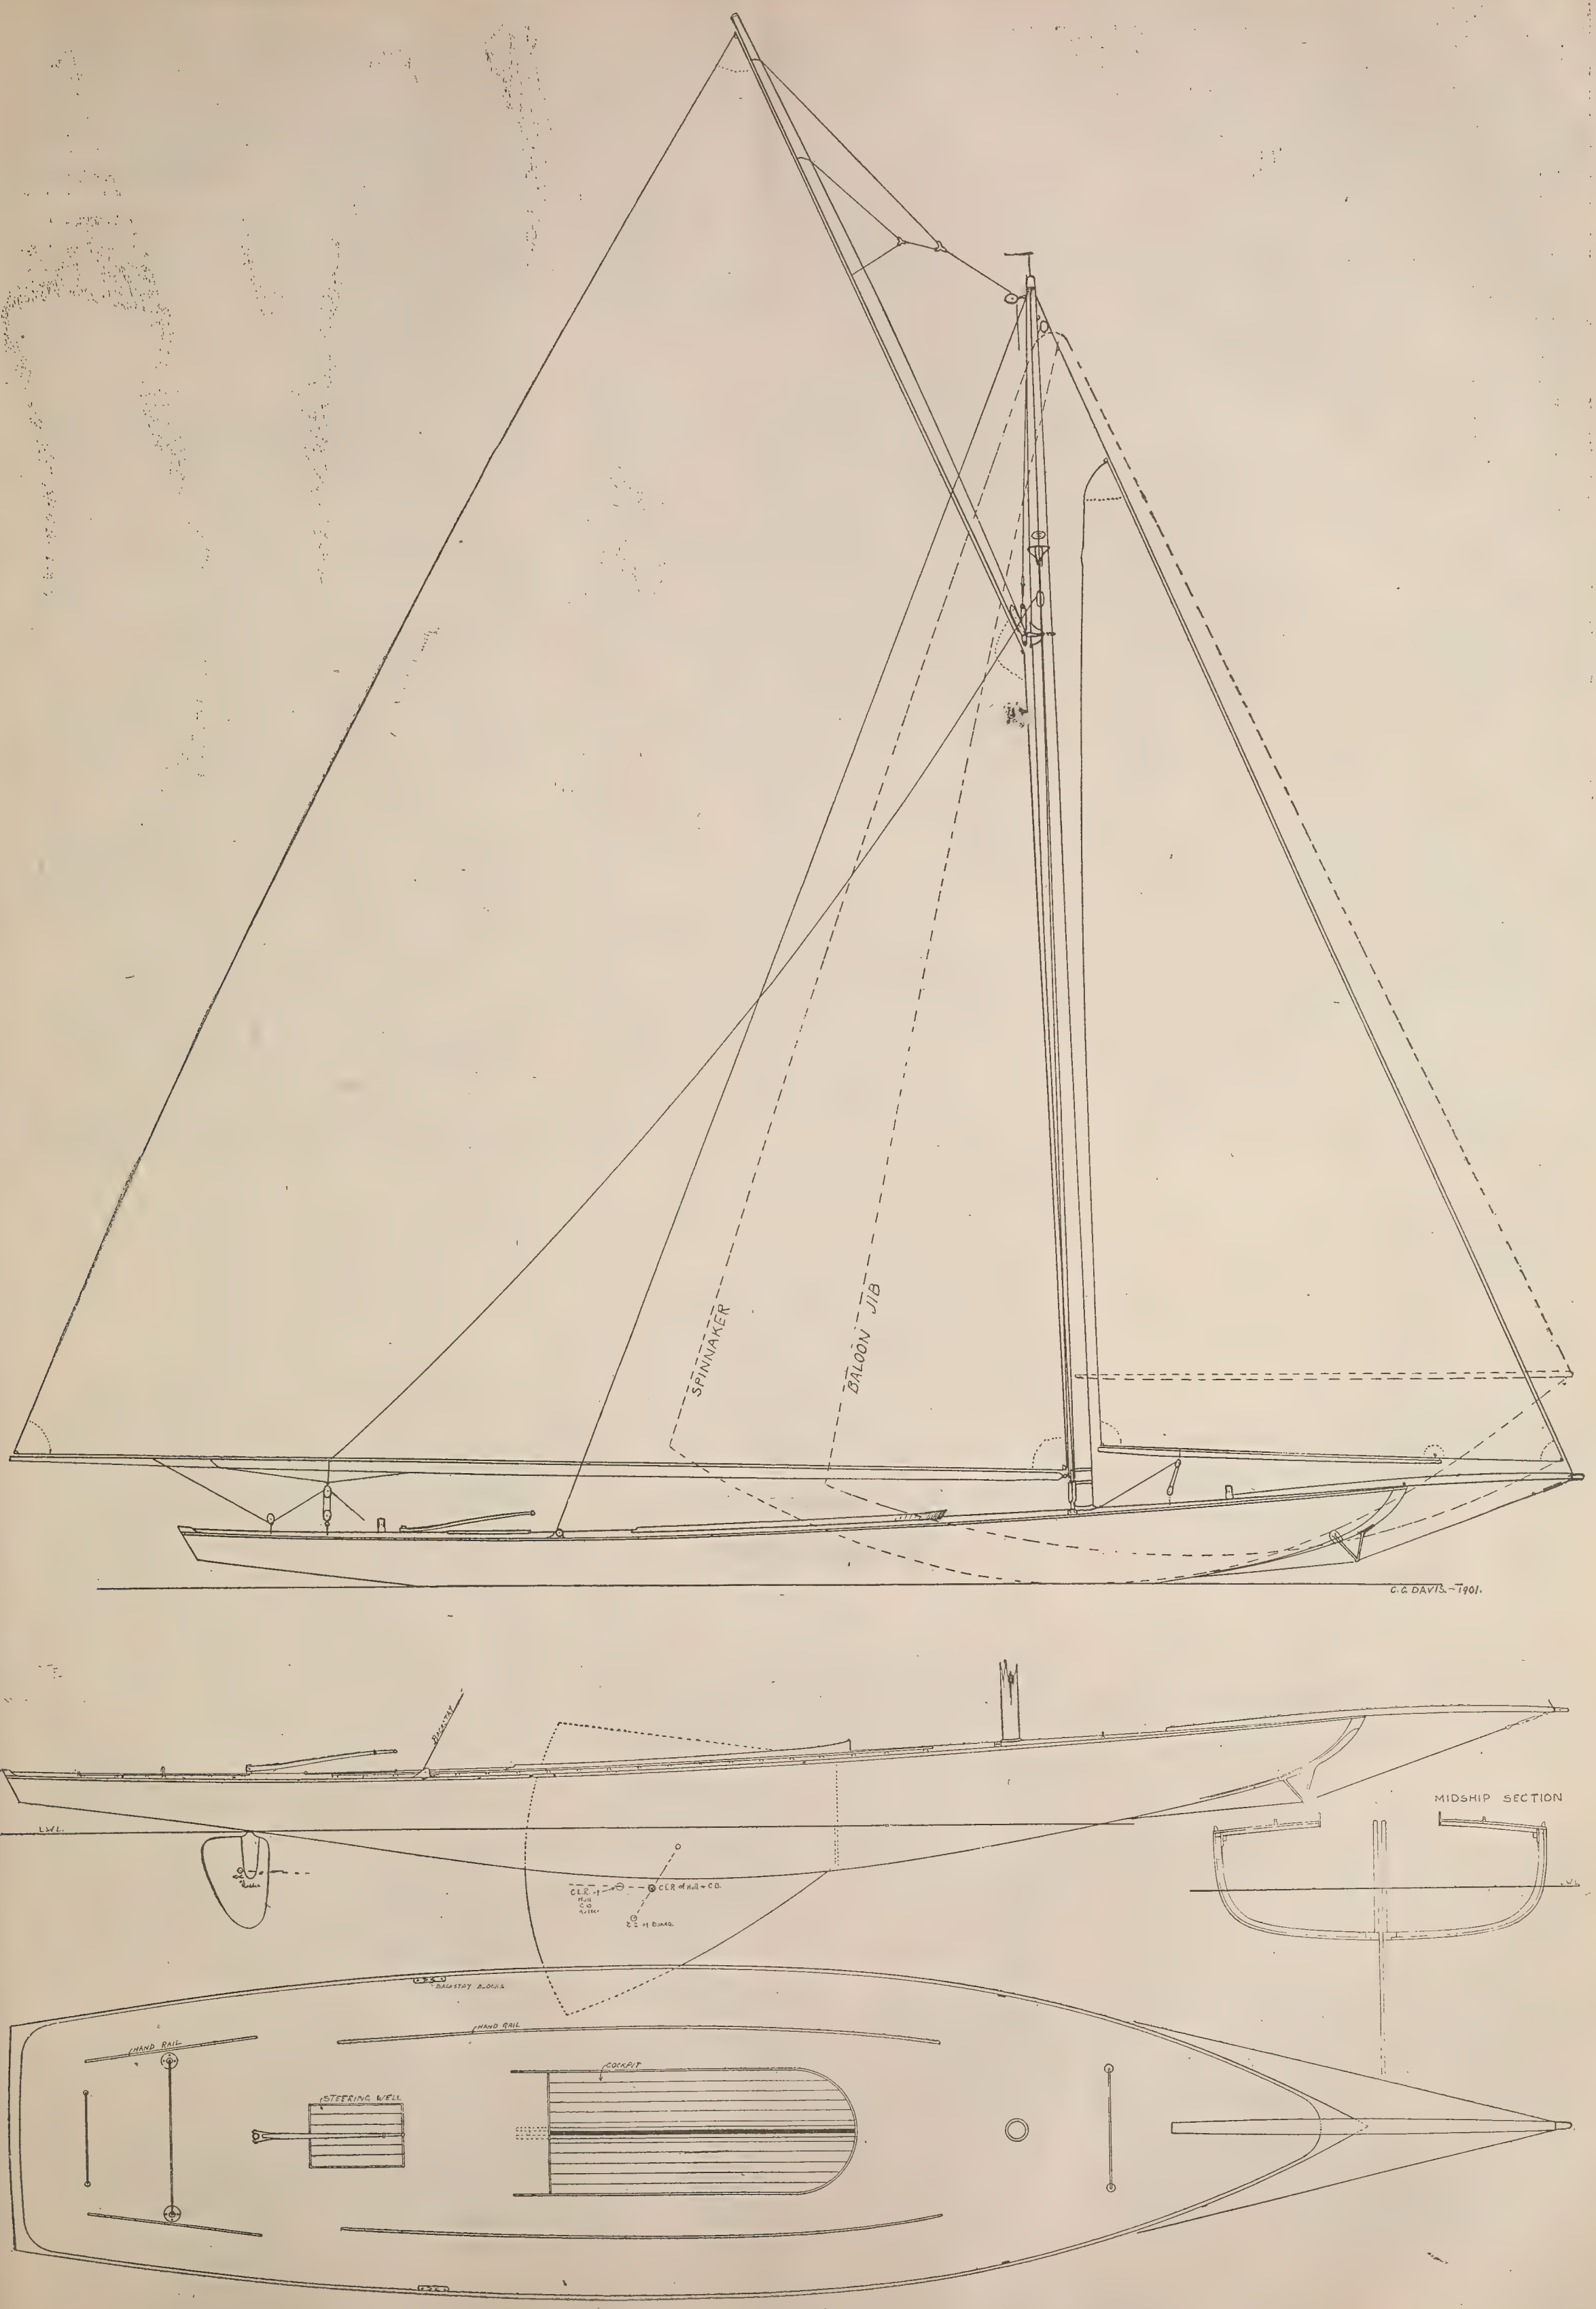
Gen. F. V. Greene will have his yawl Gavoita brought from Boston to New York in a few days.

The steel steam yacht Cangarda, which was built by the Pusey & Jones Co. for Mr. Charles J. Canfield, of Manistee, Mich., was launched on April 22. The yacht is to be schooner rigged and will be completed and ready for delivery to her owner in June.

The new steam yacht Orienta, owned by Mr. Edward R. Ladew, N. Y. Y. C., was launched on April 25 from Mr. Lewis Nixon's shipyard, Elizabethport, N. J. The yacht is 101ft. 6in. long, 12ft. beam and draws 5ft. Forward she has a large forecastle and aft of this is a room for the captain and the engineer. Then comes the galley, aft of which are the fire room, coal bunkers and engine space. Abaft of these are the owner's quarters, which consist of a large double stateroom extending across the vessel with a bathroom adjoining. There is a large saloon and toilet room with two staterooms further aft. All the woodwork is of African mahogany with panels of silk and tapestry. She has over 7ft. headroom. On deck there is the dining room forward in the deck house with the pantry in the after end. The after deck is unobstructed. The yacht will be propelled by a triple expansion engine with cylinders 10in., 15in. and 25in. in diameter by 15in. stroke and of 600 horsepower. She has the very latest impromed Mosher water tube boiler with 40 sq. ft. of grate surface. A large blower will provide fresh air in the fire room. An electric plant and a fresh-water plant will make the boat most complete.

At the yards of the Greenport Basin and Construction Co., Greenport, L. I., the greatest activity is shown in putting the seventy yachts that are laid up there into commission. The sloop Grayling, built from designs made by Messrs. Gardner & Cox, by the above firm, for Mr. Robert Toland, of Philadelphia, was completed a short time ago. She is 54ft. over all, 30ft. waterline, 13ft. 4in. beam and draws 4ft. She is a centerboard boat. The same company has also completed a 36ft. sloop from a design made by Mr. F. M. Somel. She will be named Marion and is 39ft. over all, 25ft. 6in. on the waterline, 10ft. beam and 6ft. 3in. draft. The steam yachts Vergana and Orienta are being put in commission at this yard.

A cablegram has been received by the Spalding St. Lawrence Boat Company, of Ogdensburg, N. Y., from G. L. Watson, designer of Sir Thomas Lipton's Sham-



YANKEE—DESIGNED BY CHARLES G. DAVIS FOR THE THOMPSON-LYTTON-PRICE-GRIFFITHS SYNDICATE, 1901.

rock II., ordering them to reserve a long stick of spruce for Shamrock's spinaker boom. Mr. Fraser, manager of the company, commenting on this order, states that it will be the longest and largest hollow spruce wood spar ever attempted, and that it will be lighter by several hundred pounds than any spinaker boom used on any America Cup boat since the modern large spinaker has been carried.

Two books have been received this week for review. One of them, written by the well-known designer, Mr. Charles D. Mower entitled, "How to Build a Motor Launch," will appeal to those yachtsmen who intend building a small boat, either power or sail. The other book is by Mr. Thomas Fleming Day "On Yachts and Yacht Handling." There is probably no writer more thoroughly qualified to deal with this subject than Mr. Day, for besides being a yachtsman he is also a deep sea sailor. Both these books are published by the Rudder Publishing Co., 9 Murray street, New York City.

A Schooner With a History.

WE understand that the schooner Lily White, now owned by Capt. W. H. Towles, will soon go to Tampa to be entirely rebuilt. Lily White has been a staunch vessel, and has gone through enough to destroy several vessels. In a heavy West Indian hurricane, while on a trip between Punta Rassa and Key West with a load of beef cattle, her sails and masts were carried away by the gale. She drifted around the Florida Keys and out into the Atlantic. The crew ran out of water and the 110 cattle on board nearly all perished from thirst. She turned up at St. Augustine after being out for eighteen days and given up for lost, and had about twenty live cattle when she reached that port.

In July, 1897, Lily White was struck by a squall and capsized in the Gulf, on her way from Key West to Punta Rassa, Mr. Nathan Swain and a sailor losing their lives and other passengers and crew having a narrow escape from death after a terrible experience of twenty-four hours. The vessel again drifted around the Florida Keys, this time bottom upward, and how she ever escaped being smashed on the reefs is a mystery; but she did, and was picked up three weeks after the accident at Key Largo, ninety miles east of Key West. Hendry & Langford brought her to Key West and again fitted her up for the cattle business.

Some months ago she become the property of Capt. Towles, but her troubles were not yet over, for the crew were caught in the act of smuggling dutiable goods from Cuba in January last, with the result that the vessel was confiscated by the Government, but again bought back by Mr. Towles. Now she is to be rebuilt, and is likely to figure for many years in the Gulf trade.—Fort Myers (Fla.) Press.

Rifle Range and Gallery.

Fixtures.

May 30.—Pohlmann's Pavilion, Jersey City Heights.—Tournament of Our Own Shooting Society.

July 14-23.—San Francisco, Cal.—National Schuetzenbund of North America's annual tournament in Shell Mound Park. Offhand, 200yds.

Aug. 6-7.—Taftsville, Conn.—South New England Schuetzenbund's annual festival and prize shoot.

Columbia Pistol and Rifle Club.

SAN FRANCISCO, April 7.—The Columbia Pistol and Rifle Club's shooting stands were overcrowded to-day. The weather was fine. Many visitors were in attendance, among them Mr. J. B. Bradley, of Wyoming; Mr. J. B. Saunders, of Seattle, and Mr. J. H. Allen, of Chico, Cal., who tried their hands at our sport. Otto Feudner, the shotgun champion, took the wind from the experts' sails today with his S & W. pistol, and proved that a man can excel with two weapons when he is made of the right stuff. His 34 is within 2 points of the best club score that has been shot for two years, and only 5 points away from club pistol record (29). It is the more remarkable that he has been shooting this weapon but a few months. His ten best scores to-day averaged 49.9. Geo. Mannel, our president, beat his best previous efforts with the fine rifle, making 49. It bothered Champion Page to beat it, but he finally succeeded in making a 46. Dorrell felt particularly good, as his average for the day beat Pape's. Capt. Kuhnle found that his .22-7-45 was best at 50yds., his 17 being 1 point away from club record. Hoffman, Brannigan and Feudner have purchased a .22 rifle and will be out for the captain's scalp, which is getting gray. It might be safe to predict that these youngsters will be gray before they catch Fred; any way, they will know they have had a match when they do hang his gray locks on their girdle. The bone that was broken in Young's right arm groaned and squeaked, but he banged away with pistol and revolver, and forgot the pain in the excitement of the sport, thankful to have his left or shooting hand unharmed. Dr. Twist is well over his last accident with his bike, and felt that the range was the safest place among sports. It is well to add that in our long experience here, covering a period of nearly sixteen years no accident has ever occurred at any club shoot that we remember, which is a remarkable record, when compared with other sports, and reflects great credit upon the carefulness of our shooting fraternity.

Scores, 10 shots, Columbia target, off-hand:

W. G. Hoffman, 57, 67, 77, 74, 79; C. M. Daiss, 74, 90; J. H. Allen, repeater, 148; E. A. Allen, repeater, 157, 158, 165; F. L. Pape 196.

Pistol, 50yds.: Otto Feudner, 48, 34, 42, 60—consecutive, and a run of 29 in 10 shots, with 7 in the 2in. ring; F. O. Young, 38, 44, 44, 46, 42, 49, 49, 42; E. Hovey, 41; C. M. Daiss, 47, 49, 51, 55; J. B. Bradley, 58, 59, 73, 76; G. M. Barley, 59; G. W. Hoadley, 59, 64; Mrs. G. Mannel, 63, 75, 80, 81, 84, 81; G. Mannel, 87.

Revolver, 50yds.: F. O. Young, 51, 52, 54, 58; P. Becker, 55, 66, 69; C. B. Saunders, 71, 74; Dr. J. F. Twist, 78; J. B. Bradley, 92.

.22 rifle, 50yds.: Capt. Fred Kuhnle, 17, 20, 21, 21, 19, 22, 19; W. G. Hoffman, 20, 24, 26, 27, 29, 30; E. A. Allen, 33; O. Feudner, 36; W. L. Bryant, 45.

April 21.—A. J. Brannigan beat our club records on average work with his .38 Smith & Wesson revolver, and his 38 score is 1 point behind the club's 10-shot record. His 39 is the best group (3¾in. ring) ever made in the club. The heavy wind alone prevented him beating the record on points in the latter score. In ten entries he made 479, consecutive shooting, barring one score, and that his fourth. Some idea of his remarkable work can be gained by comparing this with the ten best in past years. Gorman won in 1898 with 503, Young in 1899 with 582, and Daiss in 1900 with 454. In just twenty entries and in two club shoots he has to his credit 465 points, only 11 points behind Daiss' club record, and only three months ago we showed him how to load his revolver for his first shooting. Without doubt this is the best shooting ever done at 50yds. with a .38cal., and is a surprise to the .44cal. adherents. It also speaks well for the new S. & W. His bullet was 1 to 20, from the Ideal mould, and crimped in a nitro shell, which has a ring to prevent bullet from pressing upon powder. Dr. Twist beat his record with pistol, making 44, and Mannel astonished us all by scoring 6 and 12 in his only two entries in the 3-shot match with rifle. He realized that these two scores, if made in the coming bund shoot, would win a small fortune.

A new lady shooter appeared, and with Allen's little Stevens favorite, came within 4 points of the ladies' record, 20.

Scores, Columbia target, off-hand:

Rifle, 10 shots, 200yds.: G. Mannel 65, 69; Ed Hovey 66; J. B. Bradley 106, E. A. Allen 117, 160. Three shots: G. Mannel 3, 1, 2—6, and 2, 5, 5—12.

Pistol, 50yds.: C. M. Daiss 39; Dr. J. F. Twist 44, 48, 58, 59, 61, 65, 67, 74; W. G. Hoffman 47, 49, 51, 54; E. Hovey 48; G. Mannel 62, 67; F. O. Young 62; J. B. Bradley 66; Mrs. G. Mannel 68, 70, 74, 79, 80; E. A. Allen 82, 90, 94, 95; H. A. Carroll 92, 102.

F. O. YOUNG, Rec. Sec'y.

Rifle at Shell Mound

SAN FRANCISCO, April 15.—Yesterday was a clear but windy day at Shell Mound range. Scores of shooters were on the range. The Red Men's Schuetzen Club held their annual king shoot. The high honor went to their captain, H. Grieb. The rest of the prizes were secured in the following order: Crown, J. Meichsner; scepter, John Feldmann; apple, Lieut. C. Stein; ring, Capt. Henry Grieb; head, John Oldag; neck, Carl Koeberer; right wing, H. Schult; left wing, J. Minks; right talon, J. A. Mohr; left talon, M. Dieckert; tail, C. Oldag.

The militia were out in force, and several clubs held bullseye shoots.

The Golden Gate and Germania clubs scored as follows on the 25-ring target, with rifle.

Golden Gate Rifle and Pistol Club, handicap shoot; rifle scores: M. F. Blasse 191, 195; O. A. Bremer 217, 214, 206, 218, 217; Dr. Rogers 220, 220, 227; A. B. Dorrell 221; A. Gehret 213, 218; D. W. McLaughlin 225, 225, 218.

Pistol scores—Gold medal: J. F. Bridges 215, 221; B. Jonas 203. Silver medal: G. Tammeyer 203, 219, 202; M. J. White 194, 182; C. Scheble 185, 169; O. Feudner 94, 93, 92, 91, 89, 89, 89, 87, 85, 85, 85, 84, 83..

Handicap—Revolver scores: Paul Becker 84, 81.

Pistol scores: C. Scheble 70, 82; Otto Feudner 92, 95, 92, 88, 88.

German Schuetzen Club, monthly medal shoot: First champion class, F. P. Schuster 219; second champion class, F. Rust 205; first class, John Gefken 205; second class, L. N. Ritzau 209; third class, J. Beuttler 179; best first shot, D. Salfield, 24; best last shot, F. P. Schuster, 25.

ROEEL.

Trapshooting.

Fixtures.

May 1-2.—Toledo, O.—First annual handicap shoot of the Edgewater Gun Club. F. W. Dyar, Sec'y.

May 1-3.—Newell, Ia.—Newell Gun Club's annual tournament; targets and live birds. Henry G. Hall, Sec'y.

May 2-3.—Beatrice, Neb.—Tournament of the Beatrice Gun Club.

May 4.—Summerdale Station, Pa.—All-day shoot of the Frankford Gun Club. Main event, twelve-men team contest. D. D. Mercer, Secy, 4461 Frandford avenue, Frankford, Pa.

May 5.—Chicago, Ill.—Universal Gun Club's tournament.

May 6-7.—Bowling Green, Ky.—Bowling Green Gun Club's tournament.

May 7-9.—Peru, Ind.—Fifth annual amateur tournament of the Peru Gun Club; two days at targets for amateurs; one day at live birds. Chas. Bruck, Sec'y.

May 7-10.—Tournament of the New Jersey State Sportsmen's Association. C. W. Feigenspan, Sec'y.

May 7-10.—Lincoln, Neb.—Twenty-fifth annual tournament of the Nebraska State Sportsmen's Association, under the auspices of the Lincoln Gun Club. W. D. Bain, Sec'y.

May 8-9.—Chicago, O.—Deer Lick Gun Club's tournament.

May 9-10.—Marion, O.—Marion Gun Club's tournament.

May 10-11.—Johnstown, Pa.—Johnstown Rod and Gun Club's tournament.

May 12.—Brooklyn, L. I.—All-day shoot of the Fulton Gun Club, East New York. Team race: Oceanics vs. Fultons. Address Bob Schneider or A. A. Schoverling, P. O. Box 475.

May 14.—Brooklyn, L. I.—Shoot for naphtha launch; 10 live birds, $10 entrance, birds extra; surplus divided; seventeen entries to fill. F. Lebohner, Mgr.

May 14-17.—Allentown, Pa.—State shoot of Pennsylvania State Sportsmen's Association. C. F. Kamlich, Cor. Sec'y. Elmer E. Shaner, Mgr.

May 14-16.—Elwood, Ind.—Tournament of the Zoo Rod and Gun Club.

May 14-17.—Newton, Ia.—Annual tournament of the Iowa State Sportsmen's Association, under auspices of the Newton Gun Club. D. R. Tripp, Sec'y.

May 15-16.—Luverne, Minn.—Tournament of Luverne Gun Club.

May 15-16.—Elgin, Ill.—Tournament of Elgin National Gun Club.

May 15-16.—Zanesville, O.—Spring tournament of the Zanesville Gun Club. L. A. Moore, Sec'y.

May 16-17.—Pekin, Ill.—Twin City Gun Club's tournament.

May 17-19.—Great Falls, Mont.—Eighth annual tournament of the Montana State Sportsmen's Association, under auspices of the Great Falls Rod and Gun Club, of which Mr. Hugo Nalbach is secretary.

May 20-25.—Springfield, Ill.—Twenty-seventh annual tournament and convention of the Illinois State Sportsmen's Association. Charles T. Stickle, Sec'y.

May 21-22.—Greenville, O.—Annual shoot of the Greenville Gun Club. F. C. Brehm, Sec'y.

May 21-22.—Greenville, O.—Greenville Gun Club's tournament.

May 22-23.—Mechanicsburg, O.—Ninth annual tournament of the Mechanicsburg Gun Club. C. W. Phellis, Sec'y.

May 23-24.—Cedar Rapids, Ia.—Cedar Rapids Gun Club's tournament.

May 28-30.—London, O.—Tournament of the London Gun Club.

May 28-30.—Saginaw, Mich.—Tournament of the Michigan Trapshooters' League, under auspices of the East Side Gun Club. John Parker, Mgr.

May 28-June 1.—St. Louis, Mo.—Twenty-fourth annual tournament of the Missouri State Game and Fish Protective Association. Herbert Taylor, Sec'y.

May 28-29.—Wheaton, Minn.—Wheaton Gun Club's target tournament.

May 28-29.—Dubuque, Ia.—Dubuque Gun Club's second amateur tournament.

May 28-30.—Xenia, O.—Xenia Gun Club's tournament.

May 30.—Pittston, Pa.—Nitro Gun Club's tournament.

May 30.—Norristown, Pa.—Tournament of the Penn Gun Club. J. R. Yost, Sec'y.

May 30.—Dansville, N. Y.—Amateur tournament of the Dansville Gun Club, on Decoration Day. Norman Tompkins, Sec'y.

May 30.—Canajoharie, N. Y.—Tournament of the Canajoharie Gun Club. C. Weeks, Sec'y.

May 30.—Auburn, Me.—Annual shoot of the Auburn Gun Club.

June 5-7.—Circleville, O.—Under auspices of the Pickaway Rod and Gun Club, annual tournament of the Ohio Trapshooters' League. G. R. Haswell, Sec'y.

June 11-13.—Sioux City, Ia.—Seventh annual amateur tournament of the Soo Gun Club. W. F. Duncan, Sec'y.

June 13-14.—Bellefontaine, O.—Fourth annual tournament of the Silver Lake Gun Club. B. G. Cushman, Sec'y.

June 17-20.—Warm Springs, Ga.—Southern Interstate tournament; two days targets, two days live birds. Chas. L. Davis, Mgr.

June 20.—Waterville, Me.—Amateur target shoot of the Waterville Gun Club; $75 added money. Dana P. Foster, Sec'y.

June 25-27.—Walla Walla, Wash.—Seventh annual tournament of the Sportsmen's Association of the Northwest. W. G. Campbell, Sec'y.

July 23-26.—Interstate Park, Queens, L. I.—The Interstate Association's second Grand American Handicap target tournament; $1,000 added money. Edward Banks, Sec'y-Treas., 318 Broadway, New York.

Aug. 7-9.—Providence, R. I.—The Interstate Association's tournament under the auspices of the Providence Gun Club. R. C. Root, Sec'y.

Aug. 21-22.—Auburn, Me.—The Interstate Association's tournament, under the auspices of the Auburn Gun Club. L. A. Barker, Sec'y.

PETERS CARTRIDGE COMPANY'S TOURNAMENTS.

May 21-23.—Henderson, Ky.—Amateur tournament given by the Peters Cartridge Company; two days targets; one day live birds. John H. Mackie, Mgr.

DRIVERS AND TWISTERS.

A meeting of the promoters of the international team race was held in New York on Monday of this week and many of the details concerning it were definitely settled. The series of international matches will be shot on the grounds of the Middlesex Gun Club, which are situated near Hendon. Also matches as teams and as individuals will be arranged to take place at Glasgow, Scotland, Belfast, Ireland, and other points as are under consideration, such as Birmingham, Leeds, Manchester, etc. The stakes of the team race will be $2,500 a side. Mr. Edward Banks, who has been one of the active promoters of the team race, has been very busy, as representative of the team in the matter of transportation, in arranging passage for it. He secured passage on the steamer Canadian, of the Leyland Line. There will be ten men on the team, with two substitutes in reserve. The team will leave England June 29, on its return trip, reaching New York about July 8, which will give them time and opportunity to participate in the Pan-American tournament at Buffalo, July 15 to 20. The personnel of the team is as follows: Thomas A. Marshall, Keithsburg, Ill., captain; William R. Crosby, O'Fallon, Ill.; R. R. Merrill, Milwaukee; Charles W. Budd, Des Moines, Ia.; Frederick B. Gilbert, Spirit Lake, Ia.; C. M. Powers, Decatur, Ill.; John S. Fanning, Jersey City; Rolla O. Heikes, Dayton, O.; James A. R. Elliott, Kansas City; Frank S. Parmelee, Omaha, and E. H. Tripp, Indianapolis.

The programme of the Montana State Sportsmen's Association's eighth annual tournament, at Great Falls, Mont., May 17 to 19, under the auspices of the Great Falls, Mont. Gun Club, can be obtained of Mr. Hugo Nalbach, secretary. This tournament is open to all amateur shooters, excepting the prize events, which are for members of the M. S. S. A. Professionals and manufacturers' agents may shoot for targets. Shooting begins at 9:30. Five cents each for bluerocks, 30 cents for pigeons. The grounds will be open for practice on May 16. The annual meeting will take place on May 17, at 8 P. M. A fare of one and one-third for the round trip has been secured from all points on the Great Northern, Montana Central, and Great Falls & Canada railways. There will be contests for the bluerock championship, three-man team championship, Butte Rod and Gun Club medal, challenge medal, and championship live-bird shoot. There is a liberal sum of added money.

The team shoot, New York vs. New Jersey, starts at 9 o'clock Friday, May 10, the last day of the New Jersey State Association's tournament. Each contestant shoots at 25 birds, 30yds. rise. Entrance cost of birds. To reach Smith Brothers' grounds, where the tournament takes place May 7 to 10, inclusive, from Jersey City or Newark, take the Plank road trolleys to Ferry and Foundry streets. Ship guns and shells to Smith Brothers, Ferry and Foundry streets, Newark. In the N. Y.-N. J. team shoot the contestants will be paired to shoot against each other, thus presenting a series of individual matches as well as an aggregated team competition. Mr. C. W. Feigenspan, the famous expert, of Newark, is in charge of the New Jersey team arrangements, while Mr. L. H. Shortemeier fills a like office for the New York team. It is probable that each team will be the best that can be gotten.

Mr. J. L. Head, with his habitual energy and enterprise, is earnest in promoting the interests of shooters. He now purposes to raise a subscription as a conspicuous incident of the Peru, Ind., Gun Club's forthcoming tournament, May 7, 8 and 9, the particulars of which are set forth in a communication from Mr. Head, published elsewhere in our columns.

Mr. R. A. Welch, of the Carteret Gun Club, as to membership, and of the United States as to national fame and citizenship, will sail this week for the shores of Merrie England. He purposes to be present at the Anglo-American or American-Anglo target contest. He will go to Paris, and will shoot at the grounds of the Cercle des Patineurs, and then go to London and shoot at Hurlingham and also at the London Gun Club. He expects to be on hand in London to welcome the American team, and will be one of the rooters at the international matches, the first of which will be shot on or about June 11. Several other of America's crack amateurs contemplate visiting abroad at the time the great team contest takes place.

Concerning the matter of pigeon shooting much has been done by the daily press, both inadvertently and with purpose aforethought, to give the general public an idea and belief that pigeon shooting is synonymous with wanton slaughter. Many clubs contribute to the belief by furnishing the scores to the daily press for publication. The results as to the killing are thus given to the public, entirely dissociated from the main purpose of the competition—that is, a test of skill. Some clubs about New York refuse to give their scores to the daily press, which as a whole has declared itself to be their enemies. Is it not timely and proper for all other clubs to do likewise?

The programme of the Penn Gun Club, to be held at Oakview Park, Norristown, Pa., May 30, presents a list of fourteen target events. Also a special feature is the six-man team shoot, entrance $5 per team; 25 targets per man; entries close at 1:30 P. M. May 30. Sweepstake events commence at 10 A. M.; team shoot at 1:30. Traps magautrap and Sergeant system; targets 1½ cents. Class shooting. Lunch and loaded shells can be obtained on the grounds. J. R. Yost, Norristown, Pa., is the secretary.

Mr. Paul North, of the Chamberlin Cartridge & Target Co., Cleveland, O., is one of the most enthusiastic workers in the furtherance of the Anglo-American trapshooters' forthcoming contest. He was present at a meeting of the Interstate Association, New York, on Monday of this week, and mentioned incidentally that he would endeavor to sail for England as near the middle of May as possible. He desired to arrive in England before the American team arrives, to arrange many preliminary details.

The Staunton, Va., Gun Club, April 28, engaged in a seven-men team race with the Charlottesville Gun Club, and won by a score of 155 to 129, each contestant shooting at 25 targets. After this contest Mr. F. M. Merriken and Mr. H. A. George, of the Charlottesville team, contested for the State championship cup, emblematic of the target championship of Virginia. Mr. Merriken won by a score of 45 to 40. This is his fourth consecutive win in respect to this trophy.

At Watson's Park, Chicago, April 27, the fifteen-men team contest between the National Gun Club, of Milwaukee, and the Garden City Gun Club, of Chicago, was close and interesting, the victorious team succeeding by but 2 birds, the scores being: Gardner 190, National Gun Club 188. Out of the thirty contestants Mr. M. E. White was the only one to make a straight score.

The Trenton Shooting Association mentions that it is ready to shoot any six or twelve men team of clubs within the State of New Jersey, for a consideration or for price of targets. It would seem as if there were a good opening thereby for some club or clubs to get busy.

Mr. John S. Wright announces a live-bird shoot at Interstate Park, Queens, L. I., on May 22, for a naphtha launch, value $175. The number of birds, entrance, etc., will be announced in the near future. It is probable, however, the event will be at 10 or 15 birds.

The summer series of the Boston Gun Club begins on Wednesday of this week on the club's grounds at Wellington, Mass. It is open to all shooters. The winter series, which was finished last Saturday, evoked keen competition and constant interest.

At Richmond, Va., April 20, Messrs. Stearns and Hammond contested for the Richmond championship medal, the latter winning by a score of 44 to 43—a very close race. Each contestant shot at 50 pigeons.

BERNARD WATERS.

IN NEW JERSEY.

Trenton Shooting Association.

Trenton, N. J., April 20.—The same old story—rainy weather and a sick magautrap. While standing at the score wondering if it was November or April, and waiting for the trap to get in a good humor again, so that we could finish the squad work, and regain the shelter of the club house, the thought chased itself through our think-tank if things were really as they seemed. We were awakened from a dark brown study on the subject when the brim of our soft felt hat collapsed and gently dumped its accumulation of rain water inside our collar. We were satisfied then that things were not only what they seemed, but actually were.

The third and last race of the team shoot series with Freehold has been shot and won. Thank heaven that is off my mind! T. S. A. 2, Freehold 1.

We also won the open team shoot for any club in the State, and intend to send a twelve-men team to Frankford May 4 to take part in the tournament of the Frankford Gun Club. Some of our members are improving rapidly in their work, which is very encouraging. Soup is very scarce in this locality.

Trenton Shooting Association vs. Freeho'd Gun Club; third and last race of the series, shot at Freehold, N. J., April 17; six men to a team, 50 targets per man: Trenton Shooting Association 234, Freehold Gun Club 229.

Open team race for New Jersey, six men, 30 targets per man: Trenton Shooting Association 140, first; Freehold Gun Club 135, second; Asbury Park Gun Club 117, third; New Brunswick Gun Club 109, fourth.

The Trenton Shooting Association is open to shoot any six or twelve men team in the State for a consideration or targets only.

The Ottawa Tournament.

OTTAWA, Ont.—The Ottawa, Ont., Easter trapshooting tournament came off as advertised here to-day, April 8. It has been a most dismal day—a fine drizzling rain from above, with mud and water underfoot. A small cabin, with a smaller open shed, furnished shelter for the thirty-two shooters who faced the traps.

In this progressive age, to make trapshooting popular even locally, there must be good, well-kept grounds, with a roomy and comfortable club house, and all arrangements run right up to date. That which was good enough ten years ago is now buried among the things that were.

Mr. N. P. Leach acted as referee, squad hustler, etc. Messrs. W. H. Hayes and James Paton were official scorers.

The second event was a team race of five men each, from the St. Hubert and Westmount, Montreal, clubs, for a trophy. Conditions: One man up, 5 targets from unknown traps The total scores were: St. Hubert 45, Westmount 42.

Kline-Burmeister Tournament.

SPIRIT LAKE, Ia., April 25.—Kline and Burmeister's tournament commenced Tuesday morning with twenty-five entries. The weather was warm and pleasant, with but little wind. The shooting was done from three traps, Sergeant system. Targets were thrown about 70yds.

The programme for each day was seven 15 and five 20 target events, with $4 added to each event. The five 20-target events were open to all, and the 15-target events open to amateurs only.

Gilbert and Budd were the only two manufacturers' agents in attendance. Gilbert shot in all the events, while Budd shot only in the open events. Mr. Miller, of Spirit Lake, gave three special prizes to the amateurs making the highest average in the three days. Lowest average was won by Hughes; second by Kline and third by Shear.

Quite a number of the shooters will attend the Newell tournament next week, and go from there to Lincoln, Neb., to attend the State shoot.

Mr. F. C Whitney came up from Des Moines and had charge of the office, and kept things moving without a hitch. Burmeister was squad hustler, and Kline had charge of the traps.

HAWKEYE.

Winchester Gun Club.

DETROIT, Mich.—The regular shoot of the Winchester Club, April 20, wasn't what might be called a gala day, although the single squad that had the pluck and ammunition to waste managed to get a bit of fun and a large amount of fresh air out of it.

It was cold and the wind blew, right in our faces, a heavy gale all of the time, with heavy gusts most of the time. Where the 7½s went nobody knew, and the targets didn't know what to do. Springborn said, "Just wait and they will come back."

Brodie managed to beat Springborn for the A medal, and Warner had only 10 to beat to keep the B medal. Class C took a day off. We acknowledge the score:

Events:	1	2	3	4	5	6	7
Targets:	10	10	10	10	10	10	25
Brodie	5	5	..	7	6	4	11
Hitchcock	7	5	3	3	6	3	9
Springborn	7	6	8	6	8	5	11
Warner	4	4	8	..	..	5	14
Lane	..	..	5	5	2	..	10

American Team to England.

PERU, Ind., April 27.—Referring to the communication of Mr. Paul North in your last issue, in which he commends the idea of the Peru Gun Club, of creating a sum to be subscribed toward defraying the expenses of our team of world beaters to the British Isles, allow me to say to Mr. North I plead guilty. However, let me assure Mr. North that my object in having our club make this small provision was purely from a motive of having other clubs, who may agree with my idea, take up something of this kind, as it has been my belief since the contest was first suggested that the tournaments given by the gun clubs of the country between this time and the date of the departure of the American team could and should contribute a considerable sum toward defraying these expenses.

I am much obliged to Mr. North for his further suggestion as to a race for this same purpose, and wish to announce here that upon the first day of our tournament we will have a race upon the lines as suggested by him, and that the Peru Gun Club will contribute the targets for this race.

And speaking of our tournament of May 7, 8 and 9, I wish to say to the amateurs of this and surrounding States that if you wish to attend a tournament where the amateurs are wont to assemble, come to Peru. We will have a large entry list, and if you can shoot a little bit your chances of being a winner are good. Our tournaments are usually run very smoothly under the management of Mr. Parker.

Peru has a squad of amateurs who will shoot the programme through, not only at targets but at the pigeons. Mr. Fred ERD, Jr., will look after the retrieving with his string of splendid dogs.

To the expert, if you want an opportunity to show the effectiveness of your powder, shells, guns, etc., to the largest gathering of the purchasers of your products that you will probably meet this season, come along. They will likely be here, and while you won't have the opportunity to win their money, you will meet a lot of good fellows who want to meet you and see you shoot, and your firm will get the money you might have won.

J. L. HEAD.

Hammond vs. Stearns.

RICHMOND, Va., April 20.—At the Deep Run Hunt Club's ground to-day Stearns and Hammond met again to trp conclusions in a 50-bird race for the city championship medal. Hammond, after holding this for several years, lost it to Stearns about a month ago. To-day he regained possession of it by the following score:

Trap score type—Copyright, 1901, by Forest and Stream Pub. Co.

Hammond.....2 2 2 2 2 * 2 2 2 2 2 0 2 0 2 2 2 2 2 2 1 2 2 2 2 2—22

2 2 2 2 2 2 0 2 2 2 2 2 2 2 2 2 0 2 2 2 2 2 2 0 2—22—44

Stearns.....2 2 0 2 2 2 2 2 2 0 2 2 2 0 0 2 2 2 2 2 2 2 2 2 2—21

2 0 2 2 2 2 2 2 2 2 2 2 1 2 1 2 2 2 2 2 2 0 0 2 2 2—22—43

After this Wood and Vaughan shot at 25 birds. Wood was giving Vaughan 3 birds, but failed in the attempt, as the following figures will show:

Wood .....2222212222201*1210100*2001—17
Vaughan .....2222000 22**22122012222222—19

Ed Banks, of New York, and H. P. Collins and L. A. Thomas, of Baltimore, were visitors, and took part in the remainder of the proceedings. One 5-bird sweep was shot, and then the supply of pigeons gave out, but Lynham had obtained a plentiful supply of English sparrows, and they afforded good sport till dark. The sky was dull and cloudy, and the background none of the best, so that a goodly number escaped.

First event: Johnson 7, Stearns 9, Richmond 9, Younger 5, Tignor 6, Grundy 8, Thomas 8, Banks 8, Powhatan 7, Harrison 7, Collins 5, McPherson 3, Anderson 5.

Second event: Johnson 9, Stearns 10, Richmond 9, Grundy 6, Thomas 5, Banks 10, Powhatan 10, Harrison 9, Anderson 7.

R. F. BANKS.

Staunton Gun Club.

STAUNTON, Va., April 28.—A team from the Charlottesville Gun Club paid us a visit on the 28th, and shot the Staunton Gun Club a seven-men team race for the intercity cup, which the Staunton Club held. The conditions were 25 targets per man, unknown angles. The Staunton team won with a score of 155 to 129. This makes the fourth time this cup has been shot for by the two clubs. Charlottesville won it the fist time, and Staunton won it the last three. After the team shoot Mr. H. A. George, of the Charlottesville team, and Mr. F. M. Merriken, shot a match for the State championship cup, emblematic of the target championship of Virginia, which Mr. Merriken held. The conditions were 50 targets each, 38 singles and 6 pairs. Merriken won with a score of 45 to 40, which makes the fourth consecutive time he has won this cup. Mr. T. H. Keller, Jr., of the Peters Cartridge Company, kindly consented to act as referee in both matches, and gave entire satisfaction to all parties. There were several other 10 and 25 target events, of which no official record was kept. The scores:

F. M. MERRIKEN.

Millbrook Gun Club.

MILLBROOK, N. Y., April 21.—Fifteen members turned out for the regular monthly shoot of the Millbrook Gun Club on Saturday last. The new magautrap was used for the first time. But two of our shooters, Tallman and Foster, had ever seen the magautrap before. A large crowd was present to see it work. Tallman equaled his great score of February, again scoring 99 out of his first 100, making a run of 94 straight.

Events:	1	2	3	4	5	6
Tallman	24	25	25	25	22	23
Kelley	17	15	17	16	16	..
Foster	20	18	15	17	20	22

F. J. THOMPSON, Sec'y.

Gardner Gun Club.

GARDNER, Mass., April 20.—At all-day shoot of the Gardner Rod and Gun Club to-day nearly 1,700 targets were thrown. The weather was favorable. About 30 visitors watched the shooting with much interest:

	Shot at.	Broke.		Shot at.	Broke.
Leland	125	91	Turney	60	44
Knowlton	96	66	Derby	50	30
Paine	234	176	Crabtree	145	119
Knights	266	171	Morse	116	73
Tuller	290	244	Gilson	10	3
Sawin	201	193	Baker	30	6

Perhaps the most interesting feature of the game was a miss-and-out, which started with six shooters and simmered down to Sawin and Fuller, the latter winning by 24 to 23.

J. L. PAINE, Sec'y.

A Flock.

The English language must appear wonderfully and fearfully made to a foreigner. One of them looking at a picture of a number of vessels said, "See what a flock of ships." He was told that a flock of ships was called a fleet, and that a fleet of sheep was called a flock. And it was added, for his guidance, in mastering the intricacies of our language, that a flock of girls is called a bevy, that a bevy of wolves is called a drove, and a drove of thieves is called a gang, and a gang of angels is called a host, and a host of porpoises is called a shoal, and a shoal of buffalo is called a herd, and a herd of children is called a troop, and a troop of partridges is called a pack, and a pack of swans is called a whiteness, and a whiteness of geese is called a gaggle, and a gaggle of brant is called a gang, and a gang of ducks is called a team, and a team of widgeon is called a company (or trip), and a company of teal is called a flock, and a flock of snipe is called a whisp, and a whisp of bitterns and herons is called a sege, and a sege of plover is called a flock, and a flock of larks is called an exaltation, and an exaltation of beauties is called a galaxy, and a galaxy of ruffians is called a horde, and a horde of rubbish is called a heap, and a heap of oxen is called a drove, and a drove of blackguards is called a mob, and a mob of whales is called a school, and a school of worshipers is called a congregation, and a congregation of soldiers is called a corps, and a corps of sailors is called a crew, and a crew of robbers is called a band, and a band of bees is called a swarm, and a swarm of people is called a crowd.

WESTERN TRAPS.

A Shoot to a Finish at Last.

CHICAGO, Ill., April 20.—There was formed in the city of Chicago this week a trapshooting club, made up of shooters who are out to shoot, who are not afraid of each other, and who really intend to shoot to a finish. When you come to think of it, this is about as big a piece of trapshooting news as has happened anywhere in the country for lo! these many years. Just stop and count upon your fingers—and it will take less than one finger to do it—how many actual finishes in club or tournament shoots you have seen in the last five years. Not one finish, except in individual matches where only two shoot, and maybe you were not sometimes sure about it then. Certainly you never saw a finish at the Grand American Handicap, which, big as it is, and important as it is, is scaled down so a good many can get into the money. John Watson gave a championship trophy one time. There was no finish, for three men divided before the tie was shot out. The trophy meant nothing. Follow out the history of all the championship trophies that you know anything about, and see how many really mean a high gun finish, one man out of the whole field. It is likely that you cannot count very many such, if you knew all the history of them. As to the average semi-social trap club, the high gun idea is more or less impractical for obvious reasons. Yet it would seem that somewhere in America one ought to be able to find a shoot-off match which is a shoot-off, a finish which is a finish, and a high gun which is a high gun. John Watson and I will go a great many miles to see such a finish. If the idea developed, so that eventually we might have a Grand Prix here in America, just as we have a Grand American Handicap, methinks a good many would go a good way to see it, and it would be something curious enough to be put under a glass case, and be worthy of gate money.

The Nonpareil Gun Club.

The name of this new Chicago shooting club is the Nonpareil Gun Club. It starts off with twenty-one members and a limit set at twenty-five. The first intention was to limit the membership to twenty. The matter was suggested by Charlie Antoine, and has been under discussion for some time. The meeting of organization was held yesterday at the store of Von Lengerke & Antoine, J. H. Amberg in the chair, J. L. Alabaster secretary. Mr. Antoine read a letter which he had sent out to different gentlemen, most of which were embodied in the rules adopted by the club. A committee of three was appointed by the chair to draft by-laws along such lines, and to report at the next meeting, Messrs. J. L. Alabaster, S. Shaw and R. Kuss being appointed as such committee. It was decided to hold the first shoot on the first Saturday in May, and thereafter to take up the date of the last Saturday in each month, the shoots to be at Watson's Park, which could not be secured for the ensuing week. The following officers were elected by acclamation: President, J. L. Alabaster; Secretary-Treasurer, E. L. Harpham; Directors, Alabaster and Harpham ex-officio, and L. Willard, S. Palmer, O. Von Lengerke.

There may be some extra sweeps beside the capital event of each monthly meeting, but these sweeps will be shot high guns strictly. The main slate for each month is scheduled as follows:

Each member shall pay $10 a year, making a total pool of $200, which $200 shall be shot for in quarterly prizes of $50 per quarter; all shoots to be held monthly at 15 live birds per man, two scores of the quarter only to count, this allowing the absence from one shoot during the quarter. The quarterly prizes of $50 to be divided, $25 to first, $15 to second, $10 to third. Shooting to be strictly high guns. Ties to be shot off to a finish, miss-and-out. All events of this club to be high guns and shot to a finish.

The little purse of $50 does not mean a whole lot of money to anybody, especially since it means two or three afternoons, but it does signify a great deal. We have gone through the handicap idea pretty thoroughly out here, and have tried almost everything else in order to stimulate the lagging Chicago interest in trap matters. We have no pigeon matches here, and our club shoots have resolved themselves into pleasant social shooting schools, rather than red hot shooting matches. This new idea of a high gun club, therefore, is certainly a very appealing one, and the formation of the Nonpareil club is one of the most promising and interesting bits of news we have had for many and many a moon out here. It certainly does look as though we were to find out who is our best Chicago pigeon shooter.

There has been a little talk started about getting some manufacturer to contribute a cup or trophy for this club. No doubt there would be a good many manufacturers eager and willing to do this, but it is to be hoped that nothing of the kind will be introduced into the Spartan-like rules of this club, and that it will stick to the self-respecting and high grade course which it has mapped out for itself. The old idea of the merchandise prize was a lingering remnant of the old idea that a trapshooter was different from other mortals, and that everybody ought to be proud to touch his form and to do him honor by way of plate, silk umbrellas, bread tickets, and quarter pounds of tea. The sport in America is old enough to be beyond that sort of thing. Let us hope that we shall have one club in which no man asks cups or bread tickets or odds of anybody else, where everybody shoots for the other fellow's money as well as his own, shoots at the same score and shoots plumb down to a finish. If this be the case, and if it shall con tinue to be the case, then will it indeed appear that the ancient dreams of John Watson and myself have come true. Incidentally we shall see a little ginger injected into a sport which of late years has in this vicinity been all too gingerless.

It was determined to limit the membership first year to twenty-five members. Out-of-town shooters are not barred. The following is the membership at date: R. Kuss, L. Willard, Silas Palmer, H. O. Stone, O. Von Lengerke, Charles Comley, J. L. Alabaster, Geo. Roll, J. B. Barto, D. E. Shaw, M. E. White, Milwaukee, Wis.; W. B. Leffingwell, E. L. Harpham, E. S. Graham, F. W. Myrick, C. R. Stephens, Moline, Ill.; J. E. Pumphrey, Columbus, O.; H. S. Blake, Racine, Wis.; J. H. Amberg, J. R. Graham, Long Lake, Ill.

Milwaukee—Garden City.

The Milwaukee Gun Club will send a team of fifteen men to meet a Garden City Gun Club team of like number at Watson's Park a week from to-day. When the Chicago team went to Milwaukee it got everlastingly trimmed up, and the Chicago boys are a swearing horrible revenge this time.

April 27.—At this writing the team contest between fifteen of the best trap shots in Milwaukee and a like number chosen from the best talent of the Garden City Gun Club, of this city, is in progress at Watson's Park. At 3 o'clock nothing definite had come in regarding the race, though the local sentiment runs to the effect that Garden City will win.

As was anticipated, the Chicago team succeeded in defeating their Milwaukee brethren in the fifteen-men team race, but it was by so small a margin that it left no glory for the local men, and proved that the final race between the team of the Milwaukee Gun Club and that of the Garden City Gun Club, of Chicago, which is to be shot at Racine, Wis., some time in May, is apt to be a very close thing, with the odds, if anything, in favor of the Cream City boys. The defeat the latter sustained here to-day is by no comparison so decisive as that they gave the Garden City boys when they were the visitors at Milwaukee. The showing made by the Milwaukee team to-day was unexpectedly strong, and they well nigh overcame the advantage the Chicago men had from being acquainted with the Watson grounds.

There was only one straight made out of the thirty shooters, by M. E. White, of Garden City. Low score of 10 was made by O'Brien, of Chicago, and Sayle, of Milwaukee. The birds were brisk, and shooting conditions very pleasant.

Great Carson Day.

The Carson family was strictly in it at the weekly contest of the Chicago Gun Club to-day. Dr. C. W. Carson took the medal in the 15-target handicap, and his father, "old Doctor Carson," as he is sometimes called in contradistinction from his son, won in the 25-bird event, with added handicap. The weather to-day was simply ideal, the first pleasant Saturday for an age.

Ten Years.

To-day is the tenth anniversary in business of the firm of Von Lengerke & Antoine. It hardly seems so long ago as that that these two young men came to Chicago. They have surely prospered, as do all good persons in this glorious climate.

Garfield Averages.

The regular target season of Garfield Gun Club opens a week from to-day, the first Saturday in May. The club has printed a list of percentages for the season of 1900-1901 in the trophy events only, the record reading as below:

	Shot at.	Killed.	Av.		Shot at.	Killed.	Av.
R Kuss	60	56	.933	Mrs Dr Shaw	60	44	.733
Dr Liddy	10	9	.900	A E Midgley	40	29	.721

First prize, Dr. Shaw, 93 per cent.; second prize, Dr. J. W. Meek, 92 per cent.; third prize, T. W. Eaton, 90 per cent.; fourth prize, Dr. A. A. Mathews, 87 per cent.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Garfield Gun Club.

Chicago, April 20.—The fourteenth and last live-pigeon shoot of the series was held on our grounds to-day. Dr. Meek, from the 31yd. mark, and F. G. Barnard, 30yd. mark, tied for first honors, both going straight.

The birds were a mixed lot; not enough real screamers among them to keep a shooter guessing and wide awake all the time. The series ends with Dr. Shaw winner of first prize, Dr. Meek second, T. W. Eaton third, Dr. Mathews fourth. There was a difference of but 5 birds between high man and fourth man.

	No. 1.	No. 2.
Dr Shaw, 31	2122222101— 9	2*2120—4

Programme Illinois State Shoot.

THE following extracts present the main features of the Illinois State Sportsmen's Association's programme for its tournament, May 20 to 25 inclusive:

Dupont Smokeless Powder Championship Trophy—Open to all; $1,000 guaranteed in the purse by E. I. Dupont De Nemours & Co

The Governor's Cup—Open to any lady trap shot in America. A solid silver cup.

The Board of Trade Diamond Badge—Emblematic of the live-bird championship of Illinois.

The Illinois Gun Club's Five-Men Target Team Cup—Emblematic of the team target championship of Illinois. A solid silver cup.

The L. C. Smith Cup—Emblematic of the individual championship at inanimate targets.

A fine Parker gun, donated by Parker Brothers, Meriden, Conn., will be awarded to the amateur shooter making the combined highest average in the State team shoot and in the Board of Trade diamond badge event.

A handsome gold medal, donated by the Association, will be awarded the amateur shooter making the longest continuous run on targets during tournament.

A handsome gold medal, donated by the Association, will be awarded the amateur shooter making the longest continuous run on live birds during tournament.

An Ideal ejector gun, donated by the Lefever Arms Company, Syracuse, N. Y., to the amateur shooter participating in all open target events on any one day of the tournament and having the best general average of the amateurs for any day of the tournament.

The State Game Commissioner's Trophy—A handsome silver water set, valued at $50, presented by State Game Commissioner H. W. Loveday, to the second high team in the State team shoot at live birds.

The twenty-seventh annual convention of the Illinois State Sportsmen's Association will be called to order at 8 P. M. Wednesday evening, May 22, at the Leland Hotel, Springfield, Ill. Each club in the Association is entitled to the delegates named in the by-laws, but all members of clubs in the Association in good standing are given a cordial invitation to be present. The election of a president, first vice-president, second vice-president and a secretary-treasurer will be held, and other important business will be brought before the convention, and it is desired that a full representation of all the clubs will be made.

Shooting will begin each day promptly at 9 A. M. Guns, ammunition, etc., forwarded by express must be prepaid and billed to Springfield Transfer Company. Ammunition sent by freight to same address and duplicate bill of lading forwarded to them.

Live birds will be trapped at 25 cents. Shooters calling "no bird" before seven balls have been thrown at birds slow to start will be charged for same; after seven balls it is "no bird" at the expense of the management. Targets will be thrown at 2 cents each. Refusing a difficult bird is not allowed, and the referee's decision on this point is final.

To assist the management, please make entry for the day, and if for any reason you wish to withdraw, the cashier will refund your money in the events not shot.

The official score will be summarized on a score board in plain view of the shooter. If any protest or correction is to be made the contestant must attend to it with the scorer before the score is sent to the compiler, as no appeal will be allowed after the score has been sent to the office.

All events on the programme announced "open to all sportsmen" will be recognized as such, and may be competed in by any visiting shooter. The State events are open only to members in good standing of clubs belonging to the Illinois State Sportsmen's Association.

In the State team shoot entries will be recognized from teams of four men, members of a club in good standing in the Association. A club can enter as many teams as it chooses in this event.

Dropping for place will not be permitted, and any shooter detected in it will be positively barred and requested to leave the grounds.

All retrieving will be done by arrangement of the management, and the retriever will be released the instant the bird touches the ground, and the rule allowing shooter or substitute to gather the bird will not be allowed.

Black powder and guns of larger caliber than 12-bore will not be permitted.

The ground rules of the Illinois Gun Club relating to careless handling of firearms will be strictly enforced.

The management reserve the privilege of canceling any "open to all" event which, in their judgment, might interfere with any of the State events scheduled on the programme.

If upon receipt of this programme you ascertain your club is not a member of the Illinois State Sportsmen's Association call the attention of your secretary to the matter, and urge him to forward $5 to the secretary of the State Association at once, and a membership certificate can be issued prior to the May tournament. This will entitle any of your club members to participate in any event on the programme. Any regularly organized gun club in the State of Illinois is entitled to membership upon payment of $5. Individual shooters cannot participate in State events unless the club of which they are members is in good standing in the State Association.

First Day, Monday, May 20.—Ladies' Contest for the Governor's Cup, 20 live birds; entrance, the price of the birds; handicap rise, from 26 to 30yds.; handicap announced by official scorer on day of shoot at the score. Any lady trap shot in America is eligible to enter this contest, and the winner will be presented with a sterling silver cup, which becomes the winner's property, and is not open to challenge. This shoot will be called at 2:30 P. M., and entries will be received up to the time of firing gun on opening bird. Also on this day and on the second, third and fourth days there are ten target events at 15 and 20 targets, $2 and $2.50 entrance. High averages, $20, $10 and $5. To the amateur shooter participating in every open event on targets on any one day of the tournament, and having the best general average of the amateurs for any day of the tournament, the Lefever Arms Company, of Syracuse, N. Y., will present one of their Ideal ejector guns.

On the second day there also are two live-bird events—one at 7 birds, $5, and one at 10 birds, $10. The first, 60 and 40 per cent.; the second, high guns. Both are at 30yds. rise. Also, open to members of the State Association only, the Board of Trade diamond badge, emblematic of the individual championship of Illinois at live birds, will be contested for. The winner of the badge this year to receive the proceeds of next year's entries for the same prize. Conditions, 10 live birds, entrance $10, including birds. First prize, the diamond badge, cash value $500; second prize, $100 cash; third prize, $50 cash. To the amateur shooter making the combined highest average in this event and the State team shoot at live birds on the 22d, Parker Brothers, of Meriden, Conn., will give one of their fine hammerless guns. If any ties on this gun, to be shot off miss-and-out.

Contest for L. C. Smith, emblematic of the individual State championship at inanimate targets, and permission having been obtained from the donors, the Hunters Arms Company, to modify the rules governing this contest, the same will be posted on the bulletin board at the club grounds on the day of the shoot. First prize, the L. C. Smith cup; second prize, $50 cash; third prize, $25 cash; fourth prize, $15 cash; fifth prize, $10 cash.

On the third day, May 22, the State team shoot, open to members of State Association only, will be shot; four shooters to constitute a team; 10 birds per man and $10 entrance per team, including birds. Participants must be residents of State and members of a club in good standing in the Association. The Association will present four very beautiful medals to the four individuals comprising the winning team, and these become the personal property of the winners. First high team, 40 per cent; second high team, 30 per cent.; third high team, 20 per cent.; fourth high team, 10 per cent.

To the amateur shooter making the combined highest average in this event and the Board of Trade diamond badge event on the 21st, Parker Brothers, of Meriden, Conn., will give one of their fine hammerless guns. State Game Commissioner H. W. Loveday will present a silver water set to second high team in the above event. Value, $50.

On the fourth day, at 9 A. M., the Dupont smokeless powder championship trophy will be contested for; open to the world; $1,000 guaranteed. E. I. Dupont De Nemours & Co., Wilmington, Del., offer for contest their magnificent trophy.

Each man will shoot at 25 live pigeons, entrance $25, birds extra; handicaps, 28 to 31yds., inclusive; high guns, based on number of entries.

E. I. Dupont De Nemours & Co., through their representative, Mr. E. S. Rice, of the Illinois State Sportsmen's Association, gauartee a purse of $1,000.

The following gentlemen have been selected as a handicapping committee for this event: Hon. Thos. A. Marshall, Keithsburg; Chauncey M. Powers, Decatur; J. L. Alabaster, Chicago; Jas. R. B. Van Cleave, Springfield; John Watson, Chicago.

First high gun, $400; second high gun, $300; third high gun, $200; fourth high gun, $100. In addition to first money, the winner of same is declared the winner of the sterling trophy, and will hold same subject to the rules governing holder and future individual contests. Number of entries at $25 each in excess of forty, will create gun places and increase number of moneys, affording four additional moneys for each ten entries. The division of moneys in the Dupont smokeless powder handicap for 1901 will be high guns.

The fourth day is devoted to targets.

On the fifth day is the State team shoot at targets; open to members of the State Association only; five shooters to constitute a team; 20 targets per man and $5 entrance per team. Participants must be residents of State and members of the club they represent in the team. For this event the Illinois Gun Club will present to the winning team a silver cup, emblematic of the five-men team target championship of Illinois.

The Association will present each of the five individuals comprising the winning team with a handsome medal.

Any club in good standing in the Association can enter as many teams as they wish, but each team must be composed of different members. First, second, third and fourth high teams, 40, 30, 20 and 10 per cent.

There also are three open live-bird events—7 birds, $5; 10 birds, $10, and a miss-and-out, $5.

The sixth day is open to all shooters, and has both live-bird and target events on the programme.

Haverhill Gun Club.

HAVERHILL, Mass., April 20.—We opened our shooting season on Patriots' Day, April 19, with an all-day shoot that was a success from start to finish. The weather was fair and the shooting conditions simply perfect. Forty-five hundred and forty targets were thrown from 10:30 A. M. to 5:15 P. M.—a pretty fair showing for a country club. Visitors were present from Dover and Exeter, N. H.; Newburyport, Lynn, Boston, Lowell, Brockton, Campello and Hingham, Mass. In all, forty shooters participated. Some very good scores were made, Leroy being high average with .873, and making a straight of 50 targets from the 21yd. mark, including regular, unknown and reversed angles.

Events 1, 4, 7, 10, and 13, regular angles; events 2, 5, 8, 11 and 14, unknown angles; events 3, 6, 9, 12 and 15, reversed.

In the prize events William and Lambert tied for first on 44 out of 50, Lambert winning in the shoot-off. Merritt was second with 43. Howe, Rule and Spofford tied for third on 41, Rule winning in the shoot-off. Nos. 7 to 11, inclusive, were the prize event. Below find summary:

Indiana boasts of one of the few goldfish farms in the United States. It is located in Shelby county, and the proprietors are the original propagators of goldfish in the United States. There are two tracts of land, widely separated. One contains ten and the other sixteen acres. There are 200,000 goldfish on the two tracts. The breeding ponds are protected from the cold winds by high embankments, this being the only shelter required, as the fish are hardy, except when handled. The fish are hatched on one tract, and as they grow are transferred to the other. They are fed alike, being given toasted bread crumbs two or three times a week. The sun and water do the rest.

Boston Gun Club.

BOSTON, April 17.—Thirteen shooters assembled at the grounds of the Boston Gun Club to-day and were favored with just the kind of a day trapshooters delight in. Good light and very little wind made the targets just a little easier for some, as the scores prove, and the great majority were more than sure that it was their own look out if the targets did not succumb to the 1⅛oz. of shot. Clean scores were indulged in by Leroy and Abbott with two each, Griffith and G. W. 1 each. Abbott's score in the prize match was easily the real honor of the day, and now places him in the lead on the total score. It certainly looks as though he wishes another yard tacked on to his handicap, which will have to be done if he keeps up his present gait. Second place was taken care of by Griffith, just fresh from his well-earned laurels at Interstate Park, and securing a 26 in the prize match goes to show that his live-bird shooting had not been the least harm. Leroy took third place with 25, standing on the 21yd. mark. All events 10 unknown, except No. 7, which was at 5 pairs. Nos. 7, 8, 9, 10 and 11, 16yds.; all others handicap distance:

April 24.—The Boston Gun Club's last serial prize shoot of the spring series was held on their grounds at Wellington, to-day, and the weather was again against us. As the new series, which begins next Wednesday, looms up before us we are in hopes that we may be favored with an article of better quality from the weather bureau than has been the case in this series.

The final shoot was looked upon with a good deal of pleasure by all, as the number of targets between the three topnotchers being only 2, there promised to be some lively shooting; but the rain prevented all but one of the leaders coming, and he only after bringing a rubber suit, which was the only way to keep dry. As some one remarked, "The only thing needed to make his outfit complete would be a boat." And it was indeed almost a necessity, as there was no let up in the downpour all the afternoon.

The series which ended to-day was one of the most interesting the club has experienced, and was not decided till the last day, when first honors were secured by Baker, who has made a strong fight from the first, but only succeeded in reaching first by getting a good score last Wednesday. Second position was secured by the occupant of the 21yd. mark, who, though at a longer distance mark than his competitors, seems to use his gentle persuasive powers on the targets just good enough to come in with the top bunch most of the time. Third place was taken care of by Spencer, who held the lead from the beginning, only to lose it at the end. Fourth went to Howe, though he did not avail himself of any chance to throw away low scores. Fifth place belongs to G. W., who as yet is not used to a new weapon, which gives a little trouble in loads, which, once overcome, will bring lots of trouble to the leaders in the next series. Sixth prize was won by Horace.

Scores below. All shooting handicap distance; all events 10 unknown:

Baker, 17	8	7	7	6	7	5	..	..	..	..	
F H, 16	..	3	7	6	7	9	..	..	..	..	
Horace, 18	4	6	8	8	8	10	6	8	6	7

Frederick, 14	..	..	..	..	..	..	..	3	1	..	
Henry, 16	..	..	..	..	..	..	..	3	2	..	

Prize match, 30 unknown; distance handicap;

Horace, 18.....101011111111111011011111111111—26
G W, 17.....111011010111101111011110110110—22
F H, 16.....001011111101101111000111111111—22
Baker, 17.....101011101010110011111101010010—18

Following are the winners of the spring prize series. Conditions: Six best scores out of the fifteen to count; 30 singles, unknown; distance handicap:

Baker, 17	27	26	26	25	24	20	—148
Leroy, 21	28	25	25	23	23	23	—147
Spencer, 18	27	25	25	23	23	23	—146
Howe, 19	24	23	23	22	21	17	—130
G W, 17	23	22	22	22	20	20	—129
Horace, 18	26	23	21	20	20	17	—127

Next Wednesday, May 1, begins the regular summer series, which is open to all shooters.

SECRETARY.

The Cleveland Gun Club Co.

CLEVELAND, O., April 18.—Live-bird handicap, 15 birds per man, 50yds. boundary:

Franklin, 26.....2121022021112 11—13
Black, 28.....2222222222222 22—15
Hopkins, 27.....2202222220201 21—12
Dawson, 31.....1222202222211 20—13
Red Wing, 31.....1220022211211 11—13
Greener, 30.....2212121201222 20—13
Johns, 30.....2020001010101 20— 7
Smith, 31.....2220220222222 00—11

Black won the first cup with 15 straight:

Ties for second cup, as follows, same shot miss-and-out. It was won by Franklin with 5 straight:

Franklin, 26.....11121—5 Red Wing, 31.....2120 —3
Dawson, 31.....22220—4 Greener, 30.....2210 —3

The birds were a selected lot.

Mr. Black is to be congratulated on his fine score. He shot in fine form from start to finish.

Johns, whose score is 7 out of a possible 15, had better retire to some woods and learn to shoot before trying his luck with the crackerjacks.

April 25.—The semi-monthly club shoot at targets of the Cleveland Gun Club resulted as follows:

M Vail	..	..	..	..	..	..	..	..	..	4	..

C. G. B., Capt. O. G. Club.

Peters Cartridge Company Tournament at Olathe, Kan.

IT is not an uncommon thing for the shooters to meet at various places throughout the United States, there to proceed to murder the "mud pies" under the auspices of the Peters Cartridge Company. It is their rule to have one of the traveling men as manager, and they selected for this event the genial Tom Norton. Now Tom has been camping around these ere diggin's for several moons, and his long residence in Kansas City causes him to be well known. He was therefore the proper man for the place. Then, as he felt the need of a lieutenant, he selected Frank Hodges, who had lately been re-elected mayor—and a great team they made.

The programme called for the good thing of $150 added money, open only to amateurs; traveling salesmen barred; purses divided Rose system; five moneys; gold medal to the highest average for both days.

With such a showing open it is hardly necessary to call to mind that a good crowd of the best amateurs were found on the club ground south of the city at 9 A. M. Tuesday morning. The weather conditions were perfect—Sun bright, and just a little wind slightly across the score—so this made good scores obtainable without great effort.

Two sets of expert traps were used, Sergeant system, with traps set to known angles, and as the maker of the targets and the electric pull was present and assisted the management, everything passed off in the best of style and without a hitch.

The writer has seen so many target tournaments where there were complaints of unfairness that he pauses here long enough to point out that the known angle is the best yet tried. This means to set the three traps stationary and keep the same angle and height all day without change. This all shoot as the nearest possible to an equal change in flights.

Those present came from several States, and many of the names herewith are often seen in print; yet the most of them were probably never before mentioned, viz.: From Kansas City Mo.—H. E. Sherman, W. M. Howe, J. E. McIlrevy, C. D. Snyder, C. E. Wright, Chris Gottlieb, Tom Norton; from Gardner, Kan.—H. B. Foster, E. E. Armstrong, J. A. Marshall; from Paola—Thos. J. Cummings, A. D. Taylor; from Olathe—G. D. Hendrix, Charles Randall, Ed Collins, Mert. Newhart, Sam Ferguson, Wm. Walter, Hare Dent, Lone Theile, Lon Thompson, Wm. Lemmon, Frank Hodges, L. D. Thompson, C. H. Blackburn; from Lincoln, Neb.—C. D. Linderman, J. Morse Rau, J. E. Kilbrick; Rich Hill, Mo.—W. C. Gresham; Concordia, Kan.—W. H. Heer; Panama, Mo.—J. D. Gilkay; Lamar, Mo.—A. M. McCrea; Fairplay, Mo.—J. W. Akard; Omaha—Hump Parmelee; St. Louis—Chas. Spencer; Chicago—Tramp Irwin.

There is generally something about a shooting tournament that a writer for the press may mention as a matter of education and enlightenment to the readers. In this connection I will note that the traps were set to throw south. Considering that the whole State of Kansas is good country, and nothing to prevent setting traps to face as desired there, I say shooters have a right to insist that targets on all occasions be thrown north, northeast or east.

After the programme had been finished, Mayor Hodges had carriages in waiting to carry the shooters about town, and nearly all in attendance availed themselves of the opportunity. An hour was spent whirling along the beautiful streets, made more lovely by the aroma from the peach blossoms floating on the gentle breezes.

Mr. Hodges is already setting his plans for the next year's State shoot, and will purchase some ground facing north, and before the year ends will hang up $500, open to the world, for a distance handicap target tournament.

The shooting fraternity should at once get their heads set on coming here, as this shoot will be the real thing.

First Day, April 23.

Second Day, April 24.

The morning sun came out in all his glory, but by 10 o'clock hazy clouds were beginning to rise, and before noon a few drops of rain fell; but it was our good fortune to have the rain pass by, and the day was a fairly good one for target shooting—although there was something wrong with the light, as the scores made to-day were for the most part not up to the average. As is usually the case, there were not so many shooters present as on the first day. Most of those present, though, shot through all the events.

Taking Linderman's score yesterday, he missed only 8, and to-day 18, making a total of 26 lost in two days' shooting, 350 targets. He won the gold medal for the highest average.

He was very closely pressed by Harry Koohler. At the start of the last event of 25 targets they were tied. Koohler dropped 2 out of his first 4 and then ran out straight. But there was old steady Dick, pegging away, and he never did miss, and Jap went 25 straight. Jap made such a great struggle that it was a pity that there was not a second prize of some kind. Lou Erhardt and Frank Parmelee were going neck and neck, and landed in the same hole with 16 goose eggs each. O'Brien fell only 1 short, and was just 1 ahead of Spencer. Heer came along pretty regularly, and lost but 20.

Altogether the shoot was a great success—not financially, however, but the shooters appreciate the grace with which Mr. Norton went down in his pocket and put up the $150 added money.

The traps worked good to-day, and the targets were harder than yesterday, having more speed and consequently a more steady flight.

Everybody made Tom Norton and Mayor Hodges understand that he appreciated their efforts put forth on this occasion. The Peters people made many friends, the only regret being that there were not enough shooters present to run two sets of traps.

Events:	1	2	3	4	5	6	7	8	9	10	Shot

Peters Cartridge Company Tournament at Chattanooga, Tenn.

CHATTANOOGA, Tenn.—The tournament given here by the Peters Cartridge Company April 23 and 24, under the auspices of the Chattanooga Trapshooters' Club was a success when you consider the weather to be contended with. On preliminary day it rained all day, and for a week before the shoot it rained and snowed all around the country. This fact, no doubt, kept a good many away, but those who were here enjoyed themselves and seemed very well satisfied. Mackie is surely a man that can run a shoot, as there was not a kick or squabble, except from the magautrap; it of course kicked once in a while.

The first day opened up cloudy, and then toward noon cleared off, ending up with a fine and an ideal shooting day.

Walter W. Cureton, of Chattanooga, was in the lead by 3 birds; Legler, of Nashville, second, with Baker, of Griffin, Ga., third, 6 birds behind.

The second day was a beautiful one, and more of the boys showed up, due to the conditions of the weather. Cureton still stayed in the lead, winning the gold charm donated by the Peters Cartridge Company. Legler and Baker tied for second average. R. L. Trimble, of Covington, won first average, but of course, being a manufacturers' representative, shot for targets only. John E. Avery, of Atlanta, the company's representative, was here and shot a good race, ending with fourth average.

After presenting the medal to the winner, Mr. Mackie thanked those in attendance for coming; also Caption for his assistance.

The tournament was a success in every way but attendance, and the sportsmen who took part seemed to be very much pleased with the result. It was strictly an amateur shoot, and some very fine records were made in the two days. The scores:

First Day, April 23.

Events:	1	2	3	4	5	6	7	8	9	10	
Targets:	15	15	20	15	15	20	15	20	15	25	Broke.

Cureton won amateur average and gold watch charm, donated by Peters Cartridge Co.

Legler, of Nashville, and Baker, of Griffin, Ga., tied for second average.

Trap Around Reading.

READING, Pa., April 13.—Nearly 3,000 targets were thrown today in the target shoot held under the auspices of the Spring Valley Shooting Association, of this city. Sportsmen were present from all parts of this section of the State, and an enjoyable day was had by all. The tournament was the first ever held by this association, and the tournament committee deserve great credit for their earnest work in making the shoot a success. Secretary A. A. Fink had charge of the shoot, and kept hustling from 10 A. M. until 6 P. M., when darkness set in and put an end to all shooting. The shoot was a grand success, and the attendance of out-of-town shooters very large, while the local shooters were fairly well represented. The principal event of the day was the shoot for the individual target championship of Berks county, and the Reading Eagle challenge trophy, valued at $75. Lee Wertz, captain of the Spring Valley Association, won by breaking 39 out of 50 targets, while Jack Shaaber, of the same association, was second with 38 to his credit.

In the sweepstake events the scores were very good, and all events were very exciting.

In the merchandise event, No. 3, Jack won the leather gun case donated by J. H. Obold & Co.; R. E. Parker, of Carlisle, Pa., won the leather shell case donated by Huff Brothers; Geo. Ritter won the Schultze powder donated by Von Lengerke & Detmold, of New York, and Benner won a fine bottle of whisky donated by John A. Esterly.

The scores in the individual championship and Reading Eagle trophy event, 50 targets per man, were as follows: Wertz 39, Jack 38, Irwin 37, Dietrich 34, Ball 34, Murphy 33, Schmidt 29, Ritter 33, Kerr 30, and Osborn 31.

TOM A. MARSHALL.

PUBLISHERS' DEPARTMENT.

Low-Rate Summer Tours to the Pacific Coast and Mountains of the Canadian Northwest, via the Pennsylvania Railroad.

IN view of the extremely low rates authorized by the various transcontinental lines on account of the International Conference of the Epworth League at San Francisco in July next, the Pennsylvania Railroad Company announces a thirty-day tour across the Continent, leaving New York, Newark, Philadelphia, Baltimore, Washington, and other stations on its lines east of Pittsburg, on Monday, July 8, returning to New York Tuesday, Aug. 6.

The route will include stops at all the really important points for rest and sightseeing, among them being Chicago, Omaha, Denver, Colorado Springs, Glenwood Springs (with a daylight ride through the Rocky Mountains, including the Royal Gorge and Grand Cañon of the Arkansas), and at Salt Lake City, arriving at San Francisco 10 A. M., Tuesday, July 16, before the convention opens. Six days will be allotted to San Francisco, for which time no hotel accommodations or other features will be included in the tickets. Leaving San Francisco Monday morning, July 22, Monterey, Santa Barbara, and Los Angeles will be visited, all traveling over the new Coast Line of the Southern Pacific Company being done by daylight, in order to view what is reputed to be the most attractive scenery in California. Leaving Los Angeles, San Jose will be visited, thence Portland, with two days' stop, after which will come the crowning feature of the tour, the journey homeward via the Canadian Pacific Railway through the unrivaled mountains of British Columbia.

The schedule over the Canadian Pacific Railway will be prepared with especial care, and the train sidetracked at nights where necessary, in order that no part of this delightful feature may be missed by night traveling. This in itself is a rare opportunity. In addition, stops will be made at Banff Hot Springs and St. Paul.

The tourists will travel in the highest grade of Pullman equipment, and the special train will be composed of vestibuled dining car, sleeping cars, and an observation car. The latter car will be similar to those used on the famous Pennsylvania Limited.

With the exception of the time devoted to San Francisco, passengers will be located on the special train during the entire tour. Breakfast, luncheon and dinner will be provided in the dining car while en route, and when sidetracked at the various places visited. Our patrons will therefore avoid the expense of high-priced hostelries, the hurry and annoyance of meal stations, and the unsatisfactory accommodations afforded by inferior hotels.

A thoroughly experienced tourist agent and a chaperon will accompany the party, and in fact the entire tour will be conducted under the same careful management that has made the "Pennsylvania Tours" world famous.

The total rate for entire trip as outlined above, covering one double berth and all meals in dining car, from New York, Philadelphia, Baltimore, Washington, Harrisburg, Altoona, and points on the Pennsylvania Railroad east of Pittsburg, will be $188.50; two persons in a berth, each $168.50.

Rate, going with the main party, with Pullman berth and meals up to arrival at San Francisco, returning from San Francisco independently by any direct route, with transportation only on return trip, $118.10; two persons in a berth, each $108.10.

Rate, transportation, Pullman berth, and meals on special train to San Francisco, with transportation only returning independently via Portland and Northern Pacific Railway, or Canadian Pacific Railway and St. Paul, until Aug. 31, $127.10; two in a berth, each $117.10. This route will especially appeal to those who desire to visit Yellowstone Park on their return journey. The tickets admit of stop over at Livingston, at which point a ticket covering five and one-half days' hotel accommodations, with stage transportation through Yellowstone Park, may be purchased for $49.50.

Rate, covering same as preceding trip up to San Francisco, with transportation only returning independently via Los Angeles, San Francisco, Portland, and Canadian Pacific or Northern Pacific and St. Paul, $131.60; two in a berth, each $121.60.

Rates from Pittsburg, $5 less than above figures.

For the information of those who desire to travel independently after arrival at San Francisco, it should be noted that tickets permit stop off within limit of Aug. 31, at and west of Denver, Colorado Springs, Pueblo, Colo., and west of St. Paul. Stop-over will also be allowed until Aung. 31, at Niagara Falls and Buffalo, for Pan-American Exposition, on tickets reading through those points.

Descriptive booklet will shortly be issued, giving the schedule and further details. Diagrams are now open, and as the number who can be accommodated will be strictly limited, names should be registered immediately.

For further information apply to Tourist Agent, 1196 Broadway, New York; Thos. Purdy, Passenger Agent, Long Branch District, 789 Broad street, Newark, N. J.; J. K. Shoemaker, Passenger Agent Middle District, 1411 Chestnut street, Philadelphia; B. Courlaender, Jr., Passenger Agent Baltimore District, Baltimore and Calvert streets, Baltimore, Md.; C. Studds, Passenger Agent Southeastern District, Fifteenth and G streets N. W., Washington, D. C.; or address Geo. W. Boyd, Assistant General Passenger Agent, Broad Street Station, Philadelphia.—*Adv.*

The very handsome catalogue of more than 150 pages describing the goods sold by Mr. W. J. Cummings, Bishop Auckland, England, is likely to interest all anglers. Besides the goods described, a great deal of useful information, illustrated by admirable cuts and half-tones, appears in it, together with an abstract of the Norway Fishing Laws, and much else of interest. The catalogue is sent free. Mr. Cummings offers to Americans ordering his goods a discount of 10 per cent, on all orders amounting to £1 and over, which will partly pay the duty. He already has a large trade in America.—*Adv.*

It is more and more the fashion for well-to-do Americans to rent or purchase estates in Britain, which they occupy for portions of the year. The Kylemore Castle estate, County Galway, Ireland, presents attractions to those who can afford such luxuries which ought to appeal to many rich Americans. Pheasant, grouse and wild duck shooting, and salmon, trout and deep sea fishing, are among the advantages of this beautiful place.—*Adv.*

The widespread tendency of the present day to send boys off into camp for the summer lends especial interest to the advertisement for a party of boys to be made up for a fishing and shooting trip in the Rocky Mountains. Were it not for the expense of such a trip many parents would have their boys make it, and we do not doubt that the advertiser will receive many inquiries as to his plans.—*Adv.*

To yacht builders—and especially to those interested in small craft for inside waters—the name of Thomas Clapham, Roslyn, L. I., is familiar. Mr. Clapham is well known as a high authority on sharpies and other yachts. He has several specialties well worthy of investigation.—*Adv.*

Motor launches are coming more and more into use both for practical work and for pleasure purposes. The "Recreation Launch," manufactured by the Western Gas Engine Company, is said to have speed combined with safe and reliable power. Those who are interested should write for circular M.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1901, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, MAY 11, 1901.

VOL. LVI.—No. 19. No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

Mr. Francis Curle told me howe one Dr. Bullein, the Queenes kinsman, had a dogge which he doted on soe much that the Queene understanding of it requested he would graunt hir one desyre, and he should have whatsoever he would aske. She demaunded his dogge; he gave it, and "Nowe Madam," quoth he, "you promised to give me my desyre." "I will," quothe she. "Then I pray you give me my dogge againe."—Manningham's Diary, 1603.

The Forest and Stream's Platform Plank.

"The sale of game should be prohibited at all seasons."

NAILS DRIVEN IN 1901.—No. VI.

ARIZONA.

Chap. 57, Laws 1901.—Sec. 17. Every cold storage company, or person keeping a cold storage warehouse, or tavern or hotel keeper, restaurant or eating house keeper, market man, or any other person who shall at any time sell, or expose for sale in this Territory, any hide, head, horns, or meat of any male or female deer, antelope, elk, mountain sheep or mountain goat, or any carcass of any wild turkey, dove, quail, bob-white, partridge, pheasant or grouse, or of any wild duck, goose, brant, snipe or rail, or any brook, mountain or rainbow trout, or any black bass, strawberry bass or crappie, shall be guilty of a misdemeanor.

Sec. 19. Provided, however, that nothing in this act shall be construed to prohibit the importation and sale of fish and game from other States and Territories.

"PICTURES FROM FOREST AND STREAM."

THIRTY-TWO of the full-page pictures printed from time to time as illustration supplements to FOREST AND STREAM have been selected for publication in book form under the above title. A preliminary announcement of this has already been sent out, and the response has been such as to indicate that the projected volume will be given cordial welcome.

The scope of the collection is fairly comprehensive; the subjects include the reproductions of Audubon's bird portraits; big-game pictures by Rungius, field scenes by Osthaus, hunting pictures by Deming, shooting and fishing pictures by Davison, and yachting scenes. Every care will be taken to insure for the volume the highest artistic excellence, and to make it in paper, presswork and binding a creditable contribution to the literature of the field. A list of the plates will be found on another page.

SNAP SHOTS.

Mr. Mooney's paper contrasting the difference in conditions surrounding the field naturalist in the day of Wilson and our own time is supplemented by the note of Mr. Manly Hardy, who points out the yet more marvelous changes in the conditions of woods life which have been developed within his own personal experience. Hunting and fishing exploration, the collecting of natural history specimens, and every phase of travel, work and life in the wilderness, has been ameliorated by the development and perfection of equipment. The sportsman of the twentieth century is by no means of necessity, nor indeed often voluntarily, the Spartan that his sportsman father was before him. To go camping is not now necessarily to go roughing. Life in the wilds has shared the softening influences which have made modern living in so many material ways more luxurious and less strenuous than in the old days. Whether we of the present with all our conveniences get any more satisfaction out of it than did our fathers in their cruder way is an open question. The old-timer, who regards with indulgence the ease and comfort of these later days, would be apt to maintain that with all the hardship of the woods life as he knew it, there were rewards quite as full in their compensation as any we may find.

We are constantly talking of the rapid advance of civilization and the lessening of the wilderness on this continent, but there yet remains and will remain for many years to come an immense area of unsettled country to the north of the United States. The director of the Canadian Geological Survey says in his latest report that there are more than 1,250,000 square miles of unexplored land in Canada, or in other words, a territory comprising one-third of the entire Dominion. Here the sportsman will long be assured a hunting ground wide enough in its game resources to tempt exploration and exploitation.

In the early future extensive areas of this Canadian wilderness, which are now practically inaccessible, will be opened up by railway enterprises, and new and rich fields will be made accessible to the hunter and fisherman. One of these roads, the Algoma Central, is now building north from Sault Ste. Marie, and will have for its terminus Moose Factory, on the shore of Hudson's Bay. The purpose of the projectors is to develop the rich mineral and forest and agricultural resources of the country; awaiting the coming of the rails there are immense deposits of iron and copper and forests of valuable timber. Much of the country to be opened to travel is stocked with game. Elk and caribou abound, with wild geese and wild ducks, and fishing waters; and the man of rod and gun may complacently regard the new road as one in part projected for his own special benefit. These new opportunities come at a time when the game resources of other regions have been destroyed—resources which once appeared to be as abundant and as inexhaustible as these. Profiting by the example of the United States, which has permitted its game to be destroyed, the Canadian authorities may well take measures to prevent the reckless killing of game in these newly opened regions. Properly husbanded the stock will last for generations.

Governor Odell has vetoed the appropriation made by the Legislature this year for the purchase of Adirondack lands to be added to the State forest holdings. As a reason he submits that no settled programme has been adopted for the comprehensive treatment of New York's forest land problem, and until such a plan shall have been determined upon the Governor disapproves the further expenditure of public funds in this field. This conclusion doubtless is based upon a careful consideration of the subject, and it will be accepted as sound, in particular by those people who have knowledge of certain very questionable transactions on the part of the forestry board in the past. But the acquisition of forest lands and the conservation of the water supply are two interests of transcendent public importance, and interests which demand and should be given immediate attention.

Senator Malby's bill to prohibit hounding in the Adirondacks for another term of five years has become a law. The actual operation of the anti-hounding system has abundantly demonstrated its wisdom. We have expressed the opinion that by the end of the new five-year term local sentiment in the North Woods will be in support of a perpetual prohibition of hounding. Despite the active opposition of guides and other residents now existing, the gradual growth of a feeling in favor of the law may not be questioned.

In the several seasons of the year there comes now and again some one day, which by reason of the air or the sky or the clouds, or by a subtle, indefinable and indeterminable something, carries one in thought to some far-away scene and fills him with a longing for it. Sometimes fancy thus is led in autumn to a mountain, from whose brow one has looked out upon a wide stretching landscape of wondrous beauty, and again the suggestion coming in the spring time is of a camp site by the lake, with the soughing of the pines overhead and in front a vista of water and distant shore. Whatever the picture that rises thus unbidden, and though it be as fleeting as it is abrupt, we are grateful for it; and happy is he who can resolve on the instant to make good in actual seeing once again the reality.

For many years Mr. T. Southwell, of Norwich, England, has annually given to the public notes on the seal and whale fisheries of Great Britain, and the twentieth annual installment appears in a recent number of the Zoologist. He reports that the season's catch for 1900 included 17 whales, 632 walruses, 3,453 seals and 145 bears. The total value of this catch is estimated as $150,000, as against $190,000 in 1899. The animals of the northern sea are being exterminated. The right whale has practically disappeared from the Greenland seas, and the seals are disappearing as well. The author adds: "The destruction year after year of a very large proportion, often virtually of the whole brood and of a large number of old seals in addition, congregated in a limited area, must inevitably tell in course of time, and sooner or later reduce the breeding pack to such an extent that they would be no longer worth pursuing, and even lead to their final extermination. This has doubtless, to a very large extent, been the case. The British vessels have quite abandoned the pursuit, and what there is left of the Greenland sealing is now quite in the hands of the Scandinavians, whose more economical outfits enable them to continue the struggle long after we have been driven from the field."

We record to-day the sixth nail for 1901 driven into the FOREST AND STREAM'S Platform Plank, and other States are to be heard from. The principle of stopping the sale of game is receiving recognition everywhere. In the not remote future it will be the all-prevailing rule.

A common stock argument with advocates of an open game market is that invalids hanker for grouse and quail and should not be compelled to depend upon the chance generosity of sportsmen to satisfy their longing for game. It is true that there are invalids whose finical appetite may be tempted with game; but where one marketed quail goes to an invalid's room, a thousand go to game eaters who are healthy and robust. The consumption of game by invalids is so small as to be a negligible factor in the consideration of the subject. The invalid as a game consumer has been overworked; it would be graceful, not to say merciful, on the part of the market advocates to give him a rest.

Opposition to an anti-sale game law on the ground that it is class legislation in the interest of sportsmen as a class against the rest of the community is silly. It is of a piece with all the other opposition to game laws which is based on the "class legislation" pretense. The whole scheme of game protection has been assailed from time to time as class legislation, but in this country there is not the slightest reason to justify the charge. Sportsmen who use the rod or the gun are not from a class distinct from the rest of the community any more than are the players of golf or the young men who take red-headed girls driving behind white horses. Game laws are enacted and enforced to preserve the game stock, that it may not perish from the land, and if a law forbidding the sale of grouse and pheasants and venison is essential to accomplish the end, then such a law is in the public interest.

Perhaps no sportsman in America has ever been so well known as the Englishman, Henry Wm. Herbert, whose pen name was Frank Forester. Mr. Ruthven Deane, of Chicago, has devoted much time and effort to gathering up information about Forester, and relics of him and the notes which he has recently printed in FOREST AND STREAM are very interesting. It is hoped that any one possessing data concerning Forester, or any letters or other manuscript from his pen, or knowing of the existence of any portraits of him, will make them public, either through the FOREST AND STREAM or by communicating with Mr. Deane.

At the instance of the Acting Superintendent of the Yellowstone National Park, Montana has made a close time for a term of years on antelope. As was set forth in these columns some weeks ago, the chief purpose of the law is to afford winter protection for the Park antelope, which gather on the Gardiner Flats, on the southern edge of the Park, and thence stray over into Montana, where many have in past years been killed. Arizona and Nevada have also just adopted a long term of protection for the antelope.

Mr. Charles Hallock has republished from the FOREST AND STREAM, as a brochure dedicated to the National Geographical Society, his biographical notice of Dr. Robert Bell, of the Geological Survey of Canada. It is a record of achievement and high public service, and well deserves this separate and permanent form.

The Sportsman Tourist.

BOS AMERICANUS.

Erstwhile, where Wyoming's unclouded Sun
  Athwart her arid plains imperious rode,
Of an innumerable phalanx one,
  Uncouth, with lowering front, I stalwart strode.

Still glares the Sun upon the herbage pale,
  Where looms the mirage o'er her desert zones;
But fled the Herd; beside th' untrodden trail
  Behold, unsepultured, my bleaching bones!

Theo. F. C. Demarest.

In Old Virginia.

X.—On and Off a Deer Stand.

WHEN a boy a friend of mine wrote what we both believed to be a very beautiful poem, the first two lines of which were as follows:

"All things are transient and must pass
Coats, hats, shoes and pants won't last."

I have long since recognized the error of our judgment in poetry, but the sentiment has become even more firmly fixed as time passes on as one of truth and verity.

It was the last day but one before that set for my departure from the delightful home that had afforded so many pleasures and furnished such ideal hospitality. My hostess came out on the front porch as I sat enjoying my after-breakfast cigar, holding in either hand a missive, and said, "I have here two invitations for you, and you may take your choice, as the messages were delivered simultaneously, and both invitations come to you at one and the same time. Cousin Tom, my fox hunting cousin, invites you to a fox hunt, and Cousin Rand invites you to come on a deer hunt. The two boys, bearers of these invitations, await your reply, but there is no hurry, as I have sent them to the kitchen for their breakfast. I suppose, of course, you will go on the deer hunt, as the fox hunt will not be according to the style that you have innovated, and perhaps you may be persuaded to hunt deer on horseback. Seriously, however, I would advise you to accept Cousin Rand's invitation and go after deer, as he is a famous deer hunter, has a fine pack of dogs and will probably succeed in giving you a shot, as I know he will make every effort to do."

I took her advice and accepted the invitation to hunt deer.

The next morning, a beautiful, bright, frosty day, after an early breakfast, the cousin made his appearance, accompanied by two friends, and bringing with him three of his justly celebrated deer hounds. He had selected for our hunt a piece of timber a few miles distant that had been culled many years before and had grown up in underbrush, making a dense and in some places almost impenetrable thicket. It was his intention to hunt out this cover with his dogs with the expectation of starting a deer, which he hoped some of us on our several stands would have an opportunity of killing. A road led down about midway through the hunting ground, and this road we followed until well into the woods; then with his dogs the master of the hunt turned off at right angles to work through the north half of the cover and back again, provided nothing was started, while we rode leisurely along toward the positions assigned us, which were stands known to my two companions at the further end of the south side of the strip of timber. We had only gone a short distance when the dogs gave tongue, and in a moment all was excitement. It sounded as though the trail was fresh, and it took but a moment for us to discover that they were heading back our way. Thinking it possible that they had jumped a deer, which had not yet crossed the road back into the cover on the south side, we immediately rode a short distance, when one of my companions dismounted, led his horse back into the brush and took a position on the edge of the road; my other companion and I rode on a little further, and following instructions I concealed my horse and took a stand, while the third member of our party rode on to a like distance from where I was posted and took his stand. The dogs, as well as I could tell, were working through very thick cover and steadily in my direction. And as it was still, sound carried well, and those three eager hounds with their deep-toned voices, multiplied their yelpings until it sounded like a pack of at least twenty.

On they came steadily toward my stand, and from moderate excitement I rapidly progressed, first to great excitement and then to greater excitement, and then to suffocation. I had dropped on one knee behind a low bush, through which I could watch the direction of the dogs' approach, and by the time they had gotten almost in sight and still coming toward me, my heart was beating with throbs that I could distinctly hear, and I found it necessary to stand up in order to get my breath. I expected every moment that the deer would break cover, as the dogs were on a hot trail, and showing evidences of being close on. I think I should have fainted, although no amateur, had those dogs been thirty seconds later coming in sight, but fortunately just as I seemed to have reached the limit of human endurance the dogs broke cover, came dashing through a little open space and crossed the road within thirty steps of me, disappearing in the woods beyond, showing conclusively that the game they were trailing had already passed by. I was just wondering what would be the next move, when hearing a thunder of hoofs, I turned to see my first companion, who had been stationed below me, a great long-legged fellow, coming up the road with his horse on a dead run, which he was trying to increase the speed of by pounding him with his heels. He motioned to me as soon as he discovered that I observed him, and I, understanding his sign, ran back, mounted my horse as speedily as possible and came out into the road just as he swept past with the shout, "Come on as quick as you can; we shall have to run if we get to our stands by the time that deer crosses." Settling myself in the saddle and putting my knees well under my horse's shoulders, I leaned forward and gave him a rake with the spur, realizing the fact that if I was expected, on an ordinary horse, to go around by the road and head off a deer running straight through, I needed to get all the speed out of my mount that was in him. The road was crooked, and I had but an occasional glimpse of my companion whom I was following; but every time I did see him he was pounding away at a tremendous rate of speed, making his long legs work like a pair of flails as he rattled his heels on his horse's sides. I finally turned into a straight stretch and found that I was gaining on him, which surprised me until I got a fair view and found that he was pulling his horse up. He allowed me to overtake him and hurriedly pointed out my stand, which had before been described to me as the "rail pile and leaning tree stand."

As soon as he saw that I understood, he redoubled his efforts to get more speed out of his horse, and in a moment was out of sight around a bend of road. Checking my horse at the spot indicated, I dashed into the woods by the side of a tree and throwing my bridle over a limb ran back to the edge of the road. Crowding a couple of shells into my gun, I scanned the road carefully for tracks that would indicate that the deer had passed.

I found nothing in the way of tracks that looked at all fresh, although there was one track, evidently made by a tremendous buck, two or three days old. Listening a moment, I discovered that the dogs had turned and gone to the far side of the woods from where my stand was situated, the tract of timber being very wide at this point. They now seemed to be at least a mile and a half or two miles away, and as the sound of the chase was growing gradually fainter, I soon made up my mind that the deer was running directly from my stand and that my chance for a shot was very slim, unless the dogs succeeded in turning him. I thereupon left my cover, went out and carefully inspected the road at a distance of a hundred yards up and down each way, to make sure that he had not already passed, and satisfied myself that no new track was to be found.

I then went back to the position which had been assigned me, which was at a point half-way between a small rail pile on one side and the famous old leaning tree on the other side of the road. The cousin who had arranged the hunt had on the way out told me the history of the leaning tree, and I now inspected that curiosity with a great deal of interest.

It was a large white oak fully as thick as a man's body, growing out of a bank on one side of the road and curving over almost in a half-circle until its top pointed toward the ground on the outer side. The history of the tree was given me as follows:

"My father told me that his grandfather told him that coming to this country as a young man and settling near here on a plantation, which lies on the Meherrin River, he and a companion camped one night by this tree, which was then a sapling, and when about to pitch their camp they discovered and killed a fine buck, which they butchered and hung on this tree, which by uniting their strength they bent to the ground. And from that day to the present time the tree has grown in the shape that the heavy deer, weighing it down, pulled it in. Another illustration, as father told me, and his father told him, of 'As the twig is inclined, the tree is bent.'"

The sound of the chase had grown fainter and fainter, until I could only hear an occasional distant bugle-like tone of one of the dogs, and had about resigned myself to a long, tedious wait, without any anticipation of sport. Filling my pipe and shouldering my gun, I began to pace up and down the side of the road, enjoying the beauties of nature and grumbling at my luck. In a few moments it became apparent that I was hearing the dogs more distinctly, and listening carefully I soon discovered they had turned and were coming back in my direction. Whether they would run my stand or not was an open question, but in any event I was in the line of possibilities. Laying aside my pipe and carefully selecting a position, I waited, listening to the now rapidly approaching musical chorus, the three dogs running a hot trail. Nearer and nearer they came, apparently directly toward me, until I began to feel the assurance that mine was to be the lucky stand.

Determined not to repeat the foolish flurry of excitement gone through in the morning, I braced every nerve and succeeded fairly well in exercising self-control. Just as I was congratulating myself on the fact that my nerves were steady, I heard a distinct crash in the direction the dogs were approaching, indicating that the deer had dashed through a very thick bit of brush, and immediately my heart set up a vicious pounding, causing me to gasp for breath. The stages were short then from excitement to more excitement, and then, hastened by another crash in the brush, much closer, to another attack of suffocation. A deer was close upon me, coming fast, and I could distinctly hear his leaps through the brush, although the thick growth, and young timber prevented my seeing him. My excitement was something terrible, in spite of the determined efforts to control myself. It is more than probable that I would have missed had I gotten a shot, but I was unquestionably very eager to try—even with the possibility of the humiliation of missing a deer at short range with a shotgun loaded with buckshot. Just as I was expecting every moment to see him burst through the remaining short distance of thicket and brush and bound into the road, a yellow streak dashed by me and took the fence immediately in front in the line of where the deer was approaching, giving me a faint glimpse of a long, lank, yellow dog, and a moment later I heard the deer—checked and turned back—dash off at a right angle to the course he had been pursuing, followed by the yellow cur in full and eager cry.

One of the great metropolitan dailies has for its motto, "All the news that is fit to print"; that is good morals and good logic, and shall be the principle governing this narration. The low, subdued, earnest and intense soliloquy which followed the appearance and disappearance of that miserable yellow cur can be left to the imagination of the reader. It sufficeth to say had that dog run the deer by me a moment later, I should have shot the dog first, if I got no shot at all at the deer. The chase had continued but a few moments back through the timber when I heard the report of a gun, followed by a shout from the master of the hunt which announced game to bag, and I knew that although I had been disappointed, some one else had scored. My two companions occupying the stands beyond me on the road soon rode up, and mounting my horse we made our way through the thicket to the successful hunter, and found him with his dogs seated by a fine deer which he had just killed. The deer turned back by the stray cur had run directly by our friend as he sat on his horse, giving him the opportunity for a fair shot, which he improved as related.

Loading the game on a horse, we made our way out to the road, where we were fortunate enough to meet an old darky going toward the house with his wagon, who agreed to take the deer in for us.

"I sho will try to git him dah fo' you, Mas' Randolph," he said. "But he is such a fine fat deah dat hit mos' mak' a pusson furgit de way to de hous', at least wid paht of him; say des a ham or so."

"Well," said one of my companions, "you may forget the way with that deer, Uncle Zeke, or a part of him, as you suggest, but if you do, just bear in mind we won't have forgotten how to shoot, and Aunt Mandy will make a very gay widow."

"Nem-min', sah; nem-mia'; ef I duz furgit de way, de ol' mule she ain't, and we all will git it dah safe, sho."

A consultation was now held as to the advisability of continuing the hunt, as it was not later than 10 o'clock and the day perfect. The main argument urged against continuing was the fact that we had no lunch with us, and had eaten a very early breakfast. Not expecting to be out later than noon, we had not encumbered ourselves with the now very much desired accompaniment—a substantial luncheon. After a short discussion we concluded to go to another excellent cover near by and try that, at least for a short time, before going home.

We were soon well located on our respective stands, mine being just over the brow of a ridge near the road again, with the top of the ridge on my left hand, and a piece of low ground gradually sloping down on the right. Nothing was heard from Rand and the dogs for nearly an hour after we reached our stands. It had become very monotonous waiting on the stand, and every moment the regret grew that no lunch had been provided. I felt sure that I was a long way from any farmhouse, and yet imagined that I could smell a good dinner cooking in two or three directions, and a farm bell ringing for the noon repast so far off I could barely hear its faint tinkle, made me positively long for an opportunity to get something to eat.

A diversion offered, however, to take my thoughts from the severe arraignment being made by my department of the interior, as the dogs were again heard opening upon a trail. They were a good way off, and it was impossible for me to tell which way they were running; all I could do was to get in the exact position ordered to stand and hope for the best. I shortly discovered, however, that the dogs were not coming my way, but, on the contrary, judging by the sound, were working off in the opposite direction. Fainter and fainter their voices sounded, until they finally died out in the distance, and all was again silence. The temporary excitement had been just sufficient to whet my already very sharp appetite, and just then looking down the road I spied a large persimmon tree, loaded with lucious fruit. I made up my mind at once that I would have to go down and get some persimmons or surely starve to death. As I was about to yield to this temptation I remembered how my companions had enjoined upon me that under no circumstances was I to leave my stand, telling me that in every case when a deer ran a man's stand it sought the opportunity when he had wandered off. And I also remembered how I had promised my friends that nothing could tempt me to so far forget myself as to desert my post of duty and not at least make an honest effort to stop any deer that came my way. Sitting down on a log I turned resolutely away from the tempting persimmon tree and tried to forget how hungry I was, but it was no use; I could see the tree in spite of turning my back to it and almost taste the fruit. Fifteen, twenty, thirty minutes I sat resisting the awful temptation, and then, hearing nothing of the dogs and feeling sure there would be no danger of missing a shot in the few minutes that it would take me to run down to the persimmon tree and fill my hat, I sprang into the road and made for the tree at my best speed, feeling like the guilty deserter that I was. Leaning my gun against the fence, I shook the tree, bringing down a plentiful supply of the sweet, frost-cured fruit, and pulling off my hat I gathered as fast as I could, while keeping my mouth well filled. With my hat two-thirds full of persimmons, I was working around the outer edge of the circle of fruit, when I heard a piercing yell some distance up the road, and a moment later a magnificent buck sailed over the bank and into the road and out on the other side, so close to my stand that had I remained where I should have been I could have touched him with the muzzle of my gun as he passed by. Dropping the hat, I dashed for my gun with feverish energy, and running as hard as I could—in a sort of foolish desperation—made haste back to my stand, arriving there only to realize that the deer was probably two or three miles away. I had not collected my thoughts nor recovered my breath fully when Rand rode out from the woods in the track of the deer, and catching sight of me, asked excitedly, "Didn't you see that deer that I just jumped and ran this way?"

I should have liked very much to talk about something else about that time, but hardly knew what subject, other than the one he had mentioned, would interest him. I felt perfectly willing to have him get down off his horse and kick me to his heart's content, and thought of inviting him to do so, but to face the ordeal of explaining to him my very foolish conduct I certainly did not relish. Hesitatingly and very much embarrassed, I answered his question, telling him frankly that I had seen the deer.

"Why didn't you shoot?" was his next question.

"I wasn't within gun shot," I answered.

"Why," said he, "that's strange; I rode up and jumped him in a thick place, not 500 yards back in the woods, and he came like a shot from a gun for this stand, and I shouted that you might be put on notice." He then turned his horse back into the road, and a moment later was looking down on the track of the deer left in the loose dirt of the road. Scanning it closely and attentively for a moment, he then turned and looked at me in the most puzzled manner.

"Did he run over you and knock you down?"

"No," said I; "he didn't."

"Where is your hat?" he then asked.

Summoning up my courage, I replied, "It is down the road yonder," pointing to the persimmon tree, "and is full of very nice persimmons, which I am going down to eat."

"Oh!" said he, with a look of deep disgust. "I understand now, and I guess you don't care very much about hunting deer anyhow, and if you will fire your gun to call up our friends we will go home."

My companions were not rude to me during the return trip; on the contrary, they were polite, profoundly and painfully polite, but there was an air of concealed disgust that was not dissipated by my earnest assurance that I had never been in all my life so hungry as I had been that morning when I deserted my deer stand.

LEWIS HOPKINS.

Camp-Fire Stories from Canadian Woods.—IV.

Hunting in the Great Massinau and the Hidden Cave.

LEAVING Toronto by morning C. P. R. train east you will arrive at Kaladar Station, a few miles beyond Tweed, about 3 o'clock P. M., and thence thirteen miles by stage to Cloyne, in early evening. This place is noted more from what it is not than for what it is or might be. Its negative qualities predominate. Unlike most villages, it has no past and, in prospect, no future prosperity. A tavern, two or three stores and a blacksmith shop, with a few dwelling houses without paint scattered along about a mile of sandy, dusty road, comprise the place. On the east side is the county of Frontenac and on the west the county of Addington.

The soil is a coarse, barren sand, and plants and crops look pinched and starved, even in a year of exuberant growth in other localities, and farmers do not prosper. It is, however, the entrepôt to the great lumber region beyond, being only three miles from the depot of a large lumber company at the foot of the Great Massinau. It is the center of a lacustrine district, swarming with lake and brook trout, and in the fall of the year is the starting point of numerous hunting parties for the forests beyond. The Perry road runs northerly along the Massinau Lake. Deserted homes here and there denote the failure of some settler who, after years of toil in clearing the pine lands and rearing substantial buildings, has left in disgust for a more genial locality and a more generous soil. About seven miles from Cloyne the traveler obtains a fair view of the Massinau, a fine sheet of water ten miles long, running in a southwesterly direction. Here he stands upon the height of land. The waters of this lake flow to the south and east. Over and behind the big rock lie Dyer Lake and Buck Lake. To the south of them, Little Buck Lake, Marble Lake, Massinogon and Long Lake (Massinogon seven miles and Long Lake twenty miles long). To the east there is Campbell Lake and McClintoc Lake, and to the north of McClintoc the Brulé Lakes, which empty into the Madawaska. To the south and west the waters of Loon Lake find their way to the Bay of Quinte, while to the north and west the West-la-ma-coon runs to York River, a tributary of the Madawaska. This is a land of forest, lake and stream—a sportsman's paradise. Here the scenery is worthy of our artist's pencil. From Tapping Mountain, which rises about 900 feet from the waters of the lake, looking westward, the illimitable green rises billow upon billow clear across the counties of Addington and Hastings, a distance of about fifty miles, while to the north and east the mountains around the Brulé Lakes and the Madawaska break the horizon, or upon a clear day over the waters of the lake in the upper regions of the air the empyreal realm of the eagle, that majestic bird, perhaps, may be seen extending its immense wings and wheeling slowly and majestically to and fro, seemingly without exerting a muscle or fluttering a feather, but moving by mere volition and sailing on the bosom of the air as a ship upon the ocean. Directly in front of you to the east rises the famous rock of the Massinau. This rock is apparently the half of a high mountain split in two by some terrestrial convulsion ages ago, the west half having disappeared, leaving the east half a sheer precipice, rising perpendicularly from the waters of the lake hundreds of feet and extending north and south about a mile and a half. In the clear atmosphere objects at a distance seem surprisingly near. When on the lake you imagine you are only a half-mile or so from the rock, and are disgusted when told you have to row two or three miles to get to it.

Whether from its echoes or from its gruesome appearance while passing underneath in a boat, this rock inspired the Indians with reverential awe. Forty or fifty years ago paintings could be seen—Indian hieroglyphics—but are now obliterated by the action of the water and frosts. A curious legend is connected with this rock, and one which invested it with more than local interest. Like the buried treasures of Captain Kidd and similar chestnuts which used to interest the past generation, it was currently believed that a cave surpassingly rich in native silver existed within its adamatine bosom. Wondrous stories were told, and currently believed, how the walls were studded with pure silver. Stalactites of the solid metal hung from the roof, while all around was scattered wealth equal to a king's ransom. Here was a veritable "King Solomon's Mines," without the old hag Gagool to close the stone door upon the intruder. Like all other such fables, the truth of its existence lay in the impossibility of finding it. Its locality was known to the chief medicine man of the tribe, and the secret had been handed down from generation to generation and sacredly kept. The Indians said it was the abode of the Great Spirit, and no one (but the medicine man) dare enter, for he could not come out alive. The breath (poisonous gases) of the Great Spirit would cause him to die.

The name of Meyers is so closely connected with this cave that its history would not be complete without a word or two about those people.

Settled in early times on the shores of the Bay of Quinte, near Trenton, the Meyerses were a hardy and numerous family with an inclination to hunt as thoroughly ingrained as that propensity was possessed by an Indian. A Meyers was as adept as an Indian in following a trail or tracking a deer or a bear, and as expert at trapping and all manner of woodcraft. Without a compass, no tract was too lonely for him to explore, no forest jungle too dense or too vast for him to penetrate. The management of the camp was second nature to him, and the trackless forest was as plain and open as the streets and alleys to the dwellers in the cities. He loved the forest and its associations. To him the singing of the pines was sweet music, trees and rocks his companions. He was a true son of nature and in touch with her ever-changing mood.

A rifle—flintlock, of course—powder horn, a few patches and bullets with hatchet and knife composed his hunting outfit, while a blanket, pannikin, a few pounds of pork and flour, a little salt and tea by way of luxury, and the ever-present flint, steel and tinder box, completed his kit. Thus equipped for the woods, he would start out. No matter wherever night overtook him, with a wigwam of evergreens and a bed of the same material on top of the snow, and a fire at the root of a large tree, rock or log which would retain the heat and refract it back into his snug quarters, he would enjoy his night's rest with the ease of a commercial traveler in a palace hotel, and with a sound and refreshing sleep which downy pillows and spring mattresses fail to bring. While deer roamed around his own fields and fallow, his favorite hunting grounds were on the tributaries of the Moira, about thirty miles north of where Tweed is now situated. Here deer were as plentiful as sheep in a farm yard, and still continue to be very numerous to this day.

At the earliest snows the Meyerses repaired to this favorite hunting ground, where they built a rude cabin as a sort of depot for their hunting excursions, and remained until about the latter end of January. Some of their sons, now old, gray-headed men, still tell of their accompanying their fathers in their annual hunts, and of the sleigh loads of deer and the bales of fur garnered in during their sylvan harvest. These were the happy days of muzzleloaders and of plenteous game, with no statute to limit the season or prescribe the number. From this place proceeding a short distance to the north and east through what is now known as the township of Anglesea, they would find themselves near the large waters of Loon Lake, which lie only a mile and a half from those of the Massinau.

By placing a canoe in the water at Corbyville, four miles from the mouth of the Moira, Loon Lake may be easily reached, there being only short portages to be overcome. These waters being of easy access to the voyageur, the Meyerses and their friends became acquainted with them, long before any settlement was dreamed of, and years before the lumberman's axe resounded throughout the woods.

About eighty years ago John Meyers, the veritable nimrod of the family, hunted in this locality. Every fall he repaired to this locality and hunted weeks and months at a time with the Indians. Whether by joining or becoming one of the tribe and going through the initiation prescribed for becoming a medicine man, or by influence over the chief, he gained access to the cave, and from his description it surpassed in richness everything said or imagined about it. But like all other stories of this kind, something happens to keep them on foot. Meyers on his journey homeward was overtaken by a storm on the lake, his canoe upset and he lost his rifle and effects, and the specimens of silver went along with the rest. Not long after his return home he was taken sick and never recovered. Before he died, however, he left as a legacy the important secret of the cave, and to a trusty friend gave directions, which were written down on paper, as to the locality. Whether from the bungling or careless manner in which the precious information was written down, or from the feeble and clouded state of Meyers' mind, weakened by disease, the description was as ambiguous as the answers of the Delphic oracle.

The story of Meyers' discovery was soon widely circulated. Many were the searchers after the hidden treasure, and among the rest were Meyers' confidants, who to the pleasures of expectation added the exultation of absolute certainty. But all their explorations were in vain, the Great Spirit was not generous; they might as well have searched for the amphitheater in the Kaats-kills, where Rip Van Winkle played ninepins with the crew of Hendrik Hudson. As the search began to become fruitless, those who possessed the precious document grew generous, and its contents were imparted to others. The writing stated that the cave was situated about half a mile from the "mouth" of the lake. Learned disquisitions took place as to what was the mouth of the lake. Some held that the mouth was where the waters of the lake flowed into the Mississippi, while others contended that it was where the waters received those of the river at its head. The story of Meyers' Cave gradually died away into fable, to be revived from time to time as the fluctuation of mining interests increased or waned in this locality.

Some Boyhood Memories.

IX.—A Boy, a Man and a Memory.

IT was Saturday afternoon and you were husking corn out in the barn alone—it's you I am speaking to—and the late October sunshine streamed in through the open door and flickered yellow on the husks.

There was a woodpecker rapping away on the old tree by the well, and a partridge had been drumming down in the woods back of the house all the afternoon. You just naturally can't stand it, and you kick away the corn husks and go out around the back way, and up into the woodshed chamber, and take down the old gun from its pegs on the beam. You have been allowed to use that gun a few times, mostly to kill crows in the cornfield, and you know how to load her and where the powder and shot is kept on the top shelf in the cupboard.

A charge of powder poured in the palm of your hand (no fine distinction here between 3⅛ and 3½ drams), a wad of newspaper rammed down till the iron ramrod fairly bounded from the barrel, about the same bulk of shot—no. 4's—another light wad, tap it gently this time, a G. D. cap shoved down over the nipple—and there you are.

Then you went down through the orchard to the corner where the woods and the orchard joined and the Spitzenberg blushed to the nodding of the pine cone. Then you crawled through the fence and walked carefully—oh! so carefully—down the old woods road, for you did not catch your partridge on the wing in those days. My! how still the woods was. Then you worked your way in through the underbrush and sat down on an old hollow log and laid the gun across your knees and wondered what made you breathe so fast.

Then after awhile a red squirrel chattered in a big pine and a dog barked away off somewhere. Hark! Something is rustling the dead leaves. Don't turn your head now; just look. Ah! a big cock partridge walks gravely, suspiciously, from behind the top of that fallen hemlock. Wait now! Wait till his head is behind that second growth beech. Pull her up. There he comes—bang! A flurry of leaves, a cloud of smoke from the old gun and a trembling hand is pressing the fluttering bird to the ground.

The tragedy is over. Tragedy did I say? No, no! It is a law; nature's law; inexorable, immutable; the law that the fittest shall survive.

You took that partridge up with trembling fingers and sat down on that old log, and laying him on your knees smoothed the ruffled feathers, gently and—— Now, honestly, did you feel quite that way when years later you shot your first deer?

You are older now—quite a bit older—and you come back to the old homestead one afternoon and walk down the old woods road.

There is a boy with you—your boy—and you see an old rotten log covered with green moss that looks like the same—— Whir-r-! went a partridge from behind that stump. "Oh, papa! why didn't you bring your gun? When can I have a gun?" Then you sit down on the old log, and as the shadows grow darker on the russet leaves you tell the laddie how you shot a partridge—your first partridge—just over yonder under that little hemlock when you were a boy.

And years after, when that boy is a father, will he forget it? No, indeed! And some time, mayhaps, he may take *his* boy down an old road through the woods—and it all comes back. Then he will laugh quietly to himself and say, "See here, Bubby, your grandpa told me that he shot a partridge once right over by that tree somewhere." "Tell me about it, poppy." And he will, briefly perhaps, and with a paucity of detail.

But will that boy forget that incident, or will not that very locality in every detail meld into his retina so that in a day to come, as he sits alone on a runway, watching, waiting, the half-forgotten picture will unroll before him as a mental panorama? He does not remember his grandfather very well except as a tall, gray, silent man, who stooped a little, and whose eyes always seemed to look, not at you, but at something far beyond you.

But he could sketch that woods roads down to the last knot on the dead pine. And yet we wonder why traditions never perish.

Ah! yes. Hiawatha could well afford to wait a thousand years for Longfellow, and the Lorelei will live when the Rhine is but a memory.

DR. F. J. TOMPKINS.

TROY, N. Y.

Then and Now.

IN reading the list of camp outfit which Mr. Hough is to carry, all of which it may be very nice to have, I could not help comparing it with the outfit we used to have a few years ago. The fall I was twenty-one I was hunting all the fall. Our provisions consisted of hard bread (and very hard bread, too), pork, potatoes and a little molasses. In 1858 my partner and myself for a month had nothing but very sour flour and salt, except what we killed, and that had either to be roasted on a stick or boiled in salt and water. We had swamped and wet our flour, and no dog, unless very hungry, would have eaten such bread as it would make. We had no tea nor coffee nor even pepper.

In 1859 the provision for two for our three months was: 125 pounds of flour, 50 pounds of sugar (we carried an extra quantity of this, as we expected to find cranberries), 30 pounds clear pork, 2½ bushels of potatoes, 10 pounds of rice, 2 cakes of chocolate, a little tea, a peck of beans and one salt codfish and a barrel of hard bread (about 80 pounds), and this outfit was luxury compared with what I used to see the hunters start with when I was a boy.

I have often seen two Indians start about the first of February, when the snow was from two to three feet deep, with all their outfit on a wide one-runnered toboggan. Besides a gun, hatchet, pair of snowshoes and single blanket for each man, they had about 25 pounds of flour, a few pounds of pork and a little tea. Before leaving the settlements they would get some settler's wife to boil some potatoes which they would peel and mash and tie up in a cloth, as in this way they would not be injured by freezing. They had flintlock guns, and carried flint, steel and punk for lighting a fire. They had not a rag of spare clothing, and were very lightly dressed, as like the Cree guide whom Robinson tells of in his "Great Far Land." They had leggings which reached up a certain distance, and a breech cloth which reached down a certain distance, leaving a large space for that providence which "tempers the wind to the shorn lamb" to experiment upon. Clothed in this way, they went on foot and hauled their outfit from 75 to 100 miles, camped in such camps as they could make with their hatchets, always sleeping side to the fire, as in this way the extra warmth thus obtained helped make up for scanty bedding. They saved and dried their spare moose and beaver meat, and would return the last of May in a canoe, which they had made either of birch bark or the hides of three moose, shaved, sewed together with lap seams and stretched over a cedar frame.

Now people go to those same grounds in cars, sleep on spring beds, have hotel fare and call it hunting, and tell of the hardships of roughing it.

M. H.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Natural History.

The American Ornithologist a Hundred Years Ago and Now.

WHEN the ornithologist nowadays decides upon an expedition to any remote or outlying section of the country he gets up comfortably at 8 o'clock, takes a hansom to the railway station and boards a luxurious train which whisks him at the rate of fifty or sixty miles an hour to his destination. Arrived there, if he have not a well-appointed inn to put up at (and the chances are he will), he (with the aid of one or more henchmen) pitches a tent proof against wind or weather and spreads out his equipment, including a sleeping bag, a repeating shotgun, a binocular field glass, a tele-photo camera, an ornithological "key," a specimen case, a stylographic pen, a barometer, a compass, and last, but not least, a miscelleanous collection of tin cans and boxes. Having inspected all these and put them in order, he sits down in a calm and pleasantly anticipatory frame of mind to smoke his pipe. At night he gets into his sleeping bag and woos Morpheus as successfully as he might in a feather bed. When morning comes he goes forth appropriately clad for the season and accompanied by an experienced guide. Safely he wanders over the country, nothing occurring to mar the pleasure of his pursuit except a possible shower. When the day begins to decline he strolls back leisurely to camp, changes his clothes, refreshes himself with a Martini (ready made) and then sits down to a meal which would have caused epicurus to wonder. Finally, when he returns to town, he sends his specimens to a taxidermist to have them set up and then to an artist, who draws and colors them. The only thing that remains for him to do is to dictate to a stenographer the story of his experiences.

Contrast this with the ordeal of Alexander Wilson, that pioneer of American ornithology, a hundred years ago. With practically a virgin field to explore, he lacked, we may say, every aid or adjunct of those we have enumerated. Even if he had money he would have lacked them, but he had no money, at least as we understand the phrase. A poor schoolmaster, his whole possession may be summed up in this: *Mens sana in corpore sano*—a sound mind in a sound body. We say "a sound mind," but it may not be amiss to mention that in his day there were many of those who knew him—the great majority perhaps—who considered him downright crazy. And why? Because he loved birds. Had he set his heart upon good, fat swine he would have passed for a man of sense; but birds!—clearly the man who loved anything so useless must be crazy. Heigh ho! Is the world so very much different to-day? But no matter. The man devoted to science or an ideal cares little for the opinion of the world. So it was with Wilson. He gave himself up to the love and study of the feathered tribe perfectly regardless of what his neighbors thought or said. In the hours before or after school he would stroll out through the fields and woods and there use his eyes and ears with unalloyed delight. But he aspired to be more than a mere amateur ornithologist, and at length fortune favored his aspiration. Falling in with a publisher in Philadelphia who was bringing out a natural history, Wilson suggested that it be made as complete as possible in the ornithological department, and offered to make expeditions through the country in search of knowledge. The publisher agreed with his suggestion and accepted his offer, but he does not appear to have advanced poor Wilson much money, for we find him setting out on his first expedition with hardly more in the way of equipment than a horse, a shotgun, a couple of blankets and a little provision of dried meat and biscuit.

Think of this man, equipped in the manner stated, setting out to penetrate the wilderness of North America! Not to speak of the danger from wild beasts and wilder men, there were the mysterious hazards of the unknown facing him—and there was solitude, with possible hunger and sickness; but he faced all with a light heart from sheer enthusiasm or devotion to his ideal.

We can picture him, then, making his way laboriously through the trackless wilds, but always on the alert to seize whatever knowledge presented itself in connection with his beloved quest. Let us hear himself speak of some of his experiences:

"This day I passed through the most horrid swamps I had ever seen. These are covered with a prodigious growth of canes and high woods, which, together, shut out almost the whole light of day for miles. The banks of the steep and sluggish creeks that occupy the center are precipitous, where I had often to plunge my horse seven feet down into a bed of deep clay up to his belly, from which nothing but great strength and exertion could have rescued him; the opposite shore was equally bad and beggars all description. For an extent of several miles on both sides of these creeks the darkness of night obscures every object around.

"From Portland, Me., I directed my course across the country among dreary, savage glens and mountains covered with pines and hemlocks, amid whose black and half-burnt trunks the everlasting rocks and stones that cover this country 'grinned horribly.'

"The general features of North Carolina where I crossed it are immense solitary pine savannahs, through which the road winds among stagnant pools, swarming with alligators; dark sluggish creeks, of the color of brandy, over which are thrown high wooden bridges without railings, and so crazy and rotten as not only to alarm one's horse but also the rider, and to make it a matter of thanksgiving with both when they are fairly over without going through; enormous cypress swamps, which to a stranger have a strikingly desolate and ruinous appearance.

"On Saturday I passed a number of most execrable swamps; the weather was extremely warm and I had been attacked by something like the dysentry, which occasioned a constant burning thirst and weakened me greatly. I stopped this day frequently to wash my head and throat in the water to allay the burning thirst, and putting on my hat without wiping, received considerable relief from it. The water in these cane swamps is little better than poison, and under the heat of a burning sun and the fatigues of traveling, it is difficult to repress the urgent calls of thirst."

After describing his voyage down the Ohio, he writes: "In this lonesome manner, exposed to hardships all day and hard berths all night, to storms of hail, rain and snow—for it froze severely almost every night—I persevered from Feb. 24 to Sunday evening, March 17, when I moored my skiff safely in Bear Grass Creek at the rapids of the Ohio, after a voyage of 720 miles."

In others of his letters he describes his nightly bivouacs. It would be well worth while to quote these descriptions, but the limitations of space forbid. It will be easy for the reader, however, to imagine the outlines at least of some of them—the lone figure by the fire in the gloomy recesses of the forest, alive with prowling beasts and echoing with dismal or hideous sounds; or again, a circle of sinister painted savages, with one white man among them, and that Wilson, not knowing how soon he might be the object of treachery, but knowing only too well what that meant.

However, it must not be supposed that the ornithologist's journeyings were one series of laborious or painful experiences. Far from it. Possessed as he was of an adventurous spirit and an intense love of nature, we may reasonably conclude that his moments of pleasure, if they did not outnumber, certainly counterbalanced his moments of pain. The joy of the miner on discovering a diamond or a nugget of gold is keen, but we fancy it hardly deserves the name of joy when compared with Wilson's sensation on discovering a new species.

At length, having amassed a great store of knowledge, he ceased his wanderings and devoted himself to the completion of his history—doing all his own drawing and coloring, as well as writing. As he had proved himself an enterprising collector, so he now proved himself an excellent artist. Especially in his writing did he prove this. It is true that much of his nomenclature or classification was faulty (as was indeed inevitable), but the grace and sympathy of his descriptions have rarely been equaled and never surpassed.

Like many another unselfish worker, he did not live long to enjoy his well-earned fame. Hardy as he was, the hardships and privations he had endured were too much for him, and in less than two years after the completion of his history he set out, alas! to explore a country "from whose bourne no traveler returns." As we contemplate this son of old Scotia (for to the latter belongs the honor of his birth), the figure takes heroic proportions. To an undoubted faculty of genius he added a tireless energy, an indomitable perseverance and an intrepid courage, and to this again he added a constant and unselfish devotion to science as rare as it is admirable. For that beloved mistress he was ready to suffer any and everything. There is many a general who has a statue erected to him that less deserves one than he. But the world takes small account of the soldier of science as compared with him whose business is carnage. However, Wilson needs no statue. In his history he has left a memorial which, while sufficient to his fame, is more honorable than any mere erection of bronze or stone.

F. MOONAN.

Experience with Wild Animals.

ALMA, Ark.—*Editor Forest and Stream:* In a recent number of FOREST AND STREAM one of your contributors takes the ground that the wildcat of our forests will not under any circumstances attack a human being.

While I have no personal knowledge to the contrary, I had from T. A. Wood, now deceased, an account of an instance when they did attack persons, and I am morally certain that both accounts were true. Mr. Wood was raised on what is known as Big Piney in Pope county, Ark., and in one of the most fertile valleys in the State, but one surrounded by mountains wild and rugged to a degree, and which even at this late day are the home of many wild animals, and the base of operations for some of the boldest moonshiners who ever defied Uncle Sam in Arkansas. But to the cat story.

Mr. Wood told me that in his young days, some time in the period prior to 1849, one of the old citizens of that section died, and the body was taken some fifteen miles across the mountains to a cemetery for burial; and that as the party proceeded along a dark ravine a large bobcat, or catamount, as they are called in this country, leaped from a tree upon the back of a lady on horseback and knocked her to the ground. The screams of the woman frightened it away. She remounted and had only gone a short distance when this was repeated, and again the cat ran away. Then Bert Doolin, who was the father of Bill Doolin, the famous train robber who was killed in Oklahoma recently by Heck Thomas, placed himself in advance of the corpe with a good knife, and the cat sprang on to Doolin, who fell to the ground and succeeded in killing the cat with the knife.

At another time, Mr. Wood said, some hogs belonging to Ben Howard (who married a sister of Mr. Wood and lived in the valley of the Big Piney), just after dark began to make a noise in an unusual way, and when Howard and his two sons went out to see what the matter was with the hogs, leaving Mrs. Howard standing in the doorway, a large catamount leaped upon her, fastening its teeth in her shoulder, and held on until Mr. Howard killed it with a club.

Mr. Wood was for many years a resident of Alma, and died here in 1899 at the age of seventy-seven years, and I am sure these incidents are true.

And again, Mr. L. B. Byars, one of our best citizens, tells me that a neighbor of his in the State of Mississippi, where Mr. Byars was raised, found a large catamount trying to catch a young pig from a litter on his farm, and that when it saw him it crawled under some brush in a pile near the pigs, and that the gentleman got a pole and pushed it, when it came out and jumped on his head, knocking him down and holding on until a negro ran up and caught the cat and pressed it to the ground and choked it to death.

At another time I'll tell your readers about a famous encounter with a panther by a man named Hudson.

J. E. LONDON.

The Florida Razorback.

ST. AUGUSTINE, Fla.—*Editor Forest and Stream:* The inclosed is from a speech delivered in Jacksonville at the Marshall banquet by Mr. Fildes, and it certainly ought to become the classic description of the "razorback." Put it into FOREST AND STREAM for preservation.

I am of the opinion that the wild pig is a descendant of animals brought over by the very earliest Spanish settlers, and that it has reverted to the wild type both in color (red or black) and in speed and shape and in disposition.

The marsh ponies, or "tackies," as they are called, have been pronounced by a New York horseman to be without doubt of Arabian stock, and the ancestors of the present razorbacks may also have an equal long line of ancestry.

DEWITT WEBB.

This is Mr. Fildes' description:

"The 'Florida razorback' is the hog indigenous to this climate and soil. He is usually large of limb and fleet of foot, being the only known porker that can outrun a darky. He has a tail of wondrous length, which, while he is in active motion, he twists into the tightest corkscrew, but with which while quietly feeding he raps his leathery sides much in the same maner that the docile cow uses her tail. He is self-supporting. He earns his own living, and thrives equally well in the highwoods, in the flatwoods, in the hummocks and in the marshes. He subsists upon anything he can find above the earth or underneath its surface. He has a clear, far-seeing eye, and is very sensitive of hearing. Nature has equipped him with a snout almost as long as the beak of the wild pelican of Borneo, with which he can penetrate the earth many inches in quest of worms, snakes and insects. He is the most intelligent of all the hogs, and is likewise the most courageous. He has been known to engage in mortal combat with a coon for the possession of a watermelon, and to rend asunder a barbed-wire fence.

"He is so intelligent that when he lives in the towns he becomes as familiar with the railroad schedules as are the train dispatchers themselves, and plies his vocation in great numbers about the railroad stations, and yet no train ever ran over a 'razorback.' Whenever the railroad companies are forced to pay for killing a hog, it always proves to be a Berkshire, a Guinea, or some other fine breed—never a 'razorback.' He is too active and alert to be caught even by a locomotive. He is nervous, restless, energetic, and hence does not thrive well in pens. Confined, he loses rather than gains flesh. He is always ripe for market, as his condition is as good in August as it is in January. His owner respects his intelligence, admires his nerve and is fond of him as food, for he may always be depended upon to afford the proverbial 'streak of lean' with a very small 'streak of fat.' He is the king of hogs. He can be grown more profitably than any other known variety, since, as has been observed, he is energetic and intelligent enough to feed and clothe himself."

Great Flight of Hawks.

SATURDAY, May 4, and Sunday, May 5, were great days for hawks in southern New York and Connecticut. A stiff wind was blowing from the northwest, and there was a great flight, all working north.

A Connecticut farmer reports to us that he believes that during the day he saw over 1,000 and perhaps nearly 2,000 hawks. Several species were represented, and it is said that many tried to pick up chickens and robins, and chased pigeons. A sharp-shinned hawk shot by a farmer and fluttering to the ground was seized by another hawk and carried up to a fence post, where the uninjured bird stopped until it was shot. The gentleman who reports to us speaks of the killing on his farm of three sharp shins, one Cooper's hawk and one broad-winged hawk, and declares that during the day there was a continuous procession of hawks over his farm buildings. On Sunday morning a reader who was looking out of the window of his house on upper Manhattan Island saw a sharp-shinned hawk fly close by the window with an English sparrow in its talons.

Telegony.

Editor Forest and Stream:

I must acknowledge Mr. Wade's superior information upon the technical application of the word "telegony," my own being only a dictionary acquaintance. Indeed, the word is not to be found in the Century, and I could only derive its meaning by piecing together its components.

I must also acknowledge Mr. Wade's kindness in explaining so clearly the nice distinction in the application of the two words telegony and atavism, a distinction that appears to be most fit and proper for technical purposes, though hardly to be discerned from their derivations.

Having already said as much as seems profitable on the general subject of "heredity," I will now leave that field of discussion to Mr. Wade and others.

I must confess to a feeling of trepidation in the anticipation of a broadside from Col. Alexander when he gets "good and ready" that will "blow me out of the water."

COAHOMA.

Starlings in New York City.

THE increase in the number of starlings about New York is very noticeable, and the birds are pretty objects, walking about on the bright green lawns searching for insects. They seem very gentle, manifesting little fear of man. One may walk close enough to them to see very clearly the spots upon them.

In certain localities not too thickly settled they are quite abundant, breeding in church steeples and holes in the trees, and in nooks in the gables of old wooden houses. A nest recently seen was quite firmly woven of hay, straw and rags, and contained three beautiful unspotted eggs, slightly larger than robin's eggs, and of precisely the same color.

The starling is one of the importations from Europe against whom as yet nothing has been said. He is a busy bird and should prove very useful as an insect destroyer. Whether or no he will develop bad qualities remains to be seen.

The Linnaean Society of New York.

REGULAR meetings of the Society will be held in the American Museum of Natural History, Seventy-seventh street and Eighth avenue, on Tuesday evenings, May 14 and 28, at 8 o'clock.

May 14.—J. D. Figgins. "Some Food Birds of the Eskimos of Eastern Greenland."

W. S. Wallace.—"Notes on the Snakes of Rockland County, N. Y."

May 28.—Frank M. Chapman. "Methods in Bird Photography, with an Exhibition of Apparatus and Lantern Slides."

WALTER W. GRANGER,
Secretary American Museum of Natural History.

Supposed Wild Pigeons.

BROOKLYN, N. Y., May 2.—*Editor Forest and Stream:* I saw this afternoon on Cropsey avenue a flock of about thirty that had the appearance to me of being wild pigeons. As I have seen them in former years, I do not think I am mistaken, as I had a good view of them twice, and they were not more than 200 feet from me. I thought when I saw them they were starlings, but they were too large and were not spotted as starlings are. I know you are interested in what has become of the wild pigeons and so write you. JOHN BATEMAN.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

Some Dogs That I Have Owned.

MY interest in wing shooting began in 1883 in a somewhat singular way. I was out hunting for gray squirrels one afternoon with a squirrel dog, when I almost stepped upon a partridge in an oak thicket. I snapped my gun to my shoulder, or, at least, attempted to do so, but did not succeed, for when it was waist high, in my excitement I pulled the trigger and the gun went off. Imagine my astonishment when I heard a partridge fluttering in the brush not over five rods away. The dog heard the noise, too, for he pounced upon the bird and would have torn her to pieces if I had not released his hold. In my pride at shooting a partridge on the wing I imagined that the art of wing shooting was not such a very difficult one after all, and at once made up my mind that my way to becoming a proficient wing shot was easy. In the years of apprenticeship that I served afterward I learned differently. I brought my bird home in triumph, had it stuffed and roasted, and never before nor since has a partridge tasted half so sweet. The only partridge I had ever before killed was in the Dunlap woods while still-hunting. The bird had been pruning and was shaking the dust from herself when I fired. She fell, and although she was apparently mortally wounded, she fluttered so hard that I felt sure she would get away, so I gave her the second barrel at a distance of not over six rods.

Max.

But to return to the subject of wing shooting. My first bird dog was Max. He was seven or eight years old when I got him. He came from Springfield, Mass., and was a descendant of Ethan Allen's famous strain of blue beltons. He was a medium sized black and white setter, well ticked, with a good feathered tail and fairly large silky ears, much like those of a spaniel. Indeed, his pedigree showed away back a spaniel cross. He had rather a pointed head and a sharp nose, yet in the quality of scent his nose was as good as anybody's dog's. He was sturdily built and in his prime could hunt from daylight to darkness and repeat day after day. He was a tireless worker, extremely ambitious, and as staunch as a rock on a point. Partridges were his favorite game. He worked well on woodcock and quail, but was happiest when on the trail of an old partridge. So fond was he of trailing one of these birds that I frequently had to call him off, especially in the season of woodcock, as he was liable to pass by birds in his desire to work out a trail.

I never knew him to flush a bird intentionally. He had one fault that I practically broke him of, yet I always had to keep close watch to see that he did not commit it. When I first got him he would "break at shot" and chase. After various reprimands he got over this mean notion, though, as I have before said, it was not safe to always let him have his own way, for he was a very headstrong dog and sometimes a trifle willful. Another habit he had that he would indulge in in spite of all I could do was that of squeezing his birds in retrieving them. He had a hard mouth, and though he received many corrections for using it, I could not wholly cure him of the habit, but got around it by compelling him for the most part to point dead birds. After one full season's hunting I had learned his ways and he mine, and we got along first rate together. He was a good bird finder, and as I was lucky enough to be one of a party that included some first-class shots, a lot of birds were killed over Max.

At his best, after we had hunted together a few years, Max was a good enough dog for anybody. He found birds well, pointed them staunchly, and was true and steady on a trail. He never quit whether those behind him shot poorly or well. He always did his part, generally better than I did, for he was my first bird dog, and his experience and knowledge of the game was vastly superior to mine. I allowed him to teach me at the beginning, and I tried to profit by my early lessons. I have seen Max pick a live woodcock off from a sunken log in a dried-up brook and again lift a live partridge from a position near the trunk of a tree where he had pointed her so close that she was afraid to fly. He was naturally a fast dog, and kept the man working him and the man on the outside busy when birds were plenty. At this writing, December, 1899, when I am on the lookout for a bird dog for next season's shooting, I am free to say that I would be satisfied with a dog as good and serviceable as was Max in his prime.

In his old age Max became quite cross toward strangers, and had to be carefully guarded. He was naturally a sharp watch dog, and for a setter of his pounds could put up a good stiff scrap. He always managed to take care of himself whether in the city or country. If he was possessed of much affection he seldom showed it, and for this reason was rather an unsociable companion, except when engaged in hunting. In this respect he was not unlike many hounds.

In the fall of 1887 I thought Max was going back on me, and I took steps toward securing a new dog. Ira Moore and I went out Sept. 1, and about the middle of the afternoon Max showed such unmistakable signs of playing out that although we were in a good woodcock cover where there were birds left, Ira and I decided that it was good judgment to let up on the dog, so we stopped hunting with eight birds in our basket, with the prospect of increasing the string to an even dozen if the dog had been able to go on. I felt a good deal disappointed as I drove home, for I had believed that Max would certainly last another season. Ira said he might come around all right when the weather got cooler, but I felt that having hunted birds for three (?) years I knew more than did Ira, who had been following them for twenty-five (?) years.

Burke.

The upshot of the whole matter was that I got a new dog, once more through the recommendation of my former teacher, William W. Colburn, of Springfield, Mass. This time Mr. Colburn took somebody's "say so," and while he sent me a beautiful individual, I got a dog that knew scarcely more than a pup about partridges, and nothing at all about woodcock. Burke, for that was the dog's name, was a dark, rich, handsome red Irish setter, a son of Dr. Jarvis' noted show dog and field trial winner, Elcho, Jr. He was a dog of marked intelligence, perfect manners, and had I desired a canine companion only I could scarcely have found a more lovable or congenial one than Burke. But I wanted a hunting dog that I could kill game over, and as Burke was not that kind of a dog I sold him the following year.

Sept. 21 Gil Moore and I left by wagon for the north. At first I intended to take the new dog only, but after talking with Gil we both thought it good judgment to put Max in the wagon, too, and we did, most happily for us as it turned out. On the first day out we started in with Max, and he worked as slick as a whistle. After lunch I felt that I wanted to see the new dog work, so Max was tied in the barn and the aristocratic Burke was cut loose. And he did cut loose with a vengeance. He smashed into a flock of partridges like a line bucker on a football eleven the first crack out of the box, sending the birds helter skelter in all directions, and not until he had chased them out of the county did he come back to me.

"What kind of a dog have you got there?" exclaimed Gil.

"A treer, I guess," I replied. Well, after a little more experimenting with the "red cuss" he was exchanged for Max, and we began doing business at the old stand again. We killed that day twelve birds—ten partridges and two woodcock—and during the three days we were away we shot thirty-two birds—twenty-two partridges and ten woodcock—all over old reliable Max, that, after getting seasoned up, worked as fine as silk and all day long.

After returning home I gave Burke a few more trials, on which I killed some birds, but he was erratic and unreliable, and made hunting very unsatisfactory. The first woodcock I shot with him I flushed, and he did not know what kind of a bird it was when I brought him to it. I don't think he had ever seen a woodcock before. Certainly he never would point one for me. Burke had a defective nose, and I might add that I never hunted with a red Irish setter bird dog that had a true nose.

Belle.

It was apparent when September of 1888 came in that Max would not be able to do my hunting. He had become very deaf and was fast going by, so I began looking for a younger dog to take his place. I inspected several, and finally on Sept. 12 bought of Nathaniel Wentworth, of Hudson Center, N. H., the liver and white pointer bitch Belle, then four years old. No sweeter piece of canine flesh ever lived than Belle, and we had many a good day together, until her untimely death on Feb. 15, 1890.

Belle was small in body and light in limb, and her style was the embodiment of beauty and grace. When she walked, trotted or ran it was as if her little legs were treading upon cushions. She had the most expressive and human-like pleading eyes that I ever saw set in a dog's head. She was timid almost to a fault, and one had to be extremely careful in correcting her for a wrong. Wherever I went with her she attracted the attention of every lover of a dog by reason of her marked beauty and grace.

Belle was not of a bench show type. Her nose was rather too pointed for that; otherwise she would have stood criticism. She had a fine, slim, straight tail and a sleek coat. Indeed her coat was too fine for rough hunting, and she herself was almost too fine in her make-up to stand some kinds of hunting late in the fall, when the weather was very bleak. And to add to her other qualities of fineness, her nose was fine, "almost too fine," as her former owner often expressed himself to me. She did not exactly "potter" on scent, but she was so afraid of making a mistake that she frequently halted on old trails. Her nose was by no means poor, yet it was not always as true a nose as that Max had. She was a fair retriever, yet she was sometimes guilty of pinching her birds, especially a wing-tipped partridge. Belle was the easiest dog to work I ever hunted with. She kept in close, obeyed a call or a low whistle instantly, and made as delightful a companion in the brush as any man would wish for.

A lot of birds were killed over her in the two seasons I was permitted to hunt her. She was a member of a party that bagged nineteen partridges out from Manchester, Oct. 25, 1888, and on several other occasions she did her part in securing some big strings of birds. On account of her small size she was very handy to carry in a wagon. She was a perfect house dog, and was loved by every member of the family. Her sex did not give me the slightest trouble, yet it was her sex that ultimately was the cause of her death. It was my intention to breed her to Sime Young's pointer Prince, but I never got the chance. The cross would have produced some first-class stock.

Sweet little Belle lies buried at the farm beneath an overhanging apple tree whose white blossoms fall softly upon her grave every springtime. Beside her sleeps dear Mattie, the sweetest and loveliest piece of horseflesh that it has ever been my lot to see. Strangely enough, each met a sudden death at a time when her true value was being so much enjoyed and appreciated.

Prince.

I now approach with some misgivings concerning my ability to properly describe what in my opinion was the greatest bird dog I ever saw. Of course my friends know I refer to Prince, "the noblest Roman of them all." In my mind he was a monarch among dogs. What other bird dogs could do he accomplished, only, as a rule, better. If there ever lived a perfect partridge, quail and woodcock dog, that dog was Prince. Such old and experienced bird hunters as Gil Moore, Sime Young and Walter Leach have said that he would find more birds than any dog they ever saw. His ability as a bird finder was wonderful. He was a very fast dog when I got him—too fast for comfortable hunting—yet with his great speed he rarely flushed a bird, and never with the intention of doing so. On account of his speed and marvelous nose we were enabled to cover an immense amount of ground in a day's hunting. When he struck a cover containing no birds he was not long finding it out and telling us so. This made it possible for us to hunt many covers in a day. When he found birds he worked slowly and carefully. So absolutely true was he when he came to a rigid point that I can truthfully say that I never knew him to make a single mistake, nor did I ever see him make a false point. This, I know, is a strong statement to make, and one that some sportsmen might be inclined to doubt, but none of the men who have hunted with Prince and who knew him thoroughly will doubt the truth of it one moment.

Prince had a habit, when he got a strong whiff of scent, of stopping, chiefly, I think, as a warning to the man behind him to be on the lookout, and for the purpose of waiting until his handler had got within easy distance of him. At such times there was a slight wiggle of the tail, indicating that he was suspicious of game ahead. When he went on if he stopped again and that wiggle of the tail had ceased, it was a dollar to a cent piece that he had a bird nailed. When he "froze up" it meant business. So implicit was my confidence in Prince that had he come to a point in the paved streets of Manchester I should have expected a bird to rise. He never deceived me, and after I had hunted him one season I knew just what to expect from his every action.

His style on the three kinds of game birds found in our Northern covers was entirely different—so different that I always knew what kind of game he was following or pointing. Prince was the only dog I ever hunted with except Dick Lynch's setter Dash, that put up his own birds at the command, "Go on." As a rule he did all of the bouncing, which, of course, was a big advantage to me in my shooting. When he had a stiff point on a bird it was my practice to select the best possible opening and then send him on. He worked entirely for the man behind him, with no thought of any outsider. So tactful was he that I have seen him repeatedly, when in a bad place for me to shoot, back away from his point and approach the bird on the opposite side so that he might drive her my way.

I hunted with Prince a lot alone, and whenever he pointed a bird near the outside of a cover I always circled around and got on to the outside so as to get a better shot. At such times I either clucked to him (meaning for him to go on) or tossed a small object (generally an apple or a stone, or when hard pressed a cartridge) directly in front of him. The latter method never failed to start him, while when very close to a bird the words "Go on" sometimes failed to make him move. Any birds that Prince bounced came out of the cover; they never had a chance to "skin" back over his head. He did this kind of work as he did everything, in a practical and business-like fashion. He would hold a point as long as any dog I ever knew. In fact he would hold one as long as a bird would lie for him.

I remember before I bought him having Sime call Gill and me up from a run to a side hill to surround an old partridge that he had pointed under a thick, heavy hemlock with big overhanging branches. It was at least fifteen minutes before Gil and I reached the spot, for we had to thread our way through a pile of thick slash where there had been a cut off. When we got to Sime we found him sitting on a rock smoking his pipe, while the end of Prince's tail could just be seen under a hemlock branch. Sime positioned us around the tree, and then told the old dog to go on. And he did go on, and out boiled the partridge to Gil, who killed her. Sime from his position never saw her at all, but I did, and should have fired had not Gil dropped the bird.

Instances without number of Prince's cunning and woodcraft might be related. I think I am justified in saying that on the whole he could outwit and outgeneral more birds than were able to deceive him. He delighted in following up a wild old partridge that would not lie for him. Then he was in his element, and so sure was he of eventually making such a bird stay for a point that it was a sure thing in the end if the bird kept out of a tree. When we got on to one of these "wild devils" I used frequently to send a charge of shot after the bird, often out of gun range, for the purpose of making the bird lie, and the experiment generally worked successfully. When Prince got his mouth on to one of these birds he was immensely pleased. Ordinarily he manifested no especial pleasure in bringing in a dead bird. He retrieved, as he did other things, in a matter of fact way, but when he secured one of his old favorites he would circle around me two or three times as proud as a peacock, and if I reached for the bird he would turn his head the other way and avoid my hand. After about the third strut he would yield the bird up and start hunting again. He knew well enough that he had done his part toward capturing an old "skinner," for on no other occasion did he hesitate about giving up a dead bird.

After Prince had hunted a cover a few times he knew exactly where birds in it were usually to be found, and his generalship in working them to the best advantage for good shots was remarkable. If he was sent into an edge while I was following along on the outside, he invariably entered the cover at the further side, so as to

keep any bird that might be there between him and me. These tactics frequently resulted in some excellent easy outside shots. Pages might be written about Prince and what he had accomplished, but I will not add more, for many of his life deeds are firmly fixed; they will last as long as memory holds, and will be recalled in after years as I read again the diary of events contained in this unpretentious volume, compiled from data that I kept and entered after each hunt in a scrap book.

After Prince died in February, 1896, I gave up hunting, not resuming it until the fall of 1899, when I went out for a few times. It was pitiful to me to see Prince try to hunt in the fall of 1895, when he was so badly used up with rheumatism, lameness and a blood disorder that he could scarcely get around. His nose remained true to the last, but the Prince of old as I shall always remember him, had departed. That grand dog that seemed to rise supreme to our greatest of Northern game birds, the ruffed grouse, whose masterful ability in every departemnt of the sport of bird hunting known to dog kind was a revelation at last failed under increasing years, and the covers of New Hampshire and Massachusetts in which he achieved his great triumphs will know him no more. Good-by, old man! You were always faithful, honest, loyal, tender and true, and no master ever had a better friend.

In appearance Prince was a rugged type of an old-fashioned English pointer. He looked the grand old hero that he was. Everything about him denoted great strength. He weighed in usual flesh 73 pounds; in hunting time he got down around 60 pounds. His legs were massive, his body powerful and his head large and square cut at the nose. He had a long, coarse tail, his only defect. His color was liver and white in about equal porportions. A strip of white ran down between his eyes, spreading out at the nose, which was finely ticked. He had very expressive, intelligent eyes. Prince, while a very affectionate dog, rarely displayed his affection in a lavish manner. He was content with a quiet devotion. To his credit when he died. Prince had a record of very close to 2,500 woodcock, quail and partridges.

W. C. CLARKE.

MANCHESTER, N. H.

About Home-Made Wire Cartridges.

THE reference to Frank Forester in one of your recent issues carries me back nearly forty years to my boyhood days. In his book, written for beginners with the gun, the title of which I now forget, he mentions in a number of places the use of the old-fashioned Ely wire cartridge and the wonderful results produced by them when properly directed at a fast disappearing partridge 60 yards away.

In our village store they did not keep Ely's wire cartridges, and having been invited to spend a day at Barnegat with the ducks and geese, I decided to prepare my own wire cartridges. I had never shot either a duck or a goose, and reasoned that I never could reach them with my 14-bore muzzleloader unless I had wire cartridges to fall back upon.

Having laid in a generous supply of powder, shot, wads and caps, I proceeded to supplement my outfit with some home-made wire cartridges.

I first secured a square foot or two of wire window screening. This I cut into strips 3 inches wide and 3½ inches in length. I then took the butt of my cleaning rod and found that when the wire was closely formed around this it would easily pass into the muzzle of the gun. The wire screening carefully wound around the wooden form I now covered with two or three windings of thin but very strong manila paper, securing the edges with strong glue.

Removing the form from the mould I carefully bent in one end of the wire and, measuring out the proper quantity of shot, closed the remaining end.

I was a little dubious at the time as to the cartridges giving forth their contents at the proper moment, but completed a score or more and carefully stowed them away.

The more I thought about the matter the more was I inclined to test them before I started, so taking my gun, loaded with a wire cartridge in each barrel, snugly placed over the usual charge of powder, I visited my chum down the road. He was older than I, and I relied greatly upon his superior judgment. I told him of my experiment, and asked him the best way to test it. He at once suggested the side of the barn at sixty paces. A mark in the form of a flaring knot showing through the paint on the closed door was selected, and I blazed away.

There was no scattering of shot visible on the barn door, but about a foot from the knot was a round, freshly made hole through which you could easily poke your finger. It was evident that the cartridge had not broken. We opened the door, and in a direct line from the original point of entry we saw a hole very similar to the one made through the door. Out of curiosity I walked close to the hole, looked out and upon the meadow peacefully grazing was a herd of cows well in line with the flight of the unbroken wire cartridge. I gazed intently until satisfied that the cattle were unharmed, drew a long breath and then making a target of a horse pond some distance away discharged the remaining cartridge.

Nevertheless I took some of my wire concentrators with me on the trip.

On the sailboat from Toms River to the beach a diving duck was marked on the water perhaps a hundred yards ahead of us. My companions, thinking to get a little fun out of me, urged me to pot it on the water. I had kept my cartridges to myself, and when I loaded my gun slipped one in. Crawling well out to the bowsprit and making due allowance, the duck being now perhaps 60 to 80 yards away, I fired. The duck was in the act of diving when the shot reached him, ploughing its way through what remained of the duck's tail above water, cutting out a feather or two and splashing up the water. The duck did not finish his dive, but immediately arose from the water and flew off, badly scared. The laugh was turned on my older companions, one and all expressing great wonder at the close execution of my gun. They made many guesses, from a bullet to a genuine Ely wire cartridge, but I kept my secret to myself.

Our shooting was unsatisfactory. The day was still and the sun shone bright, and those birds we did see were high in the air. I had the satisfaction of noticing how the flocks well up in the air out of ordinary gun shot seemed to wince and notice when I shot my wire cartridge shots into them, proving conclusively that I had built better than I knew.

We hear no more nowadays of the Ely wire cartridges, and I presume it would be difficult to find them in any first-class gun store. The smokeless powder, choke bore and chilled shot have long since made obsolete Frank Forester's standby for a long shot.

CHARLES CRISTADORO.

CHICAGO AND THE WEST.

Jacksnipe Are Wildfowl.

At last the Attorney-General of Indiana has given his decision upon the much mooted question whether or not the new Indiana law proteets jacksnipe, and whether a license must be taken out for the purpose of shooting jacksnipe. Under date of April 29, Z. T. Sweeney, State Game Commissioner, answered a well-known Chicago sportsman who had inquired about this matter, to the effect that the Attorney-General had just referred to the Game Commission the Chicago gentleman's inquiry, bearing date of April 20. "In answer thereto," said Mr. Sweeney, "I beg to say that snipe come under Section 5 of the law and hunters' license will be required." It will, therefore, be seen that it costs $25 to hunt jacksnipe in Indiana, and that the legal season for shooting such birds closed April 15.

Is It?

A number of Chicago shooters have taken the position that the jacksnipe is not a wildfowl, and they have been shooting them all through the past week in Indiana. Perhaps a good many of these shooters will believe the new law unconstitutional because it does not permit them to do what they like. Yet the question involved herein is one which has never been adjudicated so far as memory serves at present. It has been discussed at different times, but I do not recall any decision of any supreme court on the question whether or not a jacksnipe is to be called a water fowl. I have been asked by several Chicago sportsmen to inquire in these columns whether any reader of FOREST AND STREAM knows of any such decision. The information will be very thankfully received.

Law or no law, the snipe season of this spring has been a practical failure, not only in Indiana but in Illinois. No one knows where the birds are, but they are probably scattered over a great extent of country, the prevailing high water having created a great many feeding grounds.

Bears Are Out.

Dr. H. H. Frothingham, of this city, left last week for a bear hunt. He has gone to the Salmon River country of Idaho, taking with him Ben Sheffield, of Livingstone, Mont., as guide.

I got a telegram to-day from Joe Kipp, on the Blackfoot reservation of Montana. It was brief but inspiring. It said, "Bears are out. Get a move on you." I shall get a move on me to-morrow night, and only hope that I may at last find my long lost grizzly. It would seem that at last spring had broken on the east slope of the Rockies. Billy Hofer wrote four days ago that he and Collins, one of the reservation men, had been up in the Two Medicine country to put out a bait, but found two feet of snow and the ice not out of Two Medicine Lake. They saw what they thought was the track of one black bear. John Monroe left five days ago for the mountains to hunt bear, and he thought then they would soon be out, his guess apparently being verified by Mr. Kipp's telegram.

We have had so many scouting parties out that it surely looks as though we ought to get a bear, and if we do not it will be simply owing to the disobliging character of the bear himself.

Change in Illinois Game Warden.

Although Governor Yates has been non-committal in regard to it, it is none the less the fact that there goes into effect to-day a change in the office of State Fish and Game Commissioner. Harry W. Loveday, of Chicago, retires, and A. J. Lovejoy, of Roscoe, takes the office.

Mr. Lovejoy is general superintendent of the State Fair grounds, and is well known by different members of the State Board of Agriculture. He does not claim to be able to be present in Chicago much of the time, hence the important duties of the warden's work here must be delegated. Warden Lovejoy has been making inquiries in certain directions here, but has not yet selected a deputy. For his benefit it may be stated that of all the game wardens we ever had in Chicago, the one most cordially hated by South Water street was M. R. Bortree. Mr. Bortree was unanimously called a "crank" by the dealers. It would seem a good enough tip to Mr. Lovejoy that he could not get a better warden here than a man who is called a crank by the game dealers. The commission merchants were never able to "handle" him, and there is no record against him. If it is the wish of Mr. Lovejoy to actually prohibit the illegal selling of game in Chicago and not merely to make a bluff at it, he could not get a better man than Mr. Bortree.

The Lacey Law in Chicago.

State Commissioner Harry W. Loveday and his deputies have brought during the past season forty-eight cases against violators of the Lacey law prohibiting shipment of game out of season from one State to another. Deputy Marshal M. H. Edinboro left on Saturday last under subpœna of the United States Court of Oklahoma, where he will testify as deputy marshal in five cases involving the seizure of illegal game shipped from Oklahoma and caught here in Chicago under the Lacey law.

Mr. George W. Clark, another efficient deputy U. S. marshal, leaves on May 15 for the Indian Territory to testify in similar cases. Commissioner Loveday reports that at present there is almost no illegal game coming through. The result of these cases brought under the U. S. law will surely have a most discouraging effect upon the illegal shipment of Western game. Mr. Lacey of Iowa, who introduced this measure in Congress, as well as those who supported it, are heartily to be congratulated on its success. They probably builded better than they knew.

During the nine months of the season last past, one hundred and forty-eight violators have been convicted under the Illinois law and have suffered fines aggregating $2,131.50. There have been confiscated 22,401 game birds shipped illegally. Of these there were 21,618 quail, 704 prairie chickens, 30 partridges and 49 ducks. The sales of this game have amounted to $3,699.

These facts and figures show large changes between the game law situation here now and ten years ago. Reviewing them in connection with the rapidly increasing strictness of the game laws of the Western States, there would certainly seem reason to think that there is hope for the Western game.

At this date, May 2, Governor Yates has not yet asked for Warden Loveday's resignation, nor given the new appointee, Mr. Lovejoy, his commission, yet it is generally understood that Mr. Lovejoy will hold the office and appoint a Chicago deputy.

Death of Liver-Eating Johnson.

We used to hear from time to time of that unique Western character known as Liver-Eating Johnson, an old plainsman who spent the closing years of his life as deputy sheriff at Red Lodge, Mont. Liver-Eating Johnson was a giant in stature, and in his prime as rugged as a bear. He had failed in health for the last few years, and last fall died at a soldiers' home in California, as I have just learned through a friend from the West. The old-time men of the West are passing away one by one.

Queer Finds of Sportsmen.

They are crazy now over the new oil fields near Beaumont, Tex. In 1892, while hunting snipe on the sea marsh not far from that point, I remember to have seen a scum somewhat like oil floating on one or two portions of the marsh. No doubt others also saw it and to better effect. If I had shot a few oil wells instead of jacksnipe at the time, I might have been better fixed to-day.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Still-Hunting a Moose.

AFTER several weeks of preparation and happy anticipation, which is by no means the least of the pleasures of a hunting trip, I boarded the train for Montreal with that contented feeling which one experiences when he sees his carefully laid plans carried into execution. A tedious railroad ride of thirty-six hours gave me ample opportunity to recall the numerous articles necessary for my trip, and to wonder if I had left out any of them.

On the morning of the 9th day of November last I stepped from the train at Newcastle, New Brunswick, without knowing a single person in the town, except that I had had some correspondence with Mr. Robert H. Armstrong of that place, who had very kindly assisted me in making the necessary arrangements for the trip. When I registered at the hotel he came forward and introduced himself; directed me to a store where I could purchase my provisions, and sent for Mr. John Robinson, Jr., the game warden, from whom I procured my license.

The first stage of my journey into the woods was a drive to the house of Mr. James Foran, twenty-five miles up the portage road that leads to the lumber camps on the waters of the Little Sou'west Miramichi. Mr. Foran enjoys the distinction of having the last house on this road. From his house the road extends about thirty-five miles into the unbroken forest.

The horses were soon ready for the start, and as the road as far as Foran's house is good, we reached there in the afternoon.

That evening Mr. Foran and his sons entertained me with accounts of the adventures of moose hunters who had traveled this way before me, and gave me an interesting sketch of the manner in which John Wambolt, the trapper who was to be my guide, lived alone in his little cabin at the outlet of Guagus Lake. It seemed to be generally conceded both at Newcastle and at Foran's that Wambolt was the best hunter in that part of New Brunswick, and that my chances of success with him for guide were almost certain.

The following morning my provisions and outfit were securely packed in a lumber wagon. As soon as it was light enough to see, the horses were harnessed and Mr. Foran and I started for Guagus Lake, twenty-five miles further up the portage road.

Any one who has traveled on a New Brunswick portage road has learned from experience that the only comfortable or safe means of locomotion is on foot. From the time we left Foran's the road got rapidly worse, and soon I was glad to leave the wagon and walk ahead. The recent rains had filled all the hollows with mud and water up to the wagon hubs, and on the hills the road would remind one of a trout brook. We had intended reaching the Guagus Lake that night, but the road was in such a condition that we soon found this would be impossible. Late in the afternoon we camped by the roadside at a spot a little more than half way to the lake.

The next morning we started early, and as I walked ahead of the team I began to get some idea of the great game country I was entering. At frequent intervals could be seen the fresh tracks of moose and caribou plainly imprinted in the mud, and in some places the roily water, stirred up by their feet, had not had time to clear. In the afternoon we reached Wambolt's camp. It was a log cabin about fifteen feet by twenty feet. Inside there was a good stove. A shelf six feet wide extending across one end, about half way between the floor and roof, formed the bed. The cracks between the logs were all tightly filled with moss, and the whole interior had a snug, comfortable appearance. We could see that no one had been there for several days. I was beginning to get a little anxious about the prospect of finding my guide, when he put in an appearance. He explained that he had wished to look over a line of traps before my arrival, and had just returned from the trip.

That evening we laid plans for my two weeks' stay in the woods. Wambolt had the utmost confidence in the game supply on his territory and his ability to get me shots at good specimens of both moose and caribou.

He informed me that it was rather late in the season for good caribou heads, as caribou shed their horns about the first of November, and the large ones shed theirs first. He was sure that we could still find a good head, but it was best to lose no time in getting to the hunting ground. So the next morning, after starting Mr. Foran off for home with instructions to return for me in two weeks, we took a trail to the "burned woods" or "barrens" that extend for miles along the north branch of the Little Sou'west Miramichi, where Wambolt has another one of his camps exactly like the one at Guagus Lake, but smaller.

At this time of year the caribou leave the woods and come out on these barren lands in herds, to feed upon the gray moss which covers the ground until the snow gets so deep that they can no longer dig it out.

Our fears with reference to the caribou horns were fully realized, for we saw thirty-three caribou in the next five days, a large number of which were fine bulls with their horns off. It was the afternoon of the fifth day before I saw a head that I cared to shoot.

During that week the weather had become very cold and about a foot of snow had fallen.

Sunday, November 18th, found us again at Guagus Lake camp with a fine caribou head. We were now ready to try the moose and I confess, I felt a little uneasy about the chances of securing a good one in a week. But Wambolt was as confident as ever. His only answer to my anxious questions was: "There are plenty of moose," and so it proved.

In New Brunswick at this time of year it snows nearly every night, and frequently during the day, too. It was our fortune to meet with just such conditions, so that every morning the tracks made the day before would be buried in the new fallen snow.

On Wednesday the thermometer went up to 34 degrees, and it rained gently all day. That morning we took a trail that went north from the Guagus Lake toward the Bald Mountain. We had gone about five miles when we came on the tracks of a tremendous moose that had crossed the trail the night before, going in a northeasterly direction. We followed him at once. At first I expected to see him ahead of me at any moment, and kept a sharp lookout. This soon became tiresome and I amused myself measuring the length of his giant strides by pacing along in his footprints. I found that he took a step from 3 feet 6 inches to 4 feet in length. From time to time I could see the branches broken by his horns where he had gone between two trees, and I tried to estimate from this how wide the spread would be.

Neither of us spoke a word till noon, when we stopped for lunch. The guide then informed me that we were probably nowhere near the moose. He was evidently an old bull looking for a place to yard for the winter. He had kept a straight northeast course and had not once stopped to feed. As long as he kept walking he was increasing his lead on us, for his great strides would carry him through the brush and fallen tree tops much faster than we could follow. My spirits fell, for I had pictured myself shooting this particular moose, and I knew if we gave him up the chance of my finding as large a one would be very slim.

After lunch we took up the track again and soon came to a place where five other moose had joined him or followed his track. About three miles further on the five separated from the big bull and took a more northerly course.

Wambolt was in favor of following the five, for he reasoned that five moose, two of which were evidently calves, would stop to feed or yard sooner than one traveling alone. I argued that for all we knew the old bull might have already come a long distance and was not at or near his destination.

Our discussion took a practical turn by the guide calling my attention to the fact that we had eaten up all our provisions, and if we would reach camp before dark we must start back at once. We accordingly took the compass and set out in a westerly direction for the trail we had left in the morning, leaving undecided the question as to which tracks we should follow. After about an hour's rapid walking we struck the trail at a point several miles north of the place where we had taken the track of the big moose, and by making all possible haste reached camp before dark.

We decided that on the following morning we would take three days' provisions on our backs and again take up the track of our moose unless we should find fresh tracks before we reached his.

Before daylight we were up and ready to start. The temperature had dropped to 20 degrees in the night. The wind was blowing a gale and occasionally a blinding snow squall would come driving through the woods. The old snow, soaked with the rain of the day before, was frozen hard, making it impossible to walk quietly. Our only consolation was that the roar of the wind through the trees drowned all other sounds, save now and then the crash of an uprooted tree.

We had not gone up the trail more than two miles when we came upon the tracks of three moose that had crossed after we had passed the afternoon before. They were going southwest, directly toward the head of Guagus Lake. As the chances of finding these were so much better, and they were so much nearer our camp, we gave up the old bull and took these fresh tracks. They took us down into a swamp, through some of the worst thickets and bog holes I have ever seen. After an hour or more of this, we came to the tracks of a very large moose going in a northeasterly direction and apparently headed for higher ground, where the traveling would be better.

By this time considerable snow had fallen and the tracks were all partly filled. The guide suggested that we leave the three and follow the big one, whose track appeared to be as fresh as the others, although the old snow had frozen since both were made, rendering it impossible to tell. I ventured the suggestion that this might be the track of the big bull we were following the previous day, before he had reached the place where we had started on his track. Wambolt did not think so, although he admitted the possibility of such a thing.

This moose went up hill and down, never varying the length of his step, no matter how steep the ascent. He would follow an old lumber road if it ran northeast, but the moment it changed its direction he would leave it. He would go through a fallen tree top where he could easily have walked around it, never seeming to notice the obstruction.

We had followed him for some time when my guide, who was always ahead, suddenly stopped and gave vent to some adjectives which I will omit from these pages. Stepping up quickly I saw our footprints of the day before, at the exact spot where we had first taken up the trail of the big moose. With prophetic wisdom my guide said: "I thought it was the same one." I knew he had thought nothing of the kind, and could not restrain a hearty laugh.

As we had already lost several hours on this back track, we started at a brisk walk for the spot where we had left it and the tracks of the five other moose the previous afternoon.

When we reached the place, Wambolt was inclined to take up the tracks of the five, but this time I insited on following the big one, since we had already tracked him so far. And we were off again with those big prints constantly stretching away further and further ahead of us through the woods.

At noon we stopped for lunch, but were soon at it again. Shortly after this we came to a large stream which my guide informed me was the north branch of the Big Savogel. He felled a tree across it for a bridge, and we got over safely.

We continued for some time in silence. I was thinking of a story I had read once, of a man who had walked down a moose in five days, and was wondering if he would have ever lived to write that article if he had been on the track of this particular moose, when my guide stopped and motioned me to come forward. "He's right here!" he whispered. I looked around but could see nothing to indicate it. The tracks were still two days old, but I noticed that the moose had turned off to the right and was traveling southeast. "He's stopped to feed, and he's in this yard somewhere. Don't break no sticks," my guide whispered again as he cautiously stepped back from the tracks and looked up at the clouds to get the exact direction of the wind, which was still blowing a gale from the northwest.

The moose had done exactly as Wambolt had phophesied. He had evidently been a long distance from this place when he had made up his mind to yard, and for some reason, probably because he had spent the winter here the year before, started in a direct line for his old feeding ground.

In the early winter, as the snow begins to get deep, the moose select some place where feed is abundant, usually the top of a ridge where there is a thick growth of young hardwood trees, and stay in this locality till spring. This is called yarding. Before the snow gets too deep to travel, the moose will wander over the entire length of the ridge, and feed on the bark and twigs of the hardwood trees. At this time the yard may extend for two or three miles in length, or as far as the growth of hardwood is plentiful. As the snow gets deeper they work closer together, and late in the winter it is not uncommon to find five or six moose standing together with the snow nearly to the top of their backs, almost unable to move.

The guide shook his head dubiously as he saw that the moose had gone directly down wind. This adverse circumstance only spurred him to greater efforts. We cautiously retraced our steps and began to move in a circle toward the southeast, gradually working around till we were again walking toward the northwest. We soon came to the big track again, still going southeast, and quickly retreated and made another loop, coming up in the same manner as before, until we could see the big track. This maneuver was repeated several times.

We were constantly on the alert scanning the woods in every direction as far as we could see through the trees. We found the tracks of several other moose, and could see by the young twigs freshly broken from the bushes, and small trees entirely stripped of their bark, that they had been feeding recently and were not far off.

At last, coming up on one of our circles, we saw the spot where the old fellow had spent the night. After that the signs were very fresh and the work extremely interesting.

We continued our circles for perhaps another half hour, and were just working up wind nearly to the place where we would expect to come upon the track, when I saw through the trees, about sixty-five yards ahead, a huge black object which quickly took the shape of a great moose. He was lying down and looking straight at me. At the same instant Wambolt said in a low voice, "There's your moose!" I dropped on one knee in order to get a better shot under the intervening limbs. As I did so the moose arose to his feet, and in doing so placed his fore shoulder exactly behind a large tree. I aimed far enough back to miss the tree, and fired at his ribs. He made a tremendous jump and started to run. Just then Wambolt grunted, imitating the grunt of a moose. At this he stopped for a second and again looked at us.

After the first shot I had worked the lever of my rifle to throw a second cartridge from the magazine into the chamber, but in the excitement I had not thrown the lever far enough forward to eject the exploded shell, and in closing the action had pushed this shell back in the gun. At the click of the hammer on the empty shell the moose started again. By this accident I lost a shot that would have saved us much worry and hard work.

As he disappeared I fired two more shots through the trees without any idea of stopping him. In a few seconds the woods was as quiet as before.

We went up to the place where he had started and were gratified to find considerable blood on the snow. "You have hit him hard, and we'll get him, but may be not till to-morrow or next day," Wambolt said assuringly. "There are only two things that will stop us from getting that moose. One is, if he knows we are following him he will take to the water, and the other is, it may snow and fill up his tracks."

It is always wise to give wounded game plenty of time to lie down if it will, so we sat down on a log and Wambolt lit his pipe.

In about twenty minutes we took up his track once more. After he had run a short distance he had settled down to a steady walk. I noticed that he was taking much shorter steps than before being hit. He was bleeding freely and had stopped once, where the blood had flowed in sufficient quantity to melt a large hole through the snow.

We kept on, and at the end of the first mile the blood had diminished so there was seldom a drop. My hopes of getting him had gone down correspondingly. Wambolt was still confident.

Another mile had passed with no sign of blood in the tracks. We were advancing cautiously and keeping a good lookout ahead. Suddenly I saw that black object through the trees. In a moment I caught a glimpse of the horns, and knew it was my moose. At the same time Wambolt whispered, "That's him!" I fired. The moose rolled over on his side and lay perfectly still.

He had been lying down, and was so near dead that I doubt if he had seen us. My first shot had passed through the lungs about six inches back of the shoulder blade.

He was a very large moose. His hoofs were much worn, showing great age. I measured from the top of his fore shoulder to the bottom of his fore foot, to get as nearly as possible his exact height at the fore shoulder. I found it just eighty inches. His horns were heavy, but of peculiar shape. The blades were narrow, extending out from the side of the head with a spread of fifty-one inches, then turning they went straight up twenty-eight inches.

Our troubles had only just commenced, for we still had to get his head and horns out of the woods. This was the most difficult task of all.

The next night, however, found us safe in camp with our trophy. On the way back we came upon a cow and a calf moose. They were very tame and stood and looked at us as we went by.

My last day in camp was spent resting and preparing the moose head for the taxidermist. Mr. Foran reached our camp that night, and the next morning we were off for Newcastle.

It was with true feelings of regret that I said goodby to Wambolt. He had proved himself a hunter worthy of the name. At my request he did not carry a gun during the entire trip. He was anxious that I should secure good specimens of both moose and caribou, and was constantly cautioning me against shooting at one with a poor set of horns.

For the benefit of any of my fellow sportsmen who contemplate taking a hunting trip in this region, I might add that Wambolt's postoffice address is Littleton, Northumberland county, N. B. He will be glad to correspond with any one planning a trip to his territory.

I found every one with whom I had dealings kind and obliging and above all interested in securing the patronage of American sportsmen. J. BRADLEY SCOTT.

Game Protective Societies Invited.

TORONTO, Ont., May 2.—*Editor Forest and Stream:* Will you kindly, through the medium of FOREST AND STREAM, request the secretaries of the game protective associations of the following States to send their names and addresses to me?: States of New York, Pennsylvania, Ohio, Michigan, Indiana, etc.

I want these addresses to enable me to correspond with the executive officers of their respective associations, with the intention of taking concerted action for the better protection of wood duck and woodcock, two grand species of game birds, that unless concerted action is taken will in a few years be exterminated.

By so doing you will confer an esteemed favor on yours truly, E. TINSLEY,

Chief Game Warden of Ontario, Parliament Building, Toronto.

Bay Birds.

THE FOREST AND STREAM has had good reports of bay bird shooting at the following points. Intending visitors would do well to communicate in advance with the parties named respecting the present supply and prospects:

L. M. Taylor, Jr.—Cherrystone, Va.
